UNIVERSITY COLLEGE, LONDON.

Mr. and Mrs. R. H. CLARKE,
30, Oakley-square, Hampstead-road, N.W.,
RECEIVE A FEW YOUNG GENTLEMEN attending the Classes, and provide for them a comfortable home, with every facility for study.

References.—Rev. J. C. Harrison, 24, Queen's-road, Regent's Park; G. Wilkinson, M.D., 4, St. John's Villas, Finchley-road; James Walton, Esq., 28, Upper Gower-street, W.C.

REIGATE GRAMMAR SCHOOL.—The Trustees of the Reigate Grammar School are prepared to receive APPLICATIONS from Gentlemen desirous of obtaining the SITUATION of MASTER of the Reigate Grammar School. No candidate will be qualified to be elected Master unless he be a member of the Church of England, and also either a Graduate of one of the English, Scotch or Irish Universities, or certificated according to the highest class of diploma conferred under the authority of the Committee of Council of Education. The salary in the first instance will be 180s. a year, with house and garden rent free. The salary will be gradually increased by the prospective improved rental of the school property. The Master will be at liberty to take a limited number of Boarders. The management of the School will be conducted in accordance with the scheme recently sanctioned by the Charity Commissioners. Copies of this scheme may be obtained by sending 12 postage-stamps to Mr. Wm. THORNTON, Reigate, who will give any further information required. Applications, accompanied by testimonials, must be sent to Mr. THORNTON, on or before the 15th of October next.

W. M. THORNTON, Clerk to the Trustees.

Reigate, Sept. 2, 1861.

By order of the Royal College,
 JOHN SCOTT, Secretary.

The INTRODUCTORY ADDRESS will be delivered by Dr. John Struthers, on Monday, November 4.

Diseases of Children (Sick Children's Hospital)—Dr. Kellier.
 Natural Philosophy (Three Months Course)—1 P.M.—W. Lees, A.M.
 PRACTICAL INSTRUCTION.—ROYAL INFIRMARY, 12 noon:
 Perpetual Ticket, at one payment, 10*l.*; annual, 5*l.*; half-yearly, 3*l.* 6*d.*; separate payments for two years and a half entitle the Student to a perpetual ticket. SICK CHILDREN'S HOSPITAL.—Ticket, three months, 1*l.* 1*s.*; perpetual, 2*l.* 2*s.*
 DISPENSARY VISITS.—ROYAL PUBLIC DISPENSARY, and New Town Dispensary, each, six months, 2*l.* 3*s.* 6*d.*; 3 months, 1*l.* 1*s.* 6*d.*.
 ROYAL MATERNITY HOSPITAL, ROYAL PUBLIC DISPENSARY, New Town Dispensary, each, 1*l.* 2*s.* DISEASES OF THE EYE.—EYE DISPENSARY, and Eye Infirmary. DISEASES OF THE EAR.—DISPENSARY, LAWMARKET. DISEASES OF THE THROAT.—DISPENSARY, DRUMMOCHTER. PRACTICAL PHARMACY.—ROYAL PUBLIC DISPENSARY, New Town Dispensary, each, six months, 3*l.* 3*s.*

FEES.—For the First of each of the above Courses, 3*l.* 5*s.*; for the Second 3*l.* 5*s.*; for the Third 3*l.* 5*s.* 6*d.*. For that class is 3*l.* 5*s.*. The Fees for the following Courses are:—Natural Philosophy, 3*l.* 5*s.*; Practical Chemistry and Practical Anatomy, 3*l.* 5*s.*; Anatomical Demonstrations, 2*l.* 3*s.*; Practical Anatomy, 3*l.* 5*s.*; 4*l.* 4*s.* 6*d.* for the whole Course, 3*l.* 5*s.* 6*d.* for Three Months, or 10*l.* for the Winter Session.

During the SUMMER SESSION, 1862, the following Three Months Courses will be delivered:—

Midwifery—Dr. Kellier.
 Midwifery (4, High School Yard)—Dr. J. Matthews Duncan.
 Medical Jurisprudence—Dr. Littlejohn.
 Botany—Mr. Baydon.
 Materia Medica and Dietetics.
 Clinical Surgery—Mr. Spence.
 Clinical Medicine—Drs. W. T. Gairdner, Warburton Bagbie, Sanders, and J. Matthews Duncan.
 Practical and Analytical Chemistry—Dr. Stevenson Macadam.
 Practical and Analytical Chemistry—Dr. Murray Thomson (6, Infirmary-street).
 Practical Anatomy and Demonstrations, Comparative Anatomy—Dr. John Struthers.
 Pathological Anatomy—Dr. Rutherford Haldane.
 Natural Philosophy—W. Lees, A.M.
 History of Medicine—Dr. Warburton Bagbie.
 Dental Surgery—Dr. John Smith.
 Venereal Diseases—Dr. P. H. Watson.
 Surgery—Mr. Spence.

The above Courses qualify for Examination for the Diplomas of the Royal Colleges of Physicians and Surgeons of Edinburgh; the Royal Colleges of Physicians and Surgeons of London; the Royal Colleges of Physicians and Surgeons of Dublin; the Faculty of Physicians and Surgeons of Glasgow; the Apothecaries' Societies of London and Dublin; and the Boards of the Navy, Army, and Indian Medical Service.

The above Courses also qualify for the Universities of Oxford and Cambridge, and the Queen's University in Ireland, during the years in which residence is not required.

In accordance with the Regulations of the University of Edinburgh, any four of the entire Medical Classes required may be attended under the above Teachers; and one of the four years of Study required may be constituted by attendance, in one year, on two of the above six Months Courses, or on one of these and two Three Months Courses. The Regulations require that, in this case, the Fee for any of the above Classes shall be the same as that for the corresponding class in the University. When Surgery and Clinical Surgery are taught, as at present, by the same Lecturer, they do not qualify for the University of Edinburgh, but for every other Public School.

The whole of the education required for graduation at the University of London may be taken under the above Teachers. Those who hold the Double Qualification of Physician and Surgeon from the Royal Colleges of Physicians and Surgeons of Edinburgh are eligible for English Poor-Law appointments equally with those who hold English Medical and Surgical Diplomas; and are, under the Medical Act, entitled to practise Medicine and Surgery in any part of Her Majesty's Dominions.

NOTICE.—In accordance with a resolution of the Medical Council, applicable to all Medical Schools and Licensing Boards, those commencing professional study after September 1861 will be required to have passed a Preliminary Examination in General Education, before being registered as Students of Medicine; and the Registrar at each Medical School is required to be closed within fifteen days after the commencement of each Session, except in cases of detention from illness or other unavoidable cause.

Preliminary Examinations in General Education by the Royal Colleges of Physicians and Surgeons of Edinburgh take place in October and November; also in February, May, and August.

Lists of the subjects and books may be obtained on application to the Office of either College.

JOHN STRUTHERS,
 Secretary to the Medical and Surgical Schools

FREE CHURCH, 14, NEWMAN-STREET, Oxford-street. To-morrow, SUNDAY, Sept. 15, Service at 11. Dr. PERFIT, "Nature of Evil, and its Relation to Human Life." Free. Evening, at 7.—Did Jesus supernaturally predict his Sufferings and Death?—Intimations.—Tickets to be had in lobby.

SCHOLASTIC.—WANTED, in a large BOARDING SCHOOL, at the ensuing quarter, an EXPERIENCED TEACHER, who would be considered the chief of six Assistant Masters. Candidates must possess proficiency in Classics and Mathematics, and a thorough knowledge of School details.—Address, stating age, qualifications, and references, to A. B., Lewis's Medical Library, 18, Gower-street North, W.C.

TWO LADIES, enjoying a delightful home in a healthy suburb, would like to RECEIVE ONE or TWO LITTLE GIRLS, who would be treated in every respect as relatives, and receive, in addition to the endowments of home, an education based upon principles of high cultivation. The French and German languages spoken familiarly. Music and Drawing by Professors of eminence. Terms, 50 Guineas per annum. References to families of distinction.—Address A. B., 15, Tyrwhitt-terrace, Lewisham-road, E.C.

"THE QUEEN."

The Publisher of 'The Queen' begs to inform the Trade and Public, that No. I. of this Journal may still be had, with the PHOTOGRAPH of HER MAJESTY. The demand for the paper, however, has so far exceeded the most sanguine expectations, that the very large stock of the Coloured Fashion Plates prepared for No. I. is exhausted, and it is not possible to obtain a further supply. The Photographs of Her Majesty will, however, continue to be supplied with No. I. of 'The Queen'; or it may be had with any following Number, it being taken instead of the current Supplement.

With No. II. of 'The Queen' (Sept. 14) will be given a Muslin Pocket Handkerchief, ready for working.—Newsreaders are requested to send their orders early to their Agents.

Office, 248, Strand, London, W.C.

HAVET'S GRAMMAR OF FRENCH GRAMMARS.

New Edition, 450 8vo. pages, 7s.

THE COMPLETE FRENCH CLASS-BOOK:

a Theoretical and Practical French Manual, prepared expressly for the Use of English Learners, and based upon the Works of the French Academy and the Standard Grammarians of the present day.

"M. Havet's treatise is a complete exposition of the principles and peculiarities of the French language."—*Athenæum*.

"No other book is so well calculated to make a complete French scholar as M. Havet's admirable and comprehensive work."—*English Journal of Education*.

"Havet's popular 'French Class-Book' is by far the most solid and practical production of its kind. It contains the rudiments, the usual phrases, and the niceties of the language, all in one volume, lucidly arranged, and set forth with an intimate knowledge of what is easy and what is difficult to English students of French."—*Continental Review*.

London: W. Allan, 9, Stationers' Hall-court.

DR. LEE ON CLIMATES.

Lately published, price 3s. cloth,

THE SOUTH OF FRANCE, HYERES,

CANNES, PAU, and the PYRENEAN BATHS.

NICE and its CLIMATE (re-issue). 3s. 6d.

SPAIN and its CLIMATES. 3s. 6d.

A NOTICE OF MENTON (supplementary to

Nice and its Climate, with Remarks on the Influence of Climate on Tuberculous Disease. 1s.

Also, price 4s. 6d.

CLIMATE: its Effect on Tuberculous Disease.

A Prize Essay.

London: W. J. Adams, 89, Fleet-street.

"* Bradshaw's 'Invalids' Connection to the Continent, New and Enlarged Edition, nearly ready.

THE PRAYER in MOSÉ in EGITTO, 'Dal tuo stellato seggio,' for Piano, by Madame Rosalie Thénar, &c.—C. LONGMAN'S MUSICAL CIRCULATING LIBRARY, (Terms on application), 25, Old Bond-street. Catalogues of Rare, Ancient and Modern Music, &c. gratis.

BAGSTER'S PARAGRAPH BIBLE, in large type, in separate Books, as pocket volumes. With very numerous Maps, and an Introduction and Index to each Book.

Genesis, price 2s.; Exodus, 2s.; Leviticus, 1s. 6d., &c. &c. Matthew, price 1s. 6d.; Mark, 1s. 4d., &c. &c. Hebrews, price 1s. 6d.; James to Jude, 1s. 6d.; Revelations, 1s. 4d., &c. &c.

Complete in 4 vols. bound in antique cloth, price 42s.; and in morocco, plain, 3s. 2s.

* The Large-print Paragraph Bible ordinarily binds up into four convenient volumes; but the Books of the Bible being printed so as to be quite independent of each other, may be combined in any order or number. Thus, 'The Books of Moses' may be procured as a volume, or the Historical Books of the Old Testament; the Prophecies; the Gospels; the Epistles, &c. &c.

ST. JOHN'S GOSPEL (from the large-print

Paragraph Bible in separate Books); with an Introduction, an Index of Subjects, and a coloured Map of the Environs of Jerusalem. Price 1s. 6d.

ST. PAUL'S EPISTLES (from the large-print

Paragraph Bible in separate Books); with Introductions to each Epistle, Alphabetical Indexes, and coloured Maps. Pocket volume, price 5s. Kept also in limp morocco.

A NEW HARMONY OF THE GOSPELS in

GREEK, and a complete Dictionnaire. With copious Introduction, Indexes, and Tables. By WILLIAM STROUD, M.D. 4to. price 2s.

Its leading objects are, to set before the reader the Four Gospels, arranged in such a manner as to facilitate the closest investigation of their contents.

THE BIBLE OF EVERY LAND: a History

of the Sacred Scriptures, in every Language and Dialect; with Specimen Portions of each, and Illustrative Alphabets, coloured Ethnographic Maps, Tables, Indexes, &c.

The Narrative contains—I. The Extent, Population, &c. of each Country—II. The Characteristics of each Language—III. The Versions executed in each Language—IV. The Results that have followed the Dissemination of the Scriptures in each Land.

New Edition, 4to. half-bound in morocco, extra, price 2l. 2s.

"We know not in what terms of sufficient commendation to express our admiration of this most beautiful book."

Eclectic Review.

Catalogues, gratis, by post free, of Polyglot Bibles, Church Services, Books of Common Prayer, in Ancient and Modern Languages, Aids to the Study of the Old and New Testament, Concordances, Grammars, Lexicons, &c.

London: W. Allan; Dulau & Co.; Simpkin & Co.

COMPLETION OF THE ENGLISH CYCLOPÆDIA. CONDUCTED BY CHARLES KNIGHT.

THE Twenty-second Volume of this important Work, published in September 1861, finishes what may be truly called the **only Complete Cyclopædia of Reference in our Language**. Its merit is not to be sought in a limited number of elaborate Treatises, to the comparative neglect of details which the Student looks for in a Cyclopædia. The Alphabetical arrangement has constant regard to the connexion of each article with other articles as part of a system. Although the number of Contributors is very large, the general uniformity has been preserved, chiefly by the circumstance that *every portion is an original contribution*, expressly written for 'THE PENNY CYCLOPÆDIA,' or for 'THE ENGLISH CYCLOPÆDIA,' which is founded upon that work, and that no portion has been hastily adapted from old Cyclopædias. The able and laborious Editor of 'The Penny Cyclopædia,' Mr. Long, who constantly bore in mind the necessary connexion of parts with the whole, was enabled to secure the aid of a large number of the most eminent men of the time. The Conductor of 'The English Cyclopædia' has been fortunate in obtaining the assistance of a body of new Contributors and Revisers, who, in their several departments, have supplied what was wanting to make this work as complete and as accurate as can be expected in an undertaking so extensive. No expense has been spared in securing the aid of gentlemen best qualified to produce a work of the highest pretensions. The cost of the literary production of 'The Penny Cyclopædia' was nearly Forty Thousand Pounds. The elaborate revisions and large additions of 'The English Cyclopædia' have involved an outlay of Ten Thousand Pounds.

THE ENGLISH CYCLOPÆDIA is published in FOUR DIVISIONS, each Division being complete in itself, and sold as a separate work.

THE CYCLOPÆDIA OF GEOGRAPHY,

In Four Volumes, embraces the Physical Features of every country, the Statistics of its departments, and its Cities and Ports of Commerce; as well as recording its History to the most recent period.

THE CYCLOPÆDIA OF BIOGRAPHY,

In Six Volumes, may fairly be stated to be the most complete Biographical Dictionary extant, — universal in its range, full without being verbose, scrupulously accurate in its dates. It includes notices of living persons of contemporary celebrity, and of others recently deceased. The six volumes contain as much matter as forty octavo volumes, such as those of the 'Biographie Universelle.'

THE CYCLOPÆDIA OF NATURAL HISTORY,

In Four Volumes, is edited by Dr. E. Lankester, who, in the revision of the articles of 'The Penny Cyclopædia,' has had the co-operation of several distinguished friends. This Cyclopædia includes the Contributions of the most eminent English Naturalists. In BOTANY, those of Dr. Lindley and Dr. Royle; in GEOLOGY, those of the late Sir Henry de la Beche, Mr. L. Horner, and Professor Phillips; in MINERALOGY, those of the late Mr. R. Phillips and the late Professor W. Turner; in ZOOLOGY, those of the late Mr. Broderip, the late Professor Edward Forbes, Mr. Ogilby, and Mr. Waterhouse; in COMPARATIVE ANATOMY and PHYSIOLOGY, those of Mr. Day, Professor Paget, and Dr. Southwood Smith.

The Division of 'The English Cyclopædia,' now completed in eight volumes, and which completes the entire work, is

THE CYCLOPÆDIA OF ARTS AND SCIENCES.

The Cyclopædias of the last century were strictly Dictionaries of Arts and Sciences. They included no names of persons or of places. Their Natural History was directed to the use of vegetable and animal substances rather than to their scientific characters. In these practical objects our 'Cyclopædia of Arts and Sciences' follows in the steps of these works, upon which all Cyclopædias, with the exception of 'The Penny Cyclopædia,' have been founded. But its range is far more universal. The difficulty of obtaining completeness in this age of rapid progress is far greater than at the period when the influence of science upon the productive powers of industry was comparatively small. In this, the most important of the Divisions of 'The English Cyclopædia,' a vast amount of new matter has been required to bring up its information to the present day, and not an article, not a page, not a line, has been reprinted without revision. Whether correction, or not, has been required, the labour of the reviser has been compensated. A Cyclopædia may make high pretensions, and yet use its old stereotype plates with a few alterations and new articles. That is not the course which has been pursued with 'The English Cyclopædia.' To judge of the extent of the division of labour required to produce the 'Cyclopædia of Arts and Sciences' alone, it will be seen that it includes sixty Contributors in the original 'Penny Cyclopædia,' and that thirty-six new Contributors and Revisers have assisted in the production of the present eight volumes.

Principal Subjects in the Cyclopædia of Arts and Sciences, with the Names of the Contributors and Revisers.

MATHEMATICS AND ASTRONOMY.

Contributors: Penny Cyclopædia.

G. B. AIRY, A.M., Trinity College, Cambridge, Astronomer Royal.
A. DE MORGAN, A.M., Trinity College, Cambridge, Professor of Mathematics at University College, London.
T. GALLOWAY, A.M. F.R.S.
J. LE CAPPELAIN, Actuary of the Albion Insurance Company.
Rev. R. SHARPESAWY, A.M. (the late), Trinity College, Cambridge.

Contributors and Revisers: English Cyclopædia.

G. B. AIRY.
A. DE MORGAN.
A. CAVLEY, F.R.S. F.R.A.S.
R. GRANT, A.M. F.R.A.S., Professor of Astronomy in the University of Glasgow.

MANUFACTURES AND MACHINERY.

Contributors: Penny Cyclopædia.

T. BRADLEY, Professor of Geometrical Drawing, Woolwich, and King's College, London.
JAMES BRESE.
EDWARD COWPER (the late), Professor of Manufacturing Art and Machinery, King's College, London.
G. DODD.
E. NORRIS, Royal Asiatic Society.
A. ROSE.

Contributors and Revisers: English Cyclopædia.

G. R. BURNELL, C.E.
GEORGE DODD.

PHYSICAL SCIENCES:

OPTICS; ACOUSTICS; DYNAMICS; ELECTRICITY; MAGNETISM; METEOROLOGY.

Contributors: Penny Cyclopædia.

A. DE MORGAN.
Rev. R. MURPHY (the late), Caius College, Cambridge.
Professor NARRICK.
T. BRADLEY, King's College.

Contributors and Revisers: English Cyclopædia.

A. DE MORGAN.
G. G. STOKES, Lucasian Professor in the University of Cambridge.
C. COLLIPSON, Lecturer on Physical Science, King's College School.
E. W. BRATLEY, F.R.S., of the London Institution.
ANDREW and THOMAS ROSE.
G. R. SHARLEY, King's College School.
R. GRANT, A.M., Professor of Astronomy, Glasgow.

RURAL ECONOMY.

Contributors: Penny Cyclopædia.

Rev. W. HICKY.
Rev. W. L. RHAM (the late), Vicar of Winkfield.

Contributor and Reviser: English Cyclopædia.

J. C. MORSON.

CHEMISTRY.

Contributors: Penny Cyclopædia.

W. H. BROOKS.
Dr. DAY.
R. PHILLIPS, F.R.S. (the late)

Contributors and Revisers: English Cyclopædia.

E. FRANKLAND, Ph.D. F.R.S., Lecturer on Chemistry, St. Bartholomew's Hospital.
Dr. ATKINSON, F.R.S., Lecturer on Chemistry, Cheltenham College.
J. ATTFIELD, Demonstrator of Chemistry, St. Bartholomew's Hospital.
Dr. GUTHRIE, F.R.S., Professor of Chemistry, University of Mauritius.

* The Articles on Chemistry in 'The Penny Cyclopædia,' which were chiefly contributed by the late R. PHILLIPS, had a high reputation at the period of their publication. But the enormous advance of chemical science has called for an entire remodelling of this department of 'The English Cyclopædia.' That labour has been accomplished by Dr. E. FRANKLAND, with the occasional assistance enumerated above.

NAVIGATION AND MILITARY SCIENCES.

Contributors: Penny Cyclopædia.

Professor DAVIES, Woolwich.
Hon. Captain DEVEREUX, R.N.
J. NARRICK, Professor of Mathematics, Royal Military College, Sandhurst.
Major PROCTER (the late), Royal Military College, Sandhurst.

Contributors and Revisers: English Cyclopædia.

S. M. SAYER, Principal Instructor of Naval Engineers of Her Majesty's Reserve, Sheerness.
Captain DONNELLY, R.E.

MATERIA MEDICA; MEDICINE; SURGERY.

Contributors: Penny Cyclopædia.

W. BAILEY, M.D. (the late), T. SOUTHWOOD SMITH, M.D.
Dr. BECKER (the late), W. COULSON.
G. BIRD, M.D., J. FARREN, A.M., Trinity College, Cambridge.
R. DICKSON, M.D., J. PAGET, St. Bartholomew's Hospital.
C. J. JOHNSTONE, M.D. (the late), W. YOUTT (the late), Veterinary Surgeon.
Dr. PHILLIPS.
J. SIMON, M.D.

Contributors and Revisers: English Cyclopædia.

R. DICKSON, M.D.
E. LANKESTER, M.D.

ARCHITECTURE: CIVIL ENGINEERING.

Contributors: Penny Cyclopædia.

W. B. CLARKE.
W. HOSKING (the late).
W. H. LEEDS.

Contributors and Revisers: English Cyclopædia.

JAMES THORNE.
G. R. BURNELL, C.E.

PAINTING; SCULPTURE; ANTIQUITIES; ENGRAVING.

Contributors: Penny Cyclopædia.

Sir C. EASTLAKE, President of Royal Academy.
R. FORD (the late).
Sir EDMUND HEAD.

Contributors and Revisers: English Cyclopædia.

SAMUEL BIRCH, British Museum.
JAMES THORNE.
T. MALONE, London Institution.
A. RAMSAY.

PHILOLOGY; MENTAL PHILOSOPHY; GOVERNMENT AND POLITICAL ECONOMY.

Contributors: Penny Cyclopædia.

T. H. KEY, A.M., Trinity College, Cambridge, Professor of Comparative Grammar at University College, London.
W. D. CHRISTIE, A.M., Trinity College, Cambridge.
J. HOPKINS, Professor of Mental Philosophy, University College, London.
GEORGE LONG, A.M.
Rev. A. W. M. MORRISON, A.M., Trinity College, Cambridge.
T. E. MAY, Barrister-at-Law, Clerk-Assistant of the House of Commons.

MR. BENTLEY'S NEW PUBLICATIONS FOR SEPTEMBER.

New Work on Japan—Consul C. Pemberton Hodgson.

A RESIDENCE at NAGASAKI and HAKODATI in 1858-59. With an ACCOUNT of JAPAN. By C. P. HODGSON, H.M.'s Consul at those Ports. With a Series of Letters on JAPAN, by HIS WIFE. 8vo. with numerous illustrations. [Just ready.]

J. Henage Jesse.

MEMOIRS of RICHARD III. and his CONTEMPORARIES. By J. H. JESSE, Author of 'The Court of England under the Stuarts.' 8vo. with Portraits and Plan, &c. [Immediately.]

New Story of Modern Life.

EAST LYNNE.

By Mrs. HENRY WOOD, 3 vols. [Immediately.]

"Truly the heart is deceitful, and out of its depths of corruption rise, like an exhalation, the misty phantoms of passion: angels of light they seem, but are only delusions of Satan.... This is the cross I must bear: sin and the swift retribution." *Longfellow.*

Lord Dundonald.

A REPLY to the OBSERVATIONS in 'THE QUARTERLY REVIEW' on THE AUTOBIOGRAPHY of LORD DUNDONALD. By MARCUS. 8vo. with Charts. [Immediately.]

Middle-Class Cookery-Book.

THE COOK'S GUIDE. By Charles ELMÉ FRANCAPELLI, late Chief Cook to Her Majesty the Queen.

This Cook's Guide and Housekeeper's and Butler's Assistant contains a Practical Treatise on English and Foreign Cookery in all its Branches, and also Instructions for Pickling and Preserving Vegetables, Fruits, Game, &c.; the Curing of Hams and Bacon; the Art of Confectionary and Ice-making; and the Arrangement of Desserts.

In a handsome volume, price 5s. with many illustrations.

DR. CUMMING'S POPULAR ANSWERS to 'ESSAYS and REVIEWS.' Small 8vo. 4s.

THE HON. MRS. YELVERTON'S 'MARTYRS to CIRCUMSTANCE.' Second and Concluding Part, price 3s. Also the First Part, Seventh Thousand, price 2s. Or the whole work in cloth, price 5s.

MEMOIRS of MARSHALL HALL, M.D. F.R.S. By HIS WIDOW. 8vo. with a Portrait, 14s.

"As a narrative this work is more interesting than a novel; as the memorial of a great English worthy it will be perused with pride; as an incentive to honourable toil and the practice of virtue, this story of the rise of Marshall Hall deserves to take rank amongst the most favourite tales of the triumph of genius." *Lancet.*

John Huss and Jerome of Prague.

THE 'LIFE and TIMES of CARDINAL JULIAN. By the Rev. E. C. JENKINS. 8vo. 14s.

"This book has solid value, and deserves close attention." *Examiner.*

"A good picture of a remarkable man, distinguished by splendid talents and vigorous energy." *Morning Post.*

The Popular Sea Novel,
Ready at every Library.

VONVED the DANE, the ROVER of the BALTIC. 3 vols.

"This is a great book, both in conception and execution, which in its own school has no rival. Victor Hugo might be proud to have written some of its chapters; he has never written anything more thrilling or more terrible; and Dumas himself has not exceeded this writer in his account of the Rover of the Baltic." *Morning Post.*

With Four Charts and Portrait, price 5s.

LORD DUNDONALD'S AUTOBIOGRAPHY.

"Ought to be a prize-book in every military and naval school." *London Review.*

A LIBRARY EDITION, in 3 vols. 8vo. with Plans, 36s.

London: RICHARD BENTLEY, New Burlington-street,
Publisher in Ordinary to Her Majesty.

13, Great Marlborough-street.

HURST & BLACKETT'S NEW PUBLICATIONS.

THE OKAVANGO RIVER. A Nar-

native of Travel, Exploration, and Adventure. By CHARLES JOHN ANDERSSON, Author of 'Lake Ngami.' 8vo. with Portrait of the Author, and numerous illustrations. 21s.

"Mr. Anderson's book, from the number of well-told adventures, its unpretending style, its rich fund of information, and spirited illustrations, will command a wide circle of readers, and become a favourite with all those who can appreciate during perseverance, and a buoyant spirit under overwhelming difficulties. The interest of his story never flags for a moment." *Athenæum.*

"Mr. Anderson's book, illustrated with many animated pictures of adventures connected with the wild sports of the journey it describes, is one that will be popular as a budget of trustworthy traveller's tales, besides being valued for the information it gives to geographers." *Examiner.*

"This volume, profusely and splendidly illustrated, will take a high rank among works of adventure and exploration. There can be no question of the great service Mr. Anderson has rendered to geographical science." *Herald.*

The SECRET HISTORY of the

COURT of FRANCE under LOUIS XV. Edited, from rare and unpublished Documents, by Dr. CHALLICE. 3 vols. with Portraits, 21s.

"A valuable and interesting work. It unites the fascination of a romance with the integrity of history." *Chronicle.*

"These volumes are both amusing and interesting." *Critic.*

"These volumes are very useful and valuable contributions to the history of France during one of its most important epochs. They are, moreover, entertaining to the general reader, as well as highly instructive to the student." *Observer.*

TRAVELS in the REGIONS of the

AMOOR, and the Russian Acquisitions on the Confines of India and China. By T. W. ATKINSON, F.R.S. F.G.S. Author of 'Oriental and Western Siberia.' Dedicated, by permission, to Her Majesty. Second Edition. With Map and 32 illustrations, 21s. bound.

"A noble work. The entire volume is admirable for its spirit, unexaggerated tone, and the mass of fresh materials by which this really new world is made accessible to us." *Athenæum.*

HENRY IV. and MARIE de MEDICI

From Original and Authentic Sources. By Miss FREER, Author of 'The Lives of Marguerite d'Angoulême, Jeanne d'Albret,' &c. 2 vols. with Portraits, 21s. bound.

"A work of more than ordinary value. The volumes do the author great credit. They bear all the marks of industry and research, and are written throughout with ease and correctness." *Daily News.*

A SAUNTER THROUGH the WEST

END. By LEIGH HUNT. 1 vol. 10s. 6d. bound.

"Leigh Hunt's genial humour shines in a book like this—worthy companion to his 'Town' and 'Old Court Suburb.'" *Examiner.*

The LIFE of JEANNE d'ALBRET,

QUEEN of NAVARRE. By Miss FREER. Price 5s. bound and illustrated, forming the 18th volume of HURST & BLACKETT'S STANDARD LIBRARY of Cheap Editions of Popular Modern Works.

"We have read this book with great pleasure, and recommend it to general perusal. It reflects the highest credit on the industry and ability of Miss Freer. Nothing can be more interesting than her story of the life of Jeanne d'Albret, and the narrative is as trustworthy as it is attractive." *Post.*

STUDIES FROM LIFE. By the

Author of 'JOHN HALIFAX, GENTLEMAN.' 1 v. 10s. 6d.

"These 'Studies from Life' are remarkable for graphic power and observation. We can honestly say that this book will not diminish the reputation of the accomplished author." *Saturday Review.*

A BOOK ABOUT DOCTORS. By

J. C. JEAFFRESON, Esq. New, Revised, and Cheaper Edition, in 1 vol. 10s. 6d. bound.

THE NEW NOVELS.

EAST and WEST. By J. Frazer

CORKRAN. 3 vols.

A HERO in SPIKE of HIMSELF.

By Captain MAYNE REID. From the French of Luis de Bellemare. 3 vols.

"This story is full of exciting adventures, and will meet with a cordial welcome from the numerous admirers of Capt. Mayne Reid's stirring narratives." *Observer.*

ALONE in the WORLD. By the

Author of 'COUSIN GEOFFREY,' &c. 3 vols.

"This new tale by Mrs. Gordon Smythies (whom Thomas Campbell, the poet, decided to be the queen of the domestic novel) unites the pathos and high morals of her 'Married for Love,' with the wit of her 'Cousin Geoffrey' and the humour of her 'Marrying Man.'" *Chronicle.*

"A most exciting and interesting novel." *Observer.*

A FAMILY HISTORY. By the

Author of 'THE QUEEN'S PARDON.' 3 vols.

"A very good novel, well imagined and well told." *Post.*

UNDER THE SPELL. By the Author

of 'GRANDMOTHER'S MONKEY,' 'WILDFLOWER,' &c. 3 vols.

"The best story hitherto written by a very pleasant novelist. It is throughout a good story—rapid and rich in incident—that nobody will leave unfinished." *Examiner.*

NOTICE TO QUIT. By W. G. Wills,

Author of 'Life's Forebodings.' 3 vols. [Just ready.]

Conchological Works,

By LOVELL REEVE, F.L.S. F.G.S.

CORRESPONDING MEMBER OF THE NATURAL HISTORY SOCIETY OF WURTEMBERG, AND OF THE LYCEUM OF NATURAL HISTORY OF NEW YORK.

In 2 vols. price 2. 12s. coloured,

Elements of Conchology:

An Introduction to the Natural History of Shells, and of the Animals which form them. By LOVELL REEVE. With 25 Plates of Shells and of the Living Animals by G. R. Sowerby and H. Miller.

2 vols. 4to. price 16s. coloured.

Conchologia Systematica:

A Complete System of Conchology; in which the Lepadæ and Conchiferous Molluscs are described and classified according to their Natural Organisation and Habits. By LOVELL REEVE. With 200 Plates of Shells by J. D. G. and G. R. Sowerby.

In 13 vols. 1,614 Plates, price 104l. 9s. 6d. coloured.

Conchologia Iconica;

Or, Figures and Descriptions of the Shells of the Mollusca, with Remarks on their Affinities, Synonymy, and Geographical Distribution. By LOVELL REEVE. Published Monthly in Parts (Part VII now ready), each containing eight Plates, price 10s. coloured. Published also in General, separately, a priced List of which may be had on application.

"This great work is intended to embrace a complete description and illustration of the Shells of Molluscos Animals; and so far as we have seen, it is not such as to disappoint the large expectations that have been formed respecting it. The figures of the Shells are all of full size; in the descriptions a careful analysis is given of the labours of others; and the Author has apparently spared no pains to make the work a standard authority on the subject of which it treats." *Athenæum.*

In preparation.

British Land and Freshwater Conchology;

Being a History of the Terrestrial and Fluvial Shells of the British Islands, and of the Animals which form them. By LOVELL REEVE. Illustrated with Wood Engravings of the Shell of each Species drawn by G. R. Sowerby, and of the Living Animal of each Genus, drawn and engraved by O. Jænnit.

TO COLLECTORS OF SHELLS.

L. REEVE begs to announce that it is his intention to add to his Publishing Business, at No. 5, Henrietta-street, Covent-garden, a department for the purchase and sale of Specimens of SHELLS.

In addition to the Specimens acquired by him during many years' correspondence with persons in different parts of the world, he has become possessed of the Cabinets of one of our most eminent of Living Collectors, comprising about Ten Thousand Species, chiefly named; and he trusts to be able to make his Conchological Museum a useful source of reference to collectors for naming, as well as for purchasing, Specimens.

SHELLS are collected with more intelligence than formerly. Conchologists are beginning to value Species rather than Specimens; and the old comeliness of competing for the possession of rarities at high prices is giving place to the more intellectual aim of procuring examples of types illustrative of form and geographical distribution, leading to the study of the habits and general organization of the molluscos animals which form them.

L. REEVE will arrange to be "at home" in his Museum for the reception of visitors on Mondays, Wednesdays, and Fridays, from twelve till four o'clock, commencing on the 1st of October.

Collections of Shells, with the name and price attached to each specimen, sent into the country to select from, to purchasers of not less than ten pounds' worth.

LOVELL REEVE, 5, Henrietta-street, Covent-garden, W.C.

LONDON, SATURDAY, SEPTEMBER 14, 1861.

LITERATURE

Virginie de Leyva; ou, Intérieur d'un Couvent de Femmes en Italie, au Commencement du Dix-septième Siècle, d'après les Documents Originaux, par Philarète Charles, Professeur au Collège de France, Conservateur à la Bibliothèque Mazarine. (Paris, Poulet-Malassis et De Broise.)

Mademoiselle de Lève, as the French have called her, La Signora di Monza, as the Italians style her, is a high personage in the world of drama and legend. Except Beatrice Cenci, no woman of private rank has entered so much into the poetry and fable of modern Italy. She figures in an episode of Manzoni's great romance 'The Betrothed,' and is the heroine of Rosini's 'Lady of Monza.' But the true history of this ardent and voluptuous woman is more singular and dramatic than the wildest efforts of the Italian poets. Massinger should have told her story. A modern writer is bound by the conventional laws of probability even in his fictions; and what fabulist could dream of presenting to his reader a young girl, pensive and charming, vowed to a religious life, who would admit a lover to her cell, who would corrupt her nuns into becoming the accomplices in her crimes, and who would remove by violence every one who came across her guilty path? The line of probability must be drawn. It may be at the Château d'If, or in the Isle of Mente Christo. It must be somewhere; and wherever it is drawn, it would be outside the walls of the Convent of St. Catherine of Monza. A heroine who stood by, and saw murders committed for the gratification of her lust and her revenge, would be rejected by every sense. Dumas himself would not adventure on such a figure. Such, however, was the real Lady of Monza, whose story M. Philarète Charles, following the documents collected by the zeal and industry of Signor Dandolo, has told in 'Virginie de Leyva,' with deep philosophical insight and with singular literary power.

Signor Dandolo, who has brought together, as the workman brings brick and mortar to the architect, the materials on which M. Charles narrates and speculates, is not only an Italian author of many good volumes, an antiquarian and archaeological scholar, a searcher amongst the archives of Milan, of Monza and Pavia, but a descendant of the great Venetian Doges of his name. Possessed of a small estate in the Apennines, he retired from political agitations into solitude in 1850, to meditate under the shade of the fir and chestnut trees on the history of his country in past times. Here, the descendant of the Doges, following his labour of love (as well capable of doing his work in his own day and generation as were the Doges, his ancestors, to govern their Republic and conduct its foreign wars), restored and annotated the authentic documents of which M. Philarète Charles has made use.

Don Antonio de Leyva, born in the province of Navarre, of an obscure but gentle race, was a soldier by profession, a bandit by nature. Pride and poverty had made him a Free Lance, and at the bidding of Charles the Fifth he went into Italy, with hordes of his proud and impoverished countrymen, to cut Italian throats and surprise Italian seigniories. Indeed, he was one of that race of brigands which profited by the intestine quarrels of Italy to establish in both north and south that Austro-Spanish influence which has just been swept away by the guns of Solferrino and Marsala. Don Antonio was the man for his work. Danger

was to him a delight, and exercised over him the fascination of a personal vice. It is a trite enough saying, that a man who cares nothing for his own life is the master of every man who does care; but this respectable old truth is the secret of Don Antonio's success in the Milanese. Contempt of death made him a great man. Brave, instant, unscrupulous, his passions were restrained by neither love nor fear. At once sensual and ambitious, he cared little for persons and nothing for principles in the exercise of his great bodily and mental powers—for nothing indeed beyond the riotous joy of carrying his point against a friend, a mistress, or an enemy. No desperate wretch in the army of Bastard William or in the forlorn hope of Pizarro set his life more completely on the throw of the dice than Don Antonio. But he won the game. In his own poor country, had there been no wars to draw him off, he would have been a contrabandist or a matador. In the conquered province of the Milanese he became a powerful partisan warrior and the Lord of Monza, that Richmond of Milan, in which until lately was preserved the Lombardic crown. Charles took care that his faithful servant should be well encouraged. So Antonio de Leyva, the poor Navarrese, was raised into the highest rank of Italian nobles, and when he went to his rest a sumptuous monument in the Church of San Dionigi of Milan recorded the virtues and exploits of the heroic and exemplary Antonio de Leyva, Prince of Ascoli!

The family took root in their new home. Don Martino, son of Antonio, sent his daughter Virginia, a girl of such rare and noble beauty that her portrait (painted in after life by Daniel Crespi) might be mistaken for an artist's dream of St. Catherine, to be educated at the Convent of Monza. In her own right, she was Lady of the district. The frugal family desired to retain this rather splendid part of their property, and Don Martino left his son the Principality of Ascoli, and placed his daughter Virginia, as the fashion in the highest families was, in the convent in which she had herself been trained. This convent, which was at Monza, and within her own magisterial jurisdiction, belonged to the order of St. Catherine. Its inmates gave their time to teaching, and among the pupils who came to them for instruction was a young lady of Monza, Isabella degli Ortensii. A handsome youth, Osio degli Osii, whose house looked down into the convent-yard, saw Isabella and made love to her by signs. The girl accepted his admiration. Sister Virginia, who caught Isabella making signs to Osio, not only reprimanded her for such levity, but sent for Signor Molteni, notary of Monza, and instructed him to inform the family of what she had seen. Isabella's father took her from the convent and married her to a man of her own age and rank. Osio, vexed with Molteni, struck a poniard to his heart, went home to his house, armed his servants, barricaded his doors, and stood on his defence. Carlo Pirivano was the magistrate of Monza, but Pirivano had a most unwholesome dread of Molteni's fate. Osio was a gentleman, and the offences of gentlemen were not to be searched too strictly. Justice was blind. Virginia felt a feminine compassion for a young lover who had lost through her act a mistress, and had revenged himself upon the more immediate instrument of his loss. As feudal Lady of Monza, exercising seigniorial rights, Virginia's will on such a point was law to Pirivano. Osio went to thank her, and the young assassin fell in love with his beautiful benefactress. Virginia was twenty years of age; by nature ardent, and by habit self-indulgent. She returned his passion.

The difficulty in the way of their meeting—not to speak of its enormous immorality—had been very great; and only that the Convent of St. Catherine was cursed with a most depraved confessor in Arrighone—a man who seems to walk visibly out of one of Boccaccio's garden-gates,—the pollution that ensued upon their meeting would have been impossible. Osio had gained Arrighone to his interests; and the monk, who had been repulsed in some dishonourable proposals of his own to the beautiful and noble nun, had shown the impassioned boy how he might approach the woman of his heart. Under the pretence of thanking her for staying the process against him, he had counselled him to make known his love boldly. "I saw this young man," said Virginia, in one of her many depositions, "for the first time from the window of my Sister Candida's cell, at which I happened to be standing. This window looked upon the garden. He made a polite bow, and signed that he had a note to deliver to me. I was very much incensed against Molteni's murderer, and resolved to follow him without pity. He had a very humble, suppliant, yet well-bred air; his bearing was so noble and distinguished that I could not refuse to receive the note." When she had first seen the gay and youthful figure, she had said to Candida, "Oh, can anything be more beautiful?" Candida confessed these words to Arrighone, and Arrighone repeated them over their wine to Osio.

Virginia struggled in the toils spread around her by the gay seducer who was following his pleasure, and the false confessor who was following his cupidity and revenge. The force of her own passions made their work but too easy. "It was a power," she said in her depositions, "altogether devilish. For all the treasures of Spain, and for all the thrones of its princes, I would not have loved Osio. I would have made a pilgrimage. I beat myself with rods until the blood ran down my body. But the passion increased in vigour. I saw him in everything. I no longer slept; I no longer lived. One day, he begged that I would consent to kiss a gold box set with diamonds, which he at once took back and pressed to his lips; it was an amulet which Arrighone had prepared for him, and which, being blessed with holy water, would overcome all my scruples. Osio gave me a book from the library of my Father Confessor, the same Arrighone, in which it was written that a layman might enter without sin into the cell of a nun, and that the only sin consisted in the nun quitting her retreat. I was in despair, and wished that I were dead."

The poor lady struggled with the coil; but the insolent audacity of Arrighone put an end to her scruples; for even in the cell of her convent, and in a province of which she was the feudal head, Virginia found that she needed a protector against his arts. He unmasked, or pretended to unmask, his face. He sent her a short and insolent note, declaring that he was the true writer of all the letters signed by Osio; that he loved her, and would insist on some return. Virginia treated him with lofty and tragic scorn, and threw herself at once into her young lover's arms.

The amour lasted long. A servant girl, Catherine de Meda, took the responsibility before the world of the children born of this intrigue. Now and then the better mind of Virginia returned upon her; when she shut herself in her room, threw the secret keys into a well, and had the passage from Osio's house built up. But she soon repented of her virtue; and the amour which began with a murder soon grew

into a strange familiarity with blood and crime. Meda was the first to fall. This girl, after going all lengths to screen her mistress, threatened to expose her. Virginia, with the help of two of the nuns, tried to kill her, but failed. Osio dashed her brains out. The two nuns assisted him to bury the body of the poor girl. An apothecary, named Ranieri, spoke of the disorders in the convent, and the Princes of Ascoli, Virginia's kinsmen, hearing of the intimacy formed between Osio and Virginia, and fearing lest political troubles might fall upon them in consequence, had him arrested, and confined in the state prison of Pavia, on the charge of violating a religious house. Virginia stirred herself to save her lover. A solemn protestation of the nuns, declaring that the rumour of disorders at St. Catherine was a vile scandal, and that there had never been the slightest intimacy between Osio and Virginia, being drawn up, Osio was set at liberty, and in a few hours after his return to Monza, Ranieri was shot. Virginia hid her lover for fourteen days in her cell; but the cry for pursuit and vengeance reached the Cardinal Borromeo, who paid a visit to the Convent of St. Catherine, had a long interview with Virginia, and, startled by the frank audacity of her confessions of sin in the matter of love, ordered the Lady of Monza herself to be arrested and sent to Milan.

This interview would make a picture. The Cardinal was an old man of princely and saintly race. Virginia was thirty-two years old; her beauty brightened by passion and preserved by the cloister. The Cardinal received her gently; spoke of many trifles with the graceful ease acquired by long habit of dealing with high-born sinners; glided into more serious topics, religious and moral; and chatted with her playfully about her duties to herself, her race, her profession, and her country. She saw his drift, and met him boldly. "You placed me," she exclaimed, "against my will, in a religious house; you made me take the vow before I was of age. I was bound to the altar by force. Therefore, my profession of a religious life is null. I must marry. I have made my choice. Unite me to the man that I have chosen." The Cardinal, struck dumb by this plain and prompt avowal, left the room without a word. A carriage with four mules came to the gates at night; Virginia was put into it; and it carried her to the convent of the Bochetto, at Milan.

The two nuns who had tried to kill Meda, trembling for their lives, sent to Osio; and the very next night after Virginia's departure, they escaped from St. Catherine's under his protection. Two of his servants, Ottavia Ricci and Benedetta Homati, were near at hand, to aid him or avenge him. They arrived at the banks of the Lambro, a little mountain torrent, with which the tourist of Lake Como is familiar. Ricci hurled one of the nuns into the flood. Osio disembarassed himself of the murderer by a few strokes under his mantle, and the remaining three persons—the nun, the seducer and the servant—pursued their journey into a wood, where Osio threw the second nun into a well, and then stabbed Homati, the witness of these new crimes. But the two nuns were not killed. By a miracle, the woman was recovered from the well, and the one thrown into the Lambro escaped with her life, to become the chief witnesses against Osio and Virginia.

Osio had to fly into the forests which still cover the mountains at the foot of Lake Como. There he lived as an outlaw, with a band of followers desperate as himself. The Conde de Fuentes, the Spanish governor of Milan, ordered his house at Monza to be razed, a ruined wall alone being left to mark the site. Foiled in

every attempt to arrest him by stratagem or force, Fuentes proclaimed a reward for any one who would bring him in, alive or dead. A companion of his youth betrayed and murdered him, in a manner the most singular. This companion asked him to his house as a change from his desolate life in the woods. Osio went. In the midst of their excesses Osio told his friend how he had killed Catherine de Meda. His host had an instrument made exactly like that with which Meda had been knocked down, and when all was ready for the act he invited Osio to go down into the wine-cellar with him to drink a particular wine. A friar was below to receive his confessions; the servants of the house seized him, and the master struck him in the nape of the neck precisely as he had struck the girl in the Convent of St. Catherine. Next day his handsome head was fixed on the ruined wall at Monza.

The parties were tried and condemned to various penalties. Arrighone, the vilest sinner of the whole, received three years in the galleys. Virginia was immured in a convent. Once or twice we get glimpses of her in the letters of Cardinal Borromeo. She passed her life, he says, in prayers and tears; and she died at last in the very odour of sanctity—as Borromeo says, *Come una santa!*

Signor Dandolo and M. Chasles appear to consider that the conventual system made Virginia what she afterwards became—the rival of Beatrice Cenci in shame and suffering, as she was in the fatal gifts of beauty, will, and individuality. We think, in snapping at general conclusions on the influences of religious seclusion, they underrate the force of personal character. Doubtless, M. Chasles is philosophically right in saying, that in the monastic system "the best education of man—that which teaches him to judge and then leaves him free to choose for himself, is absolutely prohibited." If the monastery the first of all virtues is obedience, and the habit of obedience, our philosophers urge, is relaxing and destructive to the individual mind. This may be also true. Clear, very clear, it is that the education of a monk or of a nun is not the best training for a man or woman entering on the rough duties of active life; but then it ought to be remembered, for the other side, that a monk is not meant for the life of a skipper, nor a nun for that of a *vivandière*. A woman who takes the veil, whatever may have been the cause, looks forward to a career of order, calmness, and devotion; one in which there should be no temptation to resist, no difficulties to be met. Dash, energy, and will may be required in the world, even from girls and women, and when softened and mellowed by gentler qualities, these robust and masculine virtues may become very attractive in the eyes of men, but the very theory of a religious life, which excludes all contest, rivalry and passion, also excludes, and that logically and necessarily, the teaching which would make girls useful in a booth or successful at a bazaar—rivals to Mrs. Jarley or Rebecca Sharp. Surely, it is but fair to judge each system by its effect in producing what it is intended to produce. It is no impeachment of the value of geometry that it will not teach you to swim. It is no fault of a musical education that it will not make you a dead shot. Geometry makes geometricians, music musicians, monasteries monks. When M. Chasles complains that the monastic system takes away the right of judging and choosing for oneself, he makes, we submit, an unphilosophical complaint. He might as well object to the earth being round or sugar being sweet. It would be as proper to attack the Institute of France, because it has never produced a great general, as

to impeach the Convent of St. Catherine, because its system of training is not one that would strengthen a Mdle. de Mars to walk through her slippery world without a fall. The habit of submission may have a virtue of its own humble kind, though such a virtue would be useless to Robinson Crusoe on his island, or to General Bonaparte in his first Italian campaign. A more robust and active quality is required for success. But a nun does not wish to succeed. She aspires to no more than to endure or to serve. Sworn from her youth to a career divided between charity and prayer, she puts away, with the fascinations of womanhood, all need for the strength or cunning which resists the tempter's arts. That in evil days temptation may intrude into the convent, as it intrudes into the home, there are too many facts in history to prove. We know the stories of the Medici. We have heard the scandals against the Regent. We have read Boccaccio and the imitators of Boccaccio in our own time. But we are not aware that any body of facts has ever been produced to show that, in such evil days, the licence has been greater in the convent than in the cottage,—each measured, as is fair, by the opportunities and immunities for vice which it presents. When the whole body of society is dissolved in sensuality, it is impossible for even the best to escape some sort of contamination; yet no man in his senses will maintain that, even in the very worst periods of social disorder, the inmates of religious houses were not better, measured by their temptations, than the women of the surrounding hamlets.

Our analysts, in their pride of science, forget, we think, how much, in such a case as that of Virginia de Leyva, is due to individual character. In the world, as in the cloister, she would have fallen into lawless love. Had she not been Virginia, she would probably have been Lucretia. The Borgias were De Leyvas on a grander scale and in a more splendid scene. Virginia was the true complement of Don Antonio; with the same vigorous, daring, self-indulgent nature, carrying into the recesses of the convent the principles of a camp. The scene which M. Chasles quotes from the interview between the sinful lady and the Cardinal destroys the theory that her vicious life had been in any way the result of the conventual system of education, as established in Italy and exemplified at Monza.

M. Victor Euphémion Philarète Chasles (who dedicates this volume to the Author of 'Pendennis' and 'Vanity Fair') is understood to be a candidate for the honours of the Academy; the "English candidate" he is called by his opponents: and the story of his literary life is such as to interest English readers in no common degree in his success. The son of a revolutionary general, who had been a Professor of Rhetoric before he took up the profession of war, and of a Huguenot mother, he was apprenticed in Paris to a printer. This printer, a disciple of Rousseau, was arrested by the Government of the Restoration as a man of dangerous opinions; and little Philarète, as his apprentice, passed two months with him in jail. Chateaubriand took pity on the child, and procured his liberation. Philarète then came to London, where he remained for about seven years, completing his education, and acquiring our language and literature. From London he travelled into Germany. On his return to Paris, a Saxon in culture, a Gaul in spirit and style, he became secretary and assistant to M. de Jouy. Soon he won attention to himself; in 1827 he divided with M. Saint-Marc Girardin the

prize of Eloquence proposed by the Academy for an Essay on the Sixteenth Century; and was immediately attached to the staff of the *Journal des Débats*, on which excellent paper he has continued down to the present day, very much to the profit of its readers, and, among other things very greatly to the advantage of English and German writers. He also began to write for the *Revue des Deux Mondes*. Successively he became, as his power expanded and his fame enlarged, Doctor of Letters, Director of the Mazarine Library, Chevalier of the Legion of Honour and Professor of Foreign Languages and Literature in the College of France. His literary works are of peculiar interest to an Englishman. More even than M. Guizot, M. Chasles represents English literature in France;—and the election into the Academy of the “English candidate,” when it eventually occurs, may be taken as a compliment by the whole English nation. Among his printed works we have a volume of ‘Studies of the English Civil Wars,’ two volumes ‘On the England of the Eighteenth Century,’ a volume ‘On English Manners and Literature in the Nineteenth Century,’ and a volume ‘On Shakspeare.’ These works are not merely popular summaries, like some other works which we could name, thrown off by a learned Frenchman for the use of Frenchmen less learned; but are profound studies of the several subjects, based on real reading, and illumined by a rare and masculine intelligence.

M. Chasles’ position in the republic of letters is sufficiently original, and yet he is thoroughly representative of a class. By birth a Gaul, by training an Englishman, he brings together and harmonizes two literary methods and two systems of thought. The deep admiration for Shakspeare which is visible in all his writings, leads him to deny the force and reject the authority of many of those artificial conventions of arrangement and style which have so long ruled despotically over the French mind, to the exclusion, as Englishmen think, of nature, freshness and individuality from some of the most brilliant and perfect productions of French genius. Of course, he has not done this without penalties. The French are the slaves of rules. Voltaire found Shakspeare an inspired savage. M. Chasles, who has in his genius somewhat of the philosophic humour of Elia, is treated by the small fry of literary *badauds* as a savage without the inspiration. Strange to say, this extension of culture beyond the ordinary domain of the French writer has been M. Chasles’ chief impediment with the Academy. The Forty never forget that they are French, and some of the meaner spirits among them jealously deny the merits of every literature save their own. But exclusion on such a ground from a seat otherwise won is evidently untenable in reason, and we should think will not be much longer maintained in practice.

The Theory of the Foreign Exchanges. (Effingham Wilson.)

SINCE the famous attack of Adam Smith upon the delusions and absurdities of the mercantile system, even practical men have picked up enough of Political Economy to feel a little ashamed of the old doctrines of money and exchange. But prejudices of so long a growth are not uprooted in a day. The phraseology in which the tenets of Mun and Davenant were embodied still flourishes within a circle of considerable radius round the Royal Exchange. There, we learn, from City Articles and Money Market Intelligence, men still talk of unfavourable balances,—of disastrous effluxes of the precious metals,—of adverse exchanges and of

the necessity for discouraging undue importation; there our gigantic exports are contemplated with a peculiar pride, and a diminution in our imports is a subject of emphatic congratulation.

It is with no disrespect to the writer of this essay that we announce him as belonging to thinkers of this class. His knowledge of the subject is above that of nine-tenths of the writers who favour the public with pamphlets and books upon monetary and commercial principles. The student who is curious may here find an interesting analysis of the vast and complex transactions of England with foreign countries through the medium of bills of exchange, and may gain an acquaintance with the details of the subject that cannot be obtained from theoretical writers; but he will do well to fortify himself with a previous reading of Mr. Mill’s short but lucid exposition of the laws of the subject; or, better still, of Mr. Leslie Foster’s admirable Essay on the Exchanges between England and Ireland, published in 1804. With a very small acquaintance with such authorities, he will be able to smile at the present writer’s picture of a nation “permanently importing and consuming more than it is exporting and earning”—that terror of statesmen of the old school,—and will be in no danger of falling into the error of treating an exportation of gold as a national misfortune. That adverse exchanges, or a high price of foreign bills, is, if unexpected, highly inconvenient to a merchant who is compelled to remit is undoubtedly true, and that his loss in purchasing is only partially counterbalanced by the gain of others in selling such bills is equally undeniable; but it is extremely doubtful whether, under any circumstances, a country will really export a portion of the specie necessary for its own circulation.

Writers of this kind generally speak of the exports of a country as if they were a fixed quantity; but economists know that a high price of bills acts as a stimulus to exportation, which thereupon increases, and this, as ably demonstrated by Mr. Foster, not so much to recover as to retain the specie—in other words, the precious metals will as a rule only be exported, even to discharge liabilities, when there is no other thing in the indebted country which it would be as advantageous to export. When specie does happen to be the most profitable thing to export, that is, when the currency is really redundant, its exportation is of course a thing to be desired, for it is by such means that the precious metals find their level, and preserve that steadiness of value which fits them to serve as money. It is, however, a favourite theory in the “Bank Parlour” that it is the duty of somebody to intermeddle in this matter, and having determined by intricate inquiry the causes of an “unfavourable” state of the exchanges to apply the “correctives” proper to each case. This is the belief of the writer of this essay. He is anxious to impress upon the mercantile world the fact that there is a superintending power (he does not say where, but we shall not be far wrong in assuming that its throne is in Threadneedle Street) which is constantly watching the ebb and flow of bullion, applying stimulants or palliatives, and raising and depressing prices of commodities at will, for the good of the mercantile world. No reader of Mr. Tooke’s work need be told that the Bank has no such power; but, if it had, it is certain that any attempt to exercise it would be highly dangerous. It is quite true that when there is a great demand for loans, whether domestic or foreign, the rate of interest must rise, and that this rise will have a tendency to check exports, both of specie and other forms

of capital. The complaints of the mercantile world, on such occasions, of what is called the “Bank Screw” are, therefore, generally foolish and unreasonable enough; but if anything can tend to encourage their delusions it is the absurd claim set up by the Bank to be the fosterers and protectors of commerce: a delusion from which the “other establishments” which this writer calls upon to support his doctrine, have hitherto, fortunately, been free. The Bank is, we know, the inheritor of great traditions on this subject; and it is doubtless difficult for its chiefs to divest themselves of the cant phrases which once had a shadow of meaning; but since the charter of 1844, finally depriving them of all control over the issue department, the notion that they are different from any other trading corporation, or bound to conduct their business by other than mercantile principles, can have had no foundation. It is their duty at all times to employ whatever portion of their capital and deposits can be safely spared on the best terms they can obtain. A determination to raise the rate at which they will lend requires no apology, except the state of the market; but if the directors pretend that this determination to apply “the screw” is founded, not upon such considerations, but on a paternal desire to benefit by wholesome “correctives,” it is not to be wondered at that their patient will occasionally take his own view of the remedies applied. “Let alone” is the great and only safe principle of commerce; and no one who has studied the free-trade doctrine can have failed to come to the conclusion that it is quite as applicable to money and banks as to other things.

Marvels of Pond Life; or, a Year’s Microscopic Recreations among the Polyps, Infusoria, Rotifers, Water Bears and Polyzoa. By Henry S. Slack. (Groombridge & Sons.)

Mr. Slack would write much better than he does if his style were as Saxon as his name. As it is, we fear we cannot exclude him from the number of the English writers on natural history who have descended, it would appear, from Saxons, who must have been conquered by the Romans, and their mother-tongue suppressed or Latinized. This defect we regret sincerely, because it must abate somewhat of the cordiality with which we are desirous of recommending his book on account of the beauty of its illustrations, the study to which it may prove a help, and the interesting characteristics of its contents.

Not that we join in the indiscriminate and wholesale advocacy of the microscope, which talks of it as the indispensable companion of every intelligent and well-to-do family. The microscope tasks the eyesight severely. No man or maiden, lad or lady, whose eyes are already fatigued ought to use it. No doubt, Leuwenhoeck and others preserved their sight to the end of their days; but Savigny and many other microscopists were plunged in darkness by its brightness. Nothing is more dangerous to the eyes than reflected light. “Many people fancy,” says Mr. Slack, “that the eyes are injured by the continual use of the microscope, but this is far from being the case if reasonable precautions are taken.” Yet far from being a fancy, the injury is only too well known. There is no use in calling a fact a fancy. If by “reasonable precautions” are meant efficient precautions the proposition is self-evident. Evaporation is continually drying up the liquid which lubricates the eyes, and it is not secreted in sufficient quantities to lubricate eyes which are over-fatigued simultaneously by reading and by reflected light, and hence come dimness and shortness of vision. Even

Mr. Slack deems it right to insert certain precautions in his book. All excess of light ought to be avoided; and the object brought into focus before it is steadily looked at. Both eyes ought to be kept open. Objects out of focus ought not to be stared at, because being indistinct the eyes injure themselves by straining and straining to see them. A screen made of cardboard covered with black or green velvet, ought to be used to keep out extraneous light. Green velvet will probably prove better than black: for the French picture critics, when their eyes are fatigued by gazing at miles of coloured canvas, find it refreshing to look occasionally at a bit of green silk or velvet which they carry about with them for the purpose. We may all of us find this precaution worth remembering with a view to the Exhibition of 1862.

Having cleared ourselves of responsibility in reference to the eyesight of our readers, we can now plunge into the "marvels of pond life" with a good conscience. There is a border or debateable region where the animal is scarcely distinguishable from the vegetable cell. Indeed, the learned differ respecting their distinctive marks; but the rule is a sufficiently good one, although somewhat difficult of application, that the absence of a stomach and the expulsion of oxygen gas mark the plant, whilst the presence of a stomach and the assimilation of oxygen gas characterize the animal. The difficulties in applying these tests arise chiefly from the state of science. Nature delights in bleedings: and Science triumphs by separating the bleedings of Nature. The plants and animals which make their appearance in infusions, have since the days of Needham been called Infusoria; and which of them are plants and which of them are animals in many cases the most acute physiologists, both botanical and animal, still find great difficulties in determining. Breaking the January ice of a small pond near Kentish Town, Mr. Slack drew up a skein of green threads (*Confervæ*), and on taking it home for examination found upon it when under the microscope a number of Infusoria. There were Euglenæ, Vorticellæ and Rotifers. The Euglenæ are the green spindles, which are always changing their shapes; the caterpillar-like animals shoving themselves forward by bringing their heads and tails together are the wheel-bearers (*Rotifer vulgaris*), and the Vorticellæ or vortex-makers are those groups of tiny crystal bells appended to the threads of green *Confervæ*, and jerking themselves up and down upon spirally-twisted stalks. The Euglenæ, or changing spindles, although sometimes called animals, are probably plants evolving oxygen. The living things found in infusions are the simplest plants and the simplest animals; and, of course, the grouping of them under the name of Infusoria was due to convenience, and not to science. Some of the Euglenæ may yet prove to be plants and some of them to be animals. But the vortex-makers are clearly enough upon the animal side of the boundary, for they possess an intestinal canal. When their bells are tolerably large, a dark ground illumination displays them "shining with a pearly iridescent lustre," and their cilia "flashing with prismatic colours." The bells are covered with retractile lids. Some of these vortex-makers, putting forth cilia from their bases, can quit their stalks and swim about freely. Moreover, they can secrete a gelatinous cover or cyst, and assume the shape of pears, or trumpets on short stalks. When they have been fed with indigo or carmine, the spaces into which their food passes can be clearly seen.

The Rotifer, or wheel-bearer, is a much higher animal than the vortex-maker. Not content with pushing herself forward like a caterpillar,

the wheel-bearer can moor herself by her tail-foot, or putting forth cilia looking like revolving wheels swim about at will. Whilst swimming with her wheels going, and her tail pulled in and out like a telescope, a whirlpool is produced, which sucks her prey into her ravenous maw and busy gizzard. But, she has a still more curious characteristic. There is seen in her inside a small wheel-bearer, another and a smaller self, equally active in thrusting forth its cilia, and in working its gizzard or mouth. This is a case not of a wheel within a wheel, but of a wheel-bearer within a wheel-bearer. Mr. Gosse contends that the gizzard is a mouth with hammers for teeth, which masticate by beating the food upon a sort of anvil.

Breaking the ice of a pond on Hampstead Heath, our microscopist hooks up some water-plants, upon which he perceives several polyps or hydras with their poison threads or stings. The sunshine of March brought to the surface for him a rotifer like a live transparent soup-plate (*Pterodina patina*); a carapaced wheel-bearer, which had a forked jointed tail and a pickaxe snout (*Metopidia acuminata*); vortex-makers jerking up and down in crystal vases like jack-in-the-box (*Cothurnia imberbis*); and *Salpina redunca*, a rotifer with a carapace like a three-sided glass box slightly open along the back. April supplied the Floscules, brownish egg-shaped things in transparent jars, to the bottoms of which they are attached by their tail-feet. For May the marvel was the *Meliceria ringens*. This tube-dwelling wheel-bearer moulds its own bricks and builds the tower in which it dwells. Standing upon a footstalk the meliceria thrusts out of its tower four leaves surrounded by cilia. Between the leaves, Mr. Gosse observed an instrument, like the circular ventilators of windows, containing a cup-like mould which makes the bricks. A stream of small particles is directed into the mould by ciliary currents. Particles which are too large and unsuitable are rejected, and the suitable particles are cemented into conical pellets and squeezed in close-fitting octagonal shapes in the wall. Prof. Williamson says the meliceria forms first of all a hyaline cylinder, and deposits the first row of pellets around the middle of it. The pellets are laid like beads by the head, which resembles a flower with four unequal petals; and the pellets are held in the mould until fixed into the rows which are simultaneously built upwards and downwards. A kind of vortex-maker, which rests upon a pillar is called *Epistylis*; and a species of vortex-maker resting upon something like a tree, is called *Carchæum polypinum*. August supplied wheel-bearers with carapaces like pitchers (*brachionus*); three-limbed wheel-bearers (*triarthra*); and cryptomonads, or round disks, moved along by whisking whips. For September, the wonder is the crown-bearing floscule (*Stephanoceros Eichornii*); which is perhaps the most beautiful of the rotifers. The account which Mr. Slack gives of this animal is a favourable specimen of his style:—

"In this elegant creature, an oval body, somewhat expanded at the top, is supported upon a tapering stalk, and stands in a gelatinous bottle, composed of irregular rings, superimposed one upon the other, as if thrown off by successive efforts, the upper ones being inverted and attached to the animal. But that which constitutes the glory of this little being is a crown of five tapering tentacles, each having two rows of long cilia arranged on opposing sides, but not in the same plane. The ordinary position of the tentacles is that of a graceful elliptical curve, first swelling outwards, then bending inwards, until their points closely approximate; but each is capable of independent motion, and they are seldom quiet for many minutes at a time. The cilia can be arranged in parallel rows

or in tufts at the will of the creature, and their motion appears more under control and susceptible of greater modification than the ordinary Infusoria. The *Stephanoceros* is a member of the Floscule family; but in all the specimens I obtained and watched for several weeks there was an important difference in the relation of the tube to the creature. In the Floscules, I had never seen anything like an adhesion between the tube and the animal; but in the *Stephanoceros* I noticed it continually, and always in the manner described. Like the Floscule, the *Stephanoceros* is readily alarmed, and retreats into her house, carrying with her the invaginated portion. In the last edition of Pritchard's 'Infusoria,' this case is spoken of as apparently not tubular, but a solid gelatinous mass enveloping the animal as high up as the rotatory arms. It is very likely that specimens at different ages, and possibly at different seasons, may vary in the structure of their abodes; but I am not able to censure in the preceding account, as all the tubes I examined resembled sacks turned in at the mouth, and attached to the shoulders only of their inmates; and on one occasion I was able to look down into a deserted tube, which had not collapsed, as it would have done if it had been merely a solid gelatinous mass. * * When well exhibited, the tentacles have a lustre between glass and pearl; the body in a favourable specimen is like a crystal cup; and the food, usually composed of small red and green globes, glows like emeralds and rubies, as if in the height of luxury the little epicure had more than rivalled Cleopatra's draught, and instead of dissolving, swallowed its jewelry whole. So lustrous and varied in colour is the whole appearance of the animal under these circumstances, that it is frequently alluded to by one of our first artists to whom it was displayed."

Trumpets (*Stentors*) abound in October. They are of different hues, and the green ones owe their tint to vesicles full of the colouring matter of plants. When stretched out they look just like the post-horns still to be seen and heard in old-fashioned towns. "Another little curiosity," says Mr. Slack, "was a transparent cyp upon a slender stem, which stood upright like a wine-glass, and supported on its mouth a transparent globe. It was found to be a Vorticella, and after two hours the globe was partially drawn in, and reduced in size."

When examining some small branches of *Anacharis* in a glass trough a tiny puppy-like creature was discovered pawing along upon eight imperfect legs, with more show than go, or in the Roman tongue, with more action than progression. This was one of the slow-steppers (*Tardigrada*), or water-bears. Of this bear's-cub, each of the eight legs was provided with eight serviceable claws. He had no tail. His blunt head could alter its shape considerably. From the front of the gizzard proceeded two rods meeting in a point representing, it is supposed, the jaws of insects, with a tube for the food between them. The mouth is suctorial and the rods are protrusile. They are frequently brought out as far as the lips of the mouth, which protruding with them becomes a small round pouting orifice. The water-bears have no eyes, or only "variable and fugacious" ones. Like the Rotatoria, they are destroyed by immersion in boiling water; but they can be revived after being in water gradually heated from 252° to 261°. Capable both of enduring heat, and of complete resuscitation, they can revive as if nothing had happened, after being baked by the sun's rays upon the roofs of houses where they undergo the changes of the weather and every alternation of drought and of wet.

James the Fifth; or, the Gudeman of Ballan-geich, his Poetry and Adventures. By James Paterson. (Edinburgh, Nimmo; London, Simpkin & Co.)

In the picture by Mauberge, representing three of the children of Henry the Seventh,—namely,

Arthur, Prince of Wales, Henry, Duke of York, and the Princess Margaret, the individual character of each child is artistically preserved, and faithfully rendered too, in the engraving by Vertue. The eldest boy, heir destined not to succeed to his inheritance, wears a sedate and scholarly look, a little priggish, if one may say so of the little namesake of him who wielded Excaliber. His brother, Henry Tudor, more showily attired, quietly extends his hand towards the apple lying on the table, at which all three are seated, as if it were the globe of sovereignty for which he was destined. But, look at that hooded, kerchiefed, ermined, buxom Margaret; she has more than twice the vivacity of action, double the liveliness of look, that can be traced in either of her brothers. In her left hand she holds one apple, and with her right indicates a strong desire to obtain the fruit towards which Henry's hand is extended. It was ever so with Margaret. The sister of Henry Tudor and the mother of James the Fifth of Scotland was insatiable. Enjoying much, she was hourly craving more. Yet this defect was more the result of training than a development of her nature. The grandmother, whose name she bore, not content, at her christening, to put before her a gorgeous silver box, must needs also fill it with gold pieces. When Margaret was married to James the Fourth, and the king gave his bride, as a wedding present, the title-deeds of the lands of Kilmarnock, she took the paper, and in place of thanking him, plucked his beard, as though he had not been sufficiently liberal. Then came that disastrous will of Prince Arthur, who bequeathed to his sister Margaret, not only his jewels, but his clothes. Some writers assert that the testator was Margaret's father, but however this may be, the non-payment of the legacy was one of the causes which led to the fatal hostility with England, which resulted in the Scottish overthrow, and the death of Margaret's husband, at Flodden.

The royal widow of 1513 was the wife of Douglas, Earl of Angus, in 1514, by whom she was mother to Lady Mary Douglas, of whom the unfortunate Lord Darnley was the son. In the lifetime of Angus, Margaret married the obscure Henry Stewart, a son of Lord Evandale, and from that time her influence declined, and she sank into permanent contempt and oblivion, after aiming at a fourth marriage. Meanwhile, Scotland was torn by the pretensions and dissensions of Angus and Arran, heads of the Douglasses and Hamiltons. The regency, lost by Margaret, and ill exercised by Angus, was abused by the Duke of Albany, who was twice called to power. The weakness of this French-born prince was as calamitous to Scotland as the tyranny of Angus; and the non-age of James the Fifth was a period of calamity to the nation and of misery and temptation to the boy-king.

When James the Fourth fell at Flodden, in 1513, his son, James the Fifth, was something more than a year old. During his infancy, his little person was contended for by nobles, who sought through him to aggrandize themselves. He was alternately lost and won, but Angus, and his cousins of Douglas, held him for the longest period, and did their very utmost to ruin the boy, that they might profit by it. Before he had accomplished his thirteenth year, he was placed, poor puppet, on a throne. For a few years, he was subjected to intolerable thralldom, and a most insidious temptation to do ill. Had the boy not been quick-witted and pure-minded, he would have sunk into hopeless captivity, uncleanness, and idiocy. Much blood was shed by his friends in order to rescue him; they all failed, but the lad resolved to rely on himself alone, with the aid of some

two or three faithful servants. Accordingly, one night, he escaped from Linlithgow to Falkland; and, in 1528, the royal stripling sent forth from that seat of safety the decrees which brought down ruin on the Douglasses; and he there commenced a career which gained for him the loving name of "King of the Commons."

For wisdom and justice, if the chronicles may be believed, he was a very Solomon. He crushed alike the proudest nobles in their strongholds, and the banditti who roamed over and devastated the land. He hunted down the famous Johnnie Armstrong, and was strong enough to give much vexation and infinite disgust to his unscrupulous uncle, Henry the Eighth. Even in his passionate pursuit of manly sports, he never neglected a duty, and however he might be engaged, it was popularly said of him that his eye was everywhere. His most intimate friends were literary men or men who loved literature. He was surrounded by poets, and known to sweep the lyre himself. An acceptable tradition points to him as the author of that lively May-day ode, 'Christ's Kirk on the Green'; the character song of 'The Gaberlunzie Man'; and the comic but not too delicate ballad, 'The Jolly Beggar.' Though this last falls short of the merit assigned to it by Scott, it might very well have been written by a gallant monarch, very much addicted to transgress in his duty towards his neighbour by falling in love with his neighbour's wife:—

"Of the King's nocturnal adventures much has been said in a general way; but particulars are sadly wanting. The incidents in 'The Gaberlunzie' and 'The Jolly Beggar,' are in all likelihood founded upon real occurrences. Tradition has furnished the romancer with the groundwork of many stories in which the King figures as a principal character; but it would be in vain attempting to trace their foundation in truth. When travelling incognito, he generally assumed the title of the 'Gudeman of Ballangeich,' from a steep path leading to the town of Stirling, on the north-west side of the Castle, which still bears the name. *Gudeman* was usually applied to a class of small proprietors who held, not from the crown, but from a vassal. But James did not always travel for the purposes of gallantry and the love of personal adventure. The administration of justice was frequently dealt summarily and effectively under the cloak of adventure, and he has sometimes been known to attack banditti singly, or, at least, with a few of his courtly attendants. Sir Walter Scott has very happily introduced the King, as traditionally portrayed, in 'The Lady of the Lake,' in which the famous single fight occurs between him, as Fitzjames, and Rhoderick Dhu. Another tradition has been wrought into the excellent little drama of *Cramond Brig*, by the late Mr. Murray of the Theatre Royal Edinburgh. The character of the King is here brought fairly into play—his love of justice as well as his love of adventure, although perhaps the dramatist may have twisted the tradition a little to suit the purposes of morality and effect. Scott, in his notes to 'The Lady of the Lake,' relates the circumstances somewhat differently, making the King the suitor of the pretty girl. 'Four or five persons,' he says, 'whether relations or lovers of his mistress is uncertain, beset the disguised monarch, as he returned from his rendezvous. Naturally gallant, and an admirable master of his weapon, the king took post on the high and narrow bridge over the Almond river, and defended himself bravely with his sword. A peasant, who was thrashing in a neighbouring barn, came out upon the noise, and, whether moved by compassion, or by natural gallantry, took the weaker side, and laid about with his flail so effectually, as to disperse the assailants, well thrashed, even according to the latter. He then conducted the King into his barn, where his guest requested a basin and towel, to remove the stains of the broil. This being procured with difficulty, James employed himself in learning what was the summit of his deliverer's earthly wishes, and found

that they were bounded by the desire of possessing, in property, the farm of Braehead, upon which he laboured as a bondsman. The lands chanced to belong to the Crown, and James directed him to come to the palace of Holyrood, and inquire for the "Gudeman of Ballangeich." He presented himself accordingly, and found, with due astonishment, that he had saved his monarch's life, and that he was to be gratified with a crown-charter of the lands of Braehead, under the service of presenting a ewer, basin and towel, for the King to wash his hands, when he should happen to pass the Bridge of Cramond.' The Howiesons of Braehead, whose representatives still possess the property, hold it upon the tenure represented, and this service was performed by William Howieson Crawford, younger son of Braehead, when George IV. visited Scotland in 1822."

There is no doubt that the king's life at this time abounded in romantic incidents. Princesses, despite his too gallant reputation, perhaps because of it, sighed for him: one, a disappointed daughter of the Duke of Vendôme, died for him. His wooing, winning and wedding of the daughter of the King of France, the fragile Magdalene, and her sudden, yet not unnatural death, as she stepped on Scottish ground, comprise details enough for a romance full of tender and chivalrous sentiments. The young husband mourned for his pearl of France like a true lover; and he personally wooed no second lady. His next wife, Mary of Lorraine, or of Guise, widow of the Duke of Longueville, was sought and was married by proxy. That he was hardly prepared to push his own suit is clear from the fact that within a few weeks of Magdalene's demise, the royal ambassadors were asking for Mary. When the latter became his second consort, in January, 1538, his first had not been full six months dead. It was almost a case of furnishing the marriage-table with the cold viands left of the funeral banquet held at the burial of the earlier bride.

Mr. Paterson defends James, with some success, against the charge of parsimony, and apologizes for, rather than explains, his policy in respect to his opposition to the Reformation. Knox denounced the latter, and saw in the early deaths of the king's two sons an evidence of divine retribution. Meanwhile came the fatal rupture with England, the proximate causes of which may be said to have been the assumption of the title of "Defender of the Faith," by Henry, and the favourable consideration by James of the offer from the Irish to accept him as their king. There were other and perhaps more real reasons, but any would have sufficed to bring about the final catastrophe, in which neither party gained more than a moderate crop of laurels. Norfolk invaded Scotland only to retreat from it; and James sent an army into England, only to find it in mutiny against the plebeian leader whom he had appointed in order to deprive the nobles of the glory of victory. Of the disorganized state of his forces the English took ample advantage, and James was brooding over their ruin, in Falkland Castle, where he had first tasted freedom, when news was brought him that the Queen had given birth to a girl in Linlithgow Tower: "A lass!" exclaimed the disappointed monarch, who longed for a son, who might one day avenge him, "It came wi' a lass, and it will pass wi' a lass." The cause of Scotland might have been saved by a man, or won by a woman, had the nobles been less selfish and more patriotic; but these disloyal men took advantage of the "lass," Mary Stuart, whose birth was greeted by such a sour, though paternal, prophecy. A son of James might have raised the thistle above the rose, and he had no less than six of them, but they were all illegitimate, and like the scourges which are

said to be sometimes made out of pleasant vices, they were heavy inflictions, if not on their sire, on poor Scotland, for the eldest, James, was the grim Regent, Murray, and the third, John, Prior of Coldingham, was father of Francis, Earl Bothwell.

This memoir is almost entirely personal. James is the only important figure in the picture. The others are merely accessories. The Beaton, the Douglasses, the Lindsays, even Mary of Guise, are but dimly shadowed forth. The biographer too is, perhaps, a little too much in love with his hero, yet he defends him not passionately, but with some show of argument, not denying his errors, but pointing out how they were often the results of his early training, and suggesting that whatever might be their amount or their gravity, they were venial in the light of his intellect, his good intentions, and his substantial virtues. Margaret, his mother, was not a beneficent queen to Scotland. In the daughter of her son and the son of her daughter,—the first, Mary Stuart, the second, Lord Darnley,—Scotland had reason to rue as well as to remember, her marriages alike with James the Fourth and the Earl of Angus.

History of the Commerce and Navy of Belgium
—[*Histoire du Commerce et de la Marine en Belgique*, par Ernest van Bruyssel.] (Brussels, Lacroix; London, Nutt.)

For the last half-century History has dwelt chiefly on the efforts that have been made by European nations for the advancement of their material prosperity, commercial and industrial. Never before was so much activity displayed in furtherance of this object. Electricity and steam have given an impetus to the efforts of the people, and the result must be a revision of the laws of commerce and a reform of the tariff. The division of labour, which has only been applied hitherto to individuals, must from henceforth be made applicable to nations. But in order to understand what objects are more especially adapted for the purposes of trade and commerce, we ought first to acquaint ourselves with the past traffic and navigation of each nation.

This is what M. van Bruyssel has attempted to do with regard to Belgium, from the time of Cæsar to the downfall of the Low Countries in 1830. He has shown how much a small population gifted with perseverance and energy may effect in a few centuries. He begins by describing the knowledge possessed by the Morini, Menapii, and others on the coast, in working iron, making cloth, colouring wool, and in manufacturing different varieties of tissue. The inhabitants of these countries were also good sailors, and at a very early period established Belgian colonies in England. When the Romans came, they found many of these colonies in Kent, Sussex, Surrey and elsewhere; the *Venta Belgarum*, which became the modern Winchester, was the centre and chief of these establishments. Mr. Wright in his history has shown that the Menapii went even to Ireland for commercial purposes at that remote period.

The conquest of Gaul by Cæsar put an end to this commercial activity, and it was not until long afterwards that the Belgians were again permitted to pursue their industrial occupations. The law prohibited the importation of certain products into Belgium, such as wine, oil and iron. The author here gives a detailed account of the different articles furnished by the Low Countries to Rome under the Emperors.

At the decline of the Roman Empire there was a long period during which commerce and literature were at a complete standstill in the north of Europe. Under Charlemagne new

regulations gave a fresh impulse and vigour to trade. It was then that, for the first time, was established the uniformity of weights and measures. Under his son, Louis the First, we find Ostend mentioned as a small seaport. Ships of various kinds were already made use of for commercial as well as for warlike purposes, all of which are carefully described in the work before us.

In the ninth century, says Sigebert de Gembloux, Antwerp had already attained a certain importance as a place of traffic. Anderson, in his 'History of Commerce,' shows that the Flemings had, from the year 836, held an interchange of products with Scotland, which the Scots found very advantageous, especially for the sale of their salt fish. The inhabitants of Aldenbourg were, even at that time, in the habit of going regularly into Wales on fishing excursions, killing their fish with lances and arrows. About a century later, Baldwin the Third, Count of Flanders, instituted regular annual fairs in all the principal towns, which attracted a great many foreigners, and were instrumental in making Bruges, Courtrai, Calais, and Thourout very prosperous cities.

To prove the prosperity produced in Flanders by commerce, it suffices to show that twelve or fourteen rich Flemings helped William of Normandy in his conquest of England, by supplying him with soldiers, ships, and money. Among other names cited we find Gilbert of Ghent, Philip and Humphrey of Courtrai, Bertrand of Melle, Richard of Bruges, and many more. M. Thierry is wrong in saying, in his 'History of the Conquest of England,' that the Count of Flanders refused all assistance to William. The latter even promised to pay his father-in-law an annual rent of 300 marks in silver as the price of his supplies. This is stated by the English historian Malmesbury, and the Flemish chroniclers Meyer, Ondegherst, and Despars. Twenty ships were equipped by Flanders for this expedition. After the conquest many Saxons of noble birth took refuge in the Low Countries, and among others, the mother and the sister of Harold. It is to be regretted that M. van Bruyssel has not alluded to the latter, as her tomb, with an inscription giving the details of her sorrows, was found some years ago among the ruins of the Church of St. Donat, in Bruges. This circumstance was well worth mentioning.

In such warlike times there were no laws for the regulation of commerce. The first appears in the eleventh century after the conquest of Jerusalem by Godfrey of Bouillon. He established what are called the *assizes of the kingdom of Jerusalem*, the second part of which relates entirely to the rights and duties of maritime transactions.

Under Henry the First of England a considerable number of Flemish manufacturers and tradesmen settled in Pembrokeshire, where they constructed a road of great extent, called *Flemings' Way*, to facilitate traffic. Their cleverness in weaving wool and flax was so remarkable that Gervasius, in his Chronicle, says that it was in them an inborn gift of nature. Tytler, in his History of Scotland, tells us, also, that the influx of Flemish merchants at the end of the twelfth century was one of the great causes of wealth in that country; and Macpherson, in his 'Annals of Commerce,' states that they were the first who introduced the cultivation of flax and hemp into England, as is mentioned in a charter of Westminster, in 1175.

A little later we find that some of the cities of Flanders possessed the largest emporiums of merchandise to be found in all Europe. William the Breton thus describes in his poem of the 'Philippides' the amount of wealth in the

harbour of Damme, when Philip Augustus, King of France, came to attack Flanders with 1700 ships. He speaks of the port of Calais:—

The merchandise brought there by foreign vessels exceeds all belief. Masses of bullion, heaps of oriental wools, wax, cloths, Hungarian furs, grain, wines from Gascony, iron, and other metals, and a number of other products from England, which were collected at Damme preparatory to exportation into other countries, bringing large profits to speculators.

M. van Bruyssel gives interesting details on the forms of the different vessels in the thirteenth and fourteenth centuries, and on the commercial relations between Belgium and Europe during the same period. England, Scotland and Ireland traded with the Flemings in wools, leathers, lead, coals, cheese and salt. They received from Norway various sorts of birds; from Denmark, horses; from Russia, furs; Bohemia, Hungary and Poland sent wax and gold and silver ingots; from Aragon came saffron, rice, almonds, &c.; from Germany wine, corn and iron. Fez, Tunis and Morocco traded in furs and sugar; Constantinople in alum and fruits; Egypt in spices; and from Palestine, Armenia and other parts came silks and gold and silver cloths.

The researches made by the author are very considerable. His long residence in London enabled him to examine our repositories of ancient documents; and the reader will be rewarded for perusing this book, more amusing in parts than many works of fiction, and replete with information hitherto but little known to the public.

Occasional Productions, Political, Diplomatic, and Miscellaneous. By the late Richard Rush. Edited by his Executors. (Philadelphia, Lippincott & Co.; London, Trübner & Co.)

THE synopsis of familiar letters, addressed by Washington to his private secretary, Col. Lear, to which great prominence is given in this volume, adds little to our knowledge of the General's character, and nothing to the recorded facts of his biography. Still the fragments possess a certain interest. There are the usual domestic details concerning stoves and curtains, harness and lusters, mangles and cut-glass decanters; for, as the Correspondence already published shows, Washington was minutely careful in the management of his household affairs. All great men, said Mr. Rush in his commentary, have been similarly precise and provident:—Cæsar, Cromwell, Napoleon, Frederick, Peter, Marlborough and Alexander,—and, he might have added, Wellington. But why apologize for Washington's taking thought of small things by reminding us that Frederick the Great troubled himself about the price of coffee,—that Napoleon played at blindman's buff,—that Cromwell is said to have thrown a cushion at Ludlow,—and that Peter of Russia had a pet monkey? These anecdotes, apocryphal or not, are wholly irrelevant. Mr. Rush was old enough to remember having seen Washington at the Capitol. But his personal reminiscences of England and France, though the merest possible gossip, will be more attractive to the majority of readers than his purely American chapters. We are not sure that his executors do his memory any credit in publishing them; since they were merely epistolary, being contained in letters addressed to his wife. Mr. Rush describes at length his visit to Grove Park, the seat of Lord Clarendon. Also, a Christmas at Hagley, the semi-feudalism of manners in the country, at Holkham especially, having apparently fascinated him. He writes

as a traveller in an unknown region. A dinner to which he refers took place at the Marquis of Lansdowne's house, at the time of the accession of Queen Victoria to the throne. Mr. Rush was among the guests. The death of the King was then announced, and contradicted. Next day, at Lord Clarendon's,—

"Before it was all over, I was drawn in, whether or not, to say a little in turn. The important points of the story of the day told, and the dessert course finished, our accomplished host, addressing himself to me, with his mild expression of countenance tinged with archness, blandly remarked, 'How sadly you in your country have departed from the example of your good old English stock!'—'How?' I asked.—'How?' he replied: 'why, could you elect a Lady, President of the United States?' This was something of a posing question under the event and topics of the day. I sheltered myself by saying it was a constitutional question we had not yet raised.—'Ah,' he said, 'you know you could not; but we in old England can now call up the classic days of our good Queen Anne, and the glories of Elizabeth; but as for you, you are in love with that Salic law—you will have none but men to rule over you; no lady, however beautiful or accomplished, can you ever put at the head of your nation, degenerate race that you have become!' It was so he pushed me. I parried his thrusts as well as I could. Then he varied the attack. 'And what a hubbub you made for a year before electing Mr. Van Buren President. See how quietly a Queen comes to our throne! Walk the streets, and you would not know of a change: to-morrow will be as yesterday, except that everybody will have a joyous face at the thoughts of a young Queen. We shall all be proud to look up to her; honoured when allowed to kiss her fair hand at the drawing-room; happy even to have our ears boxed if we deserve it!' It was so he went on in a vein of badinage. The occasion was not one for political dissertation. I stuck to my country by saying, that if we could not elect a Lady, President, I hoped we should have credit for keeping up the character of our English descent by doing pretty well in other things on our continent. None of the company dissented from this: least of all Lord Clarendon himself, who had been running me so hard, though so playfully. And thus passed off this pleasant little dinner-party and talk about Queens and Presidents."

This is a fair specimen of the familiar correspondence which the executors of Mr. Rush have thought fit to publish.

OUR LIBRARY TABLE.

The Natural History of the Tineina. Vol. VI., containing *Depressaria*. Part I. By H. T. Stainton. (Van Voort.)—With the regularity of the seasons appears the annual volume of Mr. Stainton's curious elaboration of minute entomological study; and so closely does each succeeding portion of the work resemble its predecessor, that it is difficult to find any new object of criticism, any defect or excellence in one volume which does not equally exist in every other. There is, however, one defect running through the whole work, which even now it is not too late to supply. We would suggest the great utility of magnified representations of those points of structure upon which the generic distinctions are based; and this, as it appears to us, may be easily done by means of an occasional supplementary plate, distinguished from the others by letters instead of numbers. With this addition, the work, as far as its limited object goes, would, we conceive, be perfect. The present volume includes some forms, which, as Mr. Stainton observes, approach the Tortricine; and this not only in their larger size and the greater expanse of the wings, but also in the characters of the larvæ. Is Mr. Stainton right, therefore, in considering this similarity as merely "superficial"? The characters derived from the structure of the larva in the Lepidoptera formed the basis of a very learned and profound generalization by one of the most thoughtful naturalists of his day, the

late Dr. Horsfield; and it may be worth Mr. Stainton's while to examine with some care the relation of conterminous groups with reference to this phase of their economy.

Monography of the Genus Conus.—[*Monographie du Genre Conus*, par Le Chevalier A. Bernardi, accompagnée de deux Planches Coloriées]. (Paris, Rothschild.)—The genus *Conus* occupies a conspicuous place in Conchology. Cones are so common that almost every mantelpiece has one or more amongst its familiar ornaments, and so rare that almost every collector's cabinet is wanting in some of the species. Sixpence will purchase a cone of one kind, while six guineas has hardly sufficed for one of another. The caprices of conchological fashion are discoverable in the varying market values of the rare species of cones. The value of the *Conus Cedo nulli* has, within our own observation, varied by several pounds, at different sales, in the same auction-room. At present, its price belies its name, for there are other species to which it must yield in money value. When one of these latter is brought forward for sale, it is curious to note the apparent insignificance of the shell as compared with the increasing biddings; and the ordinary spectator might well marvel at the high value set upon a tiny cone, in comparison with which he would, perhaps, think the large cone on his own chimney-piece far more remarkable. In Mr. Sowerby's monograph of this genus, he describes 404 species. M. Bernardi affirms that even this large number may be added to; and that, while some species were admitted by the English conchologists, others have been described since the appearance of his Monograph. Another French writer is about to issue a catalogue of all the species of this genus, and they will amount in all to 450. Were the whole displayed in one cabinet, it would form a sight to stimulate the dullist into conchological curiosity. The French Monograph before us is designed as supplementary to the monographs of Sowerby, Reeve and Kiéner. The species in the two plates are beautifully represented.

Dear Old England: a Description of Our Fatherland. By Jane Anne Winscon. (Seeley & Jackson.)—This work is intended as a book to be read in or out of school. It contains an account of the various counties of England, arranged in a geographical order, from north-east to south-west, beginning with Northumberland and finishing with Cornwall. Of course, the subject is a wide one, and the author has great opportunities of selection. It would be impossible in such a case to suit every taste. Each person will turn to his own county, and find something omitted. On the whole, we think the author has succeeded in writing a book that will excite in young minds a desire for further information on the history, geography and objects of natural interest in their own country.

The Silver Cord, a very curious and powerful story, by Mr. Shirley Brooks (Bradbury & Evans), has been republished from "Once a Week"—*Irish History and Irish Character*, by Goldwin Smith (J. H. & J. Parker), is the enlargement and reproduction of a lecture,—and *In Memoriam; being a Memoir of the late W. Newton* (Folkard), is also reprinted from the pages of a contemporary.—Messrs. Hurst & Blackett have added to their "Standard Library" Miss Freer's *Life of Jeanne D'Albret, Queen of Navarre*,—Mr. Bohn has added to his "Illustrated Library" *Southey's Life of Nelson*.—Second editions of *Our English Home; its Early History and Progress* (J. H. & J. Parker),—*Misrepresentation: a Novel*, by Anna H. Drury (Chapman & Hall), have appeared.—We have likewise on our table a third edition of Dr. Taylor's *Climate of Pau*, &c. (Churchill),—a sixth edition of Mr. Chavasse's *Advice to a Mother on the Management of her Offspring* (Churchill),—an eighth edition of Mr. Aston's *Income-Tax Tables* (Passmore),—an eleventh edition of Cornish's *Guide to Birmingham* (Cornish).—In this connexion we may announce *Mair's School List for 1861*, edited by R. H. Mair (Mair & Co.),—and *Old Moore's Almanack for the Year 1862*.

LIST OF NEW BOOKS.

Adams's Schoolboy Honour; a Tale of Halmstree College, 3s. 6d.
Bell's Rosa's Wish, and How She Attained it, 12mo. 4s. 6d. cl.
Buildings designed for International Exhibition of 1862, 1s. 5wd.
Chevreul on Colours, illustrated, new edit. 8s. 5s. cl.
Clegburn's Forests and Gardens of South India, post 8vo. 12s. cl.
Collins's Hide and Seek, new edit. crown 8vo. 8s. 6d. cl.
Crombie's Braemar: its Topography & Nat. Hist. 8s. 2s. 6d. cl.
Existence of God: a Discussion, at Wigan, 12mo. 1s. 5wd.
Fraser's Baptism: a Letter to Spurgeon, 8s. 1s. 6d. cl.
Gamble's Our Domestic Animals,—Organs of Digestion, 6s. cl.
Giles's Village Sermons, preached at Belleau-with-Aby, 8s. 5s.
Hamilton's Metaphysics & Logic, ed. Mansel & Veitch, 3s. 6d.
History and Articles of Masonry, ed. by Cooke, royal 16mo. 7s. 6d.
Knapp's God's Word and God's Works, 8s. 5s. cl.
Knowles's Notes on Epistles to Hebrews, with Analysis, &c., 6s. 6d.
Milne's Life in China, new edit. 8s. 5s. 6d. cl.
Personal Piety: a Help to Christians, 32mo. 1s. 6d. cl.
Preston's Illustrations of Masonry, Additions by Oliver, 17 ed. 9s. 6d.
Rymer's Visible Church, and no Invisible Members, cr. 8vo. 4s. cl.
Stephens & Burn's Book of Farm Buildings, royal 8vo. 31s. 6d. hf.-bd.
Trench's Sermons preached in Westminster Abbey, 2 ed. 8vo. 10s. 6d.
Trollope's Commentary on Liturgy and Ritual, crown 8vo. 5s. 6d.
Veterinary Directory, 1861, 12mo. 2s. 5wd.
Walsh and Lupton's The Horse, illustrated, 8vo. 18s. hf.-bd.
Warner's "Wise Saws and Modern Instances," 16mo. 5s. cl.
Wilkinson's Remarks on Prophecy, 12mo. 1s. cl.
Woodgate's "Essays and Reviews" Considered, 8vo. 5s. cl.

NEW GEOLOGICAL SKETCH MAP OF SCOTLAND.

Geological Survey Office.

In the last number of the *Athenæum*, the new 'Geological Sketch Map of Scotland,' by Mr. Geikie and myself, having been noticed, you mention that the cover of the map has my name only on it. You then justly add, that as I had candidly announced that the map had been prepared by Mr. Geikie, "it seems hardly fair to the younger and less-known geologist to send forth the map thus lettered." Allow me to state, that as soon as I received the first copy from Edinburgh I was much annoyed at the blunder of the binder, and immediately wrote to Mr. A. Keith Johnston, the publisher, to have the name of my coadjutor added. This was done immediately; and, with the exception of a very few copies, of which, unluckily, you received one, Mr. Geikie's name is as prominent on the cover as it is in the title of the map. Again, I beg to state that in the explanation of the map, I have given the warmest praise to Mr. Geikie for his labours.

As you express your regret that the map was not published on a larger scale, you must allow me to say, that although we much wished to follow that course, we found it to be impracticable to enter into greater detail in reference to the larger half of Scotland, where the outlines of the several formations are not yet defined, and of which no good maps exist. Our little map, which is issued at a very small cost, and explains the general structure of the country by coloured sections on its sides, is simply intended to serve as the basis of a new and reformed classification of the Scottish rocks; the more detailed elaboration being deferred until the Ordnance Survey is much more extensively applied.

As you allude to two or three of the years only in which I have been employed in Scottish exploration, I beg to say that the summers of 1826, 1827, 1850, 1855, 1858, 1859 and 1860 were devoted to that object; my new 'Geological Sketch of the Highlands,' as published in the *Journal of the Geological Society*, 1859, having been the groundwork of the present map of Mr. Geikie and myself.

RODERICK I. MURCHISON.

OUR WEEKLY GOSSIP.

SOME months ago M. Du Chaillu publicly desired his critics to suspend their judgments of him, and of his book, until such evidence of the good faith of his narrative as he could procure from the Gaboon river should arrive in London. His critics have waited, and they not unreasonably ask for his reply. Has that evidence come to hand, and will he produce it? That time enough for communication has been allowed we know. Six or seven months ago M. Du Chaillu came to England, and seventeen weeks have elapsed since we reviewed his 'Explorations and Adventures in Equatorial Africa.' The Gaboon river does not flow at the extremity of the earth. In fact, it is known to many persons, and we suppose to M. Du Chaillu amongst the number, that the book of 'Explorations and Adventures' has been read at the Gaboon and has produced a very lively sensation there. Will M. Du Chaillu tell us what is said about his "Adventures" on the spot to which he appealed for corroborative evidence? Letters came to town

from the Gaboon on Wednesday last. A gentleman, who has been conspicuously named as a witness for M. Du Chaillu, has written on the subject to his friend in London:—will M. Du Chaillu produce the letter so sent? We hope he will. The public have waited long; and they have a right to be satisfied, if it is now in M. Du Chaillu's power to satisfy them, of the reality of his explorations, if not of the literal accuracy of his text.

The mystery about the Messrs. De Schlagintweit seems to deepen. What is the truth? Who were their scientific patrons? Last week we printed explanations from Sir Roderick Murchison and General Sabine, which contradict, in the most important details, statements made by the travellers in their recent book. Sir Roderick altogether negatives, and General Sabine greatly modifies the assertion, that *they* were responsible, on the part of the Royal Society, for sending out these Germans, at a vast expense of English money, to survey rivers, hills and climates, with which we were perfectly familiar, and to collect Flora and Fauna, which, at the time they left London, were actually rotting in the vaults of the East India House. So far, good. When we expressed our own reserves, and invited General Sabine and Sir Roderick Murchison to explain their part in the transaction, we had reason to believe that the facts would turn out to have been what they now appear. But now comes the difficulty. How can we reconcile the explanations of General Sabine and Sir Roderick with the assertions of the book? In the address to Sir Charles Wood, the Messrs. De Schlagintweit declare that they were sent out to India "by the energetic assistance of Col. Sykes, on the part of the Court of Directors, and of General Sabine and Sir Roderick Murchison on the part of the Royal Society." The volume in which these words appear is dedicated—we suppose, by permission—to the Royal Society. Nay, more, we are told that through this influence "all the official arrangements were made without any delay." Are we to understand that these statements have no foundation in fact,—that they are pure inventions of the Messrs. De Schlagintweit? That is a very grave inference, and one that we should be most grieved to make. We hope the matter will be explained. As more money will be wanted for the work—in addition to the 30,000*l.* which is said to have been already wasted—the whole question will have to be brought before the House of Commons; and it would be painful to find questions about the scientific value of Messrs. De Schlagintweit's observations mixed up with other questions as to the veracity of their text. For ourselves, we have no interest in this private matter, save as reporters for the parties. It is for the Messrs. De Schlagintweit to relieve themselves, if they can, from the consequences of such express denials, and especially of those made by Sir Roderick Murchison. Our interest lies in the scientific question. We object to useless and expensive expeditions to discover what we already know. We object to the employment of German travellers to do over again the work which more competent Englishmen have already done. Goldsmith's suggested voyage of discovery, with the result of a wheelbarrow, is a light pleasantry compared with the ponderous mistake of the Messrs. De Schlagintweit's volumes, at a cost of nearly 40,000*l.* We are glad that our remarks have procured for the public some part of the secret history of this scientific job; and we take the liberty of inviting answers to two or three queries. Did the Royal Society recommend the employment of Messrs. De Schlagintweit or not? Did it accept the dedication of their volume? Did Mr. Darwin and Dr. Hooker do more than suggest how they might be usefully employed, supposing they were employed at all?

We are glad to find that the statement current in Paternoster Row last week, to the effect that Messrs. Blackie & Sons had lost the copper-plates of their 'Imperial Atlas' in the disastrous fire, is untrue. The plates are uninjured; as they were fortunately not in the Row during the fire.

The British Museum re-opened on Monday. The improvements have been considerable, and the increase of attendance on the part of the public during the week has been likewise considerable.

The Ray Society held its Annual Meeting on Friday, at Manchester, after the meeting of Section D. of the British Association, in one of the rooms of the Royal Institution, Sir Philip Egerton in the chair. The Report of the Council stated that the financial condition of the Society is now more flourishing than for many years past. The volume for 1860, Dr. Carpenter 'On Foraminifera,' is in the press. For 1861 the members will obtain Mr. Currey's translation of Dr. Hoffmeister's work 'On the Higher Cryptogamia.' The other new works in preparation are: Dr. Bowerbank 'On the British Spongiadae,'—the second volume of Mr. Blackwall's 'British Spiders,'—Dr. Günther 'On the Reptiles of British India,'—and Mr. Douglas 'On British Hemiptera Heteroptera.' Sir Philip Egerton was elected President; Mr. Lubbock, Treasurer; and Mr. Stainton, Secretary.

Mr. Brierly writes:—

"8, Liddington Place, Sept. 9, 1861.

"In the communication about 'Whales and Whaling,' which you did me the honour to insert in your number of last week, either a slip of the pen on my part, or a misprint, makes the footnote $\frac{1}{2}$, by a single word, convey an opposite meaning to that intended. It should have been, 'These *Balenoptera* were not the *Gibbosa*, or Hump-back, found in these seas, which is considerably smaller.' As it stands, it would appear that the *Gibbosa* is meant to be the larger of the two."

In its late editions the Almanac of Gotha has recognized Victor Emmanuel as King of Italy. It will be some consolation to the Roman power, after such a blow, to find that the new edition of Murray's 'Handbook for the Papal States' has not recognized the annexation to Piedmont of the provinces of Urbino, Pisano, Ancona, Macerata, Camerino, Fermo, Arcoli, Perugia, Spoleto, Rieta, and Orvieto. Albemarle Street is slow to recognize the rights of revolution. Mr. Murray does not actually close his eyes on fact; indeed, in the matter of all such information as may be useful to the travelling Briton he shows himself, in this edition, uncommonly wide awake. But as the Great Powers have not accepted the revolt of Umbria and the Marches, he will not accept it. Time, we hope, will bring him round. England accepted this annexation when it sent an ambassador to the King of Italy. France has done the same. Sweden, Denmark, Portugal, and Brazil have followed suit. Prussia is about to do it. Perhaps, when Austria has yielded, Albemarle Street will also yield. We hope so. It would be very annoying to be stopped at the Italian frontier and questioned by the Bersagliere about the contraband politics of the Red Book. Otherwise, this new edition of a book indispensable to the tourist in Italy is brought down to the latest dates.

Mr. Shaw, of Dundee, has published a railway and road map for the use of tourists in Perthshire. The work is engraved by Messrs. Johnston,—a sufficient guarantee for its accuracy and beauty. The hills and dales, the castles and churches,—everything interesting to the rambler for health and recreation,—will be duly found in its place.

The native school of Russian Art—of which we know very little in this country—commenced very nearly at the same time as our own. Lossenko, the first Russian painter, was a contemporary with Gainsborough and Hogarth; and we hear with satisfaction that the Russian Academy of Arts has decided upon commencing the illustration of the Russian School of Painters in the International Exhibition of 1862 at the year 1764. They will begin with Lossenko.

Dr. R. Luther, at Bilk, discovered on the 13th of August the seventy-first of the Planetoides, and observed it up to the 15th. Three observatories have already recognized it as such; and several astronomers, who met at Dresden on the 20th of August, gave it the name of Niobe. The newly-discovered planet stands now in the constellation of Aquarius, and is a star of the eleventh magnitude.

The great annual distribution of prizes by the French Academy took place at Paris on the 29th of August. M. de Laprade, the present Director, opened the ceremony by an address, in which he

held forth on the different instances of superior goodness and virtuous actions which had been rewarded with the prizes of the Monthyén Fund. The first prize of virtue, 3,000 francs, was awarded to Abbé Soret, for nineteen years the minister at Luzarches (Seine and Oise), who had during this period, himself undergone the severest privations, in order to assist the poor and suffering in his parish with his meagre savings; Pierre Espagne, of Bordeaux, who saved the lives of eighteen persons shipwrecked, received the second prize. Three more prizes of 1,000 francs each, and twenty of 500 francs, were awarded to four men and nineteen women. M. Henri de Bornier received the large prize of poetry (on the Canal of Suez); M. H. Buillet a prize of 4,000 francs for the best translation into French of the 'Enneades of Plotinus.' M. Jules Lecomte received an honourable mention by the Secretary of the Academy, M. Villermain, and a medal of 2,000 francs, for his book 'La Charité à Paris.' The great prize of Baron Gobert was awarded in equal parts to the MM. Dargand and Geruzex. The distribution of a number of smaller prizes in various branches of literature and sciences closed the festivity.

The alterations which are being made in Goethe's house of birth at Frankfurt, which has passed into private possession, are the talk of the town. Here we have a people whose cry for unity at this moment resounds from the Baltic to the Adriatic, from the Russian to the French frontiers, who assemble in Turnvereinen, archery associations, national leagues, Sängervereinen, and countless other meetings; a people who impose a tax on themselves for the creation of a German fleet, a tax so severe, that every labourer, student, &c. who indulges in a glass of ale, for which he pays a groschen, puts a penny into a box for the German fleet; no one, who has any knowledge of the quantity of ale a German throat may indulge in, will be in the least surprised to hear that the sum of money thus collected is already very considerable, and promises to become enormous if the hot weather lasts, which favours so much the consumption of the male beverage; yet, with all these efforts, Goethe's house passes into private possession. We refrain from any comment on contradictions which prove how small the progress towards a true national feeling in Germany has yet been. We know nothing of the present possessor of Goethe's house, not even his name; he may be a sensible and intelligent man, who takes the duty upon him of preserving, in its original state, the birth-place of Germany's greatest poet; still, this is no guarantee for the future, and does not save the German nation from the blame of allowing Goethe's house to be anything else but a national sanctuary.

SCIENCE

BRITISH ASSOCIATION.

Manchester, Sept. 12.

THOSE who last week went the furthest in their predictions of our success now find themselves far behind. Our success is, in fact, magnificent and unprecedented. The success, too, is of every kind. We have had no such gathering for numbers—for local subscriptions—for solidity and practicalness in the papers read—for continued and personal interest in the themes discussed in Section—or for the excellence and rarity of the evening discourses. The Astronomer Royal's discourse on the Eclipse drew an audience to the Free Trade Hall which tested even its capacities of accommodation. Prof. Miller's lecture on the Spectrum Analysis, in the Concert Hall, was well received, though the subject is sufficiently difficult to the unscientific mind. The Microscopical evening, the Electric Telegraph evening, and the National History evening, brought to the great Hall crowds so vast as to remind some of those present of the times of political excitement and controversy. The hospitality of the citizens has been endless. And finally, it is only fair to add, the reporting of Sectional work by the local papers has been far beyond the average in intelligence and rapidity.

The two subjects which rose in popular interest above all others have been the Origin of Man and

Iron-plated Ships. Prof. Owen made some very important contributions to the first question. These will be found in our Sectional reports. Mr. Fairbairn rather disappointed expectation by his reserve on the subject of iron plates. His reserve was, no doubt, very wise; but the good folks who had made up their minds that on Saturday morning, in the little Swedenborgian Hall, they would learn "all about it," had to put up with a smart passage of arms between Mr. Fairbairn and Sir William Armstrong, instead of revelations from the Reports of the Shoeburness Committee. What was said will be found authentically stated in our Sectional Report.

The General Committee held its meeting yesterday (Wednesday), at the Free Trade Hall. It had been already settled that the meeting of next year is to take place in Cambridge. No chairman has been fixed on; and, of course, it is imagined by some that this post may be accepted by the Prince of Wales. Dr. Whewell, Prof. Airy, and Prof. Sedgwick are appointed Vice-Presidents. The period was left open, and will be agreed upon with the local officers. The following Recommendations, involving grants of money, were adopted:—Kew Committee, 150*l.*, Photographic Pictures of the Sun.—Col. Sykes, 200*l.*, Balloon Committee.—Prof. Williamson, 50*l.*, Standard of Electrical Resistance.—Mr. Glaisher, 20*l.*, Luminous Meteors and Meteorites.—Mr. Jenkin, 20*l.*, Thermo-Electric Currents.—Mr. Hennessy, 20*l.*, Connexion of Storms and Vertical Atmospheric Currents.—Mr. Gages, 8*l.*, Analysis of Minerals.—Dr. Hooker, 40*l.*, Report on Lancastrian Coal-fields.—Sir Bunbury, 40*l.*, Flora of the Coal-Plants.—Mr. Scott, 25*l.*, Report on the Rocks of Donegal.—Mr. Jeffreys, 25*l.*, Dredging, coast of Durham; 25*l.*, Dredging, N.E. coast of Scotland; 15*l.*, Dredging, Dublin Bay; 5*l.*, Dredging, River Mersey; and 10*l.*, Ravages of the Teredo.—Mr. Sclater, 10*l.*, Report on West Indian Vertebrates; and 50*l.*, Report on Species of Apteryx.—Mr. Wright, 10*l.*, Report on Fishes of Dublin Bay.—Mr. Sclater, 10*l.*, Report of Mollusca of North America.—Dr. E. Smith, 20*l.*, Report on the Effects of Prison Discipline.—Dr. Collingwood, 5*l.*, for collecting Objects of Natural History by means of the Mercantile Marine.—Right Hon. J. Napier, 150*l.*, Committee on Patent Laws.—Prof. J. Thomson, 15*l.*, Gauging Water Pipes.—Mr. Fairbairn, 25*l.*, Accidents on Railways.—Duke of Sutherland, 150*l.*, On Steamship Performances.—Mr. Oldham, 25*l.*, Tide Observations in the Humber.—Kew Committee, 500*l.*, for the Observatory, one year; and 40*l.*, for the Photoheliometer.—Prof. Phillips, 100*l.*, an Assistant, one year.—Index to Reports, 600*l.*—Prof. Phillips stated that the Recommendations amounted to 2,368*l.*, as against 1,395*l.* last year.

In addition to these, the following Recommendations, not involving grants of money, were adopted:—Prof. Stokes, a Report on Physical Optics.—Mr. Cayley, a Report on certain Problems of Dynamics.—Mr. A. Smith and Mr. Evans, a Report on the Reports of the Liverpool Congress.—Prof. Stoney, a Report on the present state of Molecular Physics.—Dr. Lloyd, a Report on the Application of the Gaussian Theory of Magnetism to the Periodical Magnetic Variation.—Dr. Robinson, Communication with Government on the best System of Fog Signals.—Dr. Lloyd's paper on the Secular Magnetic Changes to be printed among the Reports.—Mr. Schunk's paper to be printed in the Report.—Mr. Crace Calvert, a Report on the Properties of the Woods used in Dockyards.—Prof. Williamson, Registration and Publication of the Numerical Facts of Chemistry, and on Scientific Evidence.—Mr. G. Jeffreys, a Report on the Dredging Operations.—Mr. Foster, a Report on Muscular Irritability.—Dr. Drury, Dr. Moorcroft's Report.—Mr. Hunt's paper to be printed *in extenso*.—Mr. Heywood, Application to Charity Commissioners.—Admiral Sir E. Belcher, a Report on Steam Navigation in the Port of London.—Mr. Fairbairn, a Report on the Experiments made at the Manchester Waterworks.—Mr. Atherton's paper on Steam Performance to be printed among the Reports.—Mr. Reid's paper on the Iron-Cased Ships to be printed *in extenso*.—Mr. Webster, to

communicate with the Parliamentary Committee regarding a Reform of the Patent Laws.

SECTION A.—MATHEMATICAL AND PHYSICAL SCIENCE.

President—G. B. AIRY.
Vice-Presidents—J. P. JOYCE, Rev. F. PRICE, Prof. ADAMS, The Lord Wootton, Gen. Sabine, Sir David Brewster, Rev. T. P. KIRKMAN.
Secretaries—Prof. J. STEVELLY, Prof. H. J. S. SMITH, Prof. R. B. OUPSON.
Committee—Prof. Andrews, J. Baxendale, Admiral Belcher, J. Bonomi, C. Brooke, A. Cayley, Rev. Prof. Temple, Chevallier, Warren De La Rue, J. P. Gassiot, J. H. Gladstone, J. Glaisher, G. Griffith, Prof. Biersens de Haan, Sir W. R. Hamilton, Rev. E. Hincks, W. Hopkins, Prof. Hennessy, F. Jenkin, M. Kupffer, J. Lee, H. Lloyd, E. J. Lowe, E. Macquay, Dr. Mathiessen, R. Patterson, Prof. Phillips, Gen. Portlock, Rev. T. R. Robinson, Prof. Rogers, J. Scott Russell, A. Sandeman, C. W. Siemens, A. Smith, Dr. J. A. de Souza, B. Stewart, G. J. Stoney, W. Spottiswoode, Col. Sykes, Prof. J. J. Sylvester, Prof. Tyndal, T. Webster, Prof. Wheatstone, K. Worthington.

THURSDAY.

On taking the Chair the PRESIDENT briefly stated the objects of the Sectional meetings and the mode of conducting their proceedings. The Section over which he had been placed as President embraced the subjects of Pure Mathematics and Natural Philosophy in every one of their branches which were not purely technical, these being committed to the care of other Sections; the entire ranges of measures and numbers in their abstract relations and applications, so as to prepare the mind for the using of its powers and improving it in its acquisition and dissemination of knowledge. Astronomy, the branch with which he was more immediately connected, had been the first to experience the fostering care of the British Association, and between that and the grants obtained from Government through its influence the two important works had been given to the scientific: 'The British Association Catalogue of Stars,' and 'The Greenwich Observations,' which, but for this aid, must have remained a useless mine of buried astronomical treasure. He then briefly sketched the importance to the science of magnetism of the Government Magnetical Expeditions, and the fixed magnetical observatories which had originated or been established at their solicitation or suggestion, and he pointed out the importance of these both in establishing the sure foundations of the science, and in putting us in possession of facts not before even suspected to have an existence. He next proceeded to describe the manner in which the business of the Section was conducted. He explained that after papers were read conversation upon each, so far as time permitted, was not only allowed but courted, and here perfect liberty was allowed to each to dissent from the opinions of others, and each was to receive in perfect good humour the unsparing slaughter of any of his opinions, however dear they might be in his own estimation. And here he wished to give two or three cautions, which would be found most useful: first, that science, pure science, was alone their object, and that more serious subjects were entirely forbidden. Secondly, that each should, to avoid the slightest appearance of personality, address the meeting through the Chair. Thirdly, that he must in that chair be a perfect despot; that his dictum must, for the time, be law; and, for an instance, they must not feel displeased if he peremptorily rejected all discussions about perpetual motion, the trisection of an angle, or any subject which would lead to the subversion of any of the well-established foundations of any of the exact sciences. One suggestion he would venture to throw out to those who had communications to make on the more transcendental branches of science, viz., to hold over for a more suitable occasion any subject which could not be made quite intelligible by an oral exposition. He exemplified this by reading the title of one of the papers proposed to be read to the Section, adding that he had no doubt that the meaning of this was clearly understood by the author himself, but, for his part, he (the Astronomer Royal) had not a conception of its meaning. He need scarcely add, that he hoped authors, in avoiding this error, would not fall into the opposite, of beginning at the very first principles of the science connected with their subject. He concluded by informing the Section that a letter had been received from Prof. G. G. Stokes, stating that circumstances had prevented his completing the Report on Physical Optics which he had been requested by the British Association assembled at

Oxford to draw up, but that if the Association honoured him by a renewal of the request he hoped to have the Report ready for presentation at its next year's assembly. The Astronomer Royal stated that the Committee of the Section had that morning sent forward a request to the Committee of Recommendations that the above-mentioned request to Prof. Stokes be renewed. He further stated that Mr. Cayley had at the same meeting been requested to draw up a Report on the Solution of certain Special Problems of Dynamics, that he also was not yet fully prepared to present this Report, and a similar request in this case had also been sent forward to the Committee of Recommendations.

'Report on the Progress of Celestial Photography since the Meeting at Aberdeen,' by WARREN DE LA RUE.

Dr. ROBINSON pointed out the advantages to science likely to result from these researches of Mr. De La Rue; concluding by saying, that it would be shameful to allow the entire expense of the very costly apparatus required for producing the adjustments indispensable in these researches to fall on one individual; adding, that he had no doubt that, if the Committee of the Section would send forward to the Committee of Recommendations a request that a suitable sum of money be placed at Mr. De La Rue's disposal for the continuance of those researches, that that request would be cheerfully complied with, and that Mr. De La Rue would still afford what money could not purchase—his own invaluable superintendence and co-operation.—The ASTRONOMER ROYAL, after heartily concurring in the suggestion of Dr. Robinson, called the attention of the Section to the large photograph of the sun, and especially to the rapid shading off of the intensity of the light towards the outside of the sun's disc. He and the late M. Arago had differed on this very point, M. Arago maintaining that the intensity of the sun's light must increase towards the edge of the disc, while he, the Astronomer Royal, ventured to maintain the contrary opinion. Here, by this very ingenious process by which Mr. De La Rue had succeeded in photographing the sun's disc, it became palpable that his opinion was in accordance with the fact in nature; while that of M. Arago cannot any longer be maintained. The photographed fact settles the question.

'On the Distribution of Fog round the British Isles,' by Dr. J. H. GLADSTONE.—The Royal Commissioners on Lights, Buoys and Beacons, whose Report was laid before Parliament last session, asked, among other things, for the number of days in 1858 on which fog had been noted in the Meteorological Register at each lighthouse and floating light round the coasts of the United Kingdom. From the published returns the author had drawn up a list, showing the frequency of fog at 200 different sites. On a comparison of these, the following conclusions appear to be warranted:—1st. That fogs are more numerous around England and Wales than around Scotland; while Ireland is still less frequently visited by them. The average number of days for the whole of the British Isles is—on shore, 24; at sea, 20. 2nd. That the distribution of fog on different parts of a sea varies little, even though it varies greatly on different parts of the adjoining coast. 3rd. That the frequency of fogs on the coast is in many places far less than on the neighbouring sea; but that all such stations are low ones—for instance, the sandbanks at the mouth of the Thames and the breakwaters. 4th. That two stations, very near one another, but differing in their elevation above the sea, often differ widely in the frequency of fog, the low station being generally the less foggy. 5th. That when the land rises to a considerable height, and is so situated that it meets the south-westerly winds directly after they have traversed the ocean, a frequent deposition of fog or cloud results. This is especially evident on the south and south-west coasts of England and Wales, and on certain prominent points on the west or north of Scotland. The highest number is at Barrow Head, the southernmost point of the Hebrides, viz., 126; and this is the highest light-

house station in the United Kingdom, and near to the Gulf Stream. The smallest number, 4, is at Troon, in Ayrshire. 6th. That where a large area of sea is surrounded on most sides by land, fogs are comparatively unfrequent.

This communication gave rise to an animated discussion; the general opinion being that it was not sufficiently settled what should be called a fog.—Mr. GLAISHER stating that, so far as the returns made to him of the days on which fogs prevailed, the numbers stated by Dr. Gladstone as the averages of the year would more accurately express the averages for the months of September and October.—The ASTRONOMER ROYAL wound up the discussion, agreeing with Prof. HENNESSY, that an exact definition of the term "fog," by the distance to which vision was obscured, should be adopted, and that in registering fog any day on which it was necessary to ring the fog-bell might safely be returned as one on which a fog prevailed.

'On an Electric-Resistance Thermometer with Balancing Coil,' by C. W. SIEMENS.

'On a Panoramic Lens,' by T. SUTTON.—This lens consisted essentially of a hollow sphere of crystal glass, inclosing water, with a central diaphragm and orifice, so managed as to give equal illumination to the centre and extremities of the panoramic picture, which was received on a screen concentric with the lens. Several photographic pictures taken by it were exhibited, and were entirely free from distortion of figure; what should be straight lines being accurately straight in the pictures, which were stated to extend to an angle of 120°.

Mr. C. BROOKE exhibited and explained the construction of the lens, which, he asserted, was rendered perfectly achromatic by a proper adjustment of the surfaces of the glass envelope and the central receptacle for the water. He also exhibited and explained the entire apparatus used with the lens in obtaining the photographic pictures or panoramic views of particular localities.—Prof. CHEVALIER considered that, when the picture which was received on a concentric screen was spread out into a flat picture, the perspective could not be preserved.—Mr. BROOKE admitted that, mathematically speaking, there was some distortion of the perspective, but it was so trivial as not at all to interfere with the general effect of the panoramic picture.—The ASTRONOMER ROYAL considered that the obtaining of panoramic photographs of scenes so accurate as those exhibited to the Section, and extending 120° round the observer, was a most important advance in the practical development of photography.

'Cases of Planetary Instability indicated by the Appearance of Temporary Stars,' by D. VAUGHAN.—This was an entirely speculative essay on the manner in which the approach of revolving planetary bodies to the central in a course of ages, and their breaking up into fragmentary portions, would account for temporary stars, meteors, and other phenomena.

The ASTRONOMER ROYAL would not attempt to decide on the possibility or impossibility of events occurring in a course of ages in accordance with those dwelt on by the essayist. Under ordinary circumstances, the preservation of the plane in which a planetary body moved, and the permanency of the excentricity, were established facts; but some of the phenomena of the satellites and rings of Saturn showed that it would be hazardous to decide off-hand a subject so very speculative as that discussed in this essay.

'Observations on the Structure of Copper, as seen with a Microscope,' by W. VIVIAN.—The author on looking at some broken pieces of pure copper was at first inclined to consider the structure of the fracture as crystalline; but, on examining it with a microscope, he found this a mere appearance: the true structure being a multitude of minute cells communicating with each other, but separated by compressed diaphragms. He found a somewhat similar, but characteristically different, structure in the fracture of iron and other metals.

Mr. TOMLINSON, of King's College, London, read a paper 'On Lightning Figures,' chiefly with reference to those tree-like or ramified figures sometimes found on the bodies of men and animals that

have been struck by lightning. Professor Poey has collected a number of such cases into a memoir, entitled 'The Photographic Effects of Lightning,'—a second edition of which has been published at Paris during the present year. One of these cases is the following:—A boy climbed a tree to steal a bird's-nest; the tree was struck by lightning, and the boy thrown to the ground; on his breast the image of the tree, with the bird and nest on one of its branches appeared very plainly. Mr. Tomlinson explains such cases by referring to breath-figures, and showed that when the discharge of a Leyden jar is received on a pane of glass, it burns away a portion of the organic film which covers all matter exposed to the air, so that when breathed upon, the moisture condenses in unbroken streams along the lines where the electricity has passed; while on the other parts of the surface the moisture condenses in minute globules, so that on holding the glass up to the light the figure is distinctly seen, so long as the breath remains on the plate. This figure resembles a tree, bare of leaves, and might (as the President of the Section afterwards remarked with reference to the diagrams exhibited) be taken for any tree in the world. In this figure we have a broad and somewhat rippled line of least resistance or path of the principal discharge, branching off from which are numerous ramifications, from each of which proceed large twigs, and from these smaller ones of great delicacy and beauty. It can be proved that when the discharge of a Leyden jar is thus received on glass, the jar sends out feelers in all directions to prepare the way for the line of least resistance, and this being accurately marked out, the principal discharge takes place. In some cases the discharge bifurcates, and even trifurcates. If the glass presents too much resistance, the breath-figure consists of three feelers only, and these are the lines which produce the sensation of cobwebs being drawn over the face, which seamen sometimes describe as the forerunners of the ship being struck. The main trunk is hollow, and resembles in its structure the silicious tubes known as fulgurites. Mr. Tomlinson took this figure to be typical of the lightning discharge which strikes terrestrial objects, and objected to the stereotyped zigzag by which a stroke of lightning is generally represented. His theory is, that when a tree-like impression is found on the body of a man or animal struck by lightning, a portion of the fiery hand of the lightning itself has passed over the victim and left its mark. Several cases of this kind were described and discussed, but allowance must be made for the imagination of by-standers, which leads them to see in these ramified impressions "an exact portrait of the tree"; the blotches are taken for leaves, for a bird or bird's-nest, &c., as the case may be. Cases were also examined in which these tree-like impressions were referred by medical men to ecchymosis; other cases, in which the impressions of a horse-shoe, of a nail, of a metal comb, of coins, &c., were found on the persons of the victims, were explained on the principle of the transfer of metallic particles from one conductor to another, as illustrated by the well-known experiment of M. Fusinieri. Mr. Tomlinson rejected the photo-electric theory, by which M. Poey attempted to account for the production of all these figures; and in the discussion which afterwards took place, the ASTRONOMER ROYAL, Professor HENNESSY, and others, were disposed to agree to Mr. Tomlinson's view of the subject.

FRIDAY.

Mr. GLAISHER read the 'Report of the Committee upon Luminous Meteors.'—He commenced by regretting that so few observations had been made by Members of the British Association, and expressed a hope of better organization for the future. During the nights of both the August and November epochs in the year 1860, the sky was generally overcast, and but few meteors were seen. On the other hand, in the August just passed many meteors were observed; but of all seen in the year, accounts from three different observers of the same meteor in one case, and from two in another, had only been received by any member of the Committee, and of all the rest one account alone; so that no additional information could be added to the obser-

vations themselves. Some additional accounts during the year had been received of meteors which had been previously noted, and of one so long back as the 11th of June, 1845, which was seen near Adalia, in Asia Minor, by the Rev. F. Howlett. He describes the day as very sultry, the sky cloudless, when suddenly a meteor, which resembled a bright but permanent flash of lightning, appeared in the north, near to the pole-star. All present became absorbed by the magnificence of the spectacle, and after a time heard a dull, heavy report. The interval of time was estimated to have been from seven to eight minutes between seeing the light of the explosion and hearing the report, indicating the distance of ninety miles from the observer. A third account of the same meteor, has been received from Mount Lebanon, thus giving an additional account of this remarkable phenomenon.—Extracts were then given of the various papers and communications which had been made during the past year by Prof. Haidinger to the Imperial Academy of Vienna relative to the meteorolite of the 26th of May 1751, which is remarkable as being the first, and for a long time the only one, of metallic iron. Prof. Haidinger first produced a later document, and an original German translation, and a third account, found recently in a Library at Agram. Two pieces of iron fell, one of 71 lb. in weight, and which is still in the Imperial Cabinet of Vienna. From observations the meteor passed from 48° N. to 40° 6' N., and from 20° 18' to 34° E., or from W. to E. No observations were made of its velocity; but its height, before its fall at Hraschina, was from forty-three to fifty-two miles. It was stated that the report of this meteor was heard over an area of nearly 1,000 square miles. This iron was the first in which (accidentally, as it happened) was discovered the peculiar crystalline markings now known as Widmannstathian figures, and which are generally found to be of meteoric iron, and best seen when the iron is polished, and then etched with acid. Mr. Haidinger further, in a paper read on the 19th of April, 1860, spoke of a typical form of meteor, as exemplified in the stone which fell at Stannern, in Moravia, on the 22nd of May 1808, which, on the foremost part, appeared rounded off, the crust showing streaks, parallel to the probable line of direction through the air, and was much puckered up, like kneaded dough, behind; and then observed that there must be a starting-point, from some fundamental considerations proved by the phenomena themselves, in order to arrive at an understanding of their forms and conditions. There are, first, the stone leaving the extra-terrestrial space as a solid; secondly, its velocity being greater on entering the earth's atmosphere; thirdly, it is retarded by the resistance of the air; fourthly, the fireball is formed by the compression of the air behind it, and the rotation of the stone resulting therefrom; fifthly, the termination of the first part of the path is marked by a detention from the so-called "explosion," caused by the collapse of the vacuum from the air rushing in with great violence. Several points of interest, bearing on the question of meteors, have been recently noticed by Mr. Greg in his remarks on the tabulated results given at the end of a large 'Catalogue of Fire-balls and Aërolites,' published in the Oxford volume of the British Association Reports for 1860, and may here be alluded to. First, there appear to be indications of an eight-yearly maximum and minimum period for aërolitic meteors, the calculated years of maxima being 1859, 1851, 1843, 1835, &c., and very nearly agreeing with observed years. Secondly, there appear to be aërolitic and meteor epochs both distinct from and common to each other. Thirdly, while the aërolitic class of meteors in its total is rather under the average for August, which is the principal and most constant month for an abundance of sporadic meteors, it is over the average for November, likewise a month noted, though not so regularly, for an abundant display of meteors. Fourthly, there is a most decided tendency in meteors of the aërolitic class (*i. e.* those accompanied by detonation or the fall of stony fragments) to fall in the afternoon rather than at any other time; the numbers being, out of 130 observations, from 6 A.M. to noon, 42; and from

noon to 6 P.M. 88, i.e. more than double. Fifthly, as regards the observed direction of aërolitic and first-class meteors, there would seem not to be any very great tendency one way or the other; it might have been more natural to have expected a much more decided leaning to a westerly direction. The sudden change from an easterly direction, in September and October (about the time of the autumnal equinox), to a westerly direction in November, is remarkable. In January the prevailing direction was S.E.; in February, E.N.E.; in March, N.N.W.; in April, W.; in May, N.W.; in June, S.; in July, N.W.; in August, W.; in September, E.N.E.; in October, E.S.E.; in November, W.N.W., and in December, S. Sixthly, there have been far more falls of meteoric stones in the months of June and July than in December and January. Seventhly, taking the whole year, there is a greater tendency to equality of distribution in the aërolitic class of meteors than the smaller shooting stars and sporadic meteors; and it is highly probable that there is a distinction to be allowed between these two classes as regards orbit and physical characters. The meteors for December appear of late to be on the increase. Several days or periods in the year appear to have been rich in aërolitic and first-class meteors. Some of these are,—January 2nd and 10th; February 6th and 18th; March 1st and 7th; April 19th; June 1st and 2nd; July 17th and 29th; August 3rd, 7th and 12th; September 10th; October 1st, 3rd and 23rd; November 9th—13th; also November 29th; December 8th—13th. With regard to the November period for shooting stars, E. C. Herrick, of the United States, considers it to be advancing into the year at the rate of three or four days a century, the period of *maximum* being about thirty-three years; Mr. Greg, however, considers it may be nearer seventy. If Herrick is correct, then the November period should again culminate in 1866. In conclusion, the Committee begged to impress upon the Members of the British Association the necessity of more complete and numerous observations, noting the times of their appearance and disappearance; using a watch regulated to railway time, or whose error from railway time is nearly known; noting the size, colour, direction and general description of the meteor, its place among the stars at its first and at its last appearance, or its altitude. The larger and more brilliant meteor, the more desirable it is to receive reports from a number of distant observers.

'An Attempt to explain the Earlier Physical Conditions of Meteorites, as well as some of the Phenomena attending their fall on our Planet,' by M. VON HAIDINGER.

'Observations on the Preceding Communication, by R. P. GREG.

'On the Deposit of the Metal which takes place from the Negative Terminal of an Induction Coil during the Electrical Discharge in Vacuo,' by J. P. GASSIOT.—When the electric discharges by an induction coil are made from platinum wires hermetically sealed in a vacuum tube, as usually constructed, the wire which is attached to the negative terminal of the coil shortly assumes the appearance of being corroded: this arises from very minute particles of the metal having been disintegrated and separated from the wire, which particles are deposited on the sides of the tube in a lateral direction. If the wires are protected within the vacuum by being covered with glass tubing open at the end, but extending about one-eighth of an inch beyond the wire, it is the inside of this tubing that becomes coated with metal; but exclusive of this lateral action, a portion of the negative discharge will be observed to obtrude from the glass tubing in the form of a luminous brush; this luminosity is very sensibly affected by a magnet, and can in this manner be made to impinge on different parts of the vacuum tube, and wherever it is thus impinged heat is always evolved. The above phenomenon of the deflection of the negative discharge was described in a paper communicated by me to the Royal Society, and as I was subsequently desirous to examine with greater accuracy the nature of the deposit thus obtained from the negative terminal, and particularly if it could be obtained in the same manner from other metals than platinum, I had

an apparatus constructed in which the discharge could be directed on slips of glass; the apparatus was also so constructed that wires of different metals could be inserted, and in this manner I succeeded in obtaining deposits of the following metals:—gold, silver, copper, platinum, zinc, iron, tin, lead, (brass), magnesium, tellurium, bismuth, cadmium, and antimony—for many of these I was indebted to Mr. Matherson, who furnished them to me in a pure state. With gold, silver, platinum, tin, and bismuth, the deposit would take place in the state as now exhibited in about twenty-four hours' action; if the discharges were continued the deposit became denser, and, as will be observed, in one or two instances the centre is crystalline. With reflected light a large surface exhibits the lustre of the metal—with transmitted light the outer portion is transparent, showing the peculiar colour of the metals, as gold, green; silver, bluish-purple; platinum and tin, blackish-grey; tellurium, with the exception of antimony, I found disintegrated more freely than the other metals; while iron and magnesium were the most difficult; the deposit of the latter is scarcely perceptible. With aluminium wires I could not obtain any deposit after forty-eight hours' constant action; on one occasion I observed a faint trace on the glass, but in repeating the experiment with another wire no sign of any deposit could be obtained. Under the microscope the thin layer or deposit of metal is not resolved into any form, but appears as a mere film on the surface of the glass. From a brass wire terminal there was not any separation of the original metals. I had a tube constructed with two wires, both protected by glass tubing; a long slip of glass was inserted, so that the discharges from the + and the - terminals of the coil could be made with protected wires under the same conditions. The wires were of gold. The usual deposit took place at the negative; but after twenty-four hours' constant action not the slightest indication of any deposit from the + wire could be observed. With antimony a very peculiar effect was obtained; instead of the metal being deposited in a circular form, it spread nearly all over the glass and on the sides of the vacuum tube. I repeated the experiment by inserting slips of glass of sufficient length to reach beyond the terminals. Two of these glasses are on the table, and, if examined, it will be seen that the + discharge has apparently repelled the deposit as it formed from the negative wire, leaving a space somewhat analogous to the dark band which appears in the luminous stratified discharge. Whatever may be the cause of the difference in the action of the electrical discharge between the positive + and the negative -, the disruption of the particles of metal in the latter is merely mechanical; the minute particles are disrupted by the force of the discharge, which at the negative meets with resistance, and which resistance under certain conditions is attended with considerable heating effects, as if the wires are thin the negative invariably fuses, whether the discharges are made in air or in vacuo.

'On the Apparent Path of a Projectile, as affected by the Rotation of the Earth,' by the Rev. Prof. PRICE.—This communication, though in its details eminently mathematical, yet conducted to conclusions, some of which had an important bearing on the directing of missiles discharged from some of those new guns which in some cases gave them destructive powers even at ranges of 10,000 yards, or nearly six miles. The author, after explaining to the mathematical part of his audience the symbols which he used and the successive integrations by which he arrived at the more general results, and the approximations by which these became so simplified as to be applicable to practical uses, these approximations chiefly depending on the very small fraction which expresses the angular velocity of the earth per second—a fraction which, when expressed decimally, has four ciphers after the decimal point before the first significant figure is arrived at, and whose square, therefore, and higher powers are too small to be of any practical value. He thus arrived at simple linear equations, which were easily integrated, and thus the path of the projectile obtained with sufficient exactness for all practical purposes. He selected

two useful examples,—one where the initial velocity was nothing, as in the case long ago investigated by Hook, of a stone dropped from the hand into a deep mine, or from the top of a high tower, the path turning out to be a cubical parabola, showed a deviation to the east with a very small deviation to the south, from the point immediately beneath that from which it had been let drop, as actual experiment had determined it to be long since. The other example selected was that of a gun, directed due north or due south; in either case a westerly deviation being indicated, so that a gun of long range being directed exactly to its object the ball would never strike that object. He also stated, that at every rhomb along which the gun was directed a deviation peculiar to that point of the compass was indicated by the formula.

'On the Canonical Form of the Decadic Binary Quantic,' by W. SPOTTISWOODE.

'On Petzval's Asymptotic Method of solving Differential Equations,' by W. SPOTTISWOODE.—These papers were so purely mathematical that they could not be made interesting to our general readers. Indeed, the President induced the author merely to announce to the Section the title of the first communication, which entitles it to a place in the report of the *Proceedings* of the Meeting, where it can be studied at leisure.

'Observations on the Production of Colour by the Prism; the Passive Mental Effect, or Instinct in comprehending the Enlargement of the Visual Angle, and other Optical Problems,' by J. A. DAVIES.

'The Chromascope, and what it reveals,' and 'The Prism and Chromascope,' both by J. SMITH, were further observations and speculations on the power of producing the sensation of colour by the revolving rapidity of white cards, variously cut out on a black ground—say a piece of black velvet—in strong sunlight, first exhibited to the Section at the Aberdeen Meeting of the Association. The author brought forward further evidence in favour of his optical theory, as opposed to the Newtonian, and combated the opinion that the effect of his Chromascope arose from the power of the retina to recover its sensibility to the impressions of differently coloured lights at successive times.

'An Experiment; being an Attempt to illustrate the Roseate Phenomena seen during a Total Eclipse of the Sun,' by J. SMITH.—The author considered that he had succeeded in producing the effect of the flame-coloured light seen during a total eclipse by causing a blackened circle to revolve rapidly in front of a strongly illuminated white circular card representing the sun. But as the author was not present to explain, nor the instrument to perform the experiment, no opinion could be formed as to what the experiment proved, or whether or not it illustrated the phenomena in question.

Mr. HOPKINS wishing to defer his communication 'On the Motion of Glaciers,' until Monday, the business of the Section was concluded for the day.

SECTION B.—CHEMICAL SCIENCE.

President.—Prof. W. A. MILLER.
Vice-Presidents.—Prof. ANDERSON, Prof. ANDREWS, J. P. GASSIOT, J. H. GLADSTONE, W. R. GROVE, Dr. SCHUNCK, Dr. STEPHENSON, Prof. A. W. WILLIAMSON.
Secretaries.—G. D. LIVING, A. VERNON HARCOURT.
Committee.—G. Bischof, W. Blyth, Grace Calvert, Dr. T. Clark, Dr. J. Davy, Prof. Daubigny, H. Deane, W. De La Rue, Prof. Delfia, B. Edwards, Dr. Eisenlohr, G. C. Foster, Dr. Francis, Dr. Gilbert, G. Gladstone, J. J. Griffin, F. C. Griffiths, C. H. B. Hambly, Rev. W. Vernon Harcourt, J. Higgins, J. P. Joule, Prof. Kekulé, J. Lee, S. Macadam, Dr. Matthiessen, J. Merceur, Dr. H. Müller, A. B. Northcote, H. D. Poehlin, J. J. Price, Prof. H. E. Rose, R. Rumney, R. Russell, J. Sidgbottom, R. A. Smith, Dr. Smith, D. Stone, J. Tennant, C. Tomlinson, Prof. Voelcker, W. S. Ward, R. Warington, H. H. Watson.

THURSDAY.

Opening Address by the PRESIDENT.

Report on the Manufactures of the South Lancashire District.

'On the Effect of Great Pressures combined with Cold on the Six Non-condensable Gases,' by Dr. ANDREWS.—In this communication the author gave an account of some results already obtained in a research with which he is still occupied on the changes of physical state which occur when the non-condensable gases are exposed to the combined action of great pressures and low temperatures.

The gases when compressed were always obtained in the capillary end of thick glass tubes, so that any change they might undergo could be observed. In his earlier experiments the author employed the elastic force of the gases evolved in the electrolysis of water as the compressing agent, and in this way he actually succeeded in reducing oxygen gas to 1.300th of its volume at the ordinary pressure of the atmosphere. He afterwards succeeded in effecting the same object by mechanical means, and exhibited to the Section an apparatus by means of which he had been able to apply pressures, which were only limited by the capability of the capillary glass tubes to resist them; and while thus compressed the gases were exposed to the cold attained by the carbonic acid and ether bath. Atmospheric air was compressed by pressure alone to $\frac{1}{10}$ of its original volume and by the united action of pressure and a cold of -166° F. to 1.675th; in which state its density was little inferior to that of water. Oxygen gas was reduced by pressure to 1.324th of its volume, and by pressure and cold to 1.554th; hydrogen by the united action of cold and pressure to 1.500th; carbonic oxide by pressure to 1.278th, by pressure and cold to 1.278th; nitric oxide, by pressure to 1.310th, by pressure and a cold of -160° F. to 1.680th. None of the gases exhibited any appearance of liquefaction even in these high states of condensation. The amount of contraction was nearly proportional to the force employed, till the gases were reduced to from about 1.300th to 1.350th of their volume; but, beyond that point, they underwent little further diminution of volume from increase of pressure. Hydrogen and carbonic oxide appear to resist the action of pressure better than oxygen or nitric oxide.

'On the Thermal Effects of Elastic Fluids,' by Dr. JOULE and Prof. W. THOMSON.

FRIDAY.

The PRESIDENT exhibited some Photographs of different Spectra, and read a paper on the subject. —The apparatus by which the spectra may be photographed consists of an ordinary camera obscura attached to the end of a long wooden tube, which opens into a cylindrical box, within which is a prism glass, or a hollow prism filled with bisulphide of carbon. If the prism be so adjusted as to throw the solar rays, reflected from a heliostat, upon the screen of the camera, and the wires which transmit the sparks from a Ruhmkorff coil are placed in front of the uncovered portion of the slit, the two spectra are simultaneously impressed. The solar beam is easily interposed at the proper time by means of a small screen, and the electric spectrum is allowed to continue its action for two or three, or six minutes, as may be necessary. He did not find that anything was gained in distinctness by interposing a lens of short focus between the slit and the wire which supplied the sparks, with the view of rendering the rays of the electric light parallel like those of the sun, owing to the absorbent action of the glass weakening the photographic effect; and the flickering motion of the sparks being magnified by the lens, rendered the lines less distinct than when the lens was not used. Although with each of the metals (including platinum, gold, silver, copper, zinc, aluminium, magnesium, iron), when the spark was taken in air, he obtained decided photographs, it appeared that in each case the impressed spectrum was very nearly the same, proving that few of the lines produced were those which were characteristic of the metal. The peculiar lines of the metal seemed chiefly to be confined to the visible portion of the spectrum, and these had little or no photographic power. This was singularly exemplified by repeating the experiment upon the same metal in air, and in a continuous current of pure hydrogen. Iron, for example, gave, in hydrogen, a spectrum in which a bright orange and a strong green band were visible, besides a few faint lines in the blue part of the spectrum. Although the light produced by the action of the coil was allowed to fall for ten minutes upon a sensitive collodion surface, scarcely a trace of any action was procured; whilst, in five minutes, in the air, a powerful impression of numerous bands was obtained. It was remarked by Mr. Talbot that,

in the spectra of coloured flames, the nature of the acid did not influence the position of the bright lines of the spectrum, which he found was dependent upon the metal employed, and this remark had been confirmed by all subsequent observers. But the case was very different in the absorptive bands produced by the vapours of coloured bodies,—there the nature of both constituents of the compound was essentially connected with the production of absorptive bands. Chlorine, combined with hydrogen, gave no bands by absorption in any moderate thickness. Chlorous acid and peroxide of chlorine both produced the same set of bands, while hypochlorous acid, although a strongly coloured vapour and containing the same elements, oxygen and chlorine, produced no absorptive bands. Again, the brownish red vapour of perchloride of iron produced no absorptive bands; but when converted into vapour in a flame this gave out bands independent of the form in which it occurred combined. These anomalies appeared to admit of an easy explanation on the supposition that, in any case, the compound is decomposed in flame, either simply by the high temperature, just as water is, as shown by Grove, or, in all other cases of the production of bright lines by the introduction of a metallic salt into a flame of burning bodies (as shown by Deville). In the voltaic pile the decomposition must of necessity take place by electric action. The compound gases, protoxide and binoxide of nitrogen, gave, when electrified, the same series of bright bands (as Plücker had shown) which their constituents when combined furnish. Aqueous vapour always gives the bright lines due to hydrogen and hydrochloric acid, the mixed system of lines, which could be produced by hydrogen and chlorine. The reducing influence of the hydrogen and other combustible constituents of the burning body would decompose the salt, liberating the metal, which would immediately become oxidized or carried off in the ascending current. There was obviously a marked difference between the effect of intense ignition upon most of the metallic and the non-metallic bodies. The observations of Plücker upon the spectra of iodine, bromine and chlorine show that they give, when ignited, a very different series of bands to those which they furnished by absorption, as Dr. Gladstone had already pointed out; but it was interesting to remark that, in the case of hydrogen, which, chemically, was so similar to metal, we have a comparatively simple spectrum, in which the three principal bright lines correspond to Fraunhofer's dark lines, C, F, and G. It was, however, to be specially noted that the hydrogen occasioned no perceptible absorptive bands at ordinary temperatures in such thicknesses as we could command in our experiments, and the vapour of boiling mercury was also destitute of any absorptive action, although when ignited by the electric spark it gave a characteristic and brilliant series of dark bands. The following experiment suggested itself as a direct test of Kirchhoff's theory. Two gas-burners, into which were introduced chloride of sodium on the wick of the spirit lamp, were placed so as to illuminate equally the opposite sides of a sheet of paper partially greased. The rays of the electric light screened from the photometric surface, suitably protected, were made to traverse one of the flames. If the yellow rays of the light were absorbed by the sodium flame, the light emitted laterally by the flame should be sensibly increased. The experiment, however, failed to indicate any such increase in the brilliancy of the flame, possibly because the eye was not sufficiently sensitive to detect the slight difference which was to be expected.

THURSDAY.

Opening Address of the President, Sir R. I. MURCHISON.

'Sketch of the Geology of Manchester,' by E. W. BINNEY.

'On the Recent Encroachments of the Sea on the Shores of Torbay,' by W. PENGELLY.—Hard Devonian limestones, fissile and round jointed, formed, he said, the two projecting horns of Torbay. Sandstones and conglomerates form the hollow of the bay, and have been much worn away within the memory of man, especially at Livermead, which is only preserved by continual engineering labours. The process of erosion by the sea was explained by the author as something like a succession of honey-combing, sometimes by insulation of portions of the cliffs. On the slates and limestones the sea more slowly produced excavations and ledges, which storms enlarge. The effects of the severe storm of October, 1859, on the cliffs, beach, roads, &c., of Torbay were described in detail, and the importance of such storms as modern agents of change was dwelt upon.

THURSDAY.

The CHAIRMAN, in opening the meeting, gave no formal Address, but made some remarks on the advantages of meetings like those which had just commenced. The great object of science was the unfolding the laws by which the universe was governed, and one of the greatest encouragements to this study was the assembling together of men of kindred minds and kindred pursuits. Sometimes difference of opinion engendered feelings of an unpleasant kind, which personal intercourse served to remove; and thus these meetings, on account of their scientific and social value, had become increasingly appreciated.

'On the Cervical and Lumbar Vertebrae of the Mole (*Talpa Europaea*, L.), by Prof. OWEN.—Few of our native quadrupeds have had their osteology more frequently described and studied than the common Mole, by reason of the singular and extreme modifications of certain parts of the skeleton, and their readily recognizable adaptation to the peculiar sphere and habits of life of the animal. He had not anticipated, therefore, in making a recent scrutiny of the skeleton, to find anything worth special notice that had not been noticed before, and could scarcely persuade himself that the fact he was about to communicate had escaped all previous observers. Had it been mentioned, however, in any special monograph on the *Talpa Europaea*, which might have escaped his research, he thought it would have been considered worthy of a reference by the comprehensive and industrious Stannius, and might have led the sharp-sighted De Blainville to a more rigorous scrutiny of the vertebral column than he had bestowed upon it in his Monograph on the Osteology of the Mole—the last on that subject with which Comparative Anatomy has been enriched. Jacobs, in his generally minute and accurate monograph, when treating of the cervical vertebrae, notices only their spinous processes; and, after describing the large one of the *Epistropheus*, proceeds,—“*Vertebrae colli ceterarum processum spinosum habent nullum, et magis annulis similes sunt, quorum interstitia asperae arteriae interstitiis similes sunt*” (p. 14), and this description has been generally repeated. Cuvier writes:—“*Dans les Taupes, elles (les cinq autres cervicales) ne forment également que des simples anneaux entre lesquels il y a beaucoup de jeu*.” So likewise Prof. Robert E. Grant writes:—“*The remaining cervical vertebrae are behind, like so many loose rings, shorn of their spinous and transverse processes, to allow of the freest motion with safety to the spinal chord*.” Prof. Bell more accurately states, “*that in the Talpidae and the Soricidae the cervical vertebrae have strong transverse processes, and, excepting the second, do not possess any spinous processes*.” Prof. De Blainville, in a more detailed account of the skeleton, having express reference to the species under consideration (*Talpa Europaea*), says:—“*Les quatre dernières (vertèbres cervicales) se ressemblent en ce que leur arc, fort étroit, ne présente*

aucune trace d'apophyse épineuse; les transverses sont également peu marquées, sauf le lobe inférieur de celle de la sixième, assez dilaté, du moins transversalement.” If the cultivators of other, and more particularly of the exact, sciences were to judge of Zootomy by the discrepancy of the testimonies adduced by some of the highest names in this science, as to a simple fact, easily determinable by observation, of one of our commonest native quadrupeds, they might conclude that the foundation of our generalizations in Comparative Anatomy reposed upon a very sorry and insecure basis, and that the method of obtaining the materials for such basis, by the first process of induction—the simple exercise of the eyes—stood in need of much improvement. For while one anatomist implies the absence of transverse processes in the cervical vertebrae of the mole by his silence, and another directly affirms their non-existence, a third describes them as being “strong,” and a fourth as being “little marked.” The fact is, that these so-called “transverse processes” are not only present in all the cervical vertebrae, but are variously and peculiarly developed, so as to give the mole the same advantage in strengthening and stiffening its neck, and impeding its lateral inflexions, which the crocodile derives from a similar modification of what might, with equal propriety, be termed in it the “transverse processes of the cervical vertebrae,”—viz., by their intricate or reciprocally overlapping arrangement, due to the shape and size of the costal elements of such transverse processes. But the mole has so far the advantage over the crocodile in this arrangement as that, whereas the costal part of the transverse process retains its fetal separation in the cold-blooded Reptilia, it becomes firmly ankylosed to the other parts of the transverse process in the small warm-blooded mammal. In a former memoir, ‘On the Processes of Vertebrae,’ Prof. Owen had given the results of an analysis of the “cervical transverse process,” showing it to consist of the autogenous “pleurapophysis,” combined with the exogenous “parapophysis” and “diapophysis.” In the mole the pleurapophysis joins the diapophysis, circumscribing the vertebral foramen, and developing a short process from the point of junction; in the third vertebra the pleurapophysis, or costal part of the “transverse process,” is compressed and produced backwards and a little outwards and downwards, overlapping the anteriorly produced part of the pleurapophysis of the fourth cervical. This portion of the “transverse process” much resembles the corresponding but separate element in the same vertebra of the crocodile, except that it is “sessile,” instead of being supported on a short peduncle; it is, for example, broad, compressed, and produced downwards, forwards and backwards; its larger and longer posterior portion overlapping the anterior end of the pleurapophysis of the fifth vertebra, as the same part of itself is overlapped by the pleurapophysis of the third vertebra; the posterior part of the pleurapophysis of the fourth cervical of the mole is further interlocked between the pleurapophysis of the fifth cervical below, and the anterior zygapophysis of the same vertebra above. The pleurapophysis of the fifth cervical resembles that of the fourth. In the sixth cervical it is much more developed, both forwards, backwards and downwards; the pair forming the sides of a deep and wide channel on the under part of that vertebra. In the seventh cervical the pleurapophysis is not developed; the diapophysis forms a small obtuse prominence below the interior zygapophysis, and, in the ordinary language of Anatomy, its “transverse process” would be said to be “imperforate.” With regard to the common description of the cervical vertebrae of the mole as mere rings of bone, the term is applicable only to the neural arches of the five last vertebrae, none of which have a spine, except the third and seventh, and in these it appears as a mere tubercular beginning. The bodies of the vertebrae are subdepressed, but otherwise are well-developed quadrate bones, closely united, so as to comour with the peculiar size, shape and arrangement of the “transverse processes” above described, to give strength to the neck and impede any lateral

inflexions. It is easy to show on a recent mole, when the cervical vertebrae are exposed by removal of the enormous masses of muscles with which they are surrounded, that the lateral inflexions of the neck are confined to movements between the *atlas* and *dentata*, the *dentata* and the third vertebra, and between the sixth and seventh vertebrae, but are as effectually impeded in the intervening vertebrae as in the crocodile itself. Nor is the movement upwards and downwards between the same vertebrae of more than a limited extent. The osseous style developed in the *ligamentum nucha*, co-extensive with the cervical series, and running parallel with the course of their undeveloped spines, stiffens the neck in respect of its vertical inflexions beyond the *atlas*, as well as augments the lever power of the muscles which raise the head. If the service to a mole of a stiff neck in the fossorial applications of the snout and head had been called to mind, the analogy of the more efficient modification to that end in the burrowing armadillo, might have led to an examination of the actual structure of this part of the skeleton of the mole, which would have rendered unnecessary the present communication on the subject. One of the objects Prof. Owen had in view in troubling the Section with what some might deem too trifling a matter, was to encourage younger comparative anatomists to exercise their skill on indigenous subjects, which may any day be brought within their reach. Their organization is far from being exhausted by direct and original scrutiny, and the highest generalizations in Comparative Anatomy might be tested and illustrated by the anatomy of our commonest fishes, reptiles, birds and mammals, independently of rarities from foreign shores. Prof. Owen's residence in Richmond Park had procured him facilities for examining moles, hedgehogs, &c., which might supply subjects for future communications. In conclusion, he might further state respecting the mole, that its loins were strengthened by super-additions to their vertebrae, precisely like those discovered by Sir Philip Egerton in the cervical vertebrae of the *Ichthyosaurus*; viz., by a series of “subvertebral wedge-bones” infixed into the inferior interspace between each of the six lumbar vertebrae, as well as between the first lumbar and last dorsal, and between the last lumbar and the first sacral. These which Prof. Owen had determined to be “autogenous hypapophyses,” have their broad, rhomboidal, smooth and slightly convex base downwards; and their narrower end wedged upwards into the lower part of the intervertebral substance. It is obvious that the lumbar region, co-operating with the pelvis, as the fulcrum during the vigorous actions of the hind feet by which the loose earth is kicked out of the burrow, must derive an advantage from this super-addition to their fixation, analogous to that which the *Ichthyosaurus* derived from the wedge-bones of its cervical vertebrae. The lumbar hypapophyses of the mole had not escaped the notice of the sharp-sighted Jacobs, who speaks of them as “*ossicula sesamoidea*” (loc. cit. p. 17); but he deduces no physiological consequence from the fact; and this passing notice had not been recognized by any subsequent writer on the osteology of the Insectivora. From no systematic work or monograph on Comparative Anatomy, indeed, could the student acquire any hint of so curious a fact that the vertebral column of the mole combined two peculiarities which are separately given, in the Reptilian class, viz., to the Crocodilia and the Enaliosauria respectively. This paper was illustrated by diagrams of the structures described.

Prof. OWEN afterwards read a paper ‘On some Objects of Natural History from the Collection of M. Du Chaillu,’ of which the following is a summary:—Prof. Owen's first knowledge of the zoological collection was derived from a letter sent by M. Du Chaillu, dated Gaboon, June 13, 1859, and received in the British Museum in August, 1859, in which M. Du Chaillu specified the skins and skeletons of the gorilla or *n'gana*, *kooloo-kamba*, *nshiego*, and *nshiegombowie* which he had collected, offering them for sale, with other varieties, to the British Museum. Prof. Owen replied, recommending the transmission of the collection to

London for inspection, with which recommendation M. Du Chaillu complied, bringing with him all the varieties he had named, with other objects of natural history, from which he permitted selection to be made. The skins of the adult male and female of the young of the troglodytes gorilla afforded ample evidence of the true colouration of the species. In the male, the rufo-griseous hair extends over the scalp and nape, terminating in a point upon the back. The prevalent grey colour, produced by alternate fuscous and light grey annulations of each hair, extends over the back, the hair becoming longer upon the nates and upon the thighs. The dark fuscous colour gradually prevails as the hair extends down the leg to the ankle. The long hair of the arm and forearm presents the dark fuscous colour; the same tint extends from below the axilla downwards and forwards upon the abdomen, where the darker tint contrasts with the lighter grey upon the back. The scanty hair of the cheeks and chin is dark; the pigment of the naked skin of the face is black. The breast is almost naked, and the hair is worn short or partially rubbed off across the back, over the upper border of the iliac bones, in consequence, as it appears, of the habit ascribed by M. Du Chaillu to the great male gorilla of keeping at the foot of a tree, resting its back against the trunk. The skin of the great male gorilla, as mounted in the British Museum, exhibits two opposite wounds,—the smaller in front on the left side of the chest, the larger close to the lower part of the right blade-bone. Two of the ribs in the skeleton of this animal are broken on the right side near where the charge had passed through the skin in its course outwards. These marks correspond with the account of the slaughter of the great gorilla given by M. Du Chaillu. Prof. Owen proceeded to describe the colour of the female gorilla, which, it appears, was generally darker and of a more rufous tint than the male. In one female the rufous colour so prevailed as to induce M. Du Chaillu to note it as a red-rumped variety. In the young male gorilla, 2 ft. 6 in. in height, 1 ft. 7 in. in the length of the head and trunk, and 11 inches across the shoulder, the calvarium is covered with a well-dressed "skull-cap" of reddish-coloured hair. The back part of the head behind the ears, the temples and chin are clothed with that mixture of fuscous brown and grey hair which cover with a varying depth of tint the trunk, arms and thighs. The naked part of the skin of the face appears to have been black, or of a very dark leaden colour; a few scattered straight hairs, mostly black, represent the eyebrows. A narrow moustache borders the upper lip, the whole of the lower lip and sides of the head are covered with hair of the prevailing grey fuscous colour. The rich series of skulls and skeletons brought home by M. Du Chaillu illustrate some most important phases of dentition. These phases were specified by Prof. Owen at length. The deciduous or milk dentition, it was remarked, were in the youngest specimen of the gorilla something similar to those of the human child, but an interpace equal to half the breadth of the outer incisor divides that tooth from the canine, and the crown of the canine descends nearly two lines below that of the contiguous milk molar. The deciduous molars differed from those of the human child in the more pointed shape of the first, and much larger size of the second. The dentition of the young gorilla corresponds best with that exemplified in the human child between the eighth and tenth years; the difference, however, is shown in the complete placing of the true molar, whilst the premolar series is incomplete. It was worthy of remark, also, that in both specimens examined the premolars of the upper jaw had preceded those of the lower jaw, and that the hind premolar has come into place before the front one. In the later development of the canines and the earlier development of the second molars of the second dentition the gorilla differs, like the chimpanzee and the orang, from the human order of dental development and succession. An opportunity of observing this order in the lower races of mankind is rare. Prof. Owen availed himself of the opportunity in the case of the male and female dwarf Earthmen from South Africa, exhibited in London. He found dentition at the phase indicative of the

age of from seven to nine in the English child; other indications agreed with this evidence of immaturity. The children were dressed and exhibited as adults. Both showed the same precedence in development of canines and premolars which obtains in the whole race. Referring next to the variety of the chimpanzee brought by M. Du Chaillu from the Camma Country and from near Cape Lopez, Prof. Owen remarked that this species accords specifically in its osteological and hirsute development with the *Troglodytes niger*. It is stated by M. Du Chaillu to be distinguished by the natives of Camma as the nschiegombowie from the common chimpanzee (*Troglodytes niger*), called by them the nschiego. From the character of the skins of the male and female specimens of this species brought by M. Du Chaillu to London, Prof. Owen would have deduced evidence of a distinct and well-defined variety of Troglodytes.

The reading of this paper was followed by a discussion in which Prof. OWEN, Dr. LANKESTER, and M. DU CHAILLU took part. Prof. OWEN, on being requested to point out the principal distinctions between man and the gorilla, drew attention to the fact of its inability to stand on its hind legs, and the multitudinous points of adaptation in structure which such an incapability demanded. He also went into the details of the anatomical structure of the brain in the monkey tribes, and insisted on the great differences of structure which that organ presented in man and the quadrumana. Independent of the great size of the brain in man, it possessed certain parts, as the hippocampus minor, which existed only in an undeveloped or rudimentary condition in the monkeys.

Dr. WRIGHT, of Dublin, read the following communication from Dr. J. E. Gray, 'On the Height of the Gorilla.'—Much difference occurs in the statements of travellers and others with reference to the height of the great African ape. Bowdich, the first traveller by whom it was mentioned, under the name of the *Ingéna*, states it, on the authority of the natives of the Gaboon, to be generally 5 feet high; but, in some recent notices, it has been asserted to reach the height of 6 feet 2 inches; and the specimen exhibited at the meeting of German naturalists at Vienna is said, on good authority, to have measured more than 6 feet in height. The measurement of a stuffed skin without bones is necessarily delusive, depending as it does, firstly, on the mode in which the skin has been originally prepared, and, secondly, on the extent to which the artist may be disposed to stretch it. Such measurements are not to be relied on unless they are in accordance with those of the bony skeleton; and it, therefore, occurred to me that it would be desirable to measure the long bones of the limbs of the different skeletons existing in the British Museum, the osseous structure giving the only certain dimensions on which reliance can be placed. The skeletons in the British Museum are six in number, viz.,—1. A skeleton, obtained from Paris by Prof. Owen, and mounted in the best French manner;—2, 3, 4. Skeletons of male, female and young, purchased from M. Du Chaillu;—5. A skeleton of a male, purchased at Bristol, of which we have also the stuffed skin;—6. An imperfect skeleton, purchased from M. Parzudaki, of Paris. The measurements of the several bones of each of these skeletons are given in the following table.

	Humerus.	Ulna.	Radius.	Femur.	Tibia.	Fibula.
Measurement in inch.						
Articulated specimen from Paris	17	14	13	14½	11½	10½
Skeleton from Du Chaillu's stuffed specimen (called the "King of the Gorillas")	10½	14	13½	13½	11	9½
Skeleton of young male, from the specimen purchased at Bristol	14½		11	15		9½
Imperfect skeleton, purchased of M. Parzudaki	12	11	10	11		9½
Skeleton of female, purchased of M. Du Chaillu	13	11	10½	11	9	7
Skeleton of young male, purchased of M. Du Chaillu	12	11½	9½	10	8½	7

They were taken by Mr. Gerard with a tape measuring inches and quarters of inches only, but

are quite sufficient for a comparison between the specimens themselves, and as affording materials for determining the actual height of the animal. As the largest of these (viz., the Paris specimen, photographed for the Trustees of the British Museum by Mr. Fenton) stands 5 feet 2 inches in height, we are justified in concluding that to be in all probability the extreme natural height of the full-grown animal.

Mr. J. G. JEFFREYS exhibited specimens of the *Sphenotrochus borealis* of Fleming, which had been taken in the dredge off the coast of Zetland.

Dr. OGILVIE read the Report of the Aberdeen Dredging Committee.—At the Aberdeen Meeting of the British Association a Committee was appointed for the purpose of carrying out a system of dredging on the north-eastern coast of Scotland, consisting of Dr. Ogilvie, Dr. Dickie, Prof. Nicoll, Dr. Dyce, and Mr. Peach, and 25l. was granted for that object. Of this sum, 5l. was allotted to Mr. Peach to enable him to conduct investigations at Wick. In 1860, the few weeks available for dredging, previous to the Meeting of the Association in July, were so tempestuous and generally unfavourable that no part of the grant was expended; but in the course of the autumn a trial was made off the coast of Banffshire. During the past summer, 1861, several dredging expeditions were planned and completed off the bay of Aberdeen and adjacent coast, none exceeding a distance of twelve miles from land. The Committee in Aberdeen considered it advisable to receive the aid of others besides Mr. Peach, and to have trials made at points intermediate between Aberdeen and Wick, in order to render the investigations more complete; and with this view the assistance of the Rev. W. Grigor, of Macduff, was asked and readily accorded, a part of the grant being allotted to him. They have also secured the co-operation of another zealous naturalist, Mr. Dawson, of Cruden. This gentleman has just put at their disposal a valuable and interesting Report on the Mollusca of Cruden Bay, but the others have not yet had sufficient time to allow of any report; and at Aberdeen the materials collected during the several expeditions being still in progress of examination, the Committee are under the necessity of reserving the details for a further report. The general results, however, have been such as to lead them to hope that the sum of 25l. will be granted for one year more, in order that the dredging may be further carried on, and at greater depths and distances from land. No regular dredging has previously been conducted on this part of the Scottish coast, but the Committee have now the satisfaction of observing, that, owing mainly to the admission of parties of students of the University to the dredging excursions, a feeling of interest has been awakened in the pursuit, from which the best results may be anticipated; and there can be no doubt that several ardent young men have thus been thoroughly trained in carrying on such operations in the open sea. The Committee would urge these as reasons for a renewal of the grant, that they may be thus enabled to procure materials for a complete report at the Meeting of the Association in 1862.

'On the Anatomical Characters of *Cyprea*,' by Dr. T. ALCOCK.—In this paper the author gave the results of a more detailed anatomical examination of the species of the genus *Cyprea* than had hitherto been made.

'On the Relation between the Pinnate and Palmate Leaves,' by T. M. MASTERS.—The author gave examples of transition from one form of these leaves to another, showing that the form depended on the relative growth of different parts of the leaf.

Dr. LANKESTER said that the forms of all leaves depended on the relative growth of the woody and cellular tissue of the leaf. He objected to the terms *nerves* and *veins* as applied to the vascular tissue of leaves, and proposed to substitute the more appropriate term *ribs*.

'Brief Summary of a Report on the Flora of the North of Ireland,' by Dr. G. DICKIE.—The district to which the Report refers comprehends that part of Ireland which lies to the north of a line passing to the west from Dundalk, embracing ten entire counties and part of other two. The information respecting the native Flora of this district

has been derived mainly from the following sources: Dr. Mackay's 'Flora of Ireland,'—a valuable list contributed by D. Moore, Esq., of the Glasnevin Botanic Garden,—notes contributed by Mr. Hyndman, of Belfast,—the manuscripts of the late Mr. Templeton, of Cranmore, liberally placed at the author's disposal by Mrs. Templeton,—and, lastly, records of species observed by the author himself during excursions to different parts of the north of Ireland. Details will be given in the full report for insertion in the next volume of the *Transactions* of the Association. It will be sufficient here to give a summary of the results. The standard adopted is the 'British Flora' by Sir W. J. Hooker and Prof. Arnott; and in order to bring out the botanical features of the district, the types of Mr. Watson (in his 'Cybele Britannica') afford the best means for comparison. The total number of species of Phanogams in the district may be estimated at 725. In the entire Flora of the United Kingdom, those of the English type are 396; the Scottish, 68; Highland, 108; Germanic, 196; Atlantic, 80. In the district there are 166 of the English type, 39 Scottish, 22 Highland, 17 Atlantic, and 3 only of the Germanic type; the remainder, of course, embracing those of general occurrence in Britain, hence called the British type. The Flora, therefore, is characterized by a large admixture of species belonging to the English and Scottish types, with a fair proportion of those called Western, or Atlantic. The number of Highland species is small, as might have been expected, owing to the physical characters of the country. Those of the Germanic type are still fewer; only 3 out of 196 British species referred to that type.

FRIDAY.

'Report on the best Mode of preventing the Ravages by Teredo and other Marine Animals in our Ships and Harbours, for the Consideration of which a Committee was formed at the last Meeting of the Association,' by Mr. JEFFREYS.

'Preliminary Report on the Dredging Committee for the Mersey and Dee,' by Dr. COLLINGWOOD and Mr. BYRLEY.

Mr. M'ANDREW read a short account of the proceedings of the General Dredging Committee. This Committee has now been organized, and Mr. J. G. Jeffreys has undertaken the duties of reporter of the correspondence of the various local dredging committees.

In the course of the discussion which the reading these Reports led to, Mr. JEFFREYS stated that the several results of the labours of the dredging committees confirmed Edward Forbes's law, that the species which had the greatest vertical depth had the greatest horizontal range. At the same time, the law was not absolute, as the changes which had taken place in the elevation and depression of the sea-bottom since the last geological epoch had undoubtedly produced many local disturbances in the distribution of both plants and animals. He pointed out, however, the necessity of an accurate investigation of forms in order to determine their distribution.—The Rev. Mr. HINCKS observed, with regard to the record of the existence of *Coryne pusilla*, that it was very desirable that the particular variety should be stated. He knew many varieties of this form of polyp, but knew of no book or paper where they were all recorded.—Mr. PATERSON announced that Prof. Wyville Thompson, during his dredging this summer off the Shetland Islands, had procured five perfect specimens of the *Udaria papillosa*. Of this fine sea-urchin, known as the piper, only the spines had been taken by previous naturalists.

'Report on the Present State of our Knowledge of the Genus Apteryx, living in New Zealand,' by P. L. SCLATER.

'On the Ovicells of the Polyzoa, with Reference to the Views of Prof. Huxley,' by the Rev. T. HINCKS.—In this paper the author stated that in certain forms of Polyzoa he had discovered, first, cells which developed into regular ova; secondly, cells which became absorbed, and contributed to the development of normal ova.

Mr. LUBBOCK stated that he had observed the same distinctions in the ovicells of bees and butterflies.

'On the Influence exerted by Light on the Func-

tion of Plants,' by Dr. DAUBENY.—The author described certain principles published by him in the *Philosophical Transactions* in the year 1836, in the course of which he established, firstly, that the decomposition of carbonic acid and the consequent disengagement of oxygen was influenced chiefly by the luminous rays of the spectrum, and not by the calorific or actinic ones; secondly, that under particular circumstances, nitrogen is emitted during sunlight from the leaves of plants; thirdly, that other functions of plants, such as the greenness which the leaves assume, the peculiar property which belongs to certain ones, as to the sensitive plant, the exhalation of water from the leaves and its absorption by the roots, are probably dependent upon the same influence, &c. Dr. Daubeny briefly reviewed the various points comprised in the subject he selected for consideration, and submitted representations on paper illustrative of the operations of light under various circumstances.

Dr. DAUBENY also read a paper 'On the Functions discharged by the Roots of Trees,' and made some observations 'On a Violet peculiar to the Calamine Rocks, in the neighbourhood of Aix-la-Chapelle.'—In these papers the author called attention to the selective power possessed by the roots of plants as indicative of a force independent of any explanation from physical causes, and which he therefore regarded as vital.

Dr. LANKESTER objected to the term "vital" as indicating the existence of a force independent of physical forces. All we knew of the functions of animals and plants increased the conviction that they were dependent on physical forces. The selective power of roots was no greater proof of a vital action than the selective power possessed by the crystals of minerals on compound solutions.

SUB-SECTION D.—PHYSIOLOGY.

President—Dr. DAVY.

Vice-Presidents—Prof. SHARPESY, Prof. ROLLESTON, Dr. WILLIAMS,

Dr. ROBERTS.

Secretaries—Dr. SMITH, Dr. ROBERTS.
Committee—W. R. Milner, Dr. Gibb, Dr. B. W. Richardson, A. Aspland, Dr. Borchardt, Dr. Noble, J. Robertson, J. A. Ransome, Dr. M. A. E. Wilkinson, Mr. Brook, Prof. Remak, Dr. J. W. Ogilvie, J. Toynbee, R. Garner, Prof. Ogilvie, Dr. F. Moutat, Dr. Robinson, Dr. Collingwood, A. Ransome.

THURSDAY.

'On the Connexion between the Functions of Respiration and Digestion,' by Dr. G. ROBINSON.

'Report on the Influence of Prison Dietary and Punishments on the Bodily Functions of Prisoners,' by Dr. E. SMITH and J. R. MILNER.

'On the Existence and Arrangement of the Fovea Centralis Retinae in the Eyes of Animals,' by Prof. H. MÜLLER.

'On Chloroform Accidents, and some new Physiological Facts as to their Explanation and Removal,' by Dr. C. KIDD.

'On the Action of Lime on Animal Matter,' by Dr. J. DAVY.

FRIDAY.

'On the Physiological and Medicinal Properties of Sulphate of Aniline, and its Use in the Treatment of Chorea,' by Dr. J. TURNBULL.

'Report of the Influence of Prison Dietary and Punishments upon the Bodily Functions of Prisoners, Part II.,' by Dr. E. SMITH and J. R. MILNER.

'On the Action of the Eustachian Tube in Man, as demonstrated by Dr. Politzer's Oscope,' by J. TOYNBEE.

'On the Blood of the Common Earthworm,' by Dr. J. DAVY.

'On Certain Points in the Anatomy of the Insectivora,' by Dr. G. ROLLESTON.

'Upon the Influence of the Sympathetic Nerve on Voluntary Muscles, as witnessed in the Treatment of Progressive Muscular Atrophy by Secondary Electric Currents,' by Prof. REMAK.

SATURDAY.

'On the Structure and Growth of the Elementary Parts (Cells) of Living Beings,' by L. BEALE.

'On the Question whether the Hair is or is not subject to Sudden Change in Colour,' by Dr. J. DAVY.—The popular notion is decidedly in favour of the affirmative, and many naturalists and physiologists have come to the same conclusion. They adduce instances of the change of the hair to white or grey, in the case of persons under strong emotions

of grief or terror. Haller, in his 'Elementa Physiologiae,' refers to eight authorities for examples of such changes; but all that he seems to admit for himself is that under the influence of impaired health such a change may take place slowly. Marie Antoinette was cited by favourers of the popular notion as a striking and well-authenticated instance; but when fairly considered, the case came under the condition admitted by Haller. Had it been possible for mental emotion, whether of terror or of grief, to render hair suddenly grey, surely in the Queen's case the change should have been witnessed at an earlier period than that of the arrest of the Royal Family in their attempt to leave France. If such a sudden change could be presumed, might we not expect to witness it in soldiers engaged in an active campaign amidst all the dangers and horrors of war? He had himself examined thousands of soldiers, men prematurely worn out in various climates, and concerned in many a hard-fought battle—many of them grievously wounded—but he never met with an instance of the kind. The case of a rebel Sepoy is stated by Dr. Laycock, in the April number of the *British and Foreign Medico-Chirurgical Review*, on the authority of Surgeon Parry; it being said that the man's hair changed from black to grey in half-an-hour. He was undoubtedly under the belief that he would be condemned to death. Might not this be the explanation? the man was hurried in, profusely perspiring; he was naked, and cooling and drying rapidly, his hair, previously grey, being darkened by moisture, resumed its natural colour. The effect of water in intensifying colour is well known; and a further circumstance in aid of the explanation given may be found in the fact that the natives of Bengal are in the habit of staining their hair. The *Transactions* of the Royal Society, extending over 200 years, do not contain an instance of such change in the colour of the hair: a circumstance opposed to the conclusion that it ever took place, for had it ever been undoubtedly witnessed, it is not likely that it would have remained undescribed. The author is not aware that, irrespective of recorded evidence, anything in support of the popular notion can be adduced on physiological grounds.

Human hair cannot be injected. Using colouring fluids, such as a solution of nitrate of silver and a solution of iodine, the author has not observed any change of colour, except in the portions actually immersed. Whether it owes its colour to a fixed oil, to a peculiar arrangement of its constitutional molecules, or to both, it resists decay in a remarkable manner; it resists the action of acids and alkalies, except the strongest, which dissolve it. It resists maceration, and even boiling water, except continued for a long time, and under pressure, when it suffers disintegration and decomposition. Exposure to the sun will bleach hair, but this will not account for any very sudden change of colour. Supporters of the popular opinion refer to changes in the plumage of birds, such as the ptarmigan, and in the hair of certain quadrupeds, such as the mountain hare and ermine, which become white towards winter, and of a darker hue when the winter is passed. The belief is rested on, that this is not caused by moulting, or a change of coats, but that it takes place in the existing feathers and hair. But there is no satisfactory evidence of such changes; and considering the qualities of both, they seem most improbable. There is good proof that in the ptarmigan the change is decidedly connected with moulting; at least such is the author's decided impression from inspecting the numerous specimens, shot at different seasons, belonging to Mr. Gould—which eminent ornithologist says, that the "ptarmigan is always moulting," the changes being from brown in the summer, to speckled in the autumn, and white in the winter. The speckled feathers, few and large, overlap the white; and as soon as those few are shed, the bird appears in its white dress. The similar change amongst quadrupeds most probably arises from the same cause; and examples, less striking than those amongst wild animals, can be observed in cases of the horse and the cow. Prof. Rolleston, of Oxford, had given to the author a portion of the hair of a pony which has been observed to change its coat from tawny to nearly white in winter. Mr. Erasmus

Wilson, who advocates the popular doctrine, refers to the case of a lemming in support of his views; but Mr. Blyth, a naturalist, says that he examined a lemming killed during its autumnal change, and satisfied himself that "the white hairs were all new, and not the brown changed in colour." There are reasons why it might be expected that the summer coat and plumage should be darker than those of the winter. The author concludes that whether we consider one side of the question or the other—the human evidence so questionable, the physiological so much more reliable—the idea of fallacy is unavoidable, as to the hair being subject to sudden change of colour from mental impression. The attempts made to explain such a change by physiologists are allowed to be complete failures; and more amusing attempts had been made to explain the phenomenon on other grounds than those of fallacy. The author, when on foreign service, knew an assistant surgeon of a regiment who had become insane, and whom he visited a fortnight or three weeks subsequently. The patient's hair, before brown, had become grey; but when he called attention to the fact, the regimental surgeon simply said, "Your surprise will cease, when you know that—has, since he has been afflicted with his malady, discontinued dyeing his hair." When we consider how prone the hair of some persons is to turn grey at an early age, even without accompanying or preceding bodily ailment, and how many would wish to conceal this blemish, and so have recourse to chemical means, it is easy to imagine that this source of error may not be unfrequent. Nor should it be overlooked that there is a disposition in some to make statements merely for the sake of exciting momentary surprise or of acquiring ephemeral notoriety. If we consult the records of imposition and delusion, we shall find many a thing attested, and for a time believed, of as marvellous a kind as the sudden whitening of the human hair. Has not witchcraft had its defenders? Have not table-turning, clairvoyance, and spirit-rapping had believers? Have there not been even physiologists who have given their credence to spontaneous combustion of the human body, and to equivocal generation?

THURSDAY.

'On the Connection between Ethnology and Physical Geography,' by the PRESIDENT.

'On the Direct Overland Telegraph from Constantinople to Kurrachee,' by Major-Gen. Sir H. C. RAWLINSON.—In 1858 the Turkish Government undertook to execute, at its own expense, a line of telegraph from Constantinople to Bussorah, which would form an integral portion of the great line connecting India with Europe. It was foreseen that the line would be convenient both for the requirements of the Turkish trade and the purposes of Turkish government, and would thus benefit the empire; but the money return for the outlay was to be sought in the tariff established for British messages transmitted along the line towards India.

The British Government engaged, as soon as there was a fair prospect of the completion of the Turkish undertaking, to carry on the communication from Bussorah to India at its own expense. Some of the officers originally engaged in the undertaking had retired, but three of Lieut. Holdsworth's *employés*, Mr. Carthew and the brothers M'Cullum, remained in the country, and, mainly owing to their zeal and skill, the line was now in a working and efficient state the whole way from Constantinople to Bagdad. The Porte had declined to accede to a proposition that Her Majesty's Government should incur half the expenses of the improvements, but had formally engaged to carry out all Col. Kemball's recommendations for giving greater efficiency to the line at his own expense. A submarine cable from Pera across the Bosphorus having been frequently damaged by the anchors of vessels, it was proposed to suspend a wire from the European to the Asiatic side at the narrowest part of the strait—a distance of not more than 1,000 yards. Precautions had been taken as security against interruption from the Arabs, Kurds, &c. by the line of telegraph being taken from Marden along the chain of the Masius, where there are located a great body of Jacobite Christians. Col. Kemball reported favourably of the progress of efforts to conciliate the Arab chiefs living near the outer ranges of the Kurdish mountains. The telegraph consisted of two distinct wires, one of which was reserved for the exclusive use of the British Government; and a convention was about to be signed with the Turkish Government for the regulation of the respective shares of the expense to be incurred in keeping the line in working order, for fixing the tariff for the transmission of messages, &c. With reference to the Persian section of the line, attention was being more immediately directed to a continuation of the land-line from Bagdad, through Persia, towards India. Political and physical arguments showed the desirability of taking a northward line, and the author believed that it had been decided to continue the line, in the first instance, directly from Bagdad to Teheran, thence to Khanikien and Kermanshah. From the latter place it would continue to follow the great high road from Babylon eastward. At Teheran the line would join another system of telegraphs, which had been organized in Persia itself. From Bagdad it was proposed to continue the line to Bunder Abbas; and it was almost certain that the Shah would enter cordially into the scheme. The Commissioner in Scinde, the agent for the Government of India, and the Imam of Muscat, had reported as favourably as could be wished. They were working in what he believed, in the present state of oceanic telegraphy, to be the only practicable direction.

The PRESIDENT remarked, that if Manchester and Calcutta and Bombay were to be brought into communication in ten or fifteen minutes, as they ought to be, it must be by land, and not by sea. Our oceanic cables had been total failures. We had sunk two or three millions of money, which might as well have been thrown in the form of sovereigns into the Red Sea. Pharaoh had lost his chariots and horsemen; but this country had lost a sum amounting to 50,000*l.* per annum for the next fifty years,—a monstrous sum to spend, and to spend for nothing.—General CHESNEY stated that Capt. Lynch, who was out with him at the first forming of the Company, had sent out a vessel (in pieces) to navigate the lower part of the Euphrates, and intended opening a communication with Kurrachee. England required several lines of telegraph, and they should endeavour to secure the one through Persia, as well as that through Arabia. He knew sufficient to believe that the carrying out of the line would be perfectly easy.—Capt. CHARLWOOD, R.N., thought the proposed route was as good a one as could possibly be taken, and that the Euphrates Valley was a perfectly feasible line for the telegraph as well as the railway, to be carried on to India. Communication could thus be established between Britain and Hindostan, Calcutta and London, Manchester and Bombay.

THURSDAY.

'A Glance at the Cotton Trade,' by T. BAZLEY.

—A century ago the population of Manchester was below 30,000, whilst now 350,000 persons reside in and occupy it. Population and wealth have wonderfully increased and ramified to other places; but now, in the zenith of prosperity, a mysterious hand has written upon our walls the words of caution and of admonition. During the last fifty years upwards of 20,000,000,000 pounds weight of cotton from all sources have been consumed in Great Britain, and the value would be probably not less than 750,000,000*l.* sterling, or might equal a sum of the amount of our National Debt, the chief supply having been obtained from the United States of America. Upon a fair computation, the import of that material, which has so largely employed the capital and labour of this country, has yielded a profit of not less than 1,000,000,000*l.* sterling to the people of the United Kingdom within that period. The wonder is, that so large a supply of cotton could be procured from that one source, the United States; and when we reflect that this country possesses a monopoly of the vast extent of territory found in the whole world capable of producing this raw material, the inference is most palpable, that there has been developed the most successful agricultural industry in the States of America which has been either ever contemplated or realized; whilst in British colonies and dependencies apathy and neglect have prevailed. If the legislature had little sympathy with the great industry of Lancashire, the interests of our foreign possessions might have induced our rulers to stimulate productions in them, which would have found compensating markets at home. The advocates of large and of independent supplies of raw cotton, from all possible sources, have never desired Governmental favours, their object having been to promote the removal of repressing obstacles, and to procure, by the aid of a sound colonial policy, at least a fair share, in proportion to the extent of our foreign possessions, of not only cotton, but of every other product which they might more abundantly have yielded. During the last year the consumption of cotton in Great Britain was 85 per cent. from the United States, 8 per cent. from other foreign sources, and 7 per cent. from British territory. The present position of the trade is most precarious and dangerous. Existing stocks and prospective supplies of cotton may enable the mills to be worked into the spring of next year, at moderately full time; but afterwards, unless supplies be received from the United States, independent sources can only furnish the means of keeping the mills at work little more than one day in the week. With the growth of this industry 5,000,000 of our population have become, directly and indirectly, dependent upon it for their subsistence; and the productiveness of their capital and labour, including the raw material, was for the last year nearly eighty million pounds sterling. Of this large value twenty-five millions of cotton

manufactures were absorbed in the consumption of the people of the United Kingdom, and there remained for exportation fifty-five millions. The estimated capital engaged in its fixed and floating investments, is two hundred million pounds. Now, when we contemplate the vast interests involved in this surprising trade, seeing that the people employed and connected with it exceed the population of the kingdom of Belgium, of Holland and of Portugal; that the national treasury receives from it an amazing sum in aid of the expenses of the State; that a commercial marine of unparalleled magnitude derives support from it; that the comfort and happiness of the labourers employed in it are imperilled by any indications which threaten to disturb its existence and prosperity; and that its suspension, or serious curtailment, would even endanger the general weal; we may well inquire what efforts have been made to sustain the usefulness, prosperity and permanency of this source of national riches. That the cotton trade should have rested chiefly upon the one supply of the States of America for its very means of existence, every good and every wise man has deplored; but that to produce that supply the portion of the human family which is most defenceless should be held in the degradation of slavery is abhorrent to the feelings of the righteous, of the humane and of the benevolent. Most effectually to suppress slavery will be to supersede the necessity for the labour of the slave, and if the chiefs of Africa could be induced to cultivate sugar, cotton and tobacco upon their own soil they need not expel and degrade their labourers. Of the commercial policy of the United States of America censures can scarcely be too severe. In the Northern States protection has prevailed, and the people of the South have been compelled to pay extravagant and monopolist prices for the manufactures produced by their own agricultural labour, and which, in the form of cotton, has been received in this country free from every tax. The North has robbed the South by unjust exactions, and the South has robbed the negro of life and liberty! Why the British manufacturer has tamely submitted to an import tax of 80 per cent. upon cotton goods entering the States of America, whilst the raw cotton, the growth of those States, has been received here free from tax or impost, without making an effort to procure supplies of his raw material from free labour with the right to send free exports in exchange, can only be accounted for by the anxiety to possess an apparent immediate benefit at the cost of advantages more enduring, but which could only be regarded as of prospective, or future, possession. Partial and unjust government has at length reaped the fruit of convulsion, and for which unjust policy had sown the seed. The North has taxed for its own protection and advantage the people of the South and their industry; and the South has held in degradation, oppression and slavery the labourers who have enriched their owners. Mutual wrongs have been committed, and hitherto no just object appears before the world as a cause of the lamentable struggle which is exhausting both of them. But slavery is doomed. A protective system has been fostered in the North, founded very extensively upon the pirated inventions of this country, and by the agency of which our manufactures have been largely excluded from the markets of the States. Even their very literature has been abstracted from the intellectual faculties of those in their fatherland who have only their cultivated minds and soul-breathing thoughts for their inheritance. In addition to these grave reasons, which mainly affect the morality of the States, this country has been paying a tribute of five million pounds sterling per annum to those States in excess of the price at which cotton could be remuneratively produced and sold. With the convulsion which exists in America, with the adverse commercial policy dominant there, and with the inhuman system of slavery which prevails in the cotton-producing districts, what are the duties which devolve upon our governing and mercantile classes? If by the convulsion of the States we are taught our national, as well as commercial, duties, the lesson will be ultimately beneficial. Whether it has been wise for our Government to see con-

tinually increasing the dependence of this great trade upon the one chief supply of its raw material, and that source adverse in interest, and oppressive to its own labour, we can only answer in the negative. With the East and West Indies, with tracts in South, East and West Africa, and with land in Australia as extensive as Europe, capable of growing cotton from the lowest to the highest qualities, it is a national reproach to us that we have permitted our own fields to be uncultivated, and that our spinners and manufacturers have been driven by necessity to consume the produce of slavery. Looking the means of communication and of irrigation, the resources of the East Indies remain in much the same dormant condition in which they have been for two thousand years; but brighter prospects are opening in that great dependency; railways are being constructed, canals formed, river navigation improved, and works of irrigation promoted. One great defect is, however, retained with perverse tenacity. The tenure of land is obstructive alike to the rights of individual ownership, and to its effective cultivation. Without doing the slightest wrong to the holders of any land, its equitable transfer might be sanctioned, and a landed proprietary as influential as in our own country might be established. Protection to life and the rights of property, with every other just adjunct of good government, will inevitably lead to prosperity. Small supplies of cotton, as good as that obtained from New Orleans, are now received from India, and the cotton of this vast dependency is certainly improving; but whilst, from a combination of circumstances and causes, the ryot of India is only paid 12s. per acre for his crop of cotton, and the American cultivator can obtain 12l., the energy and capability of the former cannot be developed. Supposing efforts to be made commensurate with indicated difficulties, all the common cottons, or 75 per cent. of the consumption of Great Britain, might be obtained from India in a couple of years. From Egypt the supply of cotton may increase, but there the withering influence of the despot retards its extended cultivation, though the spirited, energetic, and successful enterprise of Mehemet Ali is an example deserving the imitation of better men. He introduced that agricultural industry into his vice-royalty, and founded a fountain of wealth whence flow millions of annual income to the advantage of Egypt. For all the finer, higher, and better classes of cotton, from New Orleans, Brazil, and Egyptian to the most beautiful Sea Island, Queensland, in Australia, might quickly afford all requisite supplies. That territory alone, besides sustaining the population of Europe, could easily be made to produce all the cotton now consumed in the world; but so sweeping a change and enlarged production need not be deliberated upon, the facts being only referred to as illustrating the powers of that colony. In seeking from the Government the development of the resources of the colonies, the twofold advantage would arise of which that power would financially be greatly benefited, alike at home and in the colonies. Government must set its Colonial house in order. Land grants for beneficial purposes should be free, facilities afforded for emigration, public works promoted, and prosperity will follow in the train. Capitalists, merchants, and manufacturers, whose investments are largely embarked in the cotton trade, have duties devolving upon them. These bodies are known to have large investments in foreign railways, in the cultivation of sugar and other products, and in many dubious securities; but in the cultivation of the staple raw material of their own pursuits they have not ventured to embark. Last year the cotton trade contributed to capital and labour fifty million pounds sterling, and in the last fifty years the aggregate reward has been one thousand millions. Surely from these treasures might be spared some pittance of capital to free the negro, and to insure still greater prosperity to industry. Supposing the Government of our country to be willing to make all the preliminary arrangements which will contribute to the security and profit of capital invested in cotton growing, the clear duty of the class referred to will be to enter upon investments with no niggard hand; and, for their encouragement, it may be mentioned that

very recently an extensive Louisiana cotton-planter has asserted that he could grow cotton at 8d. per lb. which is now worth 9d. per lb. in Liverpool, and of course he has had to buy his labourers, and afterwards to sustain them. The confessed profit is 200 per cent., but, in all sobriety of judgment, cotton growing would afford 100 per cent. of recompense. Here, then, the governing, the capitalist, the mercantile, and the manufacturing classes have duties in common to perform, and from which none of them should withhold their willing help. Upon this subject the warning voice has been long and often heard, and the present embarrassment in cotton supplies has been anticipated. Having, therefore, been forewarned, may this great and world-benefiting industry be fore-armed!

'On the Price of Printing Cloth and Upland Cotton from 1812 to 1860,' by Alderman NEILD.

'On the Altered Condition of the Embroidery Manufacture of Scotland and Ireland since 1857,' by Dr. J. STRANG.

'On the Connexion of Improvements in Cotton Bleaching with Improvements in the Condition of the Factory Population,' by H. ASHWORTH.—Having traced the art of bleaching from its commencement to the present time, and described the present process in an interesting manner, Mr. Ashworth continued to say that, by an art which half a century ago was almost unknown, and by the agency of our coal as fuel, we have succeeded in converting certain products which we dig from under our feet, such as salt, pyrites and lime, into one of the most important branches of manufacturing chemistry. These discoveries in chemistry may appear extraordinary, although they are not more important in the economy of bleaching than are the mechanical arrangements which have superseded the exposure of labourers, in all states of the weather, to the accustomed drudgery of the "crofters" of old. The "crofters," of whom we have spoken, bore the appearance of remarkably strong men; their working dress was of thick white flannel, called "gladding"; the cut of the coat was peculiar, having a loose, open appearance, and a low, flat collar, on which the shirt-collar usually rested. They had their necks uncovered; and, their employment being so much exposed to moisture, they seldom wore stockings. Altogether, they assumed a bearing of unconcern about the state of the weather, and were quite regardless of the splashing of water. Their employment consisted mainly in the handling of wet cloth, and in removing it, either by hand or by wheelbarrows, from one operation to another. Perhaps the most distressing part of their labour was that of carrying upon their shoulders a pile of wet cloth, rising to some height above the head, which they conveyed to some considerable distance in the fields, and spread upon the grass. In the severity of the winter season there would be drippings from the cloth, forming icicles, which would be adhering to the skirts of their clothing. It has been through a succession of mechanical inventions that these laborious operations have been dispensed with, and one after another they have been handed over to the power of the steam-engine. The result has been that the time required for the operation of bleaching is now about as many days as formerly it required weeks to accomplish. Honour to British genius that these advantages have been derived to our country! The general public will, no doubt, feel curious to ascertain whether any, and what proportion of the money saving thus effected has reached the consumer; some other portion of the public will inquire in what extent the advantages thus achieved by science and art have been shared by the operative class employed? It is not expected that much concern will be manifested about the interests of the proprietor, and it is not unreasonable to suppose that a still more minute inquiry will be raised about the "human machine," more especially, whether, during the progress of these advances in manufacturing art, the material, moral, and intellectual condition of the working class has been made to keep pace with all these improved manipulations, which, amidst the struggle of changes, have destroyed the character of many employments, but have greatly increased the whole number of

persons employed? These inquiries it will be our endeavour to satisfy. The advantages shared by the consumer will easily be reckoned. We have before us a printed card, or list of prices for bleaching, issued by a leading firm in the year 1803. At that time the charge for bleaching a well-known description of cloth was 7s. 6d. for a piece of 28 yards, and it is now 6d. The case of the labourers employed in bleaching 60 or 70 years ago was, as before stated, a very harassing one—they suffered severely from exposure to wet and cold, and, as a consequence, from rheumatism and asthma. The earnings of a "crofter" would be from 10s. to 15s. per week. Upon wages so scanty, and with some uncertainty of employment, their mode of living was necessarily inexpensive. Oatmeal was the staple commodity of their food. They used it as porridge; their bread was of oatmeal, either in leavened oat-cakes or baked in the form of a loaf called jannock, which is said to have been introduced by the refugee Flemings; and animal food, with the exception of bacon, was seldom found at the working man's table. Now-a-days, the workmen in bleach-works perform all their work in-doors, and are therefore no longer exposed to the coldness and moisture of the former period. The wages are increased in a proportion which cannot easily be estimated, and their employment is one of great regularity. They have nearly ceased to consume oatmeal; jannock is unheard of; oat-cakes are seldom seen; and their tables are now daily spread with wheat bread, animal food from the shambles, and all the other articles which usually enter into the consumption of families in the other grades in life. The social condition of the operative bleacher of early times cannot easily be separated from the rest of the working population of that day, neither could they now be described in any other manner than that which would apply to the operatives around them in other pursuits. We may refer to their modes of pleasure-taking as affording in itself a very appreciable indication of the past and present. The amusements which formerly prevailed were rude and boisterous—now they are more refined and intellectual. Bull-baiting, bear-baiting, and cock-fighting were amongst the common amusements of the day, especially at the wakes and fairs. The game of foot-ball was a very favourite one, so much so that the people of one place would make selection of their combatants and have them pitched against those of some other place, and these would contend in very ardent strife for the renown of mastery. Indeed, so very popular was this game that a match at foot-ball was upon one day in the year tolerated by the inhabitants in the streets of Bolton. The whole of this is now given up. The game of cricket is becoming a popular one, and others equally harmless in their character are being introduced. Seventy years ago, Sunday schools had made but slight progress. There were but few persons who could read, still fewer who could write; and when any one received a letter, he had to carry it away, perhaps a good many miles, to find a scholar who could read it. At the present time, Sunday schools abound, day schools are numerous, and the affair of carrying away a letter in search of a scholar may now with much complacency be put down as among the reminiscences of seventy years ago.

'Prices in England, 1582-1620, and the effect of the American Discoveries upon them during that Period,' by Prof. ROGERS.

FRIDAY.

Mr. NEWMARCH, the President of this Section, was to-day sufficiently recovered to undertake the duties of his office; and the proceedings, consequently, commenced with the learned gentleman's Address.—He said there was some danger at this time that undue importance should be attached to what had been achieved in physical discovery. Enormous as had been our achievements which had been accomplished in railways,—beholding, as they did, the prominent effects produced by tubular bridges, ocean steamers, telegraphs and by rifled cannon,—there was some danger—and it was not a small one—lest we should attach excessive and undue importance to the obligations which society owed to these achievements, and those discoveries,

great as they were. A glance at the history of the last thirty years would show that there had been in operation economical forces, the effects of which were hardly of less importance. Sound doctrines had been applied to foreign and inland trade, taxation, education, sanitary science, prevention of crime and the poor-laws. Economical science had ceased to be hypothetical, and had become experimental. This, the prominent fact in the history of the last thirty years, was due to the spirit of close scrutiny which had been carried into everything, including history, archaeology, literature and politics. It had been mentioned as a reproach to economical science, that it was not purely a science, but partook largely of the nature of an art. He must confess that this was scarcely a reproach; and the remark arose from a hasty view of the real difference between Science and Art. Science was really a collection of general principles; but all sciences were more or less arts. Astronomy, for example, led to the production of nautical almanacs; and physiology to hospitals, sanitary laws and precautions against fire. Economic science must be essentially an art, inasmuch as its smallest problems involved human interests, affections and passions; and the advances which had been made of late years arose from regarding it both as a science and an art. There was a great want of an accurate and convenient term for social science, which would include morality and religion, education, jurisprudence, municipal law, sanitary science, political economy, the fine arts and the art of government. The Social Science Association had six Sections; namely, jurisprudence and amendment of the law, education, punishment and reformation, public health, social economy, and international laws. It was probable that social science would soon imply, technically, political economy, jurisprudence, sanitary science, education and statistics. He had mentioned statistics, but statistics was not properly a science, like dynamics and chemistry. Statistics had no body of doctrine, or of general laws, of its own. Its generalizations were of the second order. There were five main divisions, namely, vital statistics, criminal statistics, economical statistics, trade statistics, and taxation statistics. In all these, ultimate units were being gradually established. The annual death rate was almost as important as Dalton's law of definite proportions. It had been established that the death rate in a community of human beings inhabiting a country like our own ought not to exceed 17 in 1,000, and taking their stand upon this, they were able to say that where the annual death rate greatly exceeded that figure, there was something wrong. The rate of infant mortality was almost the best test of civilization. From the plan suggested by the Statistical Congress of last year, they should gradually be able to ascertain what was the real condition, and what was the effect of the social relations pervading different parts of the world. The application of the experimental method pursued during the last thirty years had led to a large modification of the early and economic science in reference to free colonization, legal interference with labour, currency prices, the nature and operation of rent, and the effects of a large increase of metallic money. As to legal interference with labour, there was no part of political economy apparently so clear as that which taught that capitalists and labourers should be left to make their own bargain. Prior to Adam Smith and Ricardo, nearly all such interference by law and custom had been mischievous; and, therefore, experience seemed to be on the side of *laissez-faire*, and against guilds, syndics, and government officers. This was true, so long as the labourers were of the adult class, working singly or in small numbers, or in families. But it ceased to be true when manufacturers congregated work-people in large masses, and largely employed women and children, who were only partially free agents. Capitalists said that the limiting the hours of labour would mischievously and fatally discourage capital; and so it would, in the abstract. But there were these qualifying conditions—that capital, depending for its return upon the order and energy of large masses of persons, must take especial care of the physical

and moral condition of such persons; and that the efficiency of exertion, even with machinery, did not mean unlimited hours of labour, but skilled efforts during the best selected parts of the day. The experiment had fully answered; and the orderly, educated, and contented labourers of Lancashire were security against foreign competition, and a guarantee of peace. Economic science dealt with six principal classes of questions, namely, the nature of wealth, the exchange of commodities, taxation and finance, currency and banks, wages and division of employment, and interference by the State. The last three only were still in dispute. Formerly with regard to these the *laissez-faire* principle seemed to be the general rule; but as society became more complex, it seemed to be clear that the State must in many cases protect individuals. It could not be denied that at present the tendency of civilization was to deal with rights in masses. The conclusion of the whole matter seemed to be, that as the result of the last thirty years, full as that period had been of scientific achievements, they might justly claim for the services rendered by economic science and statistical inquiry a place in the front rank; that they had now arrived at a kind of intermediate point, at which, after long debate, many controversies were finally settled, and from which they might see their way to a higher summit; and that the least doubtful result of their experience had been the discovery that the most solid progress was made by guiding themselves in the main by close observation of facts, and by employing speculative and hypothetical reasoning under the most cautious conditions. But there was a larger moral beyond these results. The last thirty years had been an age of renaissance, because they had found out that human life had higher ends than employment in incessant labour or devotion to excessive gain; that to accomplish these higher ends they must free themselves bodily and wholly of artificial and false supports, and contest with no mimic earnestness for the honour of the first place among modern civilized states. He did not believe in the New Zealander looking upon the ruins of St. Paul's; but rather looked forward to Windsor Castle becoming a West-End mansion, and the villas of the metropolis flourishing on the hills of the White Horse. No community ever decayed in which the poorer classes could earn a reasonable independence.

SECTION G.—MECHANICAL SCIENCE.

President—J. F. BATEMAN.

Vice-Presidents—Sir W. G. ARMSTRONG, T. FAIRBAIRN, Capt. GALTON, The Mayor of MANCHESTER, Sir J. KENNIE, Rev. Dr. ROBINSON, J. SCOTT RUSSELL, T. WEBSTER, Rev. Prof. WILLIS.

Secretaries—P. LE NEVE FOSTER, J. ROBINSON, H. WRIGHT.

Committee—J. Abernethy, J. G. Appold, T. Aston, C. Atherton, G. Bayley, Admiral Sir E. Belcher, C. F. Beyer, Capt. Blakeley, J. C. Dennis, Capt. Dyer, W. Fairbairn, J. Fenelon, Lloyd Foster, T. B. Foster, B. Fothergill, J. Gilbert, A. Henderson, J. Hetherington, J. Hick, J. Hopkinson, W. B. Johnson, A. J. Macarty, sen., J. E. McConnell, J. R. Napier, J. Oldham, A. J. Platt, J. Ramsbottom, E. J. Reed, R. Roberts, N. Scott Russell, C. W. Siemens, J. Smith, W. Smith, Bindon B. Stoney, C. Vignoles, J. Whitworth, Bennett Woodcroft.

THURSDAY.

The PRESIDENT delivered his opening Address. After saying that this Section should especially meet with support in Manchester, he took occasion to point out the many important questions which it might with benefit discuss; naming, amongst other things, gunnery and ship-armour, railway accidents, calling attention to the effects of frost on railway axles, from which so many accidents occurred last winter, as well as to the importance of good signalling, especially referring to the late accidents. He also called attention to the gigantic fires which had lately occurred, and baffled all means for extinguishing them; and he described the means adopted in Manchester,

viz., the abolition of the old fire-plug and a substitution of firecocks in their place, to which a hose and jets could be attached. He instanced that, at one large fire in Manchester, the fire-engines in connexion with the old plug, which were ineffectual, required 500 men to work them, while on the present system, at a subsequent fire in a warehouse of large size, eleven jets were at work from firecocks in the street within twenty minutes, a small amount of damage was done and a large salvage effected.

Mr. J. OLDHAM read a report 'On the Progress of Steam Navigation at Hull.'

Mr. ATHERTON, Chief Engineer of Woolwich Dockyard, read a very valuable paper, 'On Freight as affected by Difference in the Dynamic Performance of Steamships.'—The object of the paper was to point out a series of deductions from facts which had come under his experience, showing how freight was commercially dependent on the special shape and tonnage of the ship, as well as on the size (an element of the performance) of her engines. He showed the commercial importance to shipowners of these considerations. The ship must be specially fitted in all respects for the special service she is intended for, or she performs at a loss. A ship adapted for one voyage, may fail utterly when placed on a different station, and he was very anxious to call the attention of shipowners to these points.

In the course of the discussion, Mr. J. SCOTT RUSSELL took occasion to state that he fully agreed with the principles laid down by Mr. Atherton, and felt assured that the consideration of them was most important for shipowners to take up. He considered they were much indebted to Mr. Atherton for having brought the subject so clearly before the Section.

Dr. CRACE CALVERT read the next paper, in which he gave the results of investigations into the qualities of some woods suitable for ship-building. He had examined ten different kinds of woods, and the superiority of some of them to English oak could not be too strongly impressed upon the nation. In woods grown in tropical countries the tannin of the English oak is replaced in some instances by resins, and in others by substances similar to caoutchouc. Such was the case with Moulmein teak, Santa Maria and Moira woods, and these woods had therefore great advantage over oak in resisting decay. The facilities for mildewing and decaying were as follows: unseasoned oak, rapid; seasoned oak, rather less; African teak, Honduras mahogany, limited; Moira wood, Santa Maria, and Moulmein teak, none. During his researches he found great difference between oak felled in summer and oak felled in winter; the latter was rich in tannin, the former contained little tannin, but a large quantity of gallic acid. In examining the specimens of wood taken from the well-known gunboats, he found the chemical composition of the wood from the sound boats was identical with that of seasoned oak felled in winter, whilst that from the unsound boats was identical with that of unseasoned oak felled in summer.

FRIDAY.

Mr. J. SCOTT RUSSELL brought before the Section the Report of the Steam Ship Performance Committee; but without reference to the statistical tables which accompanied it, no intelligible abstract can be given of its contents.

Mr. J. HEYWOOD brought before the Section the Report of the Committee on the Patent Laws.—The report pointed out that the revision of the Patent Laws had been one of the objects which had from the foundation of the Association engaged its attention; that since the new Patent Law of 1852 many of the grievances connected with the subject had been remedied, but that still many remained to be removed. These had formed the subject of discussion at the Committees of the Association. At the Liverpool Meeting in 1854 attention was drawn to the fact of 70,000*l.* being annually taken from inventors in the shape of fees. The reports of the Committees at Liverpool, Glasgow, Cheltenham, Leeds, and Aberdeen all concurred in recommending that the surplus then derived from fees, in preference to a reduction in such fees, should be applied at

present to—1st, the erection of suitable offices for the Commissioners of Patents, and a free library of reference and consultation; 2ndly, the erection of a museum for the preservation and exhibition of models of inventions. In the discussion at Aberdeen the inadequacy of the law was strongly insisted on, and the whole subject was recommended to the consideration of the Jurisprudence Section of the Association for the Promotion of Social Science, and the result was the appointment of a joint Committee of the two bodies. This Committee arrived at the following resolutions, and the Report enters fully into the arguments upon which these resolutions are founded:—
 "1. That all applications for grants of letters patent should be subjected to a preliminary investigation before a special tribunal. 2. That such tribunal shall have power to decide on the granting of patents, but it shall be open to inventors to renew their applications notwithstanding previous refusal. 3. That the said tribunal should be formed by a permanent and salaried Judge, assisted when necessary by the advice of scientific assessors, and that its sittings should be public. 4. That the same tribunal should have exclusive jurisdiction to try patent causes, subject to a right of appeal. 5. That the jurisdiction of such tribunal should be extended to the trial of all questions of copyright and registration of design. 6. That the scientific assessors for the trial of patent causes should be five in number (to be chosen from a panel of thirty to be nominated by the Commissioners of Patents), for the adjudication of facts, when deemed necessary by the Judge or demanded by either of the parties. 7. That the right of appeal should be to the Court of Exchequer Chamber, with a final appeal to the House of Lords. 8. That for the preliminary examination the assessors (if the Judge requires their assistance) should be two in number, named by the Commissioners of Patents from the existing panel; the decision to rest with the Judge. 9. That the Committee approve of the principle of compelling patentees to grant licences on terms to be fixed by arbitration, or in case the parties shall not agree to such arbitration, then by the proposed tribunal, or by an arbitrator or arbitrators appointed by the said tribunal. 10. That a report be drawn up in conformity with the resolutions passed by this Committee, and that the Council, if such report be approved by them, be requested to allow it to be read at the meeting of the British Association to be held at Manchester this year." The Committee passed a resolution to the effect that the jurisdiction of the proposed tribunal should be extended to the trial of all questions of copyright and registration of design. The Committee conclude their report by stating that they desire in particular to direct attention to the two important points referred to, viz., the preventing the indiscriminate grant of letters patent and the constitution of an efficient tribunal for the trial of patent cases. If these objects can be accomplished, other subordinate matters, and, in comparison, of small importance, will, no doubt, be consistently and satisfactorily arranged.

Mr. HUGHES read the Resolutions passed at a meeting of the Committee of the Manchester Patent Law Reform Association, held on the 30th of August 1861, the Mayor of Manchester in the chair, as follows:—"That in consequence of very peculiar views propounded by certain persons, that inventors have no claim to remuneration for their inventions, however good and useful; that the value of an invention must not be considered in reference to the benefit of the inventor, but its utility to the public; and that the inventive genius of man does not require any stimulus, nor deserve any reward. These novel doctrines, in connexion with the Meeting of the British Association and the Great Exhibition of next year, have caused the Committee of the Manchester Patent Law Reform Association to re-consider the views and resolutions they have so often discussed and adopted at their numerous meetings since 1850. Without intending to justify the present laws in all their details, knowing the many defects which this Committee advocated previous to the alteration in the Patent Laws in 1852, but which, owing to the mischievous

opinions of misdirected parties, were overthrown, and consequently remain to be remedied, they consider it their duty to record a few of the Resolutions extracted from the minutes of their proceedings, which have been discussed and considered in every shape and form, both in Committee and in public meetings assembled frequently in the Town Hall in this city:—1. That it is universally acknowledged that discoveries, inventions and improvements relating to mechanical and chemical science have very greatly conduced to the civilization of mankind, the progress of commerce and the wealth of nations. 2. That the ingenuity of Englishmen especially has effected many valuable inventions and improvements in almost every department of science and manufactures, whereby the commerce, wealth and power of the British dominions have been promoted to an extent unparalleled in the annals of any other nation. 3. That in order to develop to the fullest extent the inventive talents of our countrymen, every encouragement and security should be given to inventors consistent with the public welfare. 4. That the present very heavy expenses, loss of time and other inconveniences, occasioned by the intricate routine or operation of passing through a great number of useless forms to which the inventor is subjected in obtaining letters patent, exhibit a tendency not calculated to encourage, but absolutely to baffle and paralyze the efforts of a class so essential in maintaining the commercial pre-eminence of this kingdom. 5. That for many of the most valuable discoveries and inventions, this country is indebted to the expansive minds of operatives and individuals in humble life, who are prevented from securing to themselves the advantages of their inventions on account of the present expensive process of obtaining protection by royal letters patent. 6. That inventors should not, in obtaining patent right for their inventions, be burthened with any more expenses than such as may be absolutely necessary for the establishment and maintenance of one government office, and for publishing full particulars of all patents granted. 7. That for want of an official record of patents easy of access to the public, many patents are taken out for the same invention, to the serious loss and discouragement of patentees and manufacturers. 8. That the practice of allowing six months to specify the particulars of inventions, for which letters patent have been granted, operates very injuriously, both to patentees and the public, is a source of constant annoyance to persons contemplating patents for inventions, and gives rise to much useless, frivolous and expensive litigation. 9. That the present state of the law involves an expensive, dilatory, inconvenient and uncertain mode of obtaining redress in cases of infringement of patent right; that the Judges of the land have been frequently at variance in their decisions, and that juries are seldom found qualified to understand the matters in dispute. 10. That Commissioners be substituted for the law officers of the Crown, to consist of one person eminently conversant with mechanics, and one conversant with chemistry; the third, in order to form a quorum, to be a barrister, or, if necessary, one of the law officers. 11. That the juries to try patent cases shall be scientific men, conversant with the subject in dispute.—It will be seen from the above extracts that some of the suggestions were embodied in the Patent Law Amendment Act of 1852, as a very great reduction in the cost of obtaining letters patent, a simplification of the process of application, and the publication of all specifications recorded, forming one of the most complete libraries of invention and scientific progress extant; but still this Committee is well aware that further improvements are necessary; and, in considering such further improvements, the interests of the public and the inventor must be taken jointly, and not separately."

Sir W. G. ARMSTRONG then read a paper 'On the Patent Laws,' in which he referred to several instances within his own personal experience of the obstructive operation of the law which enables an individual before he has put his invention into a practicable form, to obtain a monopoly of the idea and then put a stop upon all others who

are directing their attention to the same subject. The obstructive tendency of the Patent Laws is aggravated by the fact, that in addition to the patents which are legally valid, there is an enormous number incapable, if properly opposed, of being enforced at law, but to which people quietly submit in preference to troublesome and expensive litigation. This is a necessary consequence of the patents being indiscriminately granted to all applicants without investigation, and it would be difficult to remedy this evil by any practical preliminary inquiry. The number of patents, valid and invalid, is perfectly frightful, and it is impossible to make out with any certainty what one is at liberty to invent or use.—Sir W. Armstrong pointed out the difference between copyright and patent right, though both ought to protect the product of a man's mind, copyright neither creating impediment nor injustice, while patent right did both. It could not be disputed that the Patent Laws, in restricting the free use of ideas, obstructed invention, if, on the other hand, they encouraged it by holding out rewards, and thus the most that could be said was that they pulled opposite ways, and this could be no warrant to justify arbitrary interference with liberty of action. He considered the reward held out by the Patent Laws much overrated. Although the Patent Laws ought to be discussed solely in reference to public policy, it would be harsh to exclude from consideration the interests of the inventor. If the monopoly were withheld, the inventor got the start of all others, and the presumption was that understanding his subject better than others he would keep the lead. The public have great faith in a name, and a reputation duly earned is not easily lost. Under any state of the law hardships of inadequate reward must occur, and these cases he considered should be met by grants from the State. He instanced the inventor of the screw-propeller, who was unable to obtain any advantage from the law, whilst another person who conceived the simple idea of enabling postage-stamps to be easily separated by punching a series of small holes between them, was placed in a position to obtain an exorbitant recompense from the Government. Sir W. Armstrong, whilst he admitted that the law was capable of amelioration by having special tribunals for the grant and trial of patent rights, compulsory licences and the abolition of the right to patent foreign inventions; yet he regarded the whole system as unnecessary and impolitic, and could see no other complete remedy for its evils than its entire abolition.

Mr. T. WEBSTER followed, with a paper 'On Property in Invention and its Effects on the Arts and Manufactures.'—He pointed out that considerations of public policy had led to certain rules or laws respecting the use and enjoyment of all property, and that the same principles to which the origin of all property is to be referred, had peculiar claims to recognition with regard to the inventor. To say that an inventor may retain command over his invention by secrecy is to propose an impossibility in a majority of cases, and in the few cases in which it might be done the effect would be to convert his art into a mystery and restrictive practices long since condemned. The author pointed out the fallacy of stigmatizing patents as contrary to the principle of free trade, as was commonly done. He admitted the injury done by the indiscriminate grant of patents; and this, which might be remedied, ought not to be used as an argument against the system. He pointed out that although for small inventions and such as could be quickly introduced a patent might not be needed, yet that where time and capital were required to introduce the inventions into use such inventions would not be made and perfected unless the inventors were protected from piracy by letters patent. He thought the cases of obstruction, in practice, were more imaginary than real. The law admitted of successive patents for improvements, and practically it was rare that a prior inventor would not come to reasonable terms with a subsequent one. At all events, the case might be met by applying to this species of property that which the legislature had already applied to other kinds of property, viz., the powers of the "Lands Clauses

Consolidation Act," where lands were taken compulsorily.

Mr. WEBSTER then read a paper contributed by R. A. MACFIE, 'On Patents considered Internationally.'

Mr. W. SPENCE read a paper 'On Patent Tribunals,' in which he argued against the practicability of any plan of preliminary investigation of the merits of inventions before granting patents in any form that had been suggested. He, however, thought that the difficulties in the way of preliminary investigation did not apply to the trial of cases after a patent had been granted, and he fully concurred in the necessity of a special tribunal for such purpose.

At the end of the reading of the foregoing papers a lengthened discussion took place.—Lord WHORTLESLEY pointed out the importance of the speakers distinguishing carefully between the evils which could be cured by legislation, and those which could not.—Mr. W. FAIRBAIRN (the President of the Association) said the object of the Patent Law Reform Association was to lessen the cost of patents, and improve the administration of the law, not to do away with it.—Mr. R. GROVE said the question of patents or no patents was one which was fairly arguable, and personal convenience or inconvenience had much to do with the part which individuals might take. The number of patents granted for frivolous inventions was an evil, no doubt; but the objection on this score applied rather to the mode of granting than to the principle of patents generally. If any restraint were put on the indiscriminate grant of patents, it was possible, that in stopping a number of frivolous patents, a valuable invention, which might in the first instance appear frivolous, would be denied the privilege. This, however, was a risk that all things were liable to. He would not discuss the question of natural rights. Was it an encouragement to the inventor, and did you by locking up the invention injure the public? That was the point of view in which he thought it should be looked at. Assuming Sir William Armstrong to be right in desiring to abolish patents altogether, he thought it impossible to do so at the present time, as the public, at all events, were not yet prepared for it; and while that was so, the result must be injurious, as no law could be abolished or altered with a satisfactory result unless the public as a body were prepared to receive it. He thought the notion of any inventor on mere application having a right to a patent absurd, and contrary to the true intent and meaning of the Act of James, though he admitted in practice the question was not so treated now. He thought that before the patent was granted, the inventor should make out a *prima facie* case for the grant, and that a proper tribunal for conducting a preliminary examination should and could satisfactorily be established. Such tribunal should conduct its proceedings openly. Opposition should be advertised for. This would operate at once in numerous instances as a check on applications. As to rewards by the State, as advocated by Sir W. Armstrong, he thought such a system was impossible. Who were to be the judges? Was it Government or Parliament? In any case the jobbing injustice to which such a system must give rise would be frightful. He also thought that the trial of patent cases should be conducted before a special tribunal. Such a tribunal he considered should be presided over by a legal mind assisted by scientific assessors. Juries were not desirable; experience had shown him that the jury system in patent cases constantly failed to give satisfaction. He also thought that the preliminary tribunal might decide on the term to be granted according to the case made. In all cases there must be some imperfection—the best system could only be an approximation. Doubtless there were some inventions that would come, patent or no patent, but there were many that would not come without a patent. For his own part, looking at the whole question carefully, and balancing the evil with the good, he could see no other remedy for the case than the grant of a patent.—The MAYOR OF MANCHESTER said he was connected with a large manufacturing firm, and had some experience of the way in which the Patent Laws acted as a stimulus to invention,

and he pointed out the difficulties which existed in introducing a new invention unless protected by patent. He, however, did not think that any Court for preliminary examination was practicable. No such Court could ever get through the work; the utility of the invention ought not to be entered upon, as it could not fairly be judged beforehand, and novelty could not be tried, as nobody would take the trouble to make the necessary search for the purpose. He, however, thought that there should be a special Court to try patent cases.—Capt. BLAKELEY thought that patents were neither useful to the public nor inventors.—The Right Hon. J. NAPIER thought that on the grounds of justice and policy patents should be granted, but he condemned the present system on which patents were granted indiscriminately. The law officers of the Crown, of which he had been one, were heavily taxed with their professional and official duties, and could not give that attention to the granting of patents which was in his opinion essential. He considered that an inventor should make out a *prima facie* case before the patents should be granted to him. He also advocated a special tribunal.—The Right Hon. LORD STANLEY thought that State rewards for inventors were out of the question. Parliament was most unfit for determining such questions, and he did not see how any satisfactory tribunal could be established for the purpose. How, then, are inventors to be rewarded, unless by grant of a patent? If you have no patent, then you are driven to the system of secrecy; and that is fatal. He approved of the system of compulsory licences, though there may be difficulties. He also advocated the necessity of some sifting process previous to the grant.—Mr. T. ASTON advocated the necessity for patents. Unless there were patents the inventor had nothing to exchange against capital. With regard to licences by previous patentees he thought that in a large majority of the cases no difficulty whatever existed; it was the interest of the previous patentee to come to an arrangement with the subsequent one. He had never heard of any practical difficulty in obtaining a licence.—Mr. A. SMITH thought the question must be tried on the view of whether the patent was a benefit to the inventor and the public, or to either of them. If for the benefit of both the public and the inventor, there was an end of the question. He, however, did not admit that, nor did he consider that either was benefited.—Mr. NORMAN said they must not forget that in America the preliminary examination was in use.—Mr. R. ROBERTS said, that his experience had shown him that without the protection of a patent no inventions requiring time, skill and capital to perfect would ever be made, and he instanced the case of his own invention of the self-acting mule, which had taken some years to perfect and a large outlay of capital.—Mr. WINKWORTH spoke in favour of the abolition of all patent rights.—Mr. J. SCOTT RUSSELL said, that he advocated the views of Sir William Armstrong as regarded the abolition of patents, but as to the establishment of any tribunal for rewarding inventors he considered that as only suited for Utopia.

MUSIC AND THE DRAMA

ALFRED MELLON'S PROMENADE CONCERTS, THEATRE ROYAL, COVENT GARDEN.—Grand Orchestra of nearly 100 Performers.—During the week the following Vocalists will appear:—Mdlle. Parepa, Mdlle. Florence Lancelotti, Madame Laura Baxter, Mr. G. Perren, and Mr. Weiss.—On Monday, at Eight precisely, a Symphony, by Haydn; Tuesday, a Symphony, by Mozart; Wednesday, a Symphony, by Beethoven; Thursday, a Symphony, by Spohr; Friday, a Symphony, by Mendelssohn; Saturday, a Volunteer Night, when Beethoven's Battle Symphony will be given. Commence at Eight. Promenade, One Shilling.—Conductor, Mr. Alfred Mellon.

MDLLE. WHITTY will appear at the THEATRE ROYAL, DUBLIN, on September 17th, in 'PURITAN'; on the 18th, in 'NORMA'; and on the 19th, in 'IL BARBIERE,' with Titicus, Giuglini, Swift, Lemaire, Della Sedie and Ciampi.

SADLER'S WELLS.—On Saturday, Mr. Phelps recommenced his management of this theatre for the legitimate dramatic season, with the play of 'The Hunchback.' The heroine was performed by Mrs. D. P. Bowers, from the United States, who, with others, has sought a temporary refuge from civil war on the English stage. We are told that the lady has made a decided impression in America. We doubt, however, whether she will ensure an

equal reputation in this country. The audience gave her a hearty reception; but it was evident that, in the course of the performance, they were rather puzzled than pleased, and startled rather than struck. Her voice and elocution were good; but her taste was often capricious. It is almost as difficult to meet with good taste as great genius. With regard to our American actress, she is happily now placed in a school where the audience will soon correct her errors, and teach her reverence for the great poets whom she will have to interpret. She has many qualifications, though small of figure and deficient in physical force for the performance of tasks in which elocutionary vehemence is required. But she has, owing to material weakness, frequently to substitute declamatory artifice for real passion; and sometimes, instead of the natural gesture or movement, substitutes a stage attitude or a theatrical action. She is evidently a well-practised actress, and many of these exaggerations are doubtless the result of mis-education. Miss Murray performed *Helen*, and delighted the audience with her vivacity; and Mr. Edmund Phelps, as *Sir Thomas Clifford*, acted with laudable care. The house was exceedingly full, and the applause abundant.

SURREY.—The management have made a great effort to give *éclat* to their season which opened on Saturday, with a version of *Le Crétin de la Montagne*, by MM. E. Grangé and L. Thiboust, under the title of 'The Idiot of the Mountain.' The drama has been reduced to three acts from five, and is crowded with characters, situations, and scenic effects. The character of the idiot is most elaborately supported by Mr. Creswick, who strives not unsuccessfully to show the gradual growth of intellectual illumination in a rude mind under the influence of beauty, and produces often a very picturesque effect by the attitudes and gestures which are its exponents. The heroine, *Jeanne Purcell*, is very pleasantly represented by an American actress, Miss Georgiana Pauncefort, who seems by her kindness and grace to justify the number of admirers by whom her hand is solicited. Mr. Fernandez, as her accepted lover, played with a true soldierly dash and vivacity that carried the audience with him. Mr. Vincent, as his villainous father, who is guilty of more than one murder, and is the evil genius by whom the calamities are produced that form the action of the piece, was stern and gloomy enough. He is new to London, and is likely to acquire celebrity in this class of characters. Mr. Shepherd was evidently pleased with his part of *Ravel*, the smuggler, and made love and sought revenge with equal ardour and intensity. The scenery of the new drama, painted by Messrs. Brew and Johnson, is in all points excellent; the set scenes are also as ingenious as they are beautiful. The drama was followed by a new operatic interlude, on an old subject, called 'Shakespeare's Dream; or, Shakespeare's Early Days.' The young Bard, personated by Miss Edwards, strays into the fairies' haunt in a wood, and sleeps. Titania and her train discover the intruder, and would at first punish his presumption; but give way to more generous thoughts, and invest him with fairy gifts instead. The performers were scarcely equal to the delivery of the blank verse, but some airs and duets were pleasantly sung. Miss Camilla Chipp, as *Titania*, and Mr. Maurice De Solla, as *Puck*, won plaudits from the audience and were frequently *encored*. It is unnecessary to add, that both pieces were successful.

MUSICAL AND DRAMATIC GOSSIP.—Report speaks favourably of the Hereford musical meeting. The safe old works were given, and with sufficient force to attract a good local audience; but as musical novelty was entirely wanting to the performance, our duty to it is done when we record the apparent commercial success of the festival.

Miss Cushman has returned from what is understood as her farewell tour in America.

'Alceste,' we hear from Paris, is to be kept back till 'the season' is nearer at hand. Meanwhile, Madame Viardot has been singing in 'Le Trouvère,' with great success, and will appear in other parts of the *mezzo-soprano* repertory.

A friend in Leipzig sends us a summary of what is doing, musically, in that city:—"During the summer but little has occurred in the immediate neighbourhood of Leipzig, that would be of interest to your musical readers. The 'Riedel Society' has been continuing its admirable performances, perpetuating the knowledge of what is old and good, and enabling the public to judge of new works by Robert Franz, Volkmar, Papperitz, Fink, Listz, and others.—The 'Sing-Academie' gave a performance of Handel's 'Messiah.' The singers and members of the orchestra were all amateurs, and therefore we ought not to be too severe in judging their performances; but I could not help feeling again, if this be the style in which Handel's music is rendered, it is no wonder that he is comparatively so little appreciated on the Continent. Some of the readings were totally different from any I have heard in England, nor could I think them improvements. One which struck me as particularly objectionable was the way in which the glorious 'For unto us a Child is born' was given. It was commenced as a quartett, the chorus only coming in at the 'Wonderful!' &c.; and not until the last repetition did the chorus take up the whole theme. 'His yoke is easy' was also sung in the same way. The 'Tonkünstler Verein' has had its assembly at Weimar. This society is especially occupied in making propaganda for the 'Zukunft' music, and this year its speakers came forward with that pugnacious intolerance which one so often finds among those who claim the right of being freed from the restraints which the experience of the past has consolidated into the leading rules which must govern the arts and sciences. Some extracts from an opera by Cornelius were generally liked; but the majority of the other works—almost all of the 'Zukunft' school—although much applauded by the disciples of that school, were by no means calculated to win the unprejudiced to the new views. The finest performance was Beethoven's 'Missa Solennis,' sung by the members of the Leipzig 'Riedel Verein'; the same society also sang, at short notice, and without rehearsal, one of Bach's Motetts with admirable precision. Gounod's 'Faust' seems making the round of the German theatres. Last week it was produced at Dresden; this week here; and it is also in preparation at Stuttgart, where it is to be performed among the other festivities in honour of the King of Württemberg's birthday. The great beauties of this opera have already been mentioned in your columns, so that I need only add that it promises to become very popular, although by many the treatment to which Goethe's text has been subjected is regarded as little short of sacrilege. In one of the last soirées of the Conservatorium a new Concerto (in F sharp minor), by Ferdinand Hiller, was very finely played by Mr. Franklin Taylor, of Birmingham. This Concerto is a work of such excellence that it is well worth the study of all who can surmount its difficulties; and it has the additional great merit of not being too long. In the dearth of new works for the piano, which can bear being played by the side of the classical Concertos, this composition is really a treasure. The first volume of Mendelssohn's Letters has appeared. The more one sees of the man, the more truly great and lovable does he appear."

MISCELLANEA

Jahn Monument.—At the general German Turner Festival, at Berlin, some Italian "Turnvereine" were expected. They were prevented from appearing, but have resolved to contribute for the monument to the memory of Jahn. The Turnvereine, of Turin, which counts among its members the two sons of Victor Emmanuel, has already sent for that purpose a fine slab of white marble from the Apennines. The stone bears the inscription, "Società equestre ginnastica di Torino," and on the back the name of the place whence it had been procured—"Apennini." The Scandinavian "Turners" have also announced to the Berlin Turnrath that they have hewn six granite boulders from the Scandinavian Highlands for the Jahn monument.

TO CORRESPONDENTS.—J. A. C.—P. W.—S. F. C.—C. R.—C. G.—A Constant Reader—G. S.—J. Q. R.—E. S.—received.

LONDON AND CAMBRIDGE.

MACMILLAN & CO.

HAVE LATELY PUBLISHED THE FOLLOWING

BOOKS FOR SUMMER READING.

CAVOUR: a Memoir. With a Portrait from an Original Photograph. By E. DIXON, Author of 'Rome in 1850.' 6s. 6d.
"He writes well and with care. His book is short, intelligent and trustworthy."—*Athenæum*.

FOOT-NOTES from the PAGE of NATURE; or, First Forms of Vegetation. With numerous illustrations, and a Coloured Frontispiece. By Rev. H. MACMILLAN, F.R.S.E. 5s.
A popular work on Mosses, Lichens, Fresh-water Algae and Fungi.

GOLDEN TREASURY: a Collection of the Best English Poems. Beautifully printed, and bound in extra cloth, 4s. 6d.
"No book in the English language will make a more delightful companion than this."—*Spectator*.

BOHN'S ENGLISH GENTLEMAN'S
LIBRARY

FOR SEPTEMBER.

Handsomely printed in demy 8vo. and illustrated with Portraits and Plates, at 9s. per volume.

THE

LETTERS AND WORKS

OF

LADY WORTLEY MONTAGU.

Edited by Lord WHARNCLIFFE.

Third Edition, with important Additions and Corrections derived from the Original Manuscripts, a new Memoir and Illustrative Notes.

By W. MOY THOMAS.

Complete in 2 vols. with a general INDEX, and fine Portraits engraved on Steel. VOL. II.

HENRY G. BOHN, York-street, Covent-garden, London, W.C.

BOHN'S ILLUSTRATED LIBRARY
FOR SEPTEMBER.

SOUTHEY'S

LIFE OF NELSON.

With ADDITIONAL NOTES and a GENERAL INDEX.

Illustrated with 64 Engravings on Steel and Wood.

From Designs by DUNCAN, BIRKET FOSTER, WESTALL, and others. Price 5s.

HENRY G. BOHN, York-street, Covent-garden, London, W.C.

NEW PUBLICATIONS.

DUTCH PICTURES;

With some Sketches in the Flemish Manner.

By GEORGE AUGUSTUS SALA,

Author of 'William Hogarth,' 'Seven Sons of Mammon,' 'Twice Round the Clock,' &c.

Next week, in 2 vols. price 15s.

MABEL'S CROSS: a Novel.

By E. M. P.

The Critic says:—"Mabel's Cross," a novel which excited some interest on its announcement for publication a short time since, is to be published next week. The delay in its appearance has been owing to the extreme care bestowed on the revision of the work in going through the press."

Now ready, price 5s. small 8vo.

PHOTOGRAPHS OF PARIS LIFE:

Being a Record of the Politics, Art, Fashion, Gossip, and Anecdote of Paris during the past Eighteen Months.

By CHRONIQUEUSE.

"It requires a woman's sympathy to depict these home-scenes (of French Imperial life), and to sympathize with these home-virtues. La Chroniqueuse has done well to make these charming sketches better known to English hearts and English homes in a collected volume than in the confined sphere in which they first appeared."—Saturday Review.

Just published, price 5s.

ABOUT LONDON.

By J. EWING RITCHIE,

Author of 'The Night Side of London,' 'Here and There in London,' 'The London Pulpit,' &c.

"Mr. Ritchie ought to be a popular author, and largely read by a numerous and highly respectable class."—Athenæum.

"About London" displays an amount of industrious research very rarely met with, and a knowledge of men and manners which only experience—and active experience, moreover—can supply."—Literary Gazette.

London: TINSLEY BROTHERS, 18, Catherine-street, Strand.

Just ready, post 8vo. cloth lettered,

IRISH HISTORY AND IRISH CHARACTER.

By GOLDWIN SMITH.

Oxford and London: J. H. & JAS. PARKER.

Now ready, price 2s.

**THE COURT OF CACUS;
OR, THE STORY OF BURKE AND HARE.**

By ALEXANDER LEIGHTON,

Author of 'Curious Storied Traditions of Scottish Life,' &c.

* * In this volume the reader will find, for the first time, a narrative of the deeds of Burke and Hare, which will ever be remembered as the most extraordinary in the annals of a civilized people. The volume also contains vivid Sketches of the "Medical Professors," the "Pupils," and the "Body-smatchers," who were concerned in the great drama, and the curious Resurrection Stories then current in Surgeon's Square. The author has disposed the lights and shadows of this strange chapter of modern history so as to retain the absorbing interest of the story without revolting the feelings of his readers; and has endeavoured to make the book a great moral lesson, to teach that when man is left to his idol, there is no limit of enormity to which he may not attain.

London: HOULSTON & WRIGHT, Paternoster-row; and sold by all Booksellers.

THE BIOGRAPHIES OF ENGLAND'S LITERARY WOMEN.

Now ready everywhere, 8vo. 18s.

**THE LITERARY WOMEN OF ENGLAND,
FROM THE EARLIEST TIMES.**

SAUNDERS, OTLEY & Co. 66, Brook-street, Hanover-square.

The Public are informed that this work has been added to all Libraries in Town or Country.

SAUNDERS, OTLEY & Co. 66, Brook-street, Hanover-square.

NOTICE TO THE TRADE.

The FOURTH EDITION of Mr. DICKENS'S NEW WORK,

GREAT EXPECTATIONS,

Will be ready for delivery on September 21.

CHAPMAN & HALL, 193, Piccadilly.

This day is published, in 3 vols. post 8vo. price 31s. 6d.

THE SILVER CORD.

By SHIRLEY BROOKS,

Author of 'The Gordian Knot,' 'Aspen Court,' &c.

ROYAL EDUCATION COMMISSION.

This day is published, price 2s. 6d. boards,

POPULAR EDUCATION IN ENGLAND.

BEING AN ABSTRACT OF THE REPORT OF THE ROYAL COMMISSIONERS ON EDUCATION.

With an INTRODUCTION and SUMMARY TABLES.

By HERBERT S. SKEATS.

"Mr. H. S. Skeats's 'Abstract of the Report of the Royal Commissioners' is at once comprehensive, concise, and clear. All the really important points, either as to matters of fact or of suggestion, are compressed into the compass of one small volume. Yet the arrangement is so good, that there is no consequent confusion or obscurity; while the outline of what has been done, is doing, or is proposed to be done, for the formation of a sound and wide-spread education among the people, is simple, brief, and intelligible, without being bald and uninteresting from its brevity. It is a useful work well done."—*Economist*.

London: BRADBURY & EVANS, 11, Bouverie-street.

SOCIAL SCIENCE ASSOCIATION.

This day, 8vo. 1s.

ADDRESS at the OPENING of the SOCIAL SCIENCE ASSOCIATION, at DUBLIN, in August, 1861. By LORD BROUGHAM. Revised, with Notes. John Murray, Albemarle-street.

SUMMER TOURS.

Now ready, with 200 Illustrations, 2 vols. post 8vo. 24s.

MURRAY'S HANDBOOK to the SOUTHERN CATHEDRALS of ENGLAND: Including WINCHESTER, SALISBURY, EXETER, WELLS, ROCHESTER, CANTERBURY, and CHICHESTER.

The following are also Now Ready:

HANDBOOK—MODERN LONDON. Map. 16mo. 5s.

HANDBOOK—KENT and SUSSEX. Map. Post 8vo. 10s.

HANDBOOK—SURREY, HANTS, and ISLE OF WIGHT. Map. Post 8vo. 7s. 6d.

HANDBOOK—BERKS, BUCKS, and OXFORDSHIRE; University and City of Oxford, and Descent of the Thames. Map. Post 8vo. 7s. 6d.

HANDBOOK—DEVON and CORNWALL. Map. Post 8vo. 7s. 6d.

HANDBOOK—WILTS, DORSET, and SOMERSET. Map. Post 8vo. 7s. 6d.

HANDBOOK—NORTH and SOUTH WALES. Maps. 2 vols. post 8vo. 12s.

"Into every nook which an Englishman can penetrate he carries his RED HANDBOOK. He trusts to his MURRAY as he would trust to his razor, because it is thoroughly English and reliable; and for his history, hotels, exchanges, scenery, for the clue to his route and his comfort by the way, Murray's RED HANDBOOK is his 'guide, philosopher, and friend.'"—*Times*.
John Murray, Albemarle-street.

LEBAHN'S WORKS

ON THE

GERMAN LANGUAGE,

ADAPTED FOR

SELF-INSTRUCTION.

Just published, Second Edition, price 3s. 6d.

Lebahn's First German Course.

"It is hardly possible to have a simpler or better book for beginners in German."—*Athenæum*.

"It is really what it professes to be—a simple, clear and concise introduction to the German language; one too, which will be equally useful to the self-instructing student and the member of a German class."—*Critic*.

Fourth Edition, price 3s. 6d.

Lebahn's First German Reader.

"An admirable book for beginners, which indeed may be used without a master."—*Leader*.

Sixth Edition, price 3s. 6d.

Lebahn's Eichenfels and Dialogues.

"A charming production. The Dialogues are as perfectly adapted to render the student a speaker of this interesting language, as is the Vocabulary for making him a reader."—*Educational Times*.

Sixth Edition, price 3s.; with KEY, 10s. 6d.

Lebahn's German in One Volume.

"To those who would attain a practical use of the language, with a moderate expenditure of time and labour, this work will be a welcome help."—*Illustrated London News*.

Lebahn's Practice in German. Price 6s.

"Whoever fails to learn the German language with this help, must have an intellect irredeemably dull and obfuscated."—*Swiss*.

Lebahn's Exercises in German. Price 3s. 6d.

"A volume of 'Exercises in German,' including in itself all the vocabularies they require. The book is well planned: the selections for translation from German into English, or from English into German, being sometimes curiously well suited to the purpose for which they are taken."—*Examiner*.

Lebahn's Self-Instructor in German. 6s. 6d.

"The student could have no guide superior to Mr. Lebahn."—*Literary Gazette*.

Price 3s. 6d. each.

Lebahn's German Classics: with Notes and Complete Vocabularies.

PETER SCHLEMIHL, the Shadowless Man. By Chamisso.

EGMONT. A Tragedy, in Five Acts, by Goethe.

WILHELM TELL. A Drama, in Five Acts, by Schiller.

GOETZ VON BERLICHINGEN. A Drama, by Goethe.

PAGENSTREICHE, a Page's Frolics. A Comedy, by Kotzebue.

EMILIA GALOTTI. A Tragedy, in Five Acts, by Lessing.

UNDINE. A Tale, by Fouqué.

SELECTIONS FROM THE GERMAN POETS.

"These editions are prepared for the use of learners who read without a master; and they will be found convenient for that purpose. In each, the text is followed by a glossary, wherein not only the sense of every particular phrase, but also the dictionary meaning of most of the several words, is given in good English. With such aids, a student will find no difficulty in these masterpieces."—*Athenæum*.

Lebahn's German Copy-Book: being a Series of Exercises in German Penmanship, beautifully engraved on Steel. Price 2s. 6d.

* * About Seven Hundred Commendatory Notices of Lebahn's Works have appeared.

LOCKWOOD & CO. 7, Stationers' Hall-court.

Robert Ellis, Esq. Meaburn Staniland, Esq., M.P.
J. P. Cassiot, Esq., F.R.S. Daniel Sutton, Esq.
John Gladstone, Esq. Walter Charles Vennings, Esq.
Aaron Goldsmith, Esq. William White, Esq.

Every description of Life Assurance business is transacted. Advances are made on Mortgage of Freehold Property, Life and Reversionary Interests, &c., and all Assurances of Personal Security. The Assets are 340,000l., and the Income is over 63,000l. per annum. Four-fifths of the entire Profits are appropriated to the Assured. Three divisions of considerable amount have already taken place.

GENERAL LIFE AND FIRE
ASSURANCE COMPANY.

62, KING WILLIAM-STREET, LONDON, E.C.

Established 1807.
CAPITAL, 1,000,000l.

Directors.

THOMAS CHALLIS, Esq. Ald., Chairman.
THOMAS BRIDGE SIMPSON, Esq., Deputy-Chairman.

Jacob George Cope, Esq. George S. Freeman, Esq.
William Delf, Esq. Charles James Heath, Esq.
John Dixon, Esq. James Pilkington, Esq., M.P.
Benjamin Edington, Esq. Right Hon. G. P. Villiers, M.P.
John T. Fletcher, Esq. Edward Wilson, Esq.

FIRE and LIFE INSURANCES effected on the most advantageous terms. Apply to THOMAS PRICE, L.L.D., Secretary, or to the Local Agents of the Company.

The Fire Premiums of 1860 were upwards of 45 per cent. more than those of 1859, whilst the losses were 15 per cent. less.

The New Life Business has more than trebled within the last four years.
The Life Reserve Fund is more than six times the annual Life Income.

The Assets are upwards of 200,000l.

THE SCOTTISH WIDOWS' FUND
AND LIFE ASSURANCE SOCIETY

is a purely Mutual Office, in which the whole Funds belong to the Members; and the Profits are divided among them alone. Since it was founded, in 1815, its history has been one of constant and increasing prosperity; and it is now, in point of Funds, Annual Revenue and number of Members, one of the largest Life Offices in the world. The Security presented by the Society to its Members and their Representatives is of the most unquestionable character; while the Returns made in the form of Bonuses are, it is believed, not exceeded by those of any other similar Institution. The following is a

MEMORANDUM OF BUSINESS, BONUSES, FUNDS
AND REVENUE,

Extracted from the Society's detailed Prospectus

1. TOTAL ASSURANCES ISSUED £14,621,734
2. TOTAL BONUSES DECLARED 2,023,049
3. SUMS ASSURED AND BONUSES EXISTING 10,896,591
4. TOTAL CLAIMS PAID EXCEEDED 2,800,000
5. INVESTED FUNDS 2,601,764
6. ANNUAL REVENUE 425,738

Forms of Proposal, detailed Prospectuses and Reports, and every information, may be had at the Head Office, or any of the Society's Agents.

SAMUEL RALEIGH, Manager.
J. J. P. ANDERSON, Secretary.
Edinburgh, 9, St. Andrew-square.

SPECIAL NOTICE.
Proposals dated and lodged at the Head Office, or with any of the Society's Agents, during the current year, will secure One Bonus more than those of last date.

LONDON HONORARY BOARD:

ANDREW FRANCIS, Secretary.

AEGUS LIFE ASSURANCE COMPANY,
29, THEOCHMORTON-STREET, BANK.

Chairman—WILLIAM LEAF, Esq.

Deputy-Chairman—JOHN HUMPHREY, Esq., M.D.

Richard E. Arden, Esq. W. Lister Lead, Esq.

Edward Bates, Esq. Saffery Wm. Johnson, Esq.

Professor Hall, M.A. Jeremiah Fisher, Esq.

Rupert Ingleby, Esq. Lewis Pocock, Esq.

Physician—Dr. Jefferson, 3, Finsbury-square.

Surgeon—W. Coulson, Esq., 2, Frederick's-place, Old Jewry.

Attorney—George Clark, Esq.

ADVANTAGES OF ASSURING WITH THIS COMPANY.

The Premiums are on the lowest scale consistent with security. The Assured are protected by an ample subscribed capital—an assurance fund of 500,000l., invested on mortgage, and in the Government Stocks—and an income of 60,000l. a year.

Premiums to Assure £100.			Whole Term.	
Age.	One Year.	Seven Years.	With Profits.	Without Profits.
20	£0 17 8	£0 19 9	£1 15 10	£1 11 10
30	£1 1 3	£1 9 7	£2 5 8	£2 0 7

60	£2 3 4	£2 17 0	£6 13 9	£6 0 10

MUTUAL BRANCH.

Assurers on the Bonus system are entitled, after five years, to participate in nine-tenths, or 90 per cent. out of the profits. The profit assigned to each policy can be added to the sum assured, applied in reduction of the annual premium, or be received in cash.

At the first division a return of 30 per cent. in cash on the premiums paid was declared; this will allow a reversionary increase, varying, according to age, from 60 to 85 per cent. on the premiums, or from 5 to 15 per cent. on the sum assured.

One-half of the "Whole Term" Premium may remain on credit for seven years, or one-third of the premium may remain for life as a debt upon the Policy at 5 per cent., or may be paid off at any time without notice.

Claims paid one month after satisfactory proof of death.

Loans upon approved security.

No charge for Policy Stamp.

Medical Attendants paid for their reports.

Persons may, in time of peace, proceed to or reside in any part of Europe or British North America without extra charge.

No extra charge for the Militia, Volunteer Rifles, or Artillery Corpsmen Home Service.

The Medical Officers attend every day, at a quarter before Two o'clock.

E. BATES, Resident Director.

ELKINGTON & CO. desire respectfully to
call the attention of the Nobility and Gentry requiring
PLATE, to their Manufactures, which may be obtained in great
variety, in SILVER and ELECTRO PLATE, from either
of the Establishments.

PRACTICAL AND ANALYTICAL CHEMISTRY.— BIRKBECK LABORATORY.—UNIVERSITY COLLEGE, LONDON.—

Professor ALEXANDER W. WILLIAMSON, F.R.S., aided by Assistants.—Practical Instruction in Qualitative and Quantitative Analysis and the Methods and Principles of Organic Research. This Course qualifies the Student for the application of Chemistry to Agriculture, Medicine and the Manufacturing Arts.
Arrangements have been made for giving practical Instruction in Gas Analysis.
The Laboratory is open daily, from the 1st of October to the end of July, from 9 a.m. to 4 p.m., except on Saturdays, when it is closed at 3 o'clock.

Students occupy themselves with Subjects of their own choice, under sanction of the Professor, by whom they are assisted with useful instruction and advice.

A Gold Medal as reward of merit for this class is given by the Council.

Fees: Session, 26s. 5s.; six months, 12s. 18s.; three months, 12s. 10s.; one month, 4s. 4s. A deduction of 40 per cent. is made for Students who can attend only three fixed days per week.

A Prospectus, with full details, may be had at the Office of the College.

Course of General Chemistry.—Professor Williamson's Lectures are daily (except Saturdays), at 11 a.m. from the 1st of October to the 31st March. Fee for perpetual admission, 9s.; whole term, 6s.; half term, 3s.

EDWARD SPENCER BEESLY, A.M., Dean of the Faculty of Arts and Laws.

JOHN E. BRIDGEMAN, Dean of the Faculty of Medicine.

CHAS. C. ATKINSON, Secretary to the Council.
September, 1861.

KING'S COLLEGE, LONDON.—To CANDIDATES FOR THE INDIA CIVIL SERVICE, and such as have been selected for BOMBAY.

The Lecturer of ARABIC gives Notice that he will COMMENCE his Course for 1861—43, on THURSDAY, October 3, Fees 4s. 4s. per term.—For further information about this or any other Oriental Language, apply (by post) to G. W. LUTZEN, Esq., King's College.

R. W. JELF, D.D., Principal.

MINERALOGY.—KING'S COLLEGE,

LONDON.—Professor TENNANT, F.R.S., will commence a COURSE OF LECTURES ON MINERALOGY with a view to facilitate the study of GEOLOGY, and of the Application of Mineral Substances in the ARTS. The Lectures will begin on Friday Morning, October 4th, at 9 o'clock. They will be continued on each succeeding Wednesday and Friday, at the same hour. Fee, 2s. 2s.

R. W. JELF, D.D., Principal.

GOVERNMENT SCHOOL OF MINES,

JERMYN-STREET, LONDON.

Director—Sir RODERICK I. MURCHISON, D.C.L. &c.

The Prospectus for the Session, commencing on the 7th October next, will be sent on application to the Registrar. The Courses of Instruction embrace Chemistry, by Dr. Hofmann; Physics, by Prof. Tyndall; Natural History, by Prof. Huxley; Geology, by Prof. Ramsay; Mineralogy and Mining, by Mr. Warrington Smyth; Metallurgy, by Dr. Percy; and Applied Mechanics, by Prof. Willis.

TRENHAM REEKS, Registrar.

ROYAL COLLEGES OF PHYSICIANS AND SURGEONS OF EDINBURGH.

The List of Subjects and Books for the Preliminary Examination in General Education required to be passed by Candidates for the Double Qualification in Medicine and in Surgery commenced jointly by the Royal Colleges of Physicians and Surgeons, and for the separate Diploma of each College—to be held on OCTOBER 26th, and on NOVEMBER 2nd, 9th, and 16th, 1861, and on FEBRUARY 1st, MAY 3rd, and AUGUST 2nd, 1862—is now ready, and may be obtained on application to the Officer of each College.

The New Regulations for PROFESSIONAL EDUCATION, and for the PROFESSIONAL EXAMINATIONS, are also now ready.

The attention of intending Students of Medicine is specially requested to the following New Regulations, in accordance with a resolution of the Medical Council, applicable to all the Royal Colleges, Universities, and Licensing Boards.—1. That all Students of Medicine must be registered. 2. That those commencing medical study after September 1861 cannot be registered until they have passed a Preliminary Examination in General Education. 3. That, except for those who have been detained by illness or other unavoidable cause, the Registrar at all Medical Schools must be closed within Fifteen days after the commencement of each Session.

ALEXANDER WOOD, President Royal College of Physicians.

DOUGLAS MACLAGAN, President Royal College of Surgeons.

Edinburgh, August, 1861.

GERMAN AND FRENCH LANGUAGES.—

TO PRINCIPALS OF COLLEGES, GOVERNMENT SCHOOLS, AND OTHERS.—An English Gentleman (age 48), who has from childhood mostly resided on the Continent, and had very great experience in Tuition, from having been many years Professor of Modern Languages and Teacher Examiner in a Foreign University, as well as French and German Master in several Public Schools—one of which is a Government Institute for the Education of the Daughters of the Noblesse—wishes to obtain, about New Year, in his own country, a Scholastic or other engagement, suitable to his acquirements. He is thoroughly acquainted with the principal European languages; has travelled extensively in both hemispheres in an extremely responsible capacity, and is prepared to furnish the highest official testimonials and private references. In a place of trust, could offer adequate cash security. A Partnership in a really first-class School, in which advertiser would zealously devote himself to the department of Modern Languages, (usually taught with so little success in Great Britain,) would be entertained.—Letters, from Principals only, giving the fullest possible particulars, and stating if with a view to Partnership the amount of in-coming capital required, would be considered strictly confidential, and would shortly be replied to.—Address Professor D. F. B., care of Mr. Baillière, Publisher, 219, Regent-street, London, W.

ST. BARTHOLOMEW'S HOSPITAL and MEDICAL COLLEGE.—The WINTER SESSION will COMMENCE October 1, with an INTRODUCTORY ADDRESS by Dr. FRANKLAND, at Five o'clock p.m.

LECTURES.

Medicine—Dr. Black and Dr. Kirkc.

Surgery—Mr. Lawrence.

Descriptive Anatomy—Mr. Skay and Mr. Holden.

Physiology and General Anatomy—Mr. Savory.

Chemistry—Dr. Frankland.

Demonstrators of Anatomy—Mr. Callender and Mr. Smith.

Demonstrator of Morbid Anatomy—Dr. Andrew.

SUMMER SESSION, commencing May 1, 1862.

Materia Medica—Dr. F. Farre.

Botany—Dr. Harris.

Forensic Medicine—Dr. Martin.

Midwifery.

Comparative Anatomy—Mr. Coote.

Practical Chemistry—Dr. Frankland.

The Hospital contains 650 beds, and Clinical Lectures are delivered—On the Medical Cases, by Dr. Burrows, Dr. Farre, and Dr. Black; on the Surgical Cases, by Mr. Lawrence, Mr. Skay, and Mr. Paget; and on Orthopedic Surgery, by Mr. Coote.

Collegiate Establishment.—Students can reside within the Hospital walls, subject to the collegiate regulations. Some of the Teachers connected with the Hospital also receive Students to reside with them.

Information respecting Scholarships and other details may be obtained from Mr. Farre, Mr. Coote, Mr. Callender, or any of the Medical or Surgical Officers or Lecturers; or at the Anatomical Museum or Library.

QUEEN'S COLLEGE, CORK.

SESSION 1861—62.

MATRICULATION AND SCHOLARSHIP EXAMINATIONS.

On TUESDAY, the 15th of OCTOBER NEXT, at Ten o'clock, A.M., an EXAMINATION will be held for the MATRICULATION OF STUDENTS IN THE FACULTY OF ARTS, MEDICINE, and LAW, and in the DEPARTMENTS OF CIVIL ENGINEERING and AGRICULTURE.

The EXAMINATIONS for Scholarships will commence on MONDAY, the 21st of OCTOBER. The Council have the power of conferring at these Examinations, TEN SENIOR SCHOLARSHIPS of the value of 40s. each, viz.—Seven in the Faculty of Arts, Two in the Faculty of Medicine, and One in the Faculty of Law; and FORTY-FIVE JUNIOR SCHOLARSHIPS, viz.—Fifteen in Literature, and Fifteen in Science, of the value of 20s. each; Six in Medicine, THREE in Law, and Two in Civil Engineering, of the value of 20s. each; and Four in Agriculture, of the value of 15s. each; to sixteen of which first year Students are eligible.

Prospectuses, containing full information as to the subjects of the Examinations, &c., may be had on application to the Registrar.

By order of the President.

ROBERT J. KENNY, Registrar.

OWENS COLLEGE, MANCHESTER,

(in connexion with the University of London).

SESSION 1861—62.

The COLLEGE will OPEN for the SESSION on MONDAY, the 7th of October, 1861. The Session will terminate in July, 1862.

Principal—J. G. GREENWOOD, B.A.

COURSES OF INSTRUCTION will be given in the following departments, viz.:

Classics—Prof. J. G. Greenwood, B.A.

Comparative Grammar, English Language and Literature, Logic, Mental and Moral Philosophy—Prof. A. J. Scott, M.A.

Mathematics—Prof. A. Sandeman, M.A.

Natural Philosophy—Prof. R. B. Clifton, B.A.

History, Jurisprudence and Political Economy—Prof. R. C. Christie, M.A.

Chemistry (Elementary, Analytical and Practical)—Prof. Henry E. Roscoe, B.A. Ph.D. F.R.S.

Natural History (for this session, Geology and Botany)—Professor W. C. Williamson, M.B. Ph.D. F.R.S.

Oriental Languages—Prof. T. Theodor.

French—Mons. A. Pödevin.

German—Mr. T. Theodor.

Elocution—Mr. C. W. Davis, B.A.

EVENING CLASSES, for persons not attending the day classes, include the following subjects of instruction, viz. English Language and Literature, Logic, Classics, Mathematics, Natural Philosophy, History, Political Economy, Chemistry, Natural History, French, German, and Elocution.

ADDITIONAL LECTURES, on which the attendance is optional, and without fees, viz.—On the Greek of the New Testament; on the Hebrew of the Old Testament; on the Relations of Religion to the Life of the Scholar.

SCHOLARSHIPS AND PRIZES.

The VICTORIA SCHOLARSHIP, for competition in classical learning; annual value 200s., tenable for two years.

The WELLINGTON SCHOLARSHIP, for competition in the critical knowledge of the Greek Text of the New Testament; annual value 200s., tenable for one year.

The DALTON SCHOLARSHIPS, viz.—Two scholarships in Chemistry, annual value 50s. each, tenable for two years; Two scholarships in Mathematics, annual value 30s. each, tenable for one year.

DALTON PRIZES in Chemistry will also be offered.

The DALTON PRIZE in Natural History, value 12s., given annually.

Dinner will be provided within the College walls for such as may desire it.

The Principal will attend at the College, for the purpose of receiving Students, on Thursday, the 3rd, and Friday, the 4th of October, from 11 a.m. to 2 p.m.

Further particulars as to the Day and Evening Classes will be found in Prospectuses, which may be had from Mr. Nicholson, at the College, Quay-street, Manchester.

J. G. GREENWOOD, B.A., Principal.

JOHN P. ASTON, Solicitor and Secretary to the Trustees, St. James's Chambers, South King-street, Manchester.

TWO LADIES, enjoying a delightful home in a healthy suburb, would like to RECEIVE ONE or TWO LITTLE GIRLS, who would be treated in every respect as relatives, and receive, in addition to the endearments of home, an education based upon principles of high cultivation. The French and German languages spoken familiarly. Music and Drawing by Professors of eminence. Terms, 20 Guineas per annum. References to families of distinction.—Address A. B., 15, Tyrwhitt-terrace, Lewisham-road, E.C.

Institutes of Medicine.....	4 p.m.	

Matriculation.—By Regulation of the Senate, every Student is required, at the beginning of the Session, to Matriculate, by entering his name in the University Album, at the Library, before joining any Class. The Library will be open, for the purpose of Matriculation, on and after Wednesday, the 16th of October, from 11 to 3 o'clock daily, with the intervention of the holidays at the Sacrament.

Entrance Examination.—By Ordinance of the Universities Commissioners, "Any Student who, at the time of his entrance to the University, shall satisfy the Professors in the Faculty of Arts, on examination, that he is qualified to attend the higher Classes of Latin, Greek, and Mathematics, or any of them, is entitled to be admitted to the higher Classes, without having previously attended the First or Junior Class or Classes in the same department or departments; and, in the case of such Students, the Course of Study for the Degree of Master of Arts may be completed within Three Years instead of Four." The Examination for this purpose will take place in the commencement of the Session.

By order of the Senate,
DUNCAN H. WEIR, A.M., Clerk.
Glasgow College, Sept. 10, 1861.

REPEAL of the TAXES on LITERATURE

and the PRESS.—TESTIMONIAL to the Right Hon. T. MILNER GIBSON, M.P.
Subscriptions, limited to One Pound, received at Drummonds, Charing Cross; and by Robert Chambers, Treasurer, 47, Paternoster-row, E.C.
JOHN FRANCIS, Committee Room, 47, Paternoster-row, E.C.

A REVIEWER in one of the first London

Papers, having a most extensive knowledge of English and Foreign Literature, who can give the highest testimonials as to his capacity and specimens of his style, is open to an ENGAGEMENT.—Address B. A., 50, Lower Sloane-street, Chelsea.

THE PRESS.—A PARTNER, of literary

ability and business capacity, is wanted by the Projectors of a New Journal, for establishing which all the arrangements are already matured, and which will present features of special novelty, insuring its circulation among numerous and influential classes of the community. Only a moderate capital required, to be exclusively employed, under his own supervision, in developing the enterprise which promises to prove speedily and abundantly lucrative.—Address Zeta, Onwhyn's Newspaper Office, 1, Catherine-street, Strand.

TO PUBLISHERS.—A GENTLEMAN of capital

is desirous of embarking in the PUBLISHING BUSINESS, either as Partner or by Purchase.—Address, in the first instance, to X. Y. Z., care of Mr. Lindley, 19, Catherine-street, Strand, W.C.

WANTED, an ASSISTANT, in a PRINT-

SELLER'S Establishment, at the West End. He must be well educated, and of gentlemanly address, and not less than 25 years of age. He will be required to attend on customers, and make himself generally useful. Only such answers will be noticed that state full particulars as to how the business may be carried on, and the business will be treated with.—Apply, by letter only, to Mr. HERING, 137, Regent-street.

THE AQUARIUM.—LLOYD'S PRACTICAL

INSTRUCTIONS for TANK MANAGEMENT, with Descriptive and Priced List, 128 pages and 10 Engravings, post free twenty-one stamps.—Apply direct to W. ALFORD LLOYD, Portland-road, Regent's Park, London, W.

"Many manuals have been published upon aquaria, but we confess we have seen nothing for practical utility like this."
Era, Oct. 14, 1860.

THE FRIENDS of a LADY, suffering from the effects of Intemperance, wish to place her in a Private Family, where strict care may be taken of her.—Address V., care of H. Greenwood, Advertising Agent, Liverpool.

A LADY wishes strongly to RECOMMEND, as GOVERNESS to Young Children, or as Useful Companion, a Lady, 30 years of age, who has had great experience in tuition, having resided in one family years. Is of ladylike manners, and most amiable disposition.—Address to A. T., 20, Avenue-road, New-road, Hammer-smith, W.

TO BOOKSELLERS, STATIONERS AND

PRINTERS.—PARTNER WANTED.—1,200*l.* to 1,400*l.* required. Returns above 5,000*l.* Churchman preferred. First-class Business fifty miles from Town.—Address, for particulars, Mr. HOLMES, 48, Paternoster-row.

LADIES' DRAWING CLASSES.—Mr. B. R.

GREEN, Member of the New Society of Painters in Water Colours, and Author of various Publications on Drawing and Perspective, begs to announce that his CLASSES (limited to six Pupils each) will RE-ASSEMBLE on October 1st.—For terms, &c. apply to M. GREEN, 43, Fitzroy-square; or of Messrs. BOWART, Rathbone-place.

GREEN'S RUSTIC DRAWING MODELS,

enabling the Pupil to Sketch at once from Nature. First set (stile, roller, hencoop, doveote, pump, cottage-door), with figure complete, 1*l.* 1*s.*; singly, from 2*s.* 6*d.*—Sold by Messrs. Rowney, Newman, Reeves, Ackermann, and the Inventor as above.

ILLUSTRATED CATALOGUE of the best

and Newest CHEMICAL APPARATUS. 240 Woodcuts, 1*s.* 6*d.* free.

JOHN J. GRIFFIN, F.C.S., 119, Bunhill-row, E.C.

CHEMICAL APPARATUS and PURE

CHEMICAL TESTS suitable for every Operation in Elementary and Analytical Chemistry.

JOHN J. GRIFFIN, F.C.S., 119, Bunhill-row, E.C.

GAS BURNERS for CHEMICAL USE.—

The attention of Chemists is directed to a New Series of powerful and convenient Gas Burners and Gas Furnaces, suitable for Ignitions, Evaporations, and all similar Processes in Scientific and Operative Chemistry.

JOHN J. GRIFFIN, F.C.S., 119, Bunhill-row, E.C.

TO BE SOLD, a 9-feet REFLECTING TELE-

SCOPE, 9-inch Speculum, by the late celebrated Manufacturers, Messrs. Short & Ramsden, of London, equatorially mounted—a very rare instrument of its kind—the property of an elderly gentleman, declining its further use.—Apply to A. ANSAHAM & Co., Opticians, 20, Lord-street, Liverpool.

TO BE SOLD, the VALUABLE COLLEC-

TION OF DRIED BRITISH PLANTS, made by the late Samuel Gibson, of Hadden Bridge, and understood to be the most perfect Collection that exists. Gibson himself having stated his belief that it includes all but about fifteen Plants grown in the British Isles.—Apply to Mr. RICHARD ASNER, 92, Mosley-street, Manchester.

 sisting of—1. A Hebrew Grammar—2. An Introductory
 Lesson Book—3. The Book of Psalms, with Interlinear Trans-
 lation—and 4. A complete Lexicon. 8vo. price 18s.

*A GREEK STUDENT'S MANUAL, on the same plan.

JUDAH AND ISRAEL'S HISTORY care-
 fully separated and arranged in parallel columns; with
 Notes, Indexes, &c. By the Rev. M. GENESTE. 2 vols. large
 8vo. price 25s.

This work elucidates the Scripture history of the important and
 interesting period which extends from the accession of Rehoboam
 to the Babylonian Captivity; its object is yet further carried out
 by the combination, in their proper places, of those portions of
 the writings of the Prophets which fall within this period.

Mrs. H. WOOD.—EAST LYNNE. A Story of Modern Life. By Mrs. HENRY WOOD, 3 vols. [Now ready.]

"Truly the heart is deceitful, and out of its depths of corruption rise, like an exhalation, the misty phantoms of passion; angels of light they seem, but are only delusions of Satan.... This is the cross I must bear: sin and the swift retribution." *Longfellow.*

LORD DUNDONALD.—A REPLY to the OBSERVATIONS in 'THE QUARTERLY REVIEW' on THE AUTOBIOGRAPHY of LORD DUNDONALD. By MARCUS. 8vo. with Charts. [Now ready.]

Middle-Class Cookery-Book.

FRANCATELLI.—The COOK'S GUIDE. By CHARLES ELMÉ FRANCATELLI, late Chief Cook to Her Majesty the Queen.

This Cook's Guide and Housekeeper's and Butler's Assistant contains a Practical Treatise on English and Foreign Cookery in all its Branches, and also Instructions for Pickling and Preserving Vegetables, Fruits, Game, &c.; the Curing of Hams and Bacon; the Art of Confectionery and Ice-making; and the Arrangement of Desserts. In a handsome volume, price 5s. with many Illustrations.

Rev. Dr. CUMMING'S POPULAR ANSWERS to 'ESSAYS and REVIEWS.' Small 8vo. 4s.; —THE GREAT TRIBULATION, Twelfth Thousand, 7s. 6d.; and REDEMPTION DRAWETH NIGH, Sixth Thousand, 7s. 6d.

The Hon. Mrs. YELVERTON.—'MARTYRS to CIRCUMSTANCE.' Second and Concluding Part, price 3s. Also the First Part, Seventh Thousand, price 3s. Or, the whole work in cloth, price 5s.

MEMOIRS of MARSHALL HALL, M.D. F.R.S. By HIS WIDOW. 8vo. with a Portrait, 14s.

"As a narrative this work is more interesting than a novel: as the memorial of a great English worthy it will be perused with pride; as an incentive to honourable toil and the practice of virtue, this story of the rise of Marshall Hall deserves to take rank amongst the most favourite tales of the triumph of genius." *Lancet.*

The Martyrs John Huss and Jerome of Prague.

The LIFE and TIMES of CARDINAL JULIAN. By the Rev. R. C. JENKINS. 8vo. 14s.

"This book has solid value, and deserves close attention." *Examiner.*

"A good picture of a remarkable man, distinguished by splendid talents and vigorous energy."—*Morning Post.*

The Popular Sea Novel.

Ready at every Library.

VONVED the DANE, the ROVER of the BALTIC. 2 vols.

"Rivals the productions of Fenimore Cooper, and even our own Marryat, in the vivid pictures of a sailor's life and the wild scenes of the Baltic Sea." *Examiner.*
"This is a great book, both in conception and execution, which in its own school has no rival. Victor Hugo might be proud to have written some of its chapters: he has never written anything more thrilling or more terrible; and Dumas himself has not exceeded this writer in his account of the Rover of the Baltic." *Morning Post.*

With Four Charts and Portrait, price 5s.

LORD DUNDONALD'S AUTOBIOGRAPHY.

"Ought to be a prize-book in every military and naval school." *London Review.*

A LIBRARY EDITION, in 2 vols. 8vo. with Plans, &c.

London: RICHARD BENTLEY, New Burlington-street,
Publisher in Ordinary to Her Majesty.

18, Great Marlborough-street.

HURST & BLACKETT'S NEW PUBLICATIONS.

THE OKAVANGO RIVER. A Nar-

rative of Travel, Exploration, and Adventure. By CHARLES JOHN ANDERSSON, Author of 'Lake Ngami.' 8vo. with Portrait of the Author, and numerous Illustrations. 21s.

"Mr. Andersson's book, from the number of well-told adventures, its unpretending style, its rich fund of information, and spirited illustrations, will command a wide circle of readers, and become a favourite with all those who can appreciate daring perseverance, and a buoyant spirit under overwhelming difficulties. The interest of his story never flags for a moment."—*Athenæum.*
"Mr. Andersson's book, illustrated with many animated pictures of adventures connected with the wild sports of the journey it describes, is one that will be popular as a budget of trustworthy traveller's tales, besides being valued for the information it gives to geographers."—*Examiner.*

The SECRET HISTORY of the

COURT of FRANCE under LOUIS XV. Edited, from rare and unpublished Documents, by Dr. CHAILLICE. 3 vols. with Portraits. 21s.

"A valuable and interesting work. It unites the fascination of a romance with the integrity of history."—*Chronicle.*
"These volumes are very useful and valuable contributions to the history of France during one of its most important epochs. They are, moreover, entertaining to the general reader, as well as highly instructive to the student."—*Observer.*

The LIFE of JEANNE d'ALBRET, QUEEN of NAVARRE. By Miss FREER. Price 5s. bound and illustrated, forming the 18th Volume of HURST & BLACKETT'S STANDARD LIBRARY of Cheap Editions.

"We have read this book with great pleasure, and recommend it to general perusal. It reflects the highest credit on the industry and ability of Miss Freer. Nothing can be more interesting than her story of the life of Jeanne d'Albret, and the narrative is as trustworthy as it is attractive."—*Post.*

A SAUNTER THROUGH the WEST

END. By LEIGH HUNT. 1 vol. 10s. 6d. bound.

"Leigh Hunt's genial humour shines in a book like this—worthy companion to his 'Town' and 'Old Court Suburb.'"—*Examiner.*

THE NEW NOVELS.

NOTICE TO QUIT. By W. G. WILLS,

Author of 'Life's Foreshadowings.' 3 vols.

EAST and WEST. By J. Frazer

CORKRAN. 3 vols.

"There is more than usual talent manifested in this attractive novel, together with a combination of force and originality which induces the greatest interest."—*Messenger.*

A HERO in SPITE of HIMSELF.

By Captain MAYNE REID. From the French of Lule de

Bellemare. 3 vols.

"This story is full of exciting adventures."—*Observer.*

"A most attractive book."—*Post.*

ALONE in the WORLD.

By the

Author of 'COUSIN GEOFFREY,' &c. 3 vols.

"This new tale by Mrs. Gordon Smythies (whom Thomas Campbell, the poet, decided to be the queen of the domestic novel) unites the pathos and high morals of her 'Married for Love,' with the wit of her 'Cousin Geoffrey' and the humour of her 'Marrying Man.'"—*Chronicle.*

UNDER THE SPELL.

By the Author

of 'GRANDMOTHER'S MONEY,' 'WILDFLOWERS,' &c. 3 vols.

Also, just ready, in 3 vols.

COUNTY SOCIETY.

BOOKS FOR THE COUNTRY AND SEA-SIDE.

PRE-ADAMITE MAN; or, the Story of our Old Planet and its Inhabitants, told by Scripture and Science. Third Edition. Demy 8vo. 10s. 6d. cloth.

BLACK DIAMONDS; or, the Gospel in a Colliery District. By H. H. B. With a Preface by the Rev. J. B. OWEN, M.A., Incumbent of St. Jude's, Chelsea. Crown 8vo. 2s. 6d. cloth.

The HARP of GOD: Twelve Letters on Liturgical Music. Its Import, History, Present State, and Reformation. By the Rev. EDWARD YOUNG, M.A., of Trinity College, Cambridge. Crown 8vo. 3s. 6d. cloth.

DOCTRINE and PRACTICE: Lectures Preached in Portman Chapel, London. By the Rev. J. W. BEEVE, M.A., Minister of the Chapel. Crown 8vo. 5s. cloth.

BRIGHT SUNBEAMS in DARK DWELLINGS: a Tale of the Coventry Distress. By CLERUS. Crown 8vo. 3s. 6d. cloth.

"The OMNIPOTENCE of LOVING-KINDNESS:" being a Narrative of the Results of a Lady's Seven Months' Work among the Gallies in Glasgow. Crown 8vo. 3s. 6d. cloth.

ANNALS of the RESCUED. By the Author of 'Haste to the Rescue.' With a Preface by the Rev. CHARLES E. J. WIGHTMAN. Crown 8vo. 3s. 6d. cloth.

EARNING a LIVING; or, from Hand to Mouth: Scenes from the Homes of Working People. By M. A. S. BARBER, Author of 'Castle Bag and its Dependencies.' Crown 8vo. 2s. 6d. cloth.

WORKMEN and their DIFFICULTIES. By the Author of 'Bagged Houses, and How to Mend Them.' Crown 8vo. 2s. 6d. cloth.

Also, a CHEAP EDITION, 7s. cloth limp.

DAVID, KING of ISRAEL: the Divine Plans, and Lessons of his Life. By the Rev. WILLIAM GARDEN BLAIKIE, A.M. Crown 8vo. 2s. cloth.

MEMOIRS of the LIFE of JAMES WILSON, Esq. F.R.S.E., of Woodville. By JAMES HAMILTON, D.D. Post 8vo. 7s. 6d. cloth.

London: JAMES NISBET & Co, Berners-street.

LONDON, SATURDAY, SEPTEMBER 21, 1861.

LITERATURE

Letters and Papers illustrative of the Reigns of Richard III. and Henry VII. Edited by James Gairdner. Vol. I. (Longman & Co.)

THE chronicles and memorials of England and Scotland during the Middle Ages are succeeding each other with an agreeable rapidity. The volume before us is only a portion of a work yet to be completed, and it refers to a period in which the interest is permanent. The opening is solemn and dramatic—namely, the funeral of Edward the Fourth, with its preparatory incidents,—the “body washed and cleansed by a bishop”; after which, and other attentions due to defunct royalty, “the corpse was laid upon a board, all naked, saving he was covered from the navel to the knees, and so lay ten or twelve hours, that all the lords, spiritual and temporal, then being in London, or near thereabout, and the Mayor of London, with his brethren, saw him so lying.” Subsequently, the body lay in greater state, the preceding directions for which are very minute as to splendour of costume and position, with “his one hand upon his body, and a sceptre in the other hand, and on his face a kerchief, and so showed to his nobles, by the space of two days and more, if the weather will suffer. And when he may not goodly longer endure, take him away and bowel him,”—and so farewell King Edward!

To the next scene we turn with an impatient curiosity, hoping to be made witnesses of something hitherto unknown touching the hapless young princes and their uncle Gloucester. Here, however, we are disappointed. The documents, collected from various and widely-separated sources illustrative of the reign of Richard the Third, are very meagre, and not of general or particular interest. They comprise directions to the authorities at Calais, who are informed that they are not bound by any oath of allegiance to Edward the Fifth, the Lords having found Richard the true heir to the crown. Then follows a proclamation previous to the coronation, in which peace is enjoined, the carrying of arms forbidden, and all men ordered to be in bed by ten o'clock at night. The other Papers have reference to foreign alliances,—to questions of peace or war with Scotland,—and to negotiations with the nobles of Ireland, where the King's father, Richard Duke of York, had once been governor, and had left a memory honoured and loved because of the liberality and political wisdom of his administration. The only passage in any of these Papers in which we approach, as it were, to the threshold of Richard's home, is a short note to Louis the Eleventh, in which the writer thus expresses himself:—“My Lord, my cousin, I commend me to you as much as I can. I have written to my servant, Blanc Sanglier, now being with you, to make provision of certain wines of the growth of Burgundy and La Haute France, for myself and the Queen my consort.” It is pleasant, considering how things went in that royal household, to think of Richard and Anne quietly sipping their Burgundy while talking over the bygone days of their old loves and more recent adventures. Richard has set his heart on this Burgundy. He asks Louis to allow this little commission to be executed without “any disturbance or contradiction.” He adds, “you will do me in this a very singular pleasure; and if there can be anything I can do for you, on your informing me, I will accomplish it very willingly.” Let us hope that the wine arrived safely, and

that Richard, if he really poisoned “the Queen our consort,” did not make use of this identical Burgundy, which he so particularly coveted.

One other circumstance illustrative of the social life of Richard and his tastes is to be found in his anxiety, after conciliating the great Irish lords, to induce them to lay aside the old “Irish array,” and assume the English costume. For this purpose, he actually sends no less a man-milliner than a bishop, with patterns of various parts of dress, and models of caps, and vests, and hose, and such like matters that go to make up the man. Probably, the prelate may have had some other samples in his band-box, and other work besides displaying his samples; but that such things should have gone together is something curious, and since the days of that handsome prelate of Canterbury, who came to us from Savoy, there had never been a bishop or archbishop who had troubled himself on others on the subject of such gauds as these.

After the brief space occupied by the Papers above mentioned, the bulk of the volume is devoted to documents illustrative of the reign of Henry the Seventh, from 1486 to 1508. The anxiety of this king to enjoy the continual favour and encouraging countenance of the Pope is manifested by his tone of reverence, and the gusto with which he informs His Holiness of the appalling fate of men who despised Papal interdicts, sudden death and immediate corruption of body having happened, within his own knowledge, to one who laughed at the Pope, and was adverse to the Tudor king—a combination of incidents very artistically put together.

Perhaps, the condition of the kingdom, and the political atmosphere of the period, the year 1500, cannot be better described than by a letter from De Puebla, the Spanish ambassador here, to his sovereigns, Ferdinand and Isabella. After kissing the royal feet and the hands of their Highnesses, De Puebla states that “by the good fortune of your Highnesses and the lady Princess of Wales, this kingdom is at present so situated as has not been seen for the last five hundred years, till now, as those say who know best, and as appears by the Chronicles; because there were always brambles and thorns of such a kind that the English had occasion not to remain peacefully in obedience to their king, there being divers heirs of the kingdom, and of such a quality that the matter could be disputed between the two sides.” When it is remembered that the judicial murder of the young Earl of Warwick, the “last of the Plantagenets,” is said to have been insisted on by Spain, as one of the necessary preliminaries to the marriage of Katherine of Arragon with the Prince of Wales, the following passage in this despatch has double significance:—“Now it has pleased God that all should be thoroughly and duly purged and cleansed, so that not a doubtful drop of royal blood remains in this kingdom, except the true blood of the King and Queen, and, above all, that of the lord Prince Arthur. And since of this fact,” adds the ambassador, “and of the execution which was done on Perkin and on the son of the Duke of Clarence, I have written to your Highnesses in various ways, I do not wish to trouble you with lengthy writing.” The execution done on the son of the Duke of Clarence was as cruel a murder on the part of Henry the Seventh as that done by Richard on his nephews, with this addition, that it neither saved the kingdom from anarchy, nor served the King, except in obtaining a wife for his son, and securing their possible offspring from the pretensions of a rival.

Henry himself, however, was not yet altogether secure; there remained one pretender to the throne in the person of Edmund De la Pole, Earl of Suffolk, son of the loyal old duke who had married the sister of Edward the Fourth, and brother of the traitor Lincoln, who fell, at Stoke, fighting against Henry. Mr. Gairdner states correctly that “the story of the Earl of Suffolk has been very imperfectly told, and cannot be fully read without the aid of Papers which are here, for the first time, published.” The importance of the Poles arose from the marriage of the eldest son of the family, John, Earl of Lincoln, with Elizabeth, sister of Edward the Fourth and Richard the Third. The latter King, when childless, appointed John his heir, but Bosworth Field settled that appointment, and John fell fighting against Henry the Seventh, at Stoke. His next brother, Edmund, on the death of his broken-hearted sire, the Duke of Suffolk, was allowed, for a “consideration,” to take the title of Earl of Suffolk; but his allegiance always sat uneasily upon him, and as he was constantly at feud with the King, he began to look upon the latter as sitting in the usurped seat of the defunct John, Earl of Lincoln, to whom Edmund De la Pole was next heir. The latter does not seem to have been quickened in grateful feeling towards a king who had once saved him from cord or axe, by pardoning him after conviction on a charge of murder; and when Edmund suddenly left England he had good reason for expecting to find a friend and supporter in the person of Maximilian, Emperor of Germany. That sovereign, however, promised unreservedly, but broke his pledges, and finally turned Edmund adrift for the paltry bribe of ten thousand pounds,—which sum it is quite as wonderful a circumstance that Henry should be willing to actually pay down. The Pretender now led a wandering and painful life. Denmark, France, Scotland, Flanders,—everywhere was the hostility against him active or the friendship delusive. How entirely he was ruined in a pecuniary sense, how great was his misery, how fatal he had become to his kinsmen and adherents at home and abroad,—these Papers fully demonstrate. In every place of hoped-for refuge, he was a prisoner rather than a guest; and he was pitilessly hunted down till he fell within reach of the arm of Philip of Castile, who ultimately sold the wretched yet haughty wanderer and rebel to the King of England, who, quietly biding his time, and cruelly feeding his prisoner with hope, according to report “before he left the world, recommended his son to do that,” which he had promised not to do himself. However this may be, the truth is, that in the year 1513 when England was at war with France, and Richard, the brother of Edmund, took service under the French king against his country, Edmund was sent to the block, apparently without having committed any new offence of his own. The dukedom of Suffolk was made over the following year to Charles Brandon, whose only son (the Earl of Lincoln), by Mary, the sister of Henry the Eighth, dying in his father's lifetime, the dukedom fell successively to his two sons by his last and fourth wife, and the title in that line became extinct, for want of male heirs.

Mr. Gairdner traces the fortunes of Edmund's brother Richard. “He was looked upon as one of the most distinguished of the French captains, and fell with the flower of their army at the battle of Pavia, when Francis the First was taken prisoner, in 1525.” This, however, leaves the history of the house imperfect. Edmund had two other brothers, of whom no mention is made either in the documents or

the Prefaces to them, in this volume. They were perhaps, too obscure for history, but Cambridge has not altogether forgotten them. After ruin had fallen upon their family, these two brothers, Humphry and Edward, took to their books, in the above University, preferring, as it has been said of them, to claim by their own right title to learning than to be called lords by the courtesy of others. The highest dignity attained by these scions of a house whose first man of mark was Michael De la Pole, the Lord Chancellor, himself the son of a Yorkshire merchant who lent money to Edward the Third, was that of Archdeacon of Richmond, in the person of Edward.

With Mr. Gairdner's Second Volume, we shall pursue the course of history on which many of the documents he has already published reflect a new and interesting light.

On Food: being Lectures delivered at the South Kensington Museum. By E. Lankester, M.D. (Hardwicke.)

The Cook's Guide and Housekeeper's and Butler's Assistant. By Charles Elmé Francatelli. (Bentley.)

CHEMISTS tell us that diamonds are based on charcoal,—but nobody ever yet thoroughly succeeded in making a diamond out of charcoal—a bright, pure, light-giving brilliant like Coggi Hassan's, that diamond of all diamonds! There is a genius in Nature beyond all the receipts of Art, and unless men have a touch of that genius no instructions will avail them. The distance between the crude elements of food presented to us by Dr. Lankester in his Lectures, beginning with Salts and Phosphates, Heat-forming Foods, Flesh-forming Foods, the Oxygen and the Hydrogen and the Carbon, Ethyls, Tartrates, Citrates, Sulphates, and things too occult and numerous to be catalogued here,—the distance, we say, betwixt all these and the brilliant results produced by M. Francatelli from these elements, and chronicled for the benefit of the unlearned and the unskilled in his 'Cook's Guide and Housekeeper's Assistant,' is nearly as great and the difficulties almost as insuperable as betwixt the base charcoal and Coggi Hassan's diamond! Receipts are nothing without the genius to put them into practice. Genius itself is an occult combination of virtues, as mysterious as the process of making diamonds; many men and many women possess the virtues in their crude estate, but in how very few do they exist as genius! Food is a great subject, of universal interest:—"L'homme en mangeant remonte ses ressorts." Dr. Lankester resolves our food into its elements; M. Francatelli combines them into forms endowed with tastes, odours and virtues that are proudly perfect and defy the curious analyzer to do aught but—eat them.

M. Francatelli writes down in good and lucid English his method of dressing Christmas Pies—Chickens à la Milanaise—Rice à la Soeur Nightingale—Mutton in fifteen different fashions,—to say nothing of Poultry and Game in forms which bewilder the imagination;—with hints and receipts for side-dishes "for every-day fare," which, if realized, would make a plain man believe himself a perpetual Lord Mayor. He tells us "How to dress Vegetables," in which every receipt is an excuse for the Vegetarians;—shows us methods of dressing Eggs which our grandmothers did not know;—"different kinds of Puddings," "Small Pastry," "Creams," very far removed from the simplicity of the original cow;—Salads and Potted Meats, and Cold Entrées to use up scraps;—in short, a glimpse, a

beatific vision of the wonderful resources and possibilities that exist in bread, meat and vegetables. After reading 'The Cook's Guide,' a housewife might be driven to despair and a husband "to register a vow" never to forgive cold mutton or tough steak. A man might believe that a bad dinner, if there were *anything* in the larder to make it of, was a sin; but let him be merciful, and reflect that, along with his receipts and rules, M. Francatelli has not been able to give the gift of following them. Aspiration is the first step in the ladder of perfection; and if M. Francatelli can cause his readers to desire to follow his precepts he will have achieved much. In practical matters success will generally crown painstaking. It is not alone in what he teaches that he is great,—his warnings will strike dismay into the heart of timid young housekeepers just beginning their domestic career. The Preface crushes the favourite handbooks of domestic instruction without mercy and without remorse. Surely the Authors of 'The Modern Housewife' and of 'Modern Domestic Cookery' were not actuated by a malignant demon when they enjoined their followers to "make their green pea soup with milk," to flavour their "gravy soup with walnut catsup," and to "cook rabbits with the indiscriminate use of wine, lemon, vinegar, butter, garlic, spices and cayenne pepper." But such, alas, is the fact, and as M. Francatelli sadly says, "it is beyond a doubt that too many who have presumed to write on the art and science of Cookery are very far from possessing any adequate knowledge of the art and science they so recklessly attempt to teach";—no wonder, therefore, that the diamond has not yet been obtained out of the charcoal!

But there is a genius required in the eater as well as in the cook,—"Les animaux se repaissent, l'homme mange—l'homme d'esprit seul sait manger," says the highest authority upon gastronomy. "La destinée des nations dépend de la manière dont elles se nourrissent;"—after that no more need be said to prove that the homely proverb about "the devil sending cooks" is the highest act of malignity ever attributed to him,—the power of malice can no further go!

The Lectures of Dr. Lankester, originally delivered at the South Kensington Museum, possess the great merit of being interesting. The information, although it may be gathered from sources not inaccessible to those who will read for themselves, is brought together and arranged with the intelligence of a man who thoroughly understands and performs what he intends to do. The facts thus presented gain an additional value by bearing the impress and sanction of his own opinions. The Lectures give an account of the principal objects of our food and drink,—their constituent parts, their chemical combinations, their effect upon the human system, their relative value as nutritive, or restorative, or stimulant. In addition to the chapters on Food and Drink, there is an additional chapter on Tobacco and the Use of Opium, another on Spices and Condiments; these are the most interesting in the book. There is no pretence about these Lectures; the style is clear and pleasant: and for a work of general information on a subject interesting to everybody these Lectures on Food will be useful and popular. They contain the information which every one ought to possess, and there is skill shown in giving as much as is necessary and no more than is desirable. Dr. Lankester has fulfilled the task he proposed to himself with judgment and success.

After Icebergs with a Painter: a Summer Voyage to Labrador and around Newfoundland. By Rev. Louis L. Noble. (Low & Co.)

THOSE who, like ourselves and probably some of our readers, are fresh from the glaciers around Mont Blanc and Monte Rosa, will gladly take in hand a volume on Icebergs. The Swiss glaciers are grand and beautiful; but to mere passing and popular apprehension they are motionless and monotonous. Accurate measurements assure us that they move at certain ascertainable rates; and the occasional discovery, as recently near Chamouni, of the relics of long since perished guides and mountaineers confirms such scientific assurance. Otherwise, we might regard them as being moveless as the great mountains whose sides they adorn. But the iceberg is the living, voyaging glacier—the wandering Alp of the sea. The Alpine glacier moves inch by inch, the iceberg mile by mile. The iceberg advances further in one day than the glacier in one year. The glacier stretches itself upon its own rocky rack, and its icy limbs crack and rend, and are dismembered by the voluntary process. The iceberg floats on, for a time, whole and unbroken. It floats upon a yielding bed of water; it sways gently down the waves; it bends gracefully under its own gravity; and for a brief while preserves its gelid integrity, amidst storms and tempests, and the continual sappings of its foundations.

In these respects, it is the opposite of the glacier of the mountains, even though in the mountains it may have been cradled. So soon as the impelling action from behind becomes more and more energetic in the high steep of its birthplace, by a process comparatively noiseless and gradual (not by sudden and sharp dis-severance, as many suppose), and by annual proportions, step after step, these enormous ice-masses gradually reach the waters which are swelling in readiness to receive them. While the lesser masses fall and break off into the brine, the larger ones gradually glide into the buoyant element, and there begin their devious career. They have escaped from the rigid embrace of the nurturing mountain. They are now launched into life and motion. They have left the calm, quiet deathliness of the parent source for ever, and they are off upon a voyage of discovery. Of dazzling brilliancy at their sharp edges, shooting up into spear-like pinnacles, or stretching along in sharp shelf-like longitude, the bright sunlight beams through them in flaming glory, or softened blue, and here and there in subdued pearly lustre. Freshly broken statuary marble or fractured porcelain may afford a humble idea of the closely crystallized mass where it has been newly broken asunder; but you must gaze on Alpine snow-peaks at sunrise or sunset, and watch the glowing, gorgeous, and finally faintly-dying hues, all passing for a few entrancing minutes over the spotless snow-ground in indescribable glory, before you can fully understand descriptions of a similar glow and glory on the floating facets of the northern bergs. Yet the whole vocabulary of metaphoric terms will scarcely help us; for when it is said that you now gaze upon walls of polished silver, with veins of sapphire blue, and oblique bars of opaque white; now on sculptured crags, streaming with rivulets of falling brine; here on deep flutings and wrinkled folds, through which the green and silvery waters rush back to the sea; there on endless graces of outline, and at sunset on endless shiftings and graduations of colour, from tints of flame to paleness of lilies, from bloom of rose and carnation to violet blue, from washes and draperies of orange,

scarlet, crimson, purple, down to harder but shining metallic tints of gold, bronze and copper; while, in addition to all these hues, upon the body of the berg itself you behold the glowing mirror of the outstretched sea, and discern the long breakings of the rolling waves upon the glistening mass, and the lengthening out of the shattered waters round the rough edge of the floating mountain;—when you have laid on your words with the choicest selection and the utmost skill, you have but to begin again with the same words at the next iceberg. But the words are now stubborn and stale, and you cannot newly match them to the ever-shifting shades and glories of illuminated ice. You have built up one fine verbal structure, and just when you have placed the last pictorial word in due place—down, like the iceberg you have depicted—down topples the whole unsubstantial fabric into the engulfing waste of waters.

Mr. Noble has evidently found this out early in his book; but he had nothing else before him worth writing about than icebergs, and therefore he works away with his words most manfully, often cleverly, and often also wildly and without licence. Amidst all the dash and freedom, however, there are too many and manifest marks of labour and straining after effect, which not unfrequently degenerate into hyperbole or tawdriness, as when, in his 'Story of an Iceberg,' Mr. Noble exclaims, "Let us take one more look at the berg—a farewell look. It is a beautiful creature—superlatively beautiful. It is more—sublime and beautiful fold upon fold—spotless ermine—caught up from the billows, and suspended by the fingers of Omnipotence.—The Merciful One! It is falling! Cliffs and pinnacles bursting—crashing, tumbling with redoubling thunder.—Pillars and sheaves of foam leap aloft," &c. After this, it is quite time the berg should fall,—or the author will! Writers of this author's school have singular notions of metaphorical propriety, and therefore we are not much surprised at reading of a piece of ice which resembles an antler of a moose or elk. "Now that we have it in the boat, it resembles a pair of mammoth moose-horns sculptured from water-soaked alabaster." We suppose also that Mr. Noble considers the following as one of his most poetic figures:—"Power and Beauty, hand in hand, bathing the bosom of Purity. I need not pause to explain how all this is." Nor need we, even if we could, explain.

We prefer to give some better specimens of the author's descriptive powers, and begin with the first iceberg he sees:—

"Icebergs! Icebergs!—The cry brought us upon deck at sunrise. There they were, two of them, a large one and a smaller: the latter pitched upon the dark and misty desert of the sea like an Arab's tent; and the larger like a domed mosque in marble of a greenish white. The vaporous atmosphere veiled its sharp outlines, and gave it a softened, dreamy, and mysterious character. Distant and dim, it was yet very grand and impressive. Enthroned on the deep in lonely majesty, the dread of mariners, and the wonder of the traveller, it was one of those imperial creations of nature that awaken powerful emotions and illumine the imagination. Wonderful structure! Fashioned by those fingers that wrought the glittering fabrics of the upper deep, and launched upon those adamant ways into Arctic seas, how beautiful, how strong and terrible! A glacier slipped into the ocean, and henceforth a wandering cape, a restless headland, a revolving island, to compromise the security of the world's broad highway. No chart, no sounding, no knowledge of latitude, avails to fix thy whereabouts, thou roving Ishmael of the sea. No look-out, and no friendly hail or authoritative warning can cope with thy secrecy or thy silence. Mist and darkness are thy work-day raiment.

Though the watchman lay his ear to the water, he may not hear thy coming footsteps. We gazed at the great ark of nature's building with steady, silent eyes. Motionless and solemn as a tomb, it seemed to look back over the waves as we sped forward into its grand presence."

Mr. Noble meets with an English clergyman, stationed in Newfoundland, "who has true feeling and a thorough appreciation of fine scenery, and whose descriptive abilities are rare." As a specimen of them he adds the following description of an iceberg:—

"He says that an iceberg is to him the most impressive of all objects. Most beautiful in its life and changes, it is, next to an earthquake, most terrible and appalling, in the moment of its destruction, to those who may happen to be near it. Upon the falling of its peaks and precipices, waves and thunders carry the intelligence across the waters. Lofty as it frequently is, the head only, helmeted and plumed with dazzling beauty, is above the sea. In its solemn march along the blue main, how it steps upon the high places of the deep, is all unseen. Around its mighty form, far down its alabaster cliffs and caverns, no eye plays but that of the imagination. When it pauses in its last repose, and perishes, at times, as quickly as if it were smitten by the lightning, you may stand in the distance and gaze with awe, but never draw near to witness the motions and sounds of its dissolution. After tea, we sat by the windows, which face the east and command the harbour, with its grand entrance from the Atlantic, and enjoyed the scene, one of unusual splendour, every cliff glowing with hues of reddish orange."

The voyager does at last see a falling berg, not that one at whose fall he invokes "the Merciful One." It was like Windsor Castle when he first beheld it about five miles away, and began to write a description of it. It was "a mighty and imposing structure," but

"between making my last dot and now—an interval of ten minutes—Windsor Castle has experienced the convulsions of an earthquake, and gone to ruin. To use the term common here, it has 'foundered.' A magazine of powder fired in its centre could not more effectually, and not much more quickly, have blown it up. While in the act of sketching, C— suddenly exclaimed: when, lo! walls and towers were falling asunder, and tumbling at various angles with apparent silence into the ocean, attended with the most prodigious dashing and commotion of water. Enormous sheaves of foam sprang aloft and burst in air; high, green waves, crested with white caps, rolled away in circles, mingling with leaping shafts and fragments of ice re-appearing from the deep in all directions. Nearly the whole of this brilliant spectacle was the performance of a minute, and to us as noiseless as the motions of a cloud, for a length of time I had not expected. When the uproar reached us, it was thunder doubled and redoubled, rolling upon the ear like the quick successive strokes of a drum, or volleys of the largest ordnance. It was awfully grand, and altogether the most startling exhibition I ever witnessed. At this moment, there is a large field of ruins, some of them huge masses like towers prone along the waters, with a lofty steeple left alone standing in the midst, and rocking slowly to and fro."

Another iceberg is christened the Great Castle Berg, and announced as "the grand capital of the city of icebergs now in the waters of Belle Isle, and, if I except the Windsor Castle Berg which we saw founder, the largest we have seen, and, what is most likely, the largest we shall ever see." As to its supposed dimensions,—"If this were floated up into that grand bend of Niagara, I think it would fill a large part of it very handsomely, with a tower rising sufficiently above the brink of the fall to be seen from the edge of the river for some distance above. Imagine the main sheet, reaching from Table Rock toward the Horse-shoe, to be silent ice, and you will have no very wrong notion of the ice before us at this moment."

A study of the vast mass results in an elaborate picture:—

"We have rounded an angle to the southern front, and look upon a precipice of newly-broken alabaster crowned with a lofty peak and pinnacles. A slight sketch seems to satisfy the painter, and so we pass round to the eastern or ocean side, at which Capt. Knight, an experienced iceberger, expresses both delight and surprise. It is a cluster of Alpine mountains in miniature: peaks, precipices, slopes and gorges, a wondrous multitude of shining things, the general effect of which is imposing and sublime. We have been looking out from Battle Island upon this for days, and never dreamed of all this world of forms so grand and beautiful. Besides the main, there are two smaller bergs, but all nothing more than the crowning towers and spires of the great mass under the sea. Here is quite a little bay with two entrances, in which the pale emerald waves dash and thunder, washing the pearly shores, and wearing out glassy caverns. The marvellous beauty of these ices prompts one to speak in language that sounds extravagant. Had our forefathers lived along these seas, and among these wonders, we should have had a language better fitted to describe them. I can easily suppose that there must be a strong descriptive element in the Icelandic, and even in the Greenlandic tongues. I am quite tired of the words: emerald, pea-green, pearl, sea-shells, crystal, porcelain and sapphire, ivory, marble and alabaster, snowy and rosy, Alps, cathedrals, towers, pinnacles, domes and spires. I could fling them all, at this moment, upon a large descriptive fire, and the blaze would not be sufficiently brilliant to light the mere reader to the scene. I will give it up, at least for the present, and remark merely that we have received what the French newspapers occasionally receive—a warning. It came in the shape of a smart cracking of rifles in some large reverberating hall. There is undoubtedly at hand the finest opportunity one could wish of witnessing an ice-fall."

We do not, however, discover whether the author witnessed this expected fall. Perhaps a fog curtained in the catastrophe. He presents us, however, with the subjoined glance at a partial fall of another berg:—

"Any doubt that I may have entertained about the danger of lying under the shadow of this great ice-rock is now wholly dispelled. We have just witnessed what was, for the moment, a perfect cataract of ice, with all its motion, and many times its noise. Quick as lightning and loud as thunder, when bolt and thunder come at the same instant, there was one terrific crack, a sharp and silvery ringing blow upon the atmosphere, which I shall never forget, nor ever be able to describe. It shook me through, and struck the very heart. The only response on my part, and I was not alone in the fright, was a convulsive spring to the feet, and a shout to the oarsmen, of fierce command, 'Row back! row back!' The spectacle was nearly as startling as the explosion. At once, the upper face of the berg burst out upon the air, as if it had been blasted, and swept down across the great cliff, a huge cataract of green and snowy fragments, with a wild, crashing roar, followed by the heavy, sullen thunder of the plunge into the ocean, and the rolling away of the high-crested seas, and the rocking of the mighty mass back and forth, in the effort to regain its equilibrium. I dreaded the encounter; but our whale-boat was quite at home, and breasted the lofty swells most gracefully. But how fearfully impressive is all this!"

And now for an explanation of the causes of berg falls:—

"From the figure and motion of the berg, I come to describe the motive power, rather the explosive power, through which the delicate balance is destroyed, and motion made a necessity in order to gain again equilibrium and rest. Whatever may be the latent heat of ice, is a question for the professed naturalist. Two things are evident to the unlearned observer: an iceberg is as solid as ivory, or marble from the lowest depths of a quarry, and cold apparently as any substance on the earth can be made. This compact and perfectly

frozen body, immersed in the warm seas of summer, and warmer atmosphere, finds its entire outside, and especially that portion of it which is exposed to the July sun, expanding under the influence of the penetrating heat. The scrutiny of science would, no doubt, find it certain that this heat, in some measure, darts in from all sides in converging rays to the very heart. The expanding power of heat becomes at length an explosive force, and throws off, with all the violence and suddenness of gunpowder, in successive flakes, portions of the surface. The berg, then, bursts from expansion, as when porcelain cracks with sharp report, suddenly and unequally heated on the winter stove. Judge of the report when the porcelain of a great cliff cracks and falls, or when the entire berg is blasted asunder by the subtle, internal fire of the summer sun! If you would hear thunders, or whole broadsides and batteries of the heaviest ordnance, come to the iceberg then."

It will be seen from these extracts that Mr. Noble possesses considerable graphic ability; but he so often runs riot with his pen and is so continually upon the stretch with his words that his pages soon fatigue the reader. By way of relief, and as a specimen of the author's best craft in another direction, take a description of a night at sea, particularly as several recently returned voyagers may have experienced something of a like kind:—

"Through some marine manoeuvre, thought necessary by the master spirit on deck, and which could be explained by a single nautical word, if I only knew what the word is, we began to roll and plunge in a manner sufficiently violent and frightful to startle from its staid quiet almost every movable in the cabin. Out shot trunks and boxes—off slid cups and plates with a smash—back and forth, in one rough scramble with the luggage, trundled the table, followed by the nimble chairs. At this rate of going on, our valuables would soon mix in one common wreck. Determining to interfere, I sprang into the unruly confusion, and succeeded in lighting a candle just in time to join in the rough-and-tumble, at the risk of ribs and limbs, and the object of mingled merriment and alarm to the more prudent spectators. Botswood, an experienced voyager, shouted me back to my berth instantly, if I would not have my bones broken at the next heavy lurch of the vessel. I was beginning to feel the force of the counsel, when another roll, almost down upon the beam-ends, overturned the butter-tub and a box of loaf-sugar, and brought their contents loose upon the field of action. They divided themselves between the legs of the table and the individual, and so, candle in hand and adorned in modest white, he sat flat down upon the floor among them, at once their companion in trouble and their protector. The marble-white sugar and the yellow butter, our luxuries and indispensable necessities, there they were, on the common floor, and disposed for once to join in a low frolic with plebeian boots and shoes and scullion trumpery. With an earnest resolve to prevent all improprieties of the kind, one hand grasped, knuckle deep, the golden mellow mass, of the size of a good Yankee pumpkin, and held on, while the other was busy in restoring, by the rapid handful, the sugar to the safety of its box. The candle, in the mean time, encouraged by the peals of laughter in the galleries, slid back and forth in the most trifling manner possible. When we tipped one way, then I sat on a steep hill-side, looking down toward the painter, roaring in his happy valley: away slid the candle in her tin slippers, and away the barefooted butter wanted to roll after, encouraged to indulge in the foolish caper by a saucy trunk jumping down from behind. When we tipped the other way, then I sat on the same hill-side, legs up, looking up, an unsatisfactory position: back slid the candle, followed by a charge of sharp-pointed baggage, and off started the butter with the best intentions toward the tub, waiting prostrate and with open arms. Notwithstanding the repetition and sameness of this performance, the beholders applauded with the same heartiness, as if each change back and forth was a novel and original exhibition. What heightened the effect of the scene, and gave it a suspicion of

the tragic, was a keg of gunpowder, which evinced, by several demonstrations of discontent in the dark corner where it tumbled about, a disposition to come out and join the candle. By a happy lull, not unusual in the very midst of these cabin confusions during a brush at sea, the powder did not enter, and I was enabled to pitch the butter into the tub, and finally myself, after some few preliminaries with a towel, into my berth, where, in the course of the small remnant of the night, I fell into some broken slumbers."

It should perhaps be added, that although the Rev. Mr. Noble is so deeply smitten with the cold beauties of icebergs, he appears to be capable of appreciating charms not appertaining to ice, but even to fair humanity. One decided proof of this appears in his own confession:—"Among the ladies there is one of more than ordinary beauty. Luxuriant, dark hair, a fair complexion with the bloom of health, a head and neck that would attract a sculptor, and surpassingly fine black eyes. There is a power in beauty. Why has not God given it to us all? You shall answer me that in heaven." Now we shall not venture to anticipate an answer so indefinitely deferred and so agreeably localized. Who the "you" is does not appear; but if he be not, like the Rev. Mr. Noble, an Episcopalian clergyman, he may not feel so sure as the author of having the opportunity to reply at the appointed place. The double assumption involved is obvious enough, and perhaps pardonable enough, especially if it included the fair lady who was already "all spirit."

Mr. Noble is pleased to throw in a little patriotic pastime about Jonathan and John Bull, in which it is remarked—"In fact, Jonathan is a youth only, and John an old man. When the lad gets his growth he will be everywhere, and the old foggy by that time comparatively nowhere." This is certainly as cool as an iceberg, especially in the present aspect of affairs. But what if Jonathan splits asunder like a shattered iceberg!—what if the Northern and Southern sides rend asunder with a fearful crash, while the "old foggy" continues unmoved as a mountain!

Another word to Mr. Noble respecting "old foggy" and his topography. This reverend writer should never touch upon English topography without referring to a gazetteer. He has but one sentence about it, and that conveys to us an interesting piece of county topography in the following words:—"A few years ago, Mr. Hutchinson, moved by a religious spirit, was induced to give up a pleasant living in *Dorsetshire under the Malvern Hills*, and devote himself to the toils and privations of a missionary in Labrador." Some men will be too precise: why put in "under the Malvern Hills"?

The lithographs, though not of the highest order of Art, are yet effective representations of what we may presume icebergs to be. They serve both to illustrate and to moderate the writer's verbiage. For their originals the lithographer is probably indebted to the "painter of distinction" whom the author accompanied, and who is only made known to us as a certain C—. When he went to sea, he was quite as miserable and helpless as the author. C. met and began conversing with Agassiz, who, though so familiar with Alpine glaciers, had never seen an iceberg. "But not even the presence and the fine talk of the great naturalist could lay the spirit of sea-sickness. Like a very adder lurking under the door-stone of appetite, it refused to hear the voice of the charmer. Out it glided, repulsive reptile! and away we stole, creeping down into our state-room, there to burrow in damp sheets, taciturn and melancholy, wretches with thoughts concentrated all in self."

Diamonds. By William Pole. (Printed for Private Circulation.)

Mr. Pole has reprinted, for private circulation, a few notes on diamonds. Mr. Tennant has added to these notes a postscript on the imperial state crown of Queen Victoria. The two papers make an interesting summary on a popular topic, from which our readers will not be sorry to have a column of gossip by way of extract. Prof. Tennant describes the imperial crown:—

"The Imperial State Crown of Her Majesty Queen Victoria was made by Messrs. Rundell & Bridge in the year 1838, with jewels taken from old Crowns, and others furnished by command of Her Majesty. It consists of diamonds, pearls, rubies, sapphires and emeralds, set in silver and gold; it has a crimson velvet cap, with ermine border, and is lined with white silk. Its gross weight is 39oz. 5dwts. Troy. The lower part of the band, above the ermine border, consists of a row of one hundred and twenty-nine pearls, and the upper part of the band a row of one hundred and twelve pearls, between which, in front of the Crown, is a large sapphire (partly drilled), purchased for the Crown by His Majesty King George the Fourth. At the back is a sapphire of smaller size, and six other sapphires (three on each side), between which are eight emeralds. Above and below the seven sapphires are fourteen diamonds, and around the eight emeralds one hundred and twenty-eight diamonds. Between the emeralds and sapphires are sixteen trefoil ornaments, containing one hundred and sixty diamonds. Above the band are eight sapphires surmounted by eight diamonds, between which are eight festoons consisting of one hundred and forty-eight diamonds. In the front of the Crown, and in the centre of a diamond Maltese cross, is the famous ruby said to have been given to Edward Prince of Wales, son of Edward the Third, called the Black Prince, by Don Pedro, King of Castile, after the battle of Najera, near Vittoria, A.D. 1367. This ruby was worn in the helmet of Henry the Fifth at the battle of Agincourt, A.D. 1415. It is pierced quite through after the Eastern custom, the upper part of the piercing being filled up by a small ruby. Around this ruby, to form the cross, are seventy-five brilliant diamonds. Three other Maltese crosses, forming the two sides and back of the Crown, have emerald centres, and contain respectively one hundred and thirty-two, one hundred and twenty-four, and one hundred and thirty brilliant diamonds. Between the four Maltese crosses are four ornaments in the form of the French fleur-de-lis, with four rubies in the centres, and surrounded by rose diamonds, containing respectively eighty-five, eighty-six, eighty-six and eighty-seven rose diamonds. From the Maltese crosses issue four imperial arches composed of oak leaves and acorns; the leaves containing seven hundred and twenty-eight rose, table, and brilliant diamonds; thirty-two pearls forming the acorns, set in cups containing fifty-four rose diamonds and one table diamond. The total number of diamonds in the arches and acorns is one hundred and eight brilliant, one hundred and sixteen table, and five hundred and fifty-nine rose diamonds. From the upper part of the arches are suspended four large pendant pear-shaped pearls, with rose diamond caps, containing twelve rose diamonds, and stems containing twenty-four very small rose diamonds. Above the arch stands the mound, containing in the lower hemisphere three hundred and four brilliants, and in the upper two hundred and forty-four brilliants; the zone and arc being composed of thirty-three rose diamonds. The cross on the summit has a rose-cut sapphire in the centre, surrounded by four large brilliants, and one hundred and eight smaller brilliants.—Summary of Jewels comprised in the Crown: 1 large ruby irregularly polished; 1 large broad-spread sapphire; 16 sapphires; 11 emeralds; 4 rubies; 1363 brilliant diamonds; 1273 rose diamonds; 147 table diamonds; 4 drop-shaped pearls; 273 pearls."

Mr. Pole describes the interesting process of diamond-cutting:—

"The art of cutting diamonds into a regular shape is of comparatively modern invention; they

were long worn in their natural state, or only cleaned and polished. It appears, during the fourteenth century, some attempts were made to cut them into regular forms, but without any view to the improvement of their brilliancy; and it was only in the year 1456, that a certain Louis van Berghem, of Bruges, discovered the principle of cutting *facets* upon them, on which their lustre, as now known, so much depends. Cardinal Mazarin, about 1650, invented the perfect form of the brilliant, and had twelve large diamonds of the French crown cut into this shape, which has ever since been acknowledged the best possible for exhibiting the beautiful optical properties of the stone. Diamond cutting, in the present day, is almost exclusively done by Jews at Amsterdam, where large diamond mills have been established; and it is calculated that 10,000 out of the 28,000 persons of the Jewish persuasion living in that city are dependent directly or indirectly on this branch of industry. One of the largest establishments is that of Messrs. Coster, in the Zwanenburg Straat, who use steam-power to drive their machines, and employ from 200 to 300 hands. The process of cutting the diamonds is as follows:—The rough stone is first given into the hands of an experienced workman, who examines its natural form, and determines what general shape and size it can most advantageously be made to assume. Having settled this in regard to two diamonds, he beds each of them in a mass of cement placed at the end on a piece of wood of a convenient size for handling, and then proceeds to rub the two stones one against the other, on the principle of 'diamond cut diamond,' changing from time to time the parts acted on, and so bringing both stones gradually into the form he desires. The mutual abrasion of the two stones produces diamond powder, which is carefully preserved for the subsequent operations. When the diamond has received its general shape, it is sent into the mill to be finished, by cutting upon it the numerous small angular 'facets,' as they are termed, which make up the surface. This is done by exposing the stone to the action of diamond powder on a steel plate revolving with great velocity—an operation perfectly analogous to that of glass cutting, or the ordinary well-known lapidary's wheel. The cutting-plates are usually about ten or twelve inches in diameter; they are placed horizontally with their spindles vertical, and are made to revolve about thirty or forty times in a second; the part acting on the diamond travelling over the facet at the rate of about a mile in a minute. Diamond powder, of extreme fineness, mixed with the best olive oil, is placed with a feather upon the upper table of the wheel, and the apparatus is then ready for action on the diamond. The stone is embedded in a mass of soft metal, an amalgam of lead and tin, easily fusible, and yet hard enough to retain the stone firmly in its position; this is fixed in a moveable handle, which is again attached to a small frame. The workman, having first heated the metal to a soft state, beds the diamond in it in the required position, and fixes it there by plunging into water; the frame is then placed to project over the wheel, and the diamond, being downwards, comes in contact with its upper surface, on which the diamond powder is placed; weights are then applied, and the result of the friction, at the immense velocity, is to cut a facet upon the stone in a very short space of time. When one of these is finished, the workman softens the metal, extracts the stone, and replaces it in the proper position for making another facet; and here comes into play a very remarkable feature of the operation, namely, the accuracy of judgment which skill and experience give in arranging the *faces* of the stone. It is obvious that in any many-sided solid body, whose shape is to have any pretensions to regularity or symmetry, the different *faces* must not only all stand in certain definite angular positions in regard to each other, but must all bear a certain size in relation to the magnitude and form of the whole. Further, any one acquainted with geometry will know, that for a solid figure of fifty or sixty sides, the determination of these angles and surfaces by any theoretical rule would be a matter of great difficulty; while the attempt to make such a figure practically, by any one un-

skilled in the operation, would only lead to continual trial and error—attempts which, even if the thing were ever properly done at all, would waste a large portion in the operation, and consequently much diminish the ultimate available size. Any one who will try, for example, to cut a turnip or a potato, by his eye and hand only, into a regular octohedron, or solid figure of eight equal and similar sides, will at once appreciate the difficulty. Yet the diamond-cutter has to perform a much more difficult task, namely, to give about sixty symmetrical and regular *faces* to stones sometimes only about an eighth of an inch diameter, without any mechanical aide whatever to his judgment; and yet producing, without a particle of unnecessary waste, the very largest stone geometrically possible out of the rough body. This of course can only be the result of great skill and long experience. Having made one facet, he judges by his eye the exact angle at which the stone must be placed to cut the new one, and the exact depth to which the grinding for the latter must be carried; and so accurately is this done, that it is very seldom a good workman ever has to revert to a facet for correction, after he has once passed it over. The stone is so fixed in the metal as to leave other facets visible for constant comparison with the one under progress; and the handle is capable, by a sort of universal joint, of adjustment to any nicety for the position of the stone in touching the wheel. There is no further division of labour than between the rough cutter and the finisher—the latter taking the stone from the former in its roughed-out state, and returning it to the proprietor in the shape of the perfect finished brilliant ready for sale. The last touches to the facets consist of polishing, or giving to them the peculiar diamond lustre; but this is in nowise different from the grinding, except in being done with more care. The man can at any time adjust the weight or force with which the stone is pressed upon the wheel, or he can remove it entirely, and substitute the gentle pressure of his hand; and he can also modify the velocity of the grinding action; for, although the wheel itself is kept at a constant number of revolutions per minute, he can place the stone nearer to or further from the axis as he likes, which will of course give a less or greater effective velocity, according to the radius of the acting circle. The diamond powder, of which a large quantity is used, is obtained partly from the first process of rough-cutting the stones; partly from diamonds of a quality not good enough to cut for sale, which are broken up for the purpose; and partly from the newly-discovered substance, 'carbonado,' which is hard enough for this use, although of a somewhat coarse quality. The powder is carefully sifted, cleaned from dirt and extraneous matter, and, when about to be used, is mixed with the finest vegetable oil. The workmen are all Jews, and are regularly educated to the trade. They are paid by piece-work. Formerly, they did their work at their own houses, their wheels being turned by manual power; but it is now found more advantageous for the large proprietors to provide workshops of their own, furnished with steam power, for the use of which the men pay out of their earnings. Some of the more skilful and industrious men realize considerable incomes."

The "cleavage" of the diamond is also well described:—

"Although the diamond is so hard, it is very easily broken; and, indeed, by a particular knack, it may even be cut with a common penknife. This apparent anomaly is due to what is called its *cleavage*, a result of the crystalline structure. Many well-known substances—as slate, for example—split or cleave with peculiar facility in certain definite directions, while they offer considerable resistance to fracture in all others. The diamond has this property, cleaving easily in no less than four directions, parallel to the surfaces of the original octohedric crystal; and therefore, when moderate force is applied in either of these ways, the stone splits into pieces. Pliny, mentioning the great hardness of the diamond, states that if laid upon an anvil, and struck with a hammer, the steel would sooner give way than the stone. This assertion is a matter of popular belief in the present

day, but we would not recommend any possessor of a good diamond to try the experiment. The chances of some of the forces acting in the cleavage directions are so great, that the stone would in all probability fly to pieces under the first blow. The truth is, that Pliny referred not to the diamond, but to the *sapphire*, which, though less hard than the diamond, cleaves only in *one* direction, and might, therefore, withstand the test named. The cleaving property of the diamond is made useful in two ways in the manufacture: first, by splitting the stones when they contain flaws, and, secondly, in the preparation of diamond powder. When a rough diamond is seen to contain a defect of sufficient extent to depreciate its value as a single gem, it is split in two, precisely at the flaw, so as to make two sound stones. This is a very simple operation in appearance, done in a few seconds, but it requires an amazing amount of skill to do it properly. The workman, by a sort of intuitive knowledge, gained by long experience, knows, on a careful inspection of the stone, the exact direction which a cleavage plane passing through the flaw will take. Tracing this plane, therefore, to the exterior, he makes on the edge of the stone, precisely in that spot, a slight nick with another diamond. He then places a small knife in that nick, gives it a light tap with a hammer, and the stone at once cleaves in two, directly through the flaw. This operation, in daily practice in the Amsterdam works, is one of the most elegant and instructive processes in the whole range of mineralogy. It is reported that Dr. Wollaston, celebrated as almost the originator of the science of crystallography, once made a handsome sum by purchasing a large flawed diamond from Rundell & Bridge at a low price, and subsequently splitting it into smaller sound and valuable stones, the principle of the operation not being then generally known."

Mr. Pole's little reprint makes very capital reading for an idle half-hour.

Hell, of Dante Alighieri—[*L'Inferno, di Dante Alighieri, colle Figure di G. Doré*]. (Paris, Hachette & Co.)

HERE is what may be styled a volume royal, folio, broad margined, luminously printed upon the purest paper, and edited, with care, from the Cominian text, which, assumed to be the best, has, without servile obsequiousness, been adopted, say the editors, as the foundation of the present version. M. Gustave Doré illustrates the marvellous poem. The designs are, in one form or other, not unknown to the world, several of them having been exhibited in Paris during the current year. M. G. Doré is qualified to illustrate Dante, but in a pictorial manner, as distinguished from the severe and sculpturesque method of Flaxman. M. G. Doré can hardly be said to satisfy the demands on a pictorial artist of the highest grade, because he deals with no more than two complete qualities of true Art; chiar-oscuro and composition. Colour—such as may be expressed in black and white—there is barely any in his work. Drawing, beyond mere expressiveness, none. Expression, such as is given to the features, is seldom to be met with; but the purport and energy of his designs are mostly wrought out through attitude and action—the auxiliaries of expression. Great as he is in these matters, the want of facial expression leaves his works imperfect in that essential point—so we say that his designing is almost invariably based upon chiar-oscuro and composition only in completeness. But in these directions he is a master indeed,—so much a master that he seems to care for little else, and, like a musical composer who is fond of a peculiar movement, often forgets that he has repeated an effect many times, so that we weary of it now and then; and in the hastiness of a popular judgment the artist gets much less applause for originality and variety of power than he really deserves, because casual observers do not discriminate

very delicately, neither do they allow for the somewhat limited scope of the artist's speciality. What he can do within its range is what we have to judge him by. So far as the above-mentioned picturesque elements of Art can give success, beyond all doubt the series before us forms a memorable triumph, showing the designer to be a great artist. Far below the epic spirit of Flaxman's series, these works fascinate by the very profuseness of imaginative power they display. Where almost a special education is needed to appreciate the glory of our countryman, the telling, bold and dramatic compositions of M. G. Doré will obtain admiration from a wide circle. Thousands, who would look upon a grave outline by Flaxman with only acquiescent admiration, or with the indifference proper to an ignorant regard of an antique bas-relief, which they are only told is fine, will go down in fancy with the living artist into the shades of Hell, and be so impressed by his photographic vigour that they may even know how "in the thinking it reneweth fear" to have once seen such monstrous shadows, sullen flames and dismal regions.

The designs before us are seventy-six in number, engraved of an uniform size of about nine and a half by seven and a half inches—that is, somewhat larger than the mass of type on this page,—are excellently reproduced by the graver, and their varied effects are rendered with great success—no small matter in a series of such importance, wherein effect forms the principal means of expression. The number, size and variety of the works give a striking idea of the immense labour they must have cost the artist, facile as he is. Of the seventy-six designs, we shall select those which most fitly characterize the merits and faults of the whole, employing for the quotations the admirable literal blank-verse translation of Mr. W. M. Rossetti. The portrait of the poet, facing the title, is extremely bad, and most unworthy of the series. The meeting with the Panther (the type of lustful Florence), who crouchingly faced Dante on his way over the stark hill-side, is given with expressive effectiveness. The ground is rocky at the front, where Dante treads; before him, upon a slope that the early light of dawn breaks on, is the crouching she, lithe, agile, threatening:—

A panther, light and swift exceedingly,
And which was covered with a spotted hide:
And from before my face she would not go;
Nay, rather, she impeded so my path
That I was many times turned to turn back.

—Beyond is a darkling cliff, that looks out on a murmuring sea, lapsing amongst rocks, sped over by great winged birds; while the light of a pallid dawn is upon a world of cloud-edges, cumuli and strata, and falling most strongly on the beautiful beast, about whose motions a ghastly shadow clings, deepens the terror and increases her bulk. Those who remember the combat of the Knights in 'Janfry the Knight and the Fair Brunisende,' illustrated some years ago by this artist, well know how marvellously he can manage an accidental shadow.

There is much expressive treatment of light and variety of tone and surface in the design which shows the result of the appeal to Virgil:

Thou only art the one from whom I took
The lofty style which won me honouring:
Behold the beast because of which I turned:
Do thou against her help me, famous sage,
Because she makes me tremble, veins and pulse.

All artists will look with delight upon the exquisite manner in which the absorption of all substances in one level of grey tone has been expressed in the starry effect of 'Lo giorno se n'andava,' which is also a successful rendering of the silent brilliancy of the multitudinous stars

studding the sky, with the clear, sharp, thin moon and sleeping bars of cloudiness that lie over the edge of her sickle-like form. Not less will painters praise "I that do make thee go am Beatrice"—the appearance of the lady to Virgil when he was "among the spirits in suspense" in the land of darkest dusk. The artist has put a great radiance round the lady, "blest and beautiful," which shimmers in the region's twilight, revealing trees and heaped foliage, that would otherwise only tell differently dark against the sky. The wall-like ravine of the descent into Hell's vestibule looks grand and grave, and is lighted by the brightness which shines beyond, and transfigures into a fairy land the great distance seen over the ridges of the wave-like hills. The compulsion into Charon's boat upon the "lurid river" is full of action, and eminently expressive. We admire Dante and Virgil standing upon a rocky peak looking on the legions of the Lustful, whose multitudes pervade the air through and through with their numbers, and sweep into surging curves upon curves in an endless line, that wavers in the "infernal hurricane which never rests":—

And, as the cranes go chanting their outcry,
Making a long line of themselves in air,
So saw I coming, uttering forth wails,
Shades carried by the aforesaid vehemence.
Wherefore, I said, "My master, who are these
People whom the black air chastiseth so?"

Among these, of course, is Francesca. The composition, in the second design illustrating this section, of her figure with that of Paolo as they drift in the mastering wind, is extremely beautiful—so beautiful, indeed, that the unpleasantly plump and too much rounded forms of the nude figure are at first disregarded. Drawn with more elegance, this design would bear comparison with any of the splendid works which have illustrated its theme. Notwithstanding a certain richness of execution, the drawing to "Further that day we read in it no more," Canto v., v. 138 (Francesca's last words), is melo-dramatic, and does not represent the text literally. Then comes the interview with Ciacco, Canto vi., v. 36, where the Two are stepping through the rain of the third circle:—

Over the shades the heavy rain subjects
We two were passing, and we placed our soles
Upon their vanity which seemeth form.

This is one of the finest designs in the whole series, and not the less so because the artist has not recourse to his unrivalled, but somewhat overwrought, felicity of atmospheric expression and effect of chiar-oscuro, but rather depends upon the more noble faculties of action and attitude to express his feeling. The Two are stepping and half-stumbling on the field amongst the writhing souls of men and women, some of whom are knotted in convulsions,—some grovelling on the plain,—some roaring in agony at the passers-by, as prone they drag themselves after,—some women in their great woe pull their long hair backwards, with arms outstretched in the rigour of fearful pain,—some, supine, beat the earth with their shoulders, tossing from side to side, while the pitiless hail comes down over all. The ceaseless labour of the Avaricious and the Prodigals in rolling stones and bags of gold is another design, in the same spirit as the last; the hoisting, thrusting, striving, and all the mighty struggles against the weighty masses, are finely expressed. As a piece of composition, this is admirable. We notice that in more than one design the artist has added little circumstances to the text, to explain its meaning or aptly illustrate his own thought. Here, the bags of gold that are being upheaved with such toil are so introduced, not being suggested by the poem. Moreover, the "tonsures" upon which

such stress is laid by Dante are not observable either here or elsewhere, whence we infer that M. Doré dissents from the storming sarcasms hurled at the Papacy and the monastic orders by the poet.

There is not a finer design in the whole series than that which shows the melancholy line of the leaden-cowled Hypocrites, defiling along a mountain-pass before the Two, who stand above them on a little knoll. This is impressive in its extreme simplicity. White-robed, the heavy-weighted ranks pass along in solemn order, amongst the black hill-sides, and, wavering, thread the winding road; they are burthened and bowed down; some turn as they pass the Two, and painful faces lour beneath the cowls. The repose of tone and chiar-oscuro throughout this is remarkable, and contrasts advantageously with a certain sameness of effect observable in parts of the series. Where Dante and Virgil look into the Pit of Evil Counsellors (Canto xxvi., v. 46-7, 81) is an example of the employment of the like effect to that we noticed in speaking of Farinata's fiery tomb. The Two stand upon a ledge of rock; that winds along the face of a vertical cliff; they look downwards into the gulf below, and much impressiveness is gained by the bickering shadows that rise behind and point upwards upon the rocky wall. In the Pit of the Alchemists, Dante sees his relative, Geri del Bello. Contemplating his own visage, that is within his hands and resting on his knee, the figure of Geri has a mournful and horrible vigour in its design which tells well.

THE GORILLA.

At Manchester Prof. Owen made some statements about the Gorilla, recently acquired for the British Museum, which led to a reply from Dr. Gray. Dr. Gray's letter, impugning the accuracy of Prof. Owen's statement of facts, was read in the Section of Zoology, and produced a considerable sensation. Prof. Owen had left Manchester when this paper was read; but on receiving a copy of Dr. Gray's communication, he wrote an explanation to the President of the Section of Zoology, which explanation arrived too late. Prof. Owen has now sent it to us for publication; and that the reader may have the whole matter under his eye, we shall transfer Dr. Gray's letter from our Sectional report to this column. The correspondence will then explain itself.—

Dr. Gray to Prof. Babington.

British Museum, Sept. 6, 1861.

My dear Professor,—It is with much regret that I feel myself called upon to correct an error which appears in the report of Prof. Owen's paper on the

Gorilla, &c., contained in the *Times* of this day. Prof. Owen is there represented as stating, that "the skin of the great male Gorilla, now in the British Museum, exhibits two opposite wounds, the smaller in front of the left side of the chest, the larger close to the lower part of the right blade-bone. Two of the ribs in the skeleton of this animal are broken on the right side, near where the charge has passed through the skin in its course outwards." As this would appear to offer a direct contradiction to a statement made by myself, I cannot (although labouring at present under a severe attack of illness, and writing from a sick chamber,) pass it over in silence.

My attention was called to the subject by Mr. Joseph Beck, the well-known microscopist, who first made the observation, that none of the skins of the Gorilla exhibited by Mr. Du Chaillu offered any evidence of having been shot in the fore part of the chest, as invariably stated in his 'Narrative.' My own examination entirely confirmed this remark; and the unanimous conclusion of numerous sportsmen and men of science, who have since examined both skins and skeletons, has been to the same effect.

The skin and skeleton, referred to in Prof. Owen's paper, are both, as stated, in the British Museum. While the skin was being stuffed at the Crystal Palace by Mr. Wilson, I paid a visit to that establishment, in the company of Mr. Grove, the Secretary, and several friends. I then inquired of Mr. Wilson whether he had observed any bullet-hole in the chest, and he stated that he had not, but pointed out to me two holes in the nape of the neck (now filled with putty); there are also two large holes in the thin portion of the hinder part of the skull belonging to the same skin which pass through the bone, and are quite sufficient to have caused death. In neither skin nor skeleton is there any evidence of a gunshot entering on the left side of the chest; and the fracture of three (not of two) ribs on the right side beneath the scapula, and the supposed corresponding rent in the skin, are so utterly unlike the effects of a gunshot, that no sportsman could possibly so consider them. These are facts so easily verified that I trust all who feel an interest in the subject will examine and decide for themselves. I might cite many names of high authority in corroboration of what I have here advanced, but I am not disposed to appeal to any authority, however great, where the facts are open to the inspection of all. On these, and these only, I rest my case.

I shall be obliged by the reading of this letter in the Natural History Section, and remain yours faithfully,
JOHN EDW. GRAY.

Prof. Owen to the President of Section D.

Sheffield, Sept. 11th, 1861.

Sir,—Having just received the *Manchester Examiner* of the 10th inst. containing the letter from Dr. Gray on the death-wound of the large Gorilla, I lose no time in making that reply which I should have submitted to the Section, had I been present when it was read. To the remark, that "the fracture of the ribs, and the supposed corresponding rent in the skin are so utterly unlike the effects of a gunshot, that no sportsman could possibly so consider them," I answer, that the hole or rent in question is conspicuous; and that a gentleman who combines an acuteness of observation which has placed him high in science, with a well-known reputation as a skilful marksman and deer-stalker—Sir Philip Grey Egerton—concurs with me in the opinion that the hole or rent in question does present the characters of the one by which the ball escapes in an animal so killed. The wound by which the ball penetrates is much smaller; for the living skin contracts, and the difference of size in the opposite wounds plainly indicates the course of the bullet. As to the ribs, their intervals are wider in the front than at the back of the chest: a ball might enter in front without impinging on the rib or its cartilage, and it would be between the eighth and ninth cartilage, or below the latter, according to the state of the breathing of the Gorilla at the time, where the ball entered in its way obliquely upward and to the right, according to my observation of the con-

tracted aperture, distinctly manifested in the skin before it was sent to be stuffed. At the back of the chest, the ribs, where they bend outward and forward, are so close together as almost to overlap; a ball would most probably impinge on the contiguous parts of two, and a slight glancing movement—common in gunshots—might affect a third contiguous rib. No one can look at the back part of the thorax of the Gorilla without seeing there the conditions under which such fracture as the right ribs exhibit, from within outwards, might take place, as the effect of a gunshot wound through the chest. As I, and all who have had the pleasure of accompanying Sir P. Egerton in the deer-forest, must hold him to be a sportsman, the asseveration, therefore, that "no sportsman could possibly consider the fracture of the ribs, and corresponding rent in the skin, as the effect of gunshot," must pass into the category of many other assertions aimed at the character and reputation of M. Du Chaillu. The holes in the skin of the neck were mere slits made by the knife, after the death of the Gorilla, probably in the act of flaying, and removing the skin from the long projecting cervical spines; those holes showed no mark of contraction of living skin, like the wound in front of the chest.

RICHARD OWEN.

M. DU CHAILLU AND HIS BOOK.

THE following letter, from Mr. R. B. Walker, of the Gaboon, appeared in the *Morning Advertiser* of Monday last. Some excisions had been made for the sake of greater courtesy to M. Du Chaillu. We have ourselves omitted some sentences of Mr. Walker's text as we find it in our contemporary, having the strongest desire to avoid mixing up personal matters more than is necessary with the question of accuracy as to scientific facts:—

Gaboon, West Africa, July 22, 1861.

M. Du Chaillu, in his letter which appeared in the *Times* of May 22, in reply to what he somewhat contemptuously terms the "cavils" of Dr. Gray, having ventured to refer that gentleman to his (M. Du Chaillu's) friends in Corisco and Gaboon, and to the missionaries and traders in general, it appears to me that to remain silent after such a challenge would be an unpardonable act of complicity on their part. Therefore, as a trader in this river and the neighbourhood, of ten years' standing, I take up the gauntlet he has so recklessly thrown down. I trust to your impartiality to give insertion to this letter, in which I will point out a few only of the most glaring and gross of his numerous false statements and exaggerations, which have struck me on a careful perusal of his so-called 'Explorations in Equatorial Africa,'—which work is neither more nor less than an amusing fiction,—in which the author, knowing the improbability of finding speedy contradiction in England, has given full scope to his apparently very fertile imagination. Were this work to be allowed to pass undisputed, not only might the confiding public in general, but the scientific world in particular, suffer by too readily accepting as *bond fide* the "traveler's tales" with which it is replete.

Having known M. Du Chaillu for some years personally, and possessing, moreover, from reliable sources, information the most exact as to his antecedents, besides having a knowledge of many of the places and people which he pretends to describe, I am induced to request a place in your journal for the following remarks.

M. Du Chaillu has stated that he found piles of human bones in the F'an (properly, F'an *pl.* Ba F'an) towns which he visited. I do not pretend to have been in the particular towns or villages which he mentions, and which probably have no other existence than in his own imagination; but I have twice visited the Ba F'an country, living in one of their towns for four days at a time, besides making shorter stays in some eight or ten others, one of which, situated about 120 miles from the mouth of this river, contains about 3,000 inhabitants, and I never saw the slightest vestige of human remains in any of them, nor did either of the two Europeans, or of the numerous natives of Gaboon and Kroomen, by whom I was accompanied, although we looked for them. I have made inquiries of all

white people, whether missionaries, French officers, or traders, who have made excursions into any part of the country inhabited by the Ba F'an, but not one of them (with the single exception of an American missionary, who has been in communication with that people for many years, and speaks their language) ever saw a human bone or other remains, and the gentleman in question only came across a single skull planted in the ground in one village,—an object to be met with elsewhere in Africa than in the towns of the cannibal Ba F'an. That these people are notorious anthropophagi, no one attempts to deny; but the "piles of human ribs, legs, hand-arm bones, and skulls," are inventions of M. Du Chaillu.

Again, the statement of the untameability of the young of the Gorilla, or N'Jina, is untrue. In proof whereof, let me ask M. Du Chaillu, whose memory, usually so very good, seems to have failed him signally in this particular instance, if he has forgotten the young female Gorilla, of from two to three years of age, called Seraphine, which lived at my factory for four months in 1859, and which he repeatedly saw there? I assert, without fear of contradiction by M. Du Chaillu or any other person (and I could name scores of Europeans who saw it), that this animal was perfectly tame, docile, and tractable,—far more so, indeed, than many negro children of the same age. Not only was she on perfectly good terms with all grown-up people in and about the factory, but was exceedingly attached to her keeper Curtis, whom she could not bear to be out of her sight, but regularly accompanied him about the factory and in his walks in the town and neighbourhood. She was familiar and quiet with myself and clerks, and was only displeased when children approached her; and for these she seemed to have, in common with most large apes and monkeys, a very great dislike. She was seldom tied up, and even then only by a very small cord, which she could easily have broken, or cut with her teeth had she felt so inclined. She allowed herself to be clothed, seeming to like it; and actually went to breakfast with a friend of mine, M. Barbotin, commandant de l'Aviso à vapeur, le Rénardin; upon which occasion she conducted herself to the admiration of everybody. When at times put on the table, or amongst vessels of glass or earthenware, she was most careful not to break anything. She finally died from dysentery and chagrin,—the latter caused by her keeper being prevented by his other occupations from paying her so much attention as she had been in the habit of receiving.

M. Du Chaillu ignores totally the presence of M. Duval, who accompanied him in his trip overland to Cape Lopez, and likewise omits all mention of an American trader living close to him on the Fernan Vae, to whom he was under many obligations.

The species of ant to which he gives the name of "barhekouay"—a word unknown in Mipongwe, and probably invented by himself,—is the insect commonly known as the "driver," of which there are two kinds, called here respectively ntyounou and ntyounou sakoa. I need scarcely say that his description is a gross exaggeration: the insect, although sufficiently troublesome, being by no means so formidable as he represents it.

In the Appendix to his work, M. Du Chaillu mentions a visit paid by him to a French emigrant ship at Cape Lopez: no ship of the kind ever shipped a single emigrant there, or even called there. The vessel to which he alludes was the Phoenix, Capt. Chevalier, on board of which he accompanied me; and it was through me that he obtained permission to go, when he heard of my intention. So far from his being there able to hold intercourse with the people on board, as his boasted knowledge of the different native languages should have enabled him to do, he could hardly speak half-a-dozen words correctly, and was glad to avail himself of the services of Curtis, then interpreter to Capt. Chevalier, who furnished him with the numerals of the Kioo and other tribes to the north-west which figure in his Appendix; and I was the medium of communication with those emigrants speaking the Mipongwe. As to M. Du Chaillu's qualifications in this latter language, they are of

the most infinitesimal kind, as I can assert with confidence, having a competent knowledge of it myself; and he abundantly proves his ignorance when employing any Mipongwe words, nearly all of which are wrong. His Mipongwe numerals are totally incorrect. He has even less knowledge of the dialects of the neighbouring tribes. As to his identification of individuals of thirty-eight different tribes on board the Phoenix, nothing of the kind occurred; and his information must have been obtained from Capt. Chevalier, or the French Délégué.

In his engraving, the horns of "niare" are simply *à l'impossible*: this animal is certainly the "bush cow" of Dr. Gray, the native name for the animal (ayare-iga) having literally that signification.

Dr. Gray is also correct in his surmise that the specimens were not prepared on the spot. I saw many of them in the "rough": they were prepared in New York; the operator finding them in such a bad state, as to cause him to say that he would not undertake the task again for 100 dollars per specimen.

With regard to the engravings which M. Du Chailu alleges to have been prepared, with a few exceptions, from his own sketches, how does it happen that he had no sketches before leaving here, and actually told me that he could not sketch?

I think I have sufficiently shown that M. Du Chailu has been guilty of many incorrect statements—in fact, his work contains nearly as many errors and inaccuracies as there are paragraphs. It is, moreover, teeming with vanity; and, taking it as a whole, it is hard to say whether the author, in his attempt to impose upon and in fact humbug the scientific world, displays most mendacity or ignorance. I will proceed, with many apologies for so far trespassing on your space, to give an instance of downright untruthfulness which occurs in the concluding paragraphs of the book. M. Du Chailu there states, that after languishing for four months at Camme, waiting for a ship, his sight was at length gladdened by the appearance of a vessel, which came to an anchor off the mouth of the Fernan Vas, being sent by his friends in Gaboon, the captain having orders to ascertain how he came by his death. Now, not only had his death never been reported,—and if it had, he was far too insignificant for any one to send a vessel to inquire into the manner of it,—but he had actually only left Gaboon some fifteen or twenty days previously, after having made arrangements with the very same captain to follow him to ship his ebony, &c. for America; and the four months were actually spent in Gaboon and the neighbourhood, two of them with a member of the American mission, who proceeds to England by this same mail *en route* to America, and who can confirm my statement. This gentleman may be heard of by application at the American Consulate at Liverpool.

I, in common with most persons, doubt that M. Du Chailu ever killed or assisted to kill a Gorilla, and also of the extent of his "travels." At any rate, his estimate of distances, as well as the direction in which he pretends to have penetrated, must be received with the utmost caution, as not only was he unprovided with instruments, but ignorant of their use.

As indorsing my opinions, I am authorized to mention the name of M. Labeguerie, a French merchant here, and a distinguished member of the Agricultural Committee; to which I venture to add that of my friend M. A. Michon, of Havre, who could furnish information on the subject of his "travels," &c. * * *

Having thus, as far as time will permit, done my best to arrest a career which I leave others to characterize, I am, &c., R. B. WALKER.

THE MESSRS. SCHLAGINTWEIT.

Royal Gardens, Kew, Sept. 16, 1861.

IN your article respecting the appointment of the Messrs. Schlagintweit, I am called upon to say whether I did more than suggest how those gentlemen might be usefully employed in India; and I beg, therefore, to state that I was nominated to the Sub-Committee, whose duties are defined in General Sabine's letter to Sir Roderick Murchison, after

the appointment of one of the Messrs. Schlagintweit (Adolphe) had been made by the East India Company. I may further state, with regard to the part taken by the Royal Society respecting that appointment, that I was present at the Council Meeting of the Society when the proposal was announced, on the part of the East India Company, to employ *one only* of the Messrs. Schlagintweit, in completing the Indian Magnetical Survey,—that I have a very distinct recollection of the surprise and concern expressed by several members of the Council (including one most distinguished Indian officer), that the Court of Directors should overlook the claims of many competent and deserving scientific men of their own service to be employed upon this duty, including military and civil servants of all ranks and qualifications, and the staff of the grand Trigonometrical Survey of India; and that it was resolved that the Council should confine their answer to a recommendation of the Survey in question being completed. Of the subsequent appointment of not *one*, but *three* Messrs. Schlagintweit to this duty (two after my appointment to the Sub-Committee), I know nothing; nor, in so far as I am aware, had the Council of the Royal Society any part in it. On my appointment to the Sub-Committee in question, I did my utmost to further the objects of the Schlagintweits' expedition to India, in the way of advice, encouragement, and introductions to my Indian friends; and on the appearance of the first hostile comments on their appointment, I did what I could to render their position in England as little invidious as possible, feeling that they were not the parties to be blamed, and hoping that the results of their expedition might justify the expectations entertained by many as to their ability.

I have to add, that the contrast made by the Indian authorities in their treatment of the Messrs. Schlagintweit and of several distinguished Indian officers,—who, having spent their private incomes in the pursuit of science in India, and being then in England, were neither offered the Magnetic Survey, nor allowed the small sums they asked to publish researches which are of infinitely higher value than those of the Schlagintweits, and made in the same countries which they visited,—did, from the first, excite my deepest indignation.

The Magnetical Survey of India, in particular, was begun and carried on by Indian officers for many years with the highest credit to themselves; it was suspended by the Court of Directors (owing to Capt. Elliot's death), when all but completed; and the subsequent appointment of other than Indian officers to complete the operation, was as unjust as it has proved impolitic.

J. D. HOOKER.

ON THE GREAT SOLAR ECLIPSE OF JULY 13, 1860. BY THE ASTRONOMER ROYAL.

ON Monday evening, the 9th of September, Prof. Airy delivered a Lecture to probably the largest audience ever assembled to listen to a scientific discourse. The place of meeting was the Free Trade Hall, Manchester; at the doors of which the members of the British Association began to assemble at half-past six o'clock, and so rapidly did the vast building fill that all the seats in the body of the hall and the galleries were occupied within half-an-hour of the opening of the doors, and long before the commencement of the lecture there was scarcely standing room in any part of the building. A few reserved seats in the body of the hall were kept for the Presidents and Vice-Presidents, and Committees of Sections and their friends, and a vacant space in front of them was reserved to afford access to them. Some of the audience who had not been early enough to secure seats evinced displeasure at the space being unoccupied, and attempted to force the barrier, thus causing an interruption, which prevented the Astronomer Royal from continuing his discourse. The Local Secretaries, to whom the Association was throughout much indebted for their admirable arrangements, had, however, taken the precaution to have chairs placed in readiness to fill up the vacant space, so that accommodation was soon afforded to the discontented, and Prof. Airy then proceeded with his lecture, which was listened to throughout with profound attention.

Prof. Airy commenced by stating that, although the main object of his communication was the description of the great Solar Eclipse of last year, it would be desirable for him to say something about eclipses generally, and he would then more particularly describe some of the phenomena which had been observed on the occasion of the eclipses of 1842 and 1851, in order to render clearer the particular points he desired to bring under notice with respect to the Eclipse of 1860. When mankind first began to observe eclipses of the sun, it was not difficult for them to make out that the light of the sun was eclipsed or shut off from view by the interposition of the moon; and as attention was more and more directed to the subject, it became evident that the phenomena of an eclipse could not be accounted for on the supposition that the moon and the sun were bodies in close proximity one to the other. The effects of parallax became apparent, for the position of the moon on the sun's disc was found to be different for different observers situated at sufficiently distant points on the earth's surface, and it was then seen that the moon must be very much nearer to the earth than the sun, and that sometimes both the sun and the moon were nearer to the earth than at other times.

In order to render apparent to his audience the movements of the moon round the earth and the earth round the sun, and the results of such motions, the Astronomer Royal called attention to an enormous Orrery he had prepared. The sun was represented by a large ball, around which the earth was carried on an arm supposed to move in the plane of the ecliptic; the moon's orbit was represented by a hoop inclined to this plane about 5°, and the speaker showed that, as he caused the earth to revolve round the sun, the plane of the moon's orbit retained its parallelism in space; which was actually what appeared to occur in nature if the observation were continued only for a short period; but a longer period of observation would show that the plane slowly revolved, and that in about 18½ years the nodes or the points of intersection of the moon's orbit with the ecliptic completed an entire retrograde revolution. This motion was shown to the audience by causing the plane of the model-orbit to rotate on the arm carrying the earth; and also it was pointed out that the earth was not situated exactly in the centre of the moon's orbit, so that as the moon revolved she approached to or receded from the earth, in consequence of which she subtended sometimes a greater, sometimes a less, angle to an observer. Now the line joining the apogee and perigee of the moon's orbit (the line of apses) did not retain a fixed position, but on the contrary it slowly revolved and completed its revolution in about 9 years.

The speaker then showed that in order that an eclipse of the sun could take place, the sun and moon must be in conjunction, that is, as regards an observer on the earth, they must occupy nearly the same position in the heavens; he also pointed out the limits as to distance of the moon from her nodes where a partial eclipse would be possible, and also the joint effect the earth's position and the moon's position in their respective orbits in determining the extent of an eclipse when central, which might either be annular, or total without continuance, or total of longer or shorter duration. There was a recurrence in eclipses of a singular nature known to the ancients, which enabled them to predict eclipses in a rough way, but with a fair amount of accuracy. It so happened that in 223 lunations, which occupy eighteen common years, fifteen days, eight hours, eclipses both of the sun and the moon recur almost precisely in the same order. So that if a total eclipse occurred at any time, another total eclipse of the same character would occur eighteen years, fifteen days and eight hours afterwards; but in consequence of the period not including an exact number of days, it would be evident that if the first eclipse were visible in the forenoon, the second would occur in the afternoon, as a different part of the earth would be turned towards the sun.

This period of 223 lunations was called *Saros*, and it is interesting on account of the connexion between the eclipses of 1842 and 1860.

Total or great eclipses, being remarkable events likely to arrest attention, are most valuable in chro-

nology, for the places of the sun and moon are known with great accuracy, and although minute errors of the moon's place when multiplied by long periods affect the determinations to some small extent, the moon's place is known too accurately for it to be possible to make an error even approaching eight hours, in the occurrence of the earliest eclipse on record; and an error of eight hours, he remarked, would have the effect of altering a date by the period of a Saros or eighteen years, but such an error was quite impossible in the present state of science.

On the last day of the present year there will be another total eclipse, the line of totality crossing Africa, and traversing the Great Desert, Tripoli, and the Mediterranean Sea, therefore not very favourable for observation, but perhaps some of his hearers might wish to see it. There will be a more favourable eclipse in the south of Europe in 1870.

There was an appearance which had been observed on the occasion of eclipses, to which he would now draw attention, but which he would soon dismiss altogether; he alluded to the so-called Baily's beads. When the sun was much obscured, as, for instance, just before its total obscuration and just after its re-appearance, the sun's limb was seen broken up into bright spots interrupted by black spaces like a string of beads. Several observers had made mention of this phenomenon; but he had no respect for the accounts of it, as in the speaker's opinion it arose from the view of portions of the sun's limb between the mountains of the moon either with bad telescopes, or with telescopes out of focus. He had never seen this phenomenon himself, and he believed that his friend the late Mr. Baily, who first called attention to it, must have had the misfortune to use a bad telescope.

In the year 1842 there was a total eclipse on July the 8th, which was visible in the south of France and Italy. Two Englishmen left England to observe that eclipse, namely, Mr. Francis Baily and the Astronomer Royal. Mr. Baily observed at Pavia, and the Astronomer Royal made his observations on a hill called the Superga, near Turin.

The speaker said that on the Superga he saw for the first time a total eclipse in all its grandeur, and, he would add, in all its horror. Nobody who had not witnessed the phenomena of a total eclipse could form the least conception of the scene actually presented. To however great a degree the disc of the sun may be obscured in a partial eclipse, yet no idea can be formed from it of the phenomena of a total eclipse.

The obscuration is not similar to that witnessed on any other occasion; it does not in the slightest degree resemble that of a cloudy day. On a cloudy day the darkness is general, and the feeble illumination is pretty generally distributed, whereas at a total eclipse the light is concentrated on one spot, like a single light within a vast dark room; near the horizon a peculiar colouring is visible, which is seen on no other occasion. And the vast and mighty shadow of the moon may be seen approaching, and its contour marked with such clearness that the involuntary exclamation, "It is coming!" will be heard to escape from the lips of the bystanders. Then one instinctively turns towards the spot where the sun had been observed to disappear, and there is seen the dark moon as a patch surrounded by a halo of light—the "corona"—which is frequently represented of the most fantastic forms by observers. It is extremely difficult to estimate the exact amount of light at the time of totality, but in the speaker's opinion it was about equal to that when the sun is about 7° below the horizon. One observer of his party, in 1860, had noticed that the corona cast shadows from objects; notwithstanding this amount of light, it was extremely difficult to see where to walk, and he had been informed that pigeons could not find their way to their homes.

There were appearances seen during the eclipse of 1842 for which none of the observers were prepared, for on viewing the dark moon through their telescopes, astronomers saw certain red flame-like protuberances apparently shooting out from the moon. What could they be? They were seen by

several persons, and no doubt could exist as to their reality, although certain discordances arose in the accounts respecting them of the several observers. Astronomers could make nothing of these flames. As they were unexpected, no provision had been made to determine their angular positions, and no probable conjecture could be made as to their real nature. One observer for a long time disturbed the astronomers by declaring that he had seen such red flames on the face of the moon; and it ultimately transpired that he had been looking at the sun with a common opera-glass magnifying four times, and in which irradiation would account fully for what he fancied he saw.

These flame-like protuberances were noticed by Capt. Stannyan, who observed the total eclipse of 1706 at Berne, and more distinctly, by Vassinius, on the occurrence of a total eclipse visible at Gottenburg on the 3rd of May, 1733; the flames at the latter eclipse were not in immediate contact with the moon, but near it. The account of this eclipse was printed in Latin in the *Philosophical Transactions* of the Royal Society, and had not attracted attention.

The Astronomer Royal stated that he would now make some remarks respecting the eclipse of 1851, which would apply equally to that of 1860. It would be recollected, from what he had just said, that all remained in uncertainty, in respect of the nature of the red flames, since 1842; and that it became desirable, on the occurrence of the eclipse of 1851, to clear up these doubts by previously-arranged plans of observation. The speaker then pointed out the differences between the results in a science like Astronomy, which was dependent upon the self-possession of observers, and the more precise results obtained in experimental science. The difficulty of reconciling the various statements was such that few persons are aware of the qualifications necessary for the astronomer who undertakes the task; he must, as well as scientific acquirements, possess the qualifications of a police magistrate, and of one who, moreover, has become familiarized with the symptoms of nervous disease.

The discrepancies in the various accounts are not to be wondered at when it is remembered that the persons who make the observations have to travel possibly many hundred miles, perhaps in personal discomfort; at all events, they do not feel so much at their ease as if they were in their own country. Then the phenomena of totality are over in a few minutes; so much had to be done in the time, that there was great difficulty in confining one's attention to the one set of observations previously determined on. If it is difficult to control oneself, how much more difficult is it to command the strict attention of others who are to assist! He recollected, in M. Arago's account, that the trained officers of a French vessel of war totally forgot all discipline under similar circumstances.

In 1851 several observers left England to observe the eclipse, the English astronomers distributing themselves chiefly in Norway and Sweden. The Astronomer Royal was stationed near Gottenburg, and made three drawings of the red prominences at different periods of the eclipse.—(These were represented on immense diagrams, and were explained by the speaker.)—There was visible on the apparent left of the moon a small mountain-like peak, and on the right another similar prominence, as well as a curious hooked protuberance, which the speaker had called a boomerang, and a cloud-like formation quite detached from the moon's limb. The second diagram showed the covering of the left-hand prominences, and the uncovering of the right-hand prominences; whilst the third exhibited, at the lower right-hand portion of the moon's limb, a long line of new protuberances, revealed by the onward progress of the moon from right to left. Very various indeed were the representations of these protuberances by other observers. Some made the boomerang straight, some crooked; some thought that it changed from straight to crooked, and some from crooked to straight. The accounts of the three observers (Pettersen, Chevalier, and Airy), in the single town of Gottenburg, were as discordant as any in the whole continent. But there was one astronomer, who made observations in Russian Poland, in whom he placed the

utmost confidence, namely, M. Otto Struve, and whose account agreed closely with his own. Well, M. Struve made most careful measurements of the increase of these prominences on one side, and the decrease on the other, and found that they accorded completely with the rate of the moon's motion across the sun's disc. These measurements and the speaker's own observations indicated that the prominences belonged to the sun. Had they belonged to the moon, they would have gone with her from one side to the other without change.—This was illustrated by a moving model, in which the moon, about eight feet in diameter, was moved across the sun's disc, around which were painted some red prominences.

Owing, however, to the discordances of the observations of the several observers, a new theory was broached to account for these appearances, namely, the diffraction theory, which professed to explain them on the supposition of the interference of light in passing the moon's edge. The Astronomer Royal said, that if there was one point, on which he might permit himself to speak with confidence, it was on the subject of the interference of light, and the production of the diffraction bands, because he had paid particular attention to that subject. It was quite true that light in coming from a source, if made to take two different paths, may be made so to interfere as to produce blackness. Light coming from a great number of points, as when the sun's light is made to pass through a chink in a wall, produces by its interference coloured fringes on the opposite wall or a screen, which have been known since the time of Newton. But if the eye is placed in the position of the screen, then no coloured fringes are seen. And if universally, the diffracting edge is viewed by the eye or through a telescope, so as to bring it well in focus, then no fringes are seen. The moon's edge when observed during an eclipse is brought to a focus, and hence is in the same category as the chink, so that the diffraction hypothesis falls to the ground. The Astronomer Royal dismissed the diffraction theory by stating that he challenged any one to produce experimentally any appearances resembling the red flames by the diffraction of light.

After 1851, there was a total eclipse on Sept. 7, 1858, the central line of which passed across Brazil, and was observed by some of the Brazilian authorities, and also by the French, who, let it be said, never were behindhand when any scientific subject had to be investigated. This eclipse was of short duration, and was not very favourable for observation; nevertheless, it was well observed, and one of the most careful observers had remarked that the luminous prominences disappeared on one side and increased on the other; thus confirming his (the Astronomer Royal's) own observations in 1851. M. Liais had observed that the prominences were not red, but of a leaden hue; this might have been difficult to account for, but that Prof. Pole, who made observations of the Eclipse of 1860, noticed the same phenomenon; but then Prof. Pole was colour-blind, and had, in a paper communicated to the Royal Society, made an especial study of his own peculiar case. Moreover, it was discovered on the occasion of the last eclipse that Mr. Weedon, an engineer on Mr. Vignoles' staff, had also to some extent this peculiar want of power in discriminating colours.

The speaker now took up the subject more particularly of the Eclipse of 1860. He pointed out, on a large projection of the sphere, the course of the eclipse from the western coast of America, near Vancouver's Island, across America, the Atlantic, to the western coast of Spain, thence to Algeria, and on towards the Red Sea, where it was lost in sunset.

Preparations were made by several bodies to observe the great Eclipse; the French Government sent a committee of savants to the centre of Spain, and also provided for the observation of the eclipse in Algeria. The Spanish also equipped an expedition, with Señor Aguilar, the Royal Astronomer of Madrid, at their head. The British naval officers on the west coast of America made observations of the eclipse. This country differed from France in having no paid Academicians whom it can call upon to undertake

any scientific investigation; but England possessed, he was proud to say, a large number of highly-educated amateur astronomers, ready and willing to contribute to the advancement of their favourite science. As the official head of Astronomy in England, it occurred to him that he would best promote a complete series of observations of the eclipse if he induced our Government to aid the movement by placing a ready means of transport at his disposal. He therefore made an application to the Lords of the Admiralty, and most handsomely did their Lordships respond to his appeal, by placing at his disposal the finest ship in the British Navy, the *Himalaya*. And on the 7th of July there sailed from Plymouth an expedition composed of English and foreign astronomers, which, for many years to come, will be remembered as the *Himalaya Expedition*. Not only were the astronomers conveyed to Spain, but they were most liberally provided for on the journey in every respect. One condition he had made in the arrangements entrusted to him—namely, that every person should go out with a definite purpose, and take out adequate instruments to make the observations he undertook. On the whole, this arrangement was fairly carried out; there were some failures which might possibly have been avoided if there had been an opportunity for a previous drill, but that was not possible, but there were great successes. The expedition was much indebted to Mr. Vignoles and the Directors of the railway he was constructing almost in the line of the shadow; most particularly were they indebted to the Chairman, Signor Montesino. The greater part of the expedition landed at Bilbao, but a portion went to Santander, where another railway was also being constructed by English engineers.

The Astronomer Royal, referring to large diagrams he had prepared, commenced by describing the appearances of the corona, and he said he must confess that the various accounts presented great discordances. He particularly pointed out two drawings—namely, that of Mr. Bonomi and that of Lieut. Oom, an officer in the Portuguese Navy, but at present attached to the Imperial Observatory of Pulkowa, in Russia; these two drawings were, he considered, corroborative one of the other, and extremely fair representations of the corona, and both were, moreover, confirmed by the drawings of Mr. Weedon, a talented engineer on Mr. Vignoles' staff. The corona was very bright near the edge of the dark moon, and gradually diminished until its outline vanished in the surrounding darkness; but it was not bounded by a regular outline, for there were several streamers and also curved rays, which were observed and depicted by several observers. Mr. Bonomi observed the planets Venus and Jupiter, close to the obscured sun, shining with great brilliancy. Under no other conditions could these planets be viewed so close to the sun; for in whatever manner the sun might be shut off from view, the atmospheric illumination would drown these planets in light. Mr. Galton's careful drawing presented several strange horns of light, supported in part by Mr. Murray's. Mr. Weiler's presented strange appearances, which it was difficult to reconcile with the others. M. Plantamour, of Geneva, who made his observations near the eastern coast of Spain, made three successive drawings of the corona during the eclipse. The appearances depicted led the speaker to think that they could only be accounted for on the supposition that an atmosphere capable of reflecting light extended nearly from the earth to the moon. It was clear they could not be produced by our atmosphere.

He would show experimentally that there were means of detecting the difference between reflected and non-reflected light; for this purpose he would, with Mr. Ladd's assistance, throw a beam of light on to the screen by means of the voltaic lamp, then as he interposed a doubly-refracting prism the beam would be divided into two beams, one of which would revolve round the other without alteration of intensity as he caused the prism to rotate. He then would interpose an unsilvered glass reflector in the path of the ray, and again place the doubly-refracting prism in the path of the ray. On rotating the prism, the two beams of light

not only revolved the one round the other, but each became alternately obscured, thus proving that there is a difference between ordinary light and reflected light; the reflected light being what is termed polarized. By ascertaining, therefore, if the light of the corona were polarized, it could be ascertained with great probability whether it came direct to the eye or whether it had been bent by some reflecting medium. An English observer had proved beyond doubt, that the light of the corona was polarized, and a foreign observer, M. Prazmowski, had even gone further, and had shown that the position of the plane of polarization passed through the sun, the corona, and the eye of the observer. When this was ascertained, it went a long way towards proving that the light of the corona was reflected by something like an atmosphere, or at all events a medium capable of reflecting light intermediate between the earth and the moon. Was there an atmosphere extending from the earth to the moon? The speaker stated that he knew not; but he knew of no other hypothesis which would account for the appearances presented by the corona.

The Astronomer Royal now returned to the red prominences which he stated were seen in great beauty during the Eclipse of 1860. As he had stated in the early part of his lecture, the question had been raised whether they belonged to the sun or to the moon. By means of the moving model, he showed that if they belonged to the moon they would follow her as she moved onward; but if they belonged to the sun those on the left would be shortened and those on the right lengthened as the moon moved from right to left: as they were actually found so to do, it was a strong *primæ facie* argument that they belonged to the sun. M. Faye had also pointed out the following fact. Suppose there was a prominence on the top of the sun at the commencement of the eclipse, it was evident that it must be at that moment to the left of the moon's centre; at the middle of the eclipse it would be just over the centre, and on the right of the centre at the end of the eclipse. It was not at all probable, if the prominence were an illusion resulting from the sun's light shining through the valleys on the moon's limb, that all parts of the edge could produce the same identical figure.

It would be therefore seen that, besides measuring the increase and decrease of luminous prominences in the path of the moon, it was important also to ascertain if any prominence changed its angular position with respect to the moon's centre. The Astronomer Royal stated that in order to do so he had had certain lines ruled on one face of the reflecting prism, which was placed in the focus of his telescope, which was a refractor four inches aperture, mounted on a sort of altazimuth stand of a very portable kind: this was exhibited to the audience. Mr. De La Rue had used somewhat similar means, and being very skilful in making hand-drawings of heavenly bodies, in which he had great practice, he completed two drawings, which were exhibited on the diagrams in connexion with the micrometer lines he had employed; one of these drawings was made towards the commencement, the other towards the end of the totality. Now it was perfectly obvious on looking at these drawings, that the prominence and red cloud situated at the top of the sun, and nearly at right angles to the path of the moon, had shifted their angular position during the period of the eclipse. Dr. Bruhn, of Leipzig, who went to the east of Spain, not being provided with any means of measuring the angular position of a protuberance, profited by the circumstance that one of the prominences became visible before the totality, and remained so for several minutes afterwards, to make measurements of the distance of the protuberance from the cusps. Now the position of the cusps could be calculated to the utmost degree of accuracy for any particular time, and Dr. Bruhn found that if the prominence belonged to the moon, the cusp must have shifted 26° from its first position on the moon's limb; but that if it belonged to the sun, the cusp had not shifted 1° during the time he was observing. This was most conclusive evidence that the prominence belonged to the sun.

The Astronomer Royal then pointed out other drawings of the prominences, particularly a very

beautiful one by Mr. Fearnley, of Sweden, which, as far as it went, confirmed Mr. De La Rue's drawings of the prominences. He then went on to say, that in 1851 M. Busch took a daguerreotype of the corona and prominences, but it was not a very successful attempt. Since that period photography had made great progress, and it occurred to Mr. De La Rue and others that it would be extremely desirable to get photographs of the eclipse. Mr. De La Rue took with him the Kew photoheliograph, and obtained two large photographs of the totality. Father Secchi, of the Collegio Romano, had obtained five small photographs, and through the kindness of Señor Aguilar he had obtained photographic copies of them. The photographs of Mr. De La Rue and Father Secchi, though made at widely different localities, agreed very closely. In both, the changes in the angular position of the prominences had been measured, and they agreed entirely with the supposition that they were connected with the sun.

Father Secchi had explained, in striking language, his reason for preferring photographs to eye-observations. And he had shown that certain observations, on which M. Plantamour had founded an idea that the changes of magnitude of the prominences were not explained by the moon's motion, were entirely disproved by the photographs.

Some British officers stationed on the western coast of America observed the totality from Puget Sound, when the sun was only 2° above the horizon; and he had received some excellent drawings from Capt. Richards and Capt. Parsons. On comparing the drawings of the prominences made on the west coast of America with those made in Spain, he was unable to reconcile one with the other,—but there was an interval of two hours between the two observations, and it was quite possible that in that interval of time fresh prominences had come into view; and if the sun was constantly boiling up, and these protuberances were fumes, it could not be wondered at if there was a change during that period. There was no perceptible change, however, during the short interval of time between the observations in Spain.

If the prominences belonged to the sun, the question arose, could we see them at other times than during a total eclipse? With the assistance of Mr. Nasmyth, who had contributed the most important part of the apparatus, he had made many attempts, but had not succeeded. The apparatus had been lent to Mr. Piazzi Smyth when he went to the Peak of Teneriffe, but he failed to see the prominences. These negative results did not in the least detract from the evidence of the prominences belonging to the sun, because we never could get rid of the effect of the highly illumined atmosphere through which we viewed the sun, and which, do what we would, extinguishes even brighter objects than the luminous prominences.

The Astronomer Royal then explained the admirable mode of mounting of the Kew photoheliograph, as arranged by Mr. De La Rue, and having pointed out the peculiarities of the Equatorial mounting as distinguished from the Altazimuth, he strongly advised any person who intended to observe a total eclipse, to take with him an equatorially mounted telescope, fitted with clockwork to drive the telescope, so that the measurements might be made without the observer's attention being disturbed by having to follow the movement of the moon by hand.

He then pointed out that in Mr. De La Rue's photographs, prominences were depicted which could not be distinguished by the eye, as well as those which were visible to the eye. Indeed, the photographic method brought out more than could be observed by the eye, and some care was requisite in comparing the eye observations with the photographic results.

The Astronomer Royal then said that time had run out faster than he had anticipated, but he would nevertheless ask Mr. De La Rue to exhibit his photographs by means of the electric light. Mr. De La Rue complied with the request, but being called upon by the audience to explain the photographs, Dr. Tyndall kindly took charge of the electric lamp, and threw upon the screen

enlarged images of several pictures, including the totality pictures, the beauty of their effect eliciting loud applause. Mr. De La Rue also explained a representation of the corona and the entire series of red prominences, by the Rev. C. Pritchard, as well as one by himself, which were projected by means of the electric lamp.

FOREIGN CORRESPONDENCE.

Florence, Sept. 16, 1861.

FLORENCE is just now in all the heat and hurry of the first Italian Exhibition of Art and Industry, which, by a united effort of zeal and perseverance, rare in any country, opened to-day. The King and his sons were present. I shall send you the details by another post.

Among the attractions which are prepared for the half-million of visitors whom Florence is expecting to welcome to her "At Home" this autumn, I pass over in silence the projected amplifications of the original plan of the Exhibition by the addition of an agricultural and horticultural show,—the popular festivals now in course of preparation,—the opening of the grand old Palazzo di Giustizia (known as the Bargello), after its admirable regeneration at the hands of skilful architects,—and even the improvements at the *Accademia delle Belle Arti*, which on this occasion will display certain treasured works of Art not hitherto exhibited to the public. All description of these dainties must needs stand aside for the moment, to give place to a few words of notice of a projected Exhibition, which it may boldly be said that no other European city save Florence could get up for its expected guests with anything like the same promise of splendour and success, if indeed the plan could be realized at all: I mean an Exposition of Objects of Medieval Art in every branch. Some time back, when the project for the Italian Exhibition began first to take such consistency as to render its execution a certainty, a zealous lover of the *cinque cento*, and an antiquary of well-deserved repute, Dottor Marco Guastalla, conceived a design of collecting the choicest of the medieval Art-treasures which the Tuscan cities contain and arranging them for public inspection in the stately halls of the Palazzo di Giustizia—a fine and striking idea; for how could its noble old walls have been more fitly adorned than with the masterpieces of that wonderful time when Italy stood foremost in the race of genius as of culture among the peoples of the world, and poured out with such incredible fertility the fruits of her creative power in every form of embodiment, that even now, after the lapse of near four centuries, and after serving as an exhaustless Art-mine for younger nations to draw upon, the dusty lumber-rooms of her old family mansions,—not to speak of their private galleries,—her musty convent treasuries, and sometimes even her peasant cottages, are rich in the unguessed and unchronicled works of Art of that abounding elder time? Dottor Guastalla's earlier project unfortunately met with difficulties at its outset which rendered its execution impossible; yet nothing daunted nor discouraged, he struck out, like a genuine enthusiast bent upon the accomplishment of his patriotic design, the spirited scheme of temporarily giving up his own house, on the Piazza della Indipendenza, for the purposes of such an Exhibition. The *locale* is singularly well suited to the requirements of this plan, as it consists of a large and handsome suite of rooms on the ground-floor looking into a pleasant garden; and one of the saloons especially is such a few private houses can boast, being an octagonal room of great height and size, originally built for a splendid studio by the late American sculptor Greenough, whose residence it was for several years. Here the whole rich collection of objects of Medieval Art, now in the possession of Dottor Guastalla, will be opened to the public, together with an immense number of contributions of a similar kind from the storied old palaces of the Florentine nobles and the cabinets of Art-collectors, both here and in the other Italian cities. Long lists of the names of contributors to this Exhibition have appeared in the Florentine daily papers, and among them it is pleasant to see those of two

or three of our countrymen, long resident in Italy. The offerings will include specimens of first-rate beauty and value, chosen from every branch of Art. There will be bronzes and marbles moulded by the life-giving hands of Donatello, Gian di Bologna, and Desiderio da Settignano; rich garland-work of fruits and flowers, on a large scale, all alive with lizard, snail and beetle, in the wonderful earthenware-work of Luca della Robbia; a splendid terracotta by Orgagna; delicate cinque-cento ivories, and peacock-hued Majoliche of Faenza and Urbino; precious enamels of Byzantine and Lombard workmanship, especially one remarkable and costly relic-casket, enriched with quaint and glowing enamelled figures of saints and angels; Venice glasses, light as the bubbles of the sea-foam, frosted and lace-worked, white and coloured, tricked out fantastically with gilded masks and fabulous monsters; masterpieces of iron and steel work, incrustated with gold and silver, or bossed with figures and tracery in high relief; ancient arms and household furniture; cabinets in ebony and ivory, and *pietra dura* work of high perfection, especially an inlaid altar of great size and beauty; gems and cameos, and a splendid show of Italian coins, medals, and Medieval seals, which, though the work of a very few years' antiquarian zeal and research, may safely challenge comparison with many a public collection.

Besides these and such like items of price in the Exhibition, it will comprise the magnificent Archinto tapestries, which were for centuries the pride of the noble and ancient Milanese family of that name until a short time back, when, at the death of the Count Giuseppe Archinto, the title became extinct, the once colossal property of the family was broken up and scattered piecemeal among a host of creditors, and the untold wealth of objects of Art which had adorned the ancestral Milanese palace—for the Archinti were great collectors and patrons of the arts—fell into the hands of the highest bidder. The enterprising gentleman who bought these world-famous *Arazzi* for the comparatively trifling sum of a hundred thousand francs, has already, it is said, been offered a hundred and fifty thousand for them. The *Arazzi* are twenty-four in number, and vary greatly in size and proportions. The largest of the series being about nine by nearly five metres in dimension. So exquisite is the fineness of the work, and so skilful the blending of the colours that they may truly be said to be unrivalled among the productions of the loom, even by the Gobelins tapestries. Sixteen of the designs are from the pencil of Giulio Romano. Eight represent the principal events in the life of Scipio Africanus, and eight more, the battles and triumphs of the Emperors Vespasian and Titus. The remaining eight are from designs by David Teniers the younger, and portray scenes of country life, village feasts, rural dances and a whole round of rustic junketings, drawn with infinite *naïveté* and burlesque humour, while the landscapes are full of beauty and truth of design. They are all framed as it were in broad borders of the most vivid richness representing flowers, fruits, cupids and scroll-work in graceful combination. The *Arazzi* were executed in Flanders at an immense cost in the first half of the seventeenth century, by commission from Count Horace Archinto, a man of varied knowledge and refined taste, who profusely added to the stores of precious works of Art already brought together in the venerable halls of the Archinto palace. These magnificent tapestries have hitherto been but little seen, although mention has been made of them in more than one Guide-book, and some space was devoted to a description of their beauties in the great and elaborate work, called '*Milano e il suo Territorio*,' published at Milan in 1844, on occasion of the Scientific Congress, which was held there in that year. Under what different auspices and with what altered surroundings they will be now again exhibited to the world in 1861, amid the festival time of a free people, and in the artistic capital (whatever be ultimately the seat of government) of the new Italian kingdom!

A considerable portion of the proceeds of Dottor Guastalla's Medieval Art Exhibition is to be devoted to the assistance of the Orphan Asylum,

the name of one of whose most efficient patronesses, the Princess Strozzi, figures on the list of promoters of the good work. The receipts thus obtained for this excellent charity are expected to be very large, for the Exhibition, in itself highly attractive to all who find a charm in the marvels of ancient Art, will be rendered yet more so to the crowds of mere loungers and pleasure-seekers, who may be reasonably expected to form part of the visitors to Florence, by the evening illumination of the whole suite of rooms, which will thus form a tempting promenade for the resort of the gay company in these beautiful star-lit September nights, when wide open glass-doors, airy terraces and fresh garden accents are so pleasant an addition to the course of sight-seeing, which they will consider *de rigueur*.

All the new stir and movement of this pleasant time is, as may be believed, a dose of wormwood to our select party of *Codini*. After trying hard to persuade the Italian public, in the columns of the *Armonia* and the *Contemporaneo*, that there will be nothing to see at the "so-called" Exhibition, except two or three rusty machines, a few pieces of rickety furniture, and an indifferent cattle-show; as they find their warnings disregarded, they have changed their plan of attack, and now enliven their newspaper paragraphs with "shocking accidents" at the palace of the Exhibition, "reckless sacrifice of life" among the artisans employed there, caused by the shameful demands made on their powers of working against time by the Government inspectors; continual and lamentable accounts of the robberies committed there by day, and the attempts at incendiarism by night, and a whole host of other schemes of annoyance, as malicious as they are futile to excite a hostile feeling in the popular mind against the undertaking, which will help Italy on yet another important step in her path of progress. A few of these active partizans of Divine Right showed the cloven foot, it seems, the other day in the very last place where one would have expected to find them, namely, in the servants' offices of the Palazzo Pitti.

TH. T.

OUR WEEKLY GOSSIP.

ON and after October the 5th the price of the *Athenæum* will be THREEPENCE.

Thirty years ago, when the *Athenæum* came into the hands of its present Proprietors, its price was Eightpence, and its contents, with advertisements, forty-eight columns. Convinced that the circulation of Literary Journals was restricted by high price, and that every advantage offered to the public would bring increase of circulation and authority, the Proprietors reduced the price one-half—to Fourpence. The experiment succeeded, and cheap Literary Journals became the rule.

The Proprietors have always held to the principle then proved. They have given to the public the benefit of every change in the law, increasing their size without increase of price, until the average has become about sixty columns of literary matter, with forty columns of advertisements, selected so as to be of general interest.

The Proprietors, taking advantage of the abolition of the Paper Duty, have now resolved that on and after the 5th of October the price of the *Athenæum* shall be reduced to THREEPENCE.

We understand that M. Mazzini is engaged in writing *Memoirs of his Life and Times*—a work which will embrace a good deal of the secret history of European events during the last thirty years.

We are also informed that Signor Daelli, of Milan, is collecting the political and literary works of Signor Mazzini, which he proposes to publish in about twelve volumes. A translation into English of his '*Duties of Man*' is nearly ready for the press.

It is understood that Her Majesty's Commissioners for the Exhibition of 1862 have accepted

tenders for the two Catalogues, Industrial and Fine Art. The three lowest tenders were those of Messrs. Truscott, Son & Simmonds, Messrs. Harrison & Co., and Messrs. Clowes & Sons. The tender of Messrs. Truscott, Son & Simmonds, being the lowest, has been accepted.

Prof. Huxley desires us to print the following communication:—

"The Government School of Mines, Jermyn Street, Sept. 17, 1861.

"The publication in the *Athenæum* for last week of the statements made to the audience assembled in Section D. of the British Association respecting the structural relations of the human and simious brain, constrains me to request that you will be so good as to give equal publicity to the following letter, addressed to my friend the Professor of Physiology in the University of Oxford, and read by him at a subsequent meeting of the same Section:—'My dear Rolleston,—I have just received the accompanying revise of my forthcoming paper 'On the Brain of Ateles.' Will you be so kind as to have the leading points in it communicated to Section D? The obstinate reiteration of erroneous assertions can only be nullified by as persistent an appeal to facts; and I greatly regret that my engagements do not permit me to be present at the British Association in order to assist personally at what, I believe, will be the seventh public demonstration during the past twelve months of the untruth of the three assertions, that the posterior lobe of the cerebrum, the posterior cornu of the lateral ventricle, and the hippocampus minor, are peculiar to man and do not exist in the apes. I shall be obliged if you will read this letter to the Section, and I am, yours faithfully,

THOS. H. HUXLEY.

The paper referred to is now in course of publication in the 'Proceedings of the Zoological Society.'

"T. H. HUXLEY."

The various Colonial Governments have subscribed very liberally towards the expense of a proper representation of their peculiar products at the forthcoming International Exhibition of 1862. It is indeed desirable that a better and more creditable show should be made by them than was the case in 1851, in London, or even at Paris, in 1855, great advance as the latter indicated in appreciation of these monster gatherings. Amongst the sums subscribed are 8,000*l.* by the Canadian Government, 5,000*l.* from that of the Cape; British Columbia contributes 2,000*l.* (a large sum for such a young colony); 2,000*l.* will be devoted by Queensland; Tasmania, 2,000*l.*; New South Wales, 3,000*l.*—together with 5,000*l.* for an exhibition of gold—which is, we understand, not to be a simple collection of huge nuggets, but a scientifically-arranged gathering of specimens of gold ore in its native states and amongst its native attachments of quartz, &c. Gold purifying machines and all sorts of implements employed at the diggings are to be exhibited. The weight of nuggets will be limited to six ounces. A further sum of 5,000*l.* is devoted by Victoria towards this gold display, together with 5,000*l.* more for general purposes. New Brunswick appropriates 1,600*l.*; British Guiana, 1,000*l.*; from other colonies will come like sums. Large collections of lacquered ware are coming from Japan and China, together with examples of all the beautiful textile fabrics produced by those countries, with specimens of their agricultural and scientific instruments and raw products. A great collection of the productions of our Indian Empire is being made by Dr. Forbes Watson, which promises to be the most complete ever got together. India will have a separate court, as in 1851, and not rank with the Colonies, to which last 12,000 superficial feet of space is appropriated at present, and more will probably be required. There is not more than a fourth larger amount of space disposable than there was in 1851. Yet ten times as much is required. England alone, it is said, demands twice as much as the whole contents of the building, and France complains of having appropriated to her about one-tenth of her requirements. The 30th inst. is fixed as the last day for receiving applications for space, and after the 12th of February next, exhibitors may commence sending in their contributions, and continue doing so until the end of March, after which date

nothing will be received under any circumstances whatever.

The Queen has chosen a design for a lace flounce, by a student of the Female School of Art, to be exhibited at the International Exhibition of 1862; an act of graceful and thoughtful patronage worth a world of fine words.

John Francis, sculptor, whose death, at the age of eighty-one, is announced, was one of those artists who enjoy a good practice among their immediate patrons without being known to the general public. In a brief memoir which has been sent to us it is said that he was a pupil of Chantrey, but this, we think, must be a mistake, for Francis was grown a man when Chantrey was a mere child. Mr. Coke, of Holkham, subsequently Earl of Leicester, was the first patron of Mr. Francis, whom he introduced to his Whig friends as a bust-maker of promise. The portrait busts executed by him would fill a gallery, and form a compendious set of illustrations to a history of the Whigs in our time. His works also include a series of busts of the royal family. Mrs. Thorneycroft, his daughter, inherits his connexion, and continues the practice of his art.

Our Lubeck Correspondent, in sketching the biographies of the artists and men of letters of that city, alluded to the interruption of Prof. Deecke's historical studies by the Revolution of 1848, and in consequence of his having been elected as representative of a Republic during a period of democratic agitation. Inadvertently, and without intention to discount the rest of his eulogy, our Correspondent described him as a democrat. But it appears that this epithet has a signification in Germany of which we have no idea in England: it is suggestive, we are told, of nothing but physical-force anarchists. We wish, therefore, to cancel a word capable of such misconception.

Our readers will grieve to hear that the Australian Expedition has met with a fatal stop. Mr. Burke, accompanied by Messrs. King, Gray and Mills, with a horse and six camels, had left Cooper's Creek for the Gulf of Carpentaria, and nothing had been heard of him or his party. It is feared they may all have perished. The summer had been unusually dry in Australia, as elsewhere; the watercourses were dried up, and scurvy carried off many of those who remained behind at Cooper's Creek or at the Darling. Among those who are known to have died is Mr. Ludwig Becker, the naturalist. Mr. Brahe, who led the remnant of his broken party back from Cooper's Creek, says:—"When Mr. Burke left he said he should be back in three months' time at most. He expected to be able to reach the Gulf of Carpentaria, and return in less than three months. He did not say he expected to meet a ship at the Gulf of Carpentaria. Mr. Burke was quite positive about coming back to Cooper's Creek. He said he would run no risk whatever. He said he would make a push for the Gulf from Eyre's Creek. He said he might be back in a month." But, four months passed, and he had not returned. The natives had become extremely hostile to the white men. Mr. Brahe's opinion with respect to Burke was, that he had gone to Eyre's Creek, and thence towards the Gulf; that he had gone on expecting to find water, but had found the holes dry; that in this way he had gone too far, thinking to find water ahead, and was unable to return from want of water. He believed that Burke and his party were stuck fast. He was also afraid that the party were attacked with scurvy; but there were no symptoms of it when they left. Burke seemed to be in good health when he left. The Exploration Committee took steps at once to afford relief. Mr. Howitt had been despatched with a party to Cooper's Creek, but becoming acquainted with the state of matters he had returned, and his party was re-equipped and strengthened. Another party, under the command of Major Walker, was to start from Rockhampton for the Albert River; and a sea party has been organized, the Chief Secretary having consented to place a sum of 2,000*l.* on the estimates for that purpose. We hope the survivors may be reached in time.

It is a hard thing to find old remains one after another being swept away; but a few months ago

it was the splendid gateway of Reading Abbey, now, the old walls of Rochester, that have withstood time and accident so many centuries, are being blown up by gunpowder, under the guidance of the Sappers and Miners. It is for educational purposes, so to speak, that this is being done, additional ground being needed for the enlargement of Sir Joseph Williamson's Free Mathematical School at Rochester.

A Correspondent, writing from Malton, Yorkshire, respecting the negligent compilation of Messrs. Black's 'Guide-Books for Tourists,' especially in reference to the old Priory Church at Bridlington in the above county, omitted to state that the building has been recently restored by Mr. G. G. Scott in a thorough-going fashion and with tolerable success. A new open-timbered roof has been placed above a portion of the nave, the remaining portion is old, and well worthy of notice for its excellent design, and the figures remaining on the ends of the hammer-beams, amongst which are to be seen the effigies of St. George or St. Michael the Archangel, it is difficult to say which, so lofty is the roof, and several angels. The same writer refers to the curious "churoh-collar," but does not explain that that instrument is a jointed ring of iron which was put round the necks of turbulent boys at church; by this they were chained to the wall. The offertory-box is without a lid, but the hinge remains set in the stone. The four books chained to the desk are controversial in character, Hooker's 'Ecclesiastical Polity' being the best reputed of them; they are of a date contemporaneous with the above. The Early English buttresses on the north side are worthy of admiration for their beautiful proportions and design; they are boldly chamfered at the angles, and carved at the bases of the splay. Over the porch has been a priest's chamber or muniment room.

SCIENCE

BRITISH ASSOCIATION.

SECTION A.—MATHEMATICAL AND PHYSICAL SCIENCE. SATURDAY.

'Provisional Report on the Magnetic Survey of Great Britain,' by Gen. SABINE.—The Report was nearly completed, but three stations remained yet unfinished; Gen. Sabine, therefore, preferred deferring the presentation of the Report to the next Meeting, when he hoped to have it complete and ready for presentation to the Physical Section.

'On the Amount of Direct Magnetic Effect of the Sun or Moon upon Instruments at the Earth's Surface,' by G. J. STONEY.

'On the Laws of the principal Diurnal Irregularities, Solar and Lunar, of Terrestrial Magnetic Forces as deduced from Ten Years' Observations at Greenwich, and on their Apparent Causes,' by the ASTRONOMER ROYAL.—The author described in an admirable manner, and suited to the comprehension of all present, what was meant by deviation and diurnal inequalities. Taking, he said, a compass needle or other bar of magnetized iron, if this were freely suspended it would take up a definite position as affected by the earth's attraction. Two forces pulled the needle, one towards the north, the other towards the south. Its position, however, did not remain constant during the day, nor yet during the year; and it was of the utmost importance to register the deviations it made, either by the eye of an observer, or by the far more accurate method of self-registration. The latter method was employed at Greenwich, and was effected by causing a cylinder of sensitive paper to revolve once during the twenty-four hours; on this the beam of light reflected from the needle fell, and made a curved line on the sensitive paper. In a similar manner the amount of force pulling the needle north or south was registered; and thus the horizontal force acting on the needle endways and that acting sideways were rendered visible, and their changes, from time to time, calculated. The common daily disturbing force varied in different years extremely, from 1846 to 1857; and

monthly also, for in June and July it was greatest, and in December and January least. This last observation led him to consider that it might depend a good deal on the radiation of the sun's heat, which was greater in summer, of course, than in winter. An interesting diagram was exhibited showing the law of this disturbing force, and consequent deviation of the needle during the day. It was greatest at noon, and decreased from that time till eleven at night, when it was least. The disturbance at the time when greatest tended in a south-westerly direction. He was inclined to explain the fact of this direction being taken from the consideration that Greenwich was peculiarly situated with regard to the distribution of land and water on the face of the globe. During the early hours of the afternoon, the sun, when on the north of the equator, was vertical over a great space of water lying in a south-westerly direction from Greenwich, the radiation from which was very great. Magnetism and galvanism were in his view interchangeable terms; and it was well known that it was difficult to get a galvanic current through the earth at any place on its surface when there was little or no moisture; and thus the sun shining before it reached the meridian of Greenwich on the arid plains of Central Asia, would have less magnetic effect than a few hours later in our day.

Gen. SABINE, in making some observations on the remarks of the Astronomer Royal, said that he (the Astronomer Royal) had, in an unusual degree, the happy art of popularizing a scientific and technical subject. It required some courage to offer an explanation of the strange movements of the magnet, and those who studied the subject of magnetism with attention knew that the science was in this state, that they had a great many observations reduced and generalized, and that what was now wanted was a good suggestion to explain them; and the Astronomer Royal deserved thanks for the one he had thrown out. There was this great objection, however, to the explanation, that the deviations were produced by merely local causes, that we find exactly the same deviations, with small exceptions, at magnetic stations in North America and Tasmania; and even within the arctic circle, where for three months the sun never appears above the horizon, and where, therefore, no radiation could exist.—The ASTRONOMER ROYAL, in replying, said that, though it required some courage to make a supposition, it required still more to abandon it, which he was ready to do, if required by facts. He then proceeded to notice those magnetic deviations apparently caused by the moon. His opinion was, that these followed the law of the double tides, having the same epochs. There was a double tide of magnetism every lunar day, following the hours like the tides. There was, however, a considerable discordance in the results obtained for the several years of observation, though this did not destroy their value. No action of the moon as an independent magnet could produce this, and probably the influence was a reflected one from the magnetic earth. He also suggested that it was probable that the moon produced a double tide in the air, and if so in the oxygenic part of it, and they were therefore justified, from the recent discoveries of Mr. Faraday, in expecting a magnetic disturbance twice a day.

'On Spontaneous Terrestrial Galvanic Currents,' by the PRESIDENT.—The Astronomer Royal, after pointing out how seriously these spontaneous galvanic currents interfered with the working of telegraphs, stated, that he had been in correspondence with Mr. Lamont, of Munich, on the subject, and that, although his replies were of the nature of private communications, yet he considered them so valuable that he had determined to lay them before the Section, and he was sure, if he had the opportunity of asking for Mr. Lamont's sanction for so doing, he should readily obtain it.

'On a Probable Cause for the Observed Diurnal Variation of Dip and Declination,' by Prof. HENNESSY.

'On the Quantity of the Acceleration of the Moon's Mean Motion as indicated by the Records of certain Ancient Eclipses,' by the Rev. EDWARD HINCKS.

General SABINE stated, that the Astronomer Royal had requested him to state that he had been obliged to leave the Section to keep an appointment; but as, of course, the communication just read would be published in *extenso*, he would have an opportunity of considering it at leisure, and replying, if necessary.

'On the Secular Changes of Terrestrial Magnetism and their Connexion with Disturbances,' by the Rev. H. LLOYD.—It has been generally supposed that, at a given place, the mean yearly values of the magnetic elements were subject to no fluctuations of a minor period; and consequently that, for a limited number of years, the rate of the change of these values from year to year was either uniform, or else uniformly accelerated or retarded. This idea, so far as relates to the magnetic inclination, has been completely disproved by Prof. Hansteen. From the long and accurate series of observations of this element, made by himself at Christiania, Prof. Hansteen has inferred that the mean yearly value of the inclination is subject to a periodical fluctuation, as well as to a progressive change. The length of this period, according to Prof. Hansteen, is 11½ years; the maxima occurring in the years 1828, 1840 and 1851, and the minima in 1823, 1834, 1845 and 1856. The Dublin observations, so far as they extend, exhibit similar results. If we assume that the inclination decreases from year to year proportionally to the time, and compare the results calculated according to this hypothesis with those actually observed, the differences clearly exhibit a cycle or period, whose duration does not differ materially from that laid down by Prof. Hansteen. The amount of the periodical part of the variation in 1845—the year of minimum—is so considerable as to mark altogether the regular yearly decrease. The Dublin observations exhibit a similar law in the values of the horizontal component of the earth's magnetic force, as deduced by means of the bifilar magnetometer, combined with absolute determinations made according to Gauss's method. When these results are corrected for the secular change, supposed uniform, they show very clearly the existence of a cycle. The maximum is 3°50'71, and occurs in the year 1844; the minimum is 3°50'27, and is the mean value of the horizontal intensity for the year 1848. Dr. Lloyd concluded by pointing out the connexion of these phenomena with the periods of greater or less prevalence of magnetic disturbances, and showed in what manner the disturbances operated in producing these effects. The general action of a disturbance is to augment the inclination and to diminish the horizontal force; and, accordingly, the year of greatest disturbance should be also that of greatest inclination, and of least horizontal intensity—these elements being supposed to be corrected for the regular progressive change. In the same manner as the easterly disturbances of the magnetic declinations preponderate over the western in this part of the globe, the effect of disturbances should be, on the whole, to diminish the mean westerly declination, which should therefore exhibit a period of the same duration.

General SABINE remarked on the value of this communication as the condensed result of years of laborious research. In his opinion a request should be sent up from the Committee of the Section to the Committee of Recommendations that it should be printed in *extenso* in the next volume of the *Proceedings* of the Association, as justice could not be at all done to it by the abstract laid before the Section.

'On the Effect produced on the Deviations of the Compass by the Length and Arrangement of the Compass Needles,' by A. SMITH and F. J. EVANS.

'On the Involvement of Axes of Rotation,' by Prof. SYLVESTER.—After a brief statement as to the most general mode of representing the displacement of a rigid body in space by means of angular rotations about six distinct axes fixed in position, it was shown that under peculiar conditions the six axes would become insufficient, being, in fact, equivalent to a smaller number, in which case they would be said to form a system in involution. Various constructions for representing such and

similar systems were stated, and the remarkable conclusion presented, that the necessary and sufficient condition for three, four, five, or six lines being thus mutually, as it were, implicated and involved consists in their lying in ruled surfaces of the first, second, third, and fourth orders respectively. The theory of involution originated with Prof. Mobius, by whom, however, it had been left in an imperfect condition. The author referred for further information on the subject to some recent notes by himself in the 'Comptes Rendus' of the Academy of Sciences of Paris, and to certain masterly geometrical investigations of M. Chasles and Mr. Cayley, to which these had given rise.

'On Curves of the Third Order,' by A. CAYLEY.
'On Definite Integrals,' by BIERENS DE HAAN.—M. De Haan has published several volumes of tabulated integrals.

SECTION D.—ZOOLOGY AND BOTANY.

SATURDAY.

'On the Method of Mr. Darwin, in his Treatise on the Origin of Species,' by H. FAWCETT.

'On a Scheme to induce the Mercantile Marine to aid in the Advancement of Science by the intelligent Collection of Objects of Natural History,' by Dr. COLLINGWOOD.—The author pointed out the advantage which sailors possessed for the collecting of objects of natural history, and at the same time drew attention to the little that is really done by our mercantile marine for increasing our store of objects of natural history.

Mr. THOMSON, of Hull, suggested that a committee should be formed, and that systematic efforts should be made to draw the attention of the proprietors of vessels to the subject.—Dr. LANKESTER believed that nothing short of educating sailors in the elements of Natural History would induce them to collect intelligently such objects as the naturalist most desired. He suggested that the rewards offered by the Committee of Council on Education, by the Science Minute of June 1859, would induce some persons to undertake classes of Zoology in our seaport towns. Already several navigation schools had been established, and he believed if the purport of the Minute were more fully known, it might be made available for obtaining the objects Dr. Collingwood had in view.—The Rev. Mr. HIGGINS, of Liverpool, gave an account of the difficulty there was in inducing sailors to collect.—Mr. J. A. TURNER thought little could be done by men on board our ships, but that the surgeons and officers might be induced to collect. He had obtained in this way a large collection of rare objects in natural history.—Mr. PATTERSON thought that sailors should be taught Natural History. They would then be able to appreciate the difference between valuable and valueless species. He believed that such a pursuit would do much to relieve the tedium of the leisure hours which so often pressed heavily on the sailor.—Dr. WHERRY alluded to the fact that we possessed no good collection of fish in this country, and that sailors might be induced to catch fish and preserve them, till they came home and could dispose of them.

'On the Flora of Manchester,' by L. H. GREEN-DON.—After some observations on the climate and soil of Manchester, the author remarked:—"The positive character of the Manchester Flora consists in the presence of 370 or 380 British plants, which are indifferent to the soil they grow upon, and which clay and sandstone suit as well as any other. These are, of course, the common plants of the country in general; and were it not that the peat-bogs furnish many species peculiar to such habitats, and that the low level of the country and the abundance of moisture combine to the production of innumerable marshy hollows, in which plants are found plentifully that the limestone districts afford penuriously or not at all—were it not for these, the Manchester Flora would be no more than a list of cosmopolites. The ponds of the district, locally called 'pits,' are innumerable. In Cheshire they often become enlarged into beautiful sheets of water, called 'mares,' which greatly enhance the picturesque character of the northern parts of that county. South-east Lancashire contributes also a peculiar class of habitats in its innumerable and very pretty little winding

ravines, locally called 'cloughs,' the sides clothed with trees, and a stream running along the bottom. These, like the marshy hollows, supply many plants in great abundance that districts more favoured in soil and climate fail to offer, and, along with the peat-mosses, supply the principal part of what is locally interesting. Of rare and extraordinary plants we do not possess a single instance, except when they appear, as in other places, adventitiously. We have no permanent treasures or rarities, such as give celebrity to St. Vincent's Rocks, the Great Ormshead, and the Scotch mountains. If a claim to such a character can be asserted by any of our plants, that claim must come from *Carex elongata*. In conclusion, he noticed some of the more remarkable and conspicuous plants of the district. He added that, on a review of the whole subject, it appears that the Manchester district, although exposed to some great disadvantages, is quite as productive of interesting plants as any other. They are fewer in number, and they are less brilliant in appearance; nevertheless, the botanist who would wish to enjoy himself, and to find everything necessary to intimate acquaintance with the types of the British Flora, need not to distress himself at the seeming dearth of Manchester. If he will seek he will find, his reward augmenting in the ratio of his philosophy.

Dr. GIBB read a paper 'On the Arrest of Puparial Metamorphosis of the *Vanessa Antiopa*, the well-known Camberwell Beauty.'

Dr. CLELAND read a paper 'On the Anatomy of *Orthogoriscus Mola*, the short Sunfish.'

A paper was read from Mr. A. STANSFIELD 'On new British Species of Blechnum.'—Prof. BABINGTON said, that in the absence of specimens, it was impossible to say how far the author was right in his conclusions.

SECTION E.—GEOGRAPHY AND ETHNOLOGY.

SATURDAY.

'On the Osteology and Dentition of the Natives of the Andaman Islands,' by Prof. OWEN.—Prof. Owen commenced by a brief notice of the geography of the Andaman Islands, and condensed an account of the physical characters and habits of the natives, from the Reports of the able superintendents and surveyors of the convict settlements, recently established by the East Indian Government on these Islands: quoting more particularly from the statement of a Brahmin Sepoy, one of the transported mutineers, who, after escaping from the convict establishment, passed upwards of a year (from April 23, 1858, to May 17, 1859), with a tribe of Andamaners. His statement accorded with previous accounts, that the diminutive black aborigines of these islands have no notions of a Deity, of spiritual beings, or a future state; that both sexes go naked without any sense of shame. There is promiscuous intercourse, save with the parent, which only ceases in regard to the woman when she is allotted as wife to a man, but is retained as the prerogative of the male sex. "It is impossible," writes Dr. Mouatt, Inspector-General of Jails, Calcutta, "to imagine any human beings to be lower in the scale of civilization than are the Andaman savages. Entirely destitute of clothing, utterly ignorant of agriculture, living in the most primitive and rudest form of habitations, their only care seems to be the supply of their daily food."† The chief weapons of the Andamaners are bows and arrows; some of the males also carry a kind of spear. Scarification of the skin in certain maladies, tattooing, and shaving of the scalp, are performed with chips of glass skillfully detached from bottles cast ashore after wrecks, by sharp blows with a stone. The iron with which the arrows and spears are headed is also obtained from wrecks. The Andamaners appear to be devoid of fear: they are powerful for their size, can carry greater burthens than the Hindoos; are swift runners, and clear rapidly, by jumping, the fallen trees of the jungle and rocks of the tidal shore. As climbers they are little inferior to monkeys, being used from childhood to climb the lofty, straight, unbranched trees of the forest in quest of fruit and honey. They are excel-

lent swimmers from their childhood, and wonderful divers, "fishing for shell-fish in deep water." "I have seen," deposes the Sepoy, "three or four of them dive into deep water and bring up in their arms a fish six or seven feet in length, which they had seized."—"They could perceive canoes approaching long before they were visible to me, and could see fruits and honeycombs in the jungle which I could not. Their vision penetrates to great depths in the sea, where they could see and shoot fish with arrows, when the object aimed at was not apparent to me. They see well at night, catching fish in the pools left by the tide at that season; and shooting the wild pigs which came to the coast to drink by night." By their acute sense of smell they often detect afar off the existence of fruit in the neighbouring lofty trees. "I never met with any one affected with gonorrhoea, syphilis, itch, piles, small-pox, or goitre; but I have seen them affected with vomiting, colic, diarrhoea, intermittent fever, head-ache, ear-ache, tooth-ache, abscesses, rheumatism, catarrh, cough, painful and difficult respiration. The only remedies I have seen used are 'red earth rubbed up with turtle oil,' a cold infusion of certain aromatic leaves, the wetted leaves being applied to the head or other inflamed parts, and local bleedings by sharp splinters of bottle glass." They spin ropes; make wicker baskets, large nets for catching turtle—smaller nets for catching fishes; and they scoop out their canoes by means of a small kind of adze, tipped with a semicircular blade of iron. Thus, for all their immediate wants, invention has supplied the instruments called for by the nature of the surrounding objects and sources of food. But their life is little beyond that of the brute animal; and the low grade of humanity with the dwarfish stature and black colour of the Andamaners have always made a further knowledge of their physical characters peculiarly desirable.—Prof. Owen was enabled to contribute the present notice of the osteological and dental characters, by the opportunities kindly afforded him by Dr. Fred. J. Mouatt, Inspector of Indian Jails, who had brought over the bones of an adult male native of the Andamans, now presented by Dr. Mouatt to the British Museum. The bones presented a compact sound texture, with the processes, articular surfaces, and places of muscular attachments neatly defined. The cranium is well formed, not exceeding disproportionately in any diameter, it might be classed with those of the oval type. The frontal region is rather narrow, but not low; it passes by a regular curve upward and backward to the vertex. The frontal, much of the sagittal, and the upper part of the coronal sutures were obliterated. Part of the lambdoidal suture was very complex. The alisphenoid joined the parietal on both sides of the head. The glabella is but little prominent; the nasals are not flat, but are moderately developed. The alveolar parts of the upper and lower jaws slightly project. The chin is a little produced, and is not deep. The malar bones are not unusually prominent. The cranial bones are not above the average thickness. The following were the principal dimensions of this cranium:—

	In.	Lin.
Length, from inion to premaxillary border (178°0)	7	0
Do. from do. to glabella (160°0)	6	4
Breadth of the cranium (144°0)	5	4
Circumference of the cranium (409°0)	19	6
Ante-posterior diameter of the interior of the cranium (150°0)	5	9
Transverse diameter of ditto (145°0)	5	7
Vertical diameter of ditto (115°0)	4	6

—The spine of the occiput is not so developed as to interrupt the convex contour of the occipital part of the skull; the lower occipital crest is rather more developed than the upper one. The mastoids are moderately developed; there is no super-mastoid ridge. The base of the skull offers all the strictly human characteristics. There is no excess in the size of the orbits or of the auditory apertures; a sharp ridge projects from the lower boundary of the anterior nares. The lower jaw shows a variety in the shape of the coronoid process, which is occasionally seen in Europeans; it is broader and lower than usual; the front border is more convex at its upper half, and forms, with the concave lower part, a deeper and more decided sigmoid curve. The

ascending ramus forms a less open angle with the horizontal ramus than in most Negro and Australian skulls. The teeth equal in size the average of those of Indo-Europeans; they correspond in this respect with those of the European figured in the author's 'Odontography,' plates 118 and 119. Although they are large in proportion to the size of the jaws, they are markedly smaller than are those of the Australian figured in the same plates. In the upper jaw of the male Andamaner, the true molars, as in most Europeans, diminish in size from the first to the third. The fissure which penetrates the grinding surface from the outer side, to the middle of the crown, had its end unobliterated in m 1, and retained its whole length in m 2. The enamel was worn from the inner half in both teeth, but in a less proportion in m 2; it was also slightly worn from the outer tubercles in m 1. The degree of abrasion of the teeth, according to the age of the individual, is such as might be expected from the mastication of a diet consisting chiefly of fish and fruit. In the lower jaw the denture is exposed on the three outer tubercles of m 1; the crucial figure is not obliterated in m 2; m 3 is larger, as usual, than in the corresponding tooth above. The upper premolars are implanted by a fang which is divided at its base into an outer and an inner root. The undivided fang of the lower premolars is longitudinally grooved on the outer side. In the upper jaw m 1 and m 2 are implanted by two outer and one inner roots; m 3 by one antero-external and one postero-internal root. All the lower molars have distinct anterior and posterior roots. There was no irregularity in the position, nor any sign of decay in the teeth. All the bones of the trunk and limbs presented the specific and generic characters of *Homo sapiens*, Linn. The sigmoid flexure of the clavicle was well marked. The scapula agrees with that variety of form which shows a minor extent of the supra-spinal tract, and a greater breadth of the lower part of the sub-spinal tract, with a more produced angle between the surfaces for the teres major and teres minor muscles, on the inferior costa. The inferior costa describes a continuous concave curve from the angle to the base of the coracoid, without any supra-scapular notch. The os innominatum, calcaneum, astragalus, and bones of the hallux, contrasted as strongly with the quadrumanous characters of those bones as in the highest of the human races. The first lumbar vertebra had the diapophysis, metapophysis, and anapophysis distinct, and almost equally developed, and well illustrated the true serial homology of the longer diapophysis of the succeeding lumbar. In many European skeletons the diapophysis of the first lumbar vertebra are more developed than in that of the Andamaner. The ridges, processes, and surfaces for muscular attachment are well and neatly defined on the several limb-bones of this skeleton; and agree with the character for agility in running, climbing, and swimming, assigned to the Andaman race. The following were the dimensions of the principal limb-bones:—

Scapula.

	In.	Lin.
Length from end of acromion to inferior angle	7	1
Breadth from upper and outer angle to lower border of glenoid cavity	4	0

Os Innominatum.

	In.	Lin.
Length	7	7
Breadth of ilium	5	5

	Humerus	Ulna	Radius	Femur	Tibia	Clavicle
	In.	Li.	In.	Li.	In.	Li.
Length	12	2	10	8	9	11
Transverse diameter of upper end	1	10	1	2	0	10
Ditto of middle	0	9	0	6	0	6
Ditto of lower end	2	1½	0	9	1	3
					2	9
					1	10

The above dimensions of parts of the skeleton indicate that they are from an individual of 4 feet 10 inches in height. The Andamaners, or Minicopie, are called by most of the observers who have described them "Negrillos," or dwarf Negroes. They have no knowledge, and appear to have no idea, of their own origin. It has been surmised that they may be descendants of African Negroes,

† Selections from the Records of the Government of India, No. XXV., 'Andaman Islands,' Preface, p. vi.

imported by the Portuguese for slave labour in their settlement at Pegu, and which had been wrecked on the Andamans. But the recorders of this hypothesis allude to it as a mere hearsay, "We are told that when the Portuguese," &c. (*Calcutta Monthly Register, or India Repository*, November, 1790, pp. 15-17). Neither the skull nor the teeth of the male Andamaner above described, offer any of the characters held to be distinctive of the African Negroes. The cranium has not the relative narrowness ascribed to that of the Negro; it presents nothing suggestive of lateral compression; it conforms to the full oval type, with a slight degree of prognathism, and is altogether on a smaller scale than in the Indo-European exhibiting that form of skull. It is to be presumed that the Portuguese would import from the Guinea coast, or other mart of Negro-slaves, individuals of the usual stature, and it is incredible that their descendants, enjoying freedom in a tropical locality affording such a sufficiency and even abundance of food as the Andamans are testified to supply, should have degenerated in stature, in the course of two or three centuries, to the characteristic dwarfishness of the otherwise well-made, well-nourished, strong and active natives of the Andaman Islands. Prof. Owen concludes, therefore, that they were aborigines; and merely resembled Negroes in a blackness of the tegumentary pigment, which might be due to constant exposure in such a rude and primitive race. Their prognathism is not more than is found in most of the Southern Asiatic peoples, and indeed in the lower orders of these in all countries, and may be due or relate to the prolonged sucking of the plastic infant. The observation of the hair of the scalp, which we must suppose to be unsatisfactory or insufficient in regard to a race that habitually shaves or eradicates the hair, were it exact in regard to the crisp, curly, or woolly character of the hair, would show a resemblance of the Andamaners to the Papuans and Australians, as well as to the African Negroes. But the skull and dentition of the Andaman male is still more distinct from the Papuan-Australian type than from that of the West-coast Negro. There is no supra-nasal ridge due to a sunken origin of the flattened nasal bones; neither the malar nor zygomatic arches show the strength and prominence that mark them in the Australian male; there is no excessive size of molar or other teeth. From the present opportunity of studying the osteology and dentition of the Andamaner, the ethnologist derives as little indication, or ground of surmise, of the origin of the race in question, from an Australasian as from an African continent: and there is scarcely better evidence of his Malayan or Mongolian ancestry. Prof. Owen was not cognizant of any anatomical grounds for deriving the physical Andaman people from any existing continent. But in making these remarks he intended no encouragement to a belief that they originated in the locality to which they are now limited. Dr. Latham states that "their language shows them to belong to the same division with the Burmese of the opposite continent." These, however, show the average stature of the southern Asiatic men. And it would be as pure assumption to affirm that they had been derived from the Andamaners, as that these were degenerate descendants of the Burmese. Combined geological, geographical, and zoological researches have made us cognizant of the fact of the formation and destruction of continental tracts of land in the known course of the earth's period of existence. The Andaman Islands, like Java, Sumatra and Ceylon, may have been parts of some former extent of dry land, distinct from, and perhaps pre-existent to, that neighbouring and more northern continent which has been the scene of the elevation of the Himalayan range of mountains, in part,—perhaps a great part,—within the tertiary period. The Andamans are forty miles distant from the nearest islands—the Cocos—on their north, and seventy-two miles distant from the Nicobar Islands on their south. There is a mountain 2,400 feet in height, called "Saddle Peak," probably volcanic, on the main island; and there is a volcanic island in the vicinity, called "Barren Island," with an active volcano. The whole of the shores of the

Andamans are skirted by continuous coral reefs. It is plain that the Andamans are the active seat of those causes that influence the change in the relations of land to sea. We should, doubtless, err, therefore, in any speculation on the origin of their population, if we were to assume that the Andamans were such as they now are when they received their first human inhabitants. The cardinal defect of speculators on the origin of the human species is, the assumption that the present geographical condition of the earth's surface is anterior to, or, at least, co-existent with, the origin of such species. The Monogenist, on that assumption, bent on tracing all human races from one source and one existent centre, exaggerates the application and value of casual remarks, to show, for example, that "the Australians are not a pure race, but hybrids between true negroes and a Malayan, or yellow race (see Quatrefages, 'Unité de l'Espèce Humaine,' 12mo., 1861, p. 133). And the Polygenist invokes a separate creation of each race for each existing continent, or island-home of such race. The Andamaners are, perhaps, the most primitive, or lowest in the scale of civilization of the human race. They have no tradition, and as had been before remarked, apparently no notion of their own origin. Finding in their bows and arrows, and their hand-nets, implements that answer for acquiring the principal articles of food which their locality yields, they have carried the inventive faculties no further. At best, they may have availed themselves of the wrecks during the last century or two of their insular existence to barb their arrows with iron instead of fish-bone, and to get from broken bottles such trenchant fragments as our oldest known Europeans obtained from broken flints. The animal appetites are gratified in the simplest animal fashion; there is no sense of nakedness, no sentiment of shame. The man choosing promiscuously for one or more years after puberty, then takes, or has assigned to him, a female who becomes his exclusive mate and servant, and the reason assigned for this monogamy is that, though she be restricted, he may continue to select from the unmarried females as before. The climate dispenses with the necessity of any other protection of the body than a paste of earth and oil. Any rudiment of a cincture relates solely to the convenience of the suspension of weapons or other portable objects. They are not cannibals. Implacably hostile to strangers, the Andamaners have made no advance in the few centuries during which their seas have been traversed by ships of higher races. Perhaps the sole change is that of the materials for weapons derived from casual wrecks, to which allusion had already been made. Enjoying, therefore, the merest animal life during those centuries, why, asked the author, may they not have so existed for thousands of years? The conditions of existence being such as they now enjoy, on what can the ethnologist found an idea of the limitation of the period during which the successive generations of Andamaners have continued so to exist? Antecedent generations of the race may have co-existed with the slow and gradual geological changes which have obliterated the place or continent of their primitive origin, whatever be the hypothesis adopted regarding it. In every essential of human physical character, the present Mincopie, or Andamaners, participate with their more gifted brethren; they approach the Orangs and Chimpanzees only in their diminutive stature; but this is associated with the well-balanced human proportions of trunk to limbs: they are, indeed, surpassed by the great Orangs and Gorillas in the size of the trunk and in the length and strength of the arms, in a greater degree than are the more advanced and taller races of mankind.

'A Letter from the Colonial Office, on the Exploration of N.W. Australia, under Mr. Gregory.'

'An Appeal on behalf of the only Son of the Great Traveller, the late T. Atkinson, Esq.,' by Sir R. I. MURCHISON.—Sir R. I. Murchison said that Eastern Siberia and the Great Steppes beyond it, were explored a few years ago by that remarkable and enterprising traveller, Thomas Atkinson, who once lived in Manchester, and had built one very good church here, and whose skill and taste

as a landscape-painter were well known—who had directed his enterprise for a series of years to the exploration of those remarkable regions of Mongolia and the eastern steppes of the Kirghis. The volumes which he had published had been received with much approbation by the public, and had been read with much avidity; and he had thrown much light on tracks in which he might venture to assert not only no Englishman, but scarcely any European, had previously trod. He knew of no traveller that had penetrated where this remarkable man had been. In his travels he had a spirited wife, who accompanied him throughout; and, at the foot of one of those desolate mountains, the Alatau (in the Actau range, in the middle horde of the Kirghis, and near the celebrated spring Tamschiboulac), she gave birth to their only son, now twelve years old, who, by the lamented death of Mr. Atkinson, at Walmer, only a few weeks ago, was left in a state of want; for Mr. Atkinson did not travel at the expense of either the Russian or the British Government, but entirely at his own cost, and had expended his little means in his extraordinary journeys. It therefore occurred to him to make some appeal to the public in order to establish a fund to help on the education of that fine boy, who in commemoration of his having been born in such a remarkable spot, had been named Alatau Tamschiboulac Atkinson. They were of course exceedingly anxious that this young man, with so remarkable a geographical name, should in future life prove equal to his father; and in order to enable him to do so, the first thing was to give him a good education. Therefore was made this little appeal. Subscriptions would be received in London, at the rooms of the Royal Geographical Society, 15, Whitehall Place, and by the bankers of the Society, Messrs. Cocks & Biddulph, Charing Cross; and in Manchester by Dr. Shaw, the Secretary of the Geographical and Ethnological Society, as well as by the local treasurers of the British Association. — The following subscriptions were then announced:—Sir R. I. Murchison, 20*l.*; W. Fairbairn, Esq., 10*l.*; J. Craufurd, Esq., 5*l.*; C. White, Esq., 10*l.*; W. Spottiswoode, Esq., 5*l.*; and H. D. Seymour, Esq., M.P. 5*l.*

A Letter from Sir Hercules Robinson, Governor of Hong Kong, relating to the Progress of Major Sard, Capt. Blakiston, and others, who are endeavouring to pass from China to the North of India.

'On the Mountains forming the Eastern Side of the Basin of the Nile, and the Origin of the Designation "Mountains of the Moon" as applied to them,' by Dr. BEKE.—This paper was in continuation of the author's communications to the British Association in the years 1846, 1848 and 1851. It commenced by stating that the great additions made to our geographical knowledge since the date of the author's previous communications have all tended to establish the substantial truth of the opinions therein expressed. In 1846 Dr. Beke described the Abessinian table-land as having its summit-line towards the sea-coast, and thence falling gradually towards the Nile; which river skirts the western flank of the high land, and is the sink into which all the rivers flowing over the table-land are received. The fall of the Nile is so small, that Dr. Beke estimated its absolute elevation in the fifth parallel of north latitude at not more than 2,000 feet. It is now found that at Gondokoro in 4° 44' N. lat., the elevation of the bed of the Nile is only 1,911 feet. On the other hand, the mountain-range of Eastern Africa, forming the anticlinal axis between the ocean and the basin of the Nile, which in 1846 could only be traced as far as 9° 30' N. lat., may now be regarded as extending beyond the sixth parallel of south latitude, in a line running from N.N.E. to S.S.W., between the 40th and 35th meridians. It was next stated that the Snowy Mountains, Kilimanjaro, Kenia and Doengo-Engai, which in 1846 were unknown, are portions of this mountain-range of Eastern Africa, to which Dr. Beke attributes the name of the "Mountains of the Moon," the snows of which are described by Ptolemy as flowing into the lakes of the Nile; the lakes intended being Nyanza and Tanganyika, recently discovered by Captains Burton and Speke. With reference to the derivation of the designation "Mountains of

the Moon" from the name of the country Unyamwezi, in the vicinity of those lakes, the author showed in the first place how the Indian name of the island of Java—Java-dive—was translated into Greek *Κριθής νήσος* or *Barley Island*, just as the Latin name of the Etruscan city and port of Luna was translated *Σελήνη*; though there is reason for believing that such significations did not belong to the words *Java* and *Luna* in their respective aboriginal languages, but were merely mis-translations by the Indian conquerors of Java in the one case, and by the Romans in the other. In the same way, it was contended, the native African name Unyamwezi, having become known to the Greeks through the Sawahilis, or people of the coast, in whose language *muwezi* means *moon*, was supposed to have some connexion with the name of that planet. Dr. Beke argued, however, that *Mwezi*, as a component part of the name Unyamwezi, does not necessarily mean *moon* in the aboriginal language of the country. All the Kafir tongues have certain prefixes, distinguishing singulars from plurals, adjectives from substantives, and one kind of substantive from another. Thus, Ki-Nyamwezi is the language spoken by the Wa-Nyamwezi people, who dwell in the country called U-Nyamwezi, one of those people, being a M'-Nyamwezi or Mu-Nyamwezi, (whence our "Monomoezi"). Thus, it appears that the root is not *Mwezi*, but *Nyamwezi*; and though it may be that the natives themselves never use the root without some prefix, strangers might not unreasonably do so, and even contract Nyamwezi into Mwezi as the Sawahilis and Arabs, according to Captain Burton, actually do; and from this contraction, the translation into the Greek *Selene* would have followed as a matter of course. What the theoretical root may mean in the Nyamwezi language has yet to be ascertained. Meanwhile the rendering of Unyamwezi into "Possession of the Moon," or "Land of the Moon" appears to be purely hypothetical. Should it prove to be erroneous, the designation "Mountains of the Moon," as applied to the great mountain-range of Eastern Africa, in which are the sources of the Nile, will have originated in a mistranslation. Still, that well-known name has been in use during so many ages, that it could hardly be practicable, and certainly would not be judicious, to supersede it now. The paper concluded thus:—"The entire eastern side of the basin of the Nile appears to be auriferous, the gold collected in various parts of it since the earliest ages, being brought down by the tributaries of that river, so that there is reason to consider the Mountains of the Moon as a meridional metalliferous cordillera, similar in its general character to the Ural and the corresponding mountain-ranges of America and Australia. Whenever the discovery shall be made in Eastern Africa of some of the chief deposits of that precious metal, the influx from all parts of the civilized world to the 'diggings,' in the Mountains of the Moon will be such as to occasion a more rapid and complete revolution in the social condition of those hitherto neglected regions, than could be caused by commerce, by missionary labours, by colonization, or by conquest; as we have witnessed in other parts of the globe, where the *auri sacra fames* has collected together masses of the most hardy and energetic of human beings. We shall then, too, doubtless see in Eastern Africa, as in California and in Australia, the formation of another new race of mankind."

'Notice of a Volcanic Eruption on the Coast of Abessinia,' by Dr. BEKE.—During the night of the 7th or morning of the 8th of May, 1861, a volcano eruption took place from Djebel Dubbeh, in about 13° 57' N. lat., and 41° 20' E. long., accompanied by loud shocks resembling the discharge of artillery and immense clouds of dust. The noises were distinctly heard both at Massowah and at Perim, places nearly 400 miles apart, and the dust fell for several days over a vast extent of the Red Sea, and on the coast of Arabia as far as the mountain-range of Yemen. At Edd, on the Abessinian coast, a day's journey from Djebel Dubbeh, the dust was knee-deep, and its fall during the first day caused total darkness. The eruption continued at intervals for three or four days. There is no remembrance of any previous eruption. Djebel

Dubbeh is distant about 230 miles, in a direction almost due north, from the great extinct volcano Aiyalu or Azalo, mentioned in Dr. Beke's paper 'On the Mountains forming the Eastern side of the Basin of the Nile,' and, like Aiyalu and also Kilimandjaro, it forms a portion of the mountain-system to which he attributes the designation of the Mountains of the Moon.

'Cromleachs and Rocking Stones considered Ethnologically,' by P. O'CALLAGHAN.

'Remarks on the English Gipsies and their Dialects,' by C. SMART.

SECTION G.—MECHANICAL SCIENCE. SATURDAY.

Dr. EDDY read 'A Proposal for a Class of Gunboats capable of engaging Armour-plated Ships at Sea, accompanied with Suggestions for fastening on Armour-Plates.' He considered that the monster iron-clad vessels which we and our neighbours were building might be successfully assailed by vessels of very inferior size specially designed for the purpose. The first essential condition of such vessels was superiority of speed, and so protected as to approach them without being crippled; and he believed that one such vessel with a couple of heavy guns might so harass a larger vessel as to paralyze her movements, and that two such vessels might even engage with advantage; and, if this was so, might not a flotilla of these small vessels advantageously engage a fleet of the large iron-plated ships? To obtain superior speed, we must either sacrifice weight of metal or increase the size. He preferred the former, and by reducing the armament to a very few guns—two or four,—and those of the powerful kind now manufactured, he thought we might obtain the required speed within moderate dimensions; and he hoped to show that, by a peculiar adjustment of material, we might gain all the protection required, without immoderate weight. Much of this problem had indeed been worked out by Capt. Coles, of whose cupola, the conical fort, with revolving shield, in the model produced, was a modification. A speed of sixteen knots an hour would, he believed, be sufficient for present purposes, and he took it that this speed might be secured without difficulty in a vessel of fine lines, and of certain proportions, without tremendous size. Dr. Eddy proceeded to describe from a model the kind of gunboat he proposed to build. The dimensions, he said, were calculated from one datum, namely, the least elevation above water at which the guns could advantageously be laid, which he took to be 8 feet. In this position, then, he would place two of the heaviest Armstrong guns, with their muzzles 4½ ft. apart, on an inclined slide, upon a turn-table placed within a fixed conical fort, armour clad, the sides of which sloped at an angle of 45°. Above this, for a perpendicular height of four feet, he would protect the guns and gunners with a shield of iron plate, also at an angle of 45°. The shape of the fort would be a truncated cone on a cylinder, like an extinguisher upon a candlestick. A second cupola he believed might be added, and this would give an armament of four guns, which, if concentrated upon one point at short range, must have a crushing effect. But, to be of any use, the smaller vessel must be enabled to approach her large antagonist without risk of having a shot sent through her bottom from the enemy's depressed guns. The manner in which he proposed to fortify the gunboat was by keeping all the vital parts well below the water-line, and covering them with a deck which would deflect upwards any shot that might reach it. As the boat was only intended to attack ships, not forts, he presumed there was no need to apprehend a shot striking her at a larger angle with the horizon than 7°. Still at this angle, to protect the sides of the vessel effectually, the armour must be carried at least 4 ft. above water and 3 ft. below, possibly more; but as this involved a weight of 300 tons in plating alone, some other method of protection must be sought. He hoped he had found this desideratum in a plan which aimed at carrying out thoroughly the principle of deflexion. His plan consisted of an arched deck of inch iron resting upon two courses of timber, the extremities of the arch being tied, so as to neutralize the outward

thrust. He proposed that this should spring at the sides from three feet below the water-line, and that the crown should rise amidships up to the water-line, the crown being kept tolerably flat, the object being to present so small an angle that even a flat-headed bolt should glance off. The space above the deck and between it and the water-line he proposed to pack with some tough and resilient but light fibre, and these qualities he found combined in the cocoa-nut fibre, which could be easily rendered incombustible by sal-ammoniac. This fibre would offer a considerable amount of resistance to the penetration of a shot, and in proportion to the resistance would tend to deflect the shot. The exact amount of resistance which this mode of packing would afford could not be ascertained without experiment, but the trial would not be expensive. He might be met with the objection, that steel or iron was the substance which offered the greatest amount of protection proportionate to its weight. Granting this, he maintained that there were circumstances under which iron alone could not be advantageously used, and that this was one. Dr. Eddy alluded to the difficulty now felt in securing the iron plates on the sides of the vessels without weakening them by perforating holes, and he mentioned a plan of screwing the plates within a rail-shaped frame, which he said he had been encouraged by Mr. Fairbairn to lay before the Section, and which he thought would obviate the difficulty.

Capt. BLAKELY, R.A., then brought forward his paper 'On Artillery versus Armour.'—He said it was now four years since he first developed at Dublin his ideas with reference to the strength and extent of range which might be obtained with a particular description of cannon. He was happy to think that the principle he then contended for had since been recognized by both the English and Spanish Governments to be correct. With great deference to the opinion of Sir William Armstrong, he must state, as the result of his experiments, that nearly every kind of steel he had used was better than every kind of wrought iron. Cast iron, where weight was no objection, he found to answer admirably. Capt. Blakely exhibited the drawing of the new Spanish gun, and explained its construction. The diameter of the bore was between six and seven inches; more than half of the gun, he said, was of cast iron, the upper portion of the breech only being formed of rings of steel. Extensive experiments had been made to determine the proper degree of tension for these rings, because on that point depended the efficiency of the gun. If the rings were too tight, they burst before the central part, and if they were too loose the central parts burst first, and perhaps left the rings whole. He did not think that any limit could be assigned as to the size which would be reached in the manufacture of guns. The whole question of armour hung on the cannon which it had to resist. He had read that Sir William Armstrong was engaged in the manufacture of a 300 lb. gun. He (Capt. Blakely) was trying to make a 600 lb. gun, and by using wire he did not think there was any insurmountable difficulty in making a 6,000 lb. gun, or even a 60,000 lb. gun. He believed it could be done, and if it could be done anywhere it was in England. The construction he would propose was that to which Sir W. Armstrong alluded and approved of on the previous day, the coiling of steel wire round a central cylinder. With a 600 lb. gun of this construction the iron plates would have no chance.

The CHAIRMAN remarked that they had better confine their attention to the 200 lb. gun, which was all they had got at present.—Capt. BLAKELY admitted that with the 200 lb. gun the iron plates would have the best of it. He had offered over and over again to make a gun of the description he had named at his own expense and place it at the service of the Government for trial, and the offer had been refused. With all respect, he must remark that it was not philosophical for the Government to refuse his oft-repeated offer, and to go on building ships with the conviction that such guns could not be made. He, however, announced that since the last Meeting of the Association the Ordnance Select Committee had acknowledged the

correctness of his theory that in building up cannon each layer must have a definite strain; he therefore asked the Meeting to place some confidence in his assurance that guns could and would be made to smash any armour-plate which a ship could carry.

Mr. FAIRBAIRN, President of the Association, as one of the Committee (of which Sir J. D. Hay was chairman) appointed to conduct the experiments at Shoeburyness, gave some of the results of the experiments made. Apologizing for his not having been able to prepare a written report, he stated that one of the results of the experiments made was to convince him that, though we had very good iron in this country, yet he did not think that the quality of the wrought iron was quite so good as some produced in other countries. The iron itself was good, but it had not that uniformity of texture which was obtained in foreign countries. Our iron-masters, he believed, were bestowing attention on the subject, and in a short space of time would, he believed, be able to produce such plates as would have a fair chance of resisting such artillery as Sir William Armstrong's. It was the intention of the Committee to do everything they could to resist Sir William Armstrong, and he on his part would of course do everything he could to smash them up. In the case of armour-plated ships, it was not only necessary to have plates of sufficient thickness, but to have sufficient resistance behind to resist the deflexion caused by the shot. In the *Warrior* and the *Black Prince* wood was used for this purpose. His own opinion was, that wood was entirely unnecessary, and that every part of the vessel above the water line would be better of iron. Experiments had been made to test the velocity of the shot from the Armstrong gun, and it was found to be about 1,100 feet per second. Mr. Fairbairn referred to the necessity of securing toughness and homogeneity in the plates, and also the desirability of securing a better mode of attachment than the present system of using bolts or screws. They had tried experiments with a target composed of iron bars; but they found that the resistance offered was not nearly so great as by the iron plates. The experiments would be continued, and in a few months the Committee hoped to arrive at a definite result with regard to the proper thickness of the plates, the mode of attachment, and the quality of the iron.

On the Iron-cased Ships of the British Admiralty, by E. J. REED.—He enumerated and described the vessels at present constructed; and stated that the construction of six other vessels had been determined upon, the contracts for three of this number having already been issued. It was important to observe that, notwithstanding the long delay on the part of the Admiralty before they commenced the construction of vessels of this class, the determination of Parliament to have a fleet of iron-cased ships had even now overtaken the Admiralty, and no experiments on a large scale had yet taken place. The great expense it would be necessary to incur to conduct target experiments on a large scale had probably much to do with the delay. A committee of eminent ship-builders had lately estimated that the cost of a target large enough to test half-a-dozen modes of construction would be no less than 45,000*l.*, and another 45,000*l.* would have to be expended in the construction of a floating hull on which to place the target. The three new ships in course of construction would be twenty feet longer than the *Warrior*, fifteen inches broader, 582 tons additional burthen, and 1,245 tons additional displacement; and as the displacement was the actual measure of the ship's size, they would thus be more than 1,000 tons larger than the *Warrior*. As the engines of the new vessels were only to be of the same power, their speed would probably be much less than that of the *Warrior*. This diminished speed was one of the penalties we must pay for clothing both extremities of the vessel with iron plates. Another penalty would probably be a great tendency to chop and plunge in a sea-way. The cost of these new vessels would exceed the cost of those of the *Warrior* class by 20,000*l.* or 30,000*l.* They would certainly be noble specimens of war ships. A vessel built throughout of iron 400 ft. long and nearly

60 ft. broad, enveloped from end to end in armour impervious to all shell and to nearly all shot, furnished with the most powerful ordnance, with ports 9 ft. 6 in. above the water-line, steaming at a rate of 12 or 13 knots an hour, would indeed prove a most formidable engine of destruction. If the present intentions of the Admiralty were carried out, we should have six of such vessels added to the Navy in the next year or two. In vessels of this kind all beautifying devices must be dispensed with. Their stems were to be upright, or nearly so, without that forward reach, the "knee of the head," which added so much to the beauty of the present vessels. Their stems would also be upright, and as devoid of adornment as the bows. It should also be stated, as a distinguishing mark of these six ships, that their thick plate would not be extended to the bow at the upper part, but would stop at the junction with the transverse plated bulkhead, some little distance from the stem, and this bulkhead would rise to a sufficient height to prevent the spar deck from being raked by shot. They would be armed with fifty 100-pounder Armstrong guns, forty on the main deck and ten on the upper. It was not yet determined, he believed, whether these new ships were to be backed up with teak, as in the previous ships, or whether the plates should be 6½ inches thick, without wood. This would not be decided upon until after the termination of the experiments with the large targets suggested by the President and others. All that was yet definitely determined was, that whether the armour be made of iron alone or of iron and wood, its weight should be equal to iron plates 6½ inches thick. He now came to notice a very different class of vessels, of which the hull was mainly timber with armour plated upon it. The Royal Alfred, Royal Oak, Caledonia, Ocean and Triumph were all vessels of this class. Their length was to be 272 feet, breadth 58 feet, and displacement, 6,839 tons. Each would be fitted with engines of 1,000 horses' power. They were formed with timber originally designed for wooden line-of-battle ships, but had been lengthened 18 feet. The whole of these ships, it was believed, as well as the iron-plated ships, would match *La Gloire* in speed, provided they were fitted with the engines at first proposed. It was necessary to make this proviso, because there was a probability of smaller engines being put into some of them. He could not pretend to compare the French and English ships with each other in detail; but he might mention that a friend of his, who had just returned from France, had furnished him with the dimensions of the *Solférino*, one of the largest of the French iron-cased ships, as follows:—Length 282 feet, breadth 54 feet, draught of water 26 feet, burthen 6,820 tons. The vessel will be plated with 4½-inch plates, right fore and aft at the water-line, and over two decks amidships. With reference to the cost of iron-plated vessels, Mr. Reed said that, assuming the average cost of the ships to be 50*l.* per ton, and the engines 60*l.* per horse-power, then the eighteen ships which we were now building would cost about 4,700,000*l.*, and their engines above 1,150,000*l.*—together nearly 6,000,000*l.* sterling; and when masted, rigged and fully equipped, 8,000,000*l.* would have been expended upon them. He referred, in conclusion, to the extensive dock changes which this revolution in ship-building rendered necessary, and urged the serious importance of at once supplying increased dock accommodation in the South of England for these ships. He argued that whether in peace or in war such accommodation would be required; that it would be in the highest degree perilous longer to defer the establishment of colossal docks on the Southampton Water; and in some other favourable places. At present we had no docks fitted in all respects to receive such ships, whereas the French had many. Mr. Reed contrasted the English and French docks; and stated that it had been proposed to increase the French works by the establishment of an immense steam arsenal, protected by a series of impregnable fortresses at Lezardrieux.

A vote of thanks to the readers of the papers, proposed by the CHAIRMAN, was carried by acclamation.

Sir J. D. HAY rose, at the request of the President

of the Association, to supplement his remarks on the Experiments at Shoeburyness with some observations of his own. The Committee, he said, in order to ascertain the best quality of material, the best thickness of metal, and the best mode of manufacturing iron plates, invited the leading manufacturers of the country to place before them specimens of iron plates which they considered best adapted for the purposes required. Plates, varying in thickness from ½ inch to 10 inches were sent in. The Committee found on making experiments, that the steeley description of metal, that was to say, metal which had been hardened, and went by the names of semi-steel, homogeneous iron, &c., up to a thickness of ¾ in., possessed great resisting powers, but after that thickness, this description of metal was not so well qualified to resist a blow of a projectile as wrought iron of the best kind. This having been ascertained, another law had been pointed out to them which they were not yet in a position fully to recognize. It was that the resistance of the plating increased with the square of its thickness. Thus, if the resistance of a plate one inch in thickness was equal to one, the resistance of a plate two inches in thickness would be four; four inches in thickness, 16; and six inches in thickness, 36. Considerable difficulty was felt in fastening the plates upon the sides of the vessels, as it was felt that all holes drilled in them were a source of weakness. Mr. Scott Russell had a plan of fastening the plates, which, perhaps, he would explain to the Meeting. Their great fear was not of a solid missile being driven through the ships' sides, but of the possible materials the shot might contain. They could scarcely hope effectually to exclude cold shot, but they did think it was possible so to construct a ship and so to plate it, that a hollow missile impinging upon its sides would be broken to pieces, and consequently they hoped to be able to exclude all shells, red-hot shot and shot filled with liquid iron, which were amongst the most terrible weapons of modern warfare. In the course of their experiments they had tried the effect of the shells upon an old brig, the *Husar*. At the twelfth round the brig was on fire beyond the possibility of extinction. He thought it a misfortune that the stem and stern of the *Warrior* were not better protected—and the steering apparatus was placed in that part of the ship from which the missiles were scarcely excluded at all. He thought it a wise determination on the part of the Admiralty to convert the wooden line-of-battle ships laid down into armour-plated vessels of great size and speed. In the course of the Shoeburyness experiments they had found that at whatever angle the targets were placed the fracture made by the Armstrong gun was just as large, though it differed somewhat in shape, according to the angle. He could only account for this fact by supposing that the damage was done by the instantaneous concussion, and not by the shot boring or punching a hole through.

Mr. T. ASTON read a paper 'On Elongated Projectiles for Rifled Fire-arms.'—After alluding to the improvements that have been made in war projectiles, which have resulted in the elongated form, he proceeded to notice the advantages which it possesses over the old spherical shape. The elongated projectile, presenting to the resisting atmosphere a sectional area considerably less than the spherical of the same weight, is less retarded in its progress through the air. It follows, therefore, that although the spherical projectile with a similar charge of gunpowder is more easily set in motion, and has a greater initial velocity than the elongated form, and to that extent has at the outset an advantage, the elongated form is much better able to overcome the resistance of the atmosphere, and owing to its superiority of momentum preserves its progressive power for a much longer period,—at the same time it is less disturbed by the varying conditions of the elastic medium through which it is propelled. In short, it has a longer and truer flight. The essential condition to the efficiency of the long projectile is, that it shall move onwards with its point foremost; if it turns over in its path, it presents a large surface to the action of the air, its flight at once becomes irregular, and is rapidly retarded. The action of the common spinning-top suggests at once the idea that the best mode of

making the elongated projectile move steadily through the air with its point foremost is to give it rotation round its axis of progression. The rapid revolution of the body causes its inherent inequalities to be rapidly carried round a constant axis in regular order, and a kind of balance is thereby established, which gives the body a steady motion. Various plans have been from time to time tried with the object of imparting to long projectiles a steady flight; they have been made with spiral grooves cut externally on their periphery, or internally from front to rear, in the expectation that the resisting action of the atmosphere acting on the inclined surfaces would give the requisite spinning motion. Again, they have been made very long and furnished with fins or feathers, in order that they may be propelled on the principle of the arrow, but no practically successful results have as yet brought projectiles of this kind into use. The required object is, as is well known, readily and successfully effected by propelling the elongated projectile from a rifled barrel, that is, a tube having its interior made of such a spiral form that the projectile while it is propelled from the breech to the muzzle is turned round its axis of progression: a rotatory motion is thus imparted, which is retained by the advancing projectile and gives it the required steady motion. The elongated bullet was first used with rifled small-arms, either poly-grooved or fluted, or, like the Enfield, having three grooves. The length, however, was limited; and various attempts were made to fire longer projectiles compounded of various metals and of various shapes, so that by changing the position of the centre of gravity they might be propelled point foremost. But if made beyond a certain length they were always found to turn over at moderately long ranges. Mr. Whitworth was the first to enunciate the principle that projectiles of any requisite length could be successfully fixed by giving them rapid velocity of rotation, which should be increased in proportion with their increased length. He, as is well known, uses rifles having a spiral polygonal bore, in which all the interior surfaces are made effective as rifling surfaces. The success of the elongated projectile having been established in the case of small-arms, their employment with ordnance followed as a natural consequence. Rifled ordnance were, therefore, called into existence to meet the requirements of the time. In fact, the rifled cannon may be considered as a rifled musket made with enlarged proportions. Directing our attention more particularly to the two systems of Armstrong and Whitworth, we see in the former the coiled barrel and fluted bore formerly used for the rifled small-arm, applied on an enlarged scale. In the Whitworth cannon the same system and form of rifling are used which are employed for the Whitworth musket. There is, however, a change required for the projectiles; they cannot, like the small-arms bullets, be made of lead, for obvious reasons, such as the cost of the metal, its liability to distortion of form, and unsuitableness for shells. Sir William Armstrong uses a compound projectile, formed of an iron case surrounded with a leaden coating,—the rifling being effected by the force of the explosion in the barrel, which is thus partly expended in forcing the lead through the grooves. Mr. Whitworth uses a simple hard-metal projectile, made of the requisite shape to fit the rifled bore by machine labour in the manufactory, so that the whole force of the explosion is employed to propel the projectile. After giving a description of the two projectiles, and pointing out that the Armstrong projectile necessarily required a breech-loading cannon, and that the Whitworth is used at pleasure for muzzle-loading or breech-loading cannon, Mr. Aston proceeded to notice the external shape of the projectiles. The importance of giving to ships intended for high speed the shape best suited to facilitate their progress through water is now universally acknowledged; and Mr. Whitworth considered that it was necessary to ascertain, by reasoning upon similar grounds, and by experimental research, what was the proper shape to give to his projectile, so that it might be propelled through the air under conditions most favourable to precision and range. He, after numerous corroborating experiments, decided that the projectile of the form exhibited to the Meeting

was the best. It has a taper front, having nearly the external section of what mathematicians term the solid of least resistance, the curve being somewhat rounded; the rear is made to taper in such proportion that the air displaced by the front is allowed readily to close in behind upon the inclined surfaces of the rear part. The middle part is left parallel to the required distance, to provide rifling surfaces and obviate windage. The results of long and repeated trials show that this form of projectile gives much greater precision and a superiority of range, varying from 15 to 25 and 30 per cent. (according to the elevation and consequent length of range), as compared with a projectile of the common rounded front and parallel rear end. At low elevations, where the range is comparatively short and the velocities great, the difference in the result of the taper and non-taper rear is not so marked as at the higher elevations, where the mean velocities of the projectiles are reduced. But at all ranges the superiority exists both in precision and velocity, as the elongated projectile at no practical range has a mean velocity so great as to prevent the atmosphere closing in behind it. One of the most important advantages attending the use of the taper rear is, that it gives a lower trajectory, which renders errors in judging distance of minor importance, as the projectile which skims along near to the ground is more likely to hit a mark, especially a moving one, than a projectile which, moving in a more curved path, has to drop, as it were, upon the object aimed at, whose distance therefore must be accurately guessed. The taper shape of the rear is peculiarly well adapted for the proper lubrication of the gun, which is most essential for good shooting. With the Whitworth gun a wad made wholly of lubricating material was introduced; it obviates the necessity of washing out the piece,—and the subsequent adoption of a similar wad for the Armstrong gun enabled that piece also to be used without washing out, which was at first necessary, and found to be a very inconvenient operation for a service gun. Various forms of elongated Whitworth projectiles suited for special purposes were described: tubular projectiles for cutting cores out of soft materials, as the sides of timber ships; flat-fronted hardened projectiles, first used by Whitworth and afterwards by Armstrong, for penetrating iron plates. It is found that these projectiles penetrate, when fixed point blank, through iron plates inclined at an angle of $57\frac{1}{4}^\circ$ to the perpendicular. The edge of the flat front, though slightly rounded, takes a hold, as it were, as soon as it touches the plate, and the resistance met is merely that due to the thickness of plate measured diagonally. Official experimental trials made on board the Excellent at Portsmouth showed that these projectiles penetrate readily through water, and would go through a ship's side below water-mark. The new American floating battery, which is submerged to protect her sides during action, would find no defence in that plan against these projectiles. Shell and shrapnel having the elongated form and taper rear were also described; and to show the suitableness of that form for ricochet firing, tables were read, from which it appears that the mean results of a series of six shots, making many ricochets within a range of 2,400 yards, gave the greatest mean deviation of about 75 yards from the straight line. In considering the probable result of the contest now going on between armour-plates and projectiles, it should be borne in mind that the limit of thickness of armour-plate that can be carried by ships will soon be reached, but that the power of destruction of projectiles may be without doubt increased far beyond what has hitherto been tried. It may, therefore, be reasonably anticipated that in this all-important contest the victory will ultimately rest on the side of the projectile.

Sir W. ARMSTRONG said that, with regard to the prospective size to be attained in the construction of artillery, he must confess he did not go so far as Capt. Blakely. It was quite true that he himself was engaged in the construction of a 300-pounder

gun—and the experiment was already very considerably advanced, and so far with perfect success—but, at the same time, he must say he found the construction of even a 300-pounder gun on his principle a work of considerable difficulty, and he really would venture to suggest to Capt. Blakely that it would be better to obtain a 100-pounder or a 200-pounder before he ventured upon such a monster as he had mentioned. He agreed with Capt. Blakely that the hooping of a cast-iron gun with wrought iron gave it great resisting power; but he differed with Capt. Blakely in thinking that such mathematical nicety was required in the construction. Provided only care were taken to allow sufficient shrinkage, the hoops would adapt themselves to that amount of tension which would give the maximum resisting force of the gun, and before the hoops would give way the gun would have passed through the phase of greatest resistance. He entirely agreed with Mr. Fairbairn as to the desirability of adopting the form of structure for plated ships which should obviate the use of wood. He attached great importance to this plan, because by adopting it much unnecessary wood would be got rid of, and the iron plates could therefore be thickened, but chiefly because by this means the liability of part of the ship rotting, and their having to pull it to pieces periodically to set it to rights again, was done away with. His opinions on the subject of iron-plated ships had been so often made known that it would be mere repetition for him to go over the ground again. The only new point he had to bring before them was, that in the construction of those ships they must chiefly keep in view their adaptation for a small number of monster guns. There had been a feeling among naval men that guns above a certain weight—five tons, he believed—could not be practically managed on board ship. Lately, however, their ideas had been considerably enlarged, and they now went as far as $7\frac{1}{2}$ tons, which would be about equal to one of his 200-pounders. He believed that guns of a much larger size could be managed, but to do so of course they would have to avail themselves of machinery. Mr. Aston had explained the Whitworth projectile and had called attention to what he considered its various merits. He had also alluded to his (Sir Wm. Armstrong's), which lay on the table before them. Upon this subject let them talk as long as they liked, Mr. Aston and himself would never come to an agreement. He believed that his own projectile would inflict a greater amount of damage than the other. He thought something more was required than the punching process of the flat-headed shot. Let the effects be tried. Let a target be erected representing an object such as would be used in actual war, and then let experiments be made to see which missile would inflict the largest amount of injury. He had no doubt whatever that for punching a hole in iron plating the flat-headed bolt invented by Mr. Whitworth was the form, if made of steel. But he apprehended that the object to be attained was not only to punch a hole in the side of an armour-plated ship, but to inflict so much damage as to disable her. What he wanted to effect was to be able to hurl a large mass, no matter what form, against the vessel, so as to crush in her side, and he believed that this could be done by the use of guns of a large size. In the Whitworth projectile, the rotary motion was given by the shape of the bolt. In his own ordnance the projectile was covered with a soft material, and so took the direction of the grooves. There might be advantage in both plans; but he did claim for his own this superiority, that there was less necessity for precision in the manufacture, and little fear of injury to the bolt. He had lately been making experiments with a large kind of projectile, one of which he had before him—[a huge mass of metal, weighing some cwt.]. In this projectile, instead of having a soft metal all round it, it was confined to three ribs, which would take the impression of the grooves. It was designed for a gun called the "shunt gun," the construction of which, not having a diagram with him, he could not explain. —Mr. J. SCOTT RUSSELL said, there were one or two general considerations of this subject which he thought, if laid before the Meeting, would save a

† Sir J. D. Hay subsequently confirmed Mr. Aston's remarks in this respect, and said that Whitworth flat-fronted shot fired from an Armstrong gun (for the Armour-Plates Committee) had penetrated plates inclined at an angle of 80° to the perpendicular.

good deal of misapprehension. If they would just set out by believing that we should never get perfect impenetrability, many schemes, with the answers to them, would be put out of the way. The whole practical part was incorporated in one expression of a great sailor, "Whatever you do, for God's sake, keep out the shells." Having been in vessels fired at, and having been behind iron targets fired at, he was in a position to say that he could stand behind iron plating with a wonderful degree of comfort. You were sure the shells would be kept out, and if two or three holes were punched in the side of the ship by the large shot neither you nor the vessel were much the worse for it. But if Sir William Armstrong should be able to do as he had just said, to bring large masses to bear upon the sides of these iron-plated ships, then this was another mode of destruction quite as injurious as destruction by shells would be. The whole question then resolved itself into these two things:—Keep out the shells, and prevent Sir William Armstrong driving in the sides. The ship-building question at the present time involved the very difficult problem, how to build a ship with an enormous weight in the place where good ship-builders generally contrived to keep out all weight. The first vessels were loaded with 1,000 tons, the new vessels would have 1,500 tons, and this weight was not only a great inconvenience, but a great injury to the sides of the ship. As the ships were now built, the plating in no way contributed to the strength of the ship; he was anxious to see the ship built entirely of iron, in which case the iron plating might contribute to the strength. What he wanted to know was, how much in the construction of these large ships the builders might be allowed to appropriate of 9 in. of iron to be used partly in armour, and partly in the construction of the ship? The question they now asked the Iron-Plates Committee, and which he believed Mr. Fairbairn's experiments would settle in a very short and decisive manner, was, how much of this iron could be used in the construction of the ship, and how much must be used in armour-plating outside? Take it that there were eight inches of plating allowed. If the Committee would be content with a 2-inch plate, and a 1-inch plate on the outside, leaving the builders five inches to be used in the sides of the ship, he was prepared to say that this would be an enormous advantage. He would even meet them further, and give them four inches to be used for the armour, leaving him four inches to be used in the construction of the ship. But the Committee might insist upon having a 5-inch plate to go to the bad, leaving him only three inches for the ship, and he would still endeavour to build the ship to suit these conditions. There was another point upon which the builders were at issue with the Committee. The Committee say they will not have holes in these iron plates, and the builders reply that, so far as they knew at present, the Committee must have holes. Sir J. D. Hay had asked him to lay before the Section a plan which he had submitted to the Admiralty so long ago as 1854. He would bring up between the plates a piece of soft malleable iron. This he would heat in its place after the plates were on, so as to make a round-headed rivet all round the edges of the plates, which could thus be firmly attached. This plan, if successful, would obviate the necessity of perforating the plates; but allow him to say that he did not believe in his own opinion until tried, for there was scarcely a theory promulgated but was knocked down by those Armstrong and Whitworth guns—and at the present moment he had not a single theory to set up. The Warrior had been built without armour on her extreme ends, and he (Mr. Scott Russell) had some of the blame or the merit of that arrangement—which it was remained to be seen. But yet he would take very little credit on that point, for this reason, that when the dimensions and the required speed of a vessel were settled, the question as to whether she should bear armour from end to end was determined beforehand by the very conditions of the problem. Referring to Mr. Aston's paper, Mr. Russell entered into calculations to show why he did not attach much importance to the tapering form of the Whitworth projectile. He believed that in pro-

portion as the velocity of the projectile was less than its critical velocity, which he believed was about 1,100 feet per second (the very velocity which the Committee had ascertained was the velocity of the Whitworth projectile), in that proportion only might some advantage be derived from distinction of shape. The case of the projectile and the ship differed in this, that the one had attained its critical velocity and the other had not, hence this difference in his opinion with regard to the value of form. In the ship it was of value, but in regard to the projectile which had attained its critical velocity, length and fine taper would have no effect. But this was one of the subjects upon which no wise man would dogmatize, but would be grateful to any one who would institute experiments.—Admiral Sir E. BELCHER considered that the suggestion of Dr. Eddy, for constructing small vessels to compete with the iron-cased frigates, had been met by Mr. Scott Russell's observations on the incompatibility of weight and speed without dimensions. The height of the large vessel would enable her so to depress her guns that the smaller boat would present an angle of about 60°, instead of the angle stated. The curved deck of the proposed gunboat involved the necessity of its being rendered bomb-proof, and that entailed iron plating equal to the plating of a frigate. The fibre suggested for the packing would be peculiarly liable to smoulder or to burn, and the salt with which it was proposed to render it incombustible would corrode the iron so rapidly that, in the course of a few months, the vessel would be useless. It had occurred to him that, instead of the iron plates being backed up with wood, iron ribs, placed transversely, something in the gridiron fashion, at intervals from each other less than the diameter of the shot, and the interstices filled up with wooden material, would be a better mode of resistance. By the present system of laying the iron plates, if one were injured when the vessel was abroad, it would be impossible to replace it, perhaps for months or even years. Therefore he thought it would have been better if Mr. Scott Russell had followed out his plan of sliding the plates in from the water-line upwards, because if one of the lower plates happened to get injured, it could be removed, and the other plates could be slid down to fill up the vacant space, and a new plate could be put in at the top without difficulty. After the battle of Algiers, it was his duty to clean out the captain's cabin. He was surprised to find that a ream of foolscap, which had been struck by a large shot, had simply been crumpled up. In 1854, he applied for leave to build a battery of compressed brown paper, and he believed that this material, which was one of the most powerful repellants of shot, might be advantageously used. Sir E. Belcher alluded to the force with which even wooden ships could charge and split icebergs, and expressed his decided opinion, that if the weight of the Warrior struck La Gloire across the bows the latter must inevitably go down. He himself, if hard put to it, should have no objection to have a try at La Gloire in one of the old wooden ships—and he thought he saw some of his naval friends around him who would say the same. He complained that the peculiar construction of the new vessels would deprive them of the pleasure of running down an enemy, which was a point upon which naval men prided themselves.—The Rev. Dr. ROBINSON (Dean of Armagh) said the paper which had been read by Mr. Reed could hardly be rated too highly, and he hoped a recommendation would proceed from that Section that it should be printed in the *Transactions*. In the course of an interesting address, Dr. Robinson traced the invention of armour-plates to Lord Rosse; and whilst paying a high tribute to the splendid mechanical genius of Mr. Whitworth, he pointed out that both the elongated projectile and the beautiful system of polygonal rifling were inventions dating much further back than his time. He himself had seen a rifle on the polygonal principle made two centuries before Mr. Whitworth was born.—Mr. FAIRBAIRN, in allusion to the remarks of Mr. Scott Russell as to the possibility of using a number of single inch plates, instead of one solid plate, stated that the experiments had shown

that one 2-inch plate was equal to three or four 1-inch laminated plates. He quite agreed with Admiral Belcher as to the form of the bows of the Warrior. His own opinion was that they should have been curved downwards instead of projecting below.

FINE ARTS

FINE-ART GOSSIP.—A new effort in decoration appears in the statues, in terra-cotta, representing Strength, Temperance, Justice and Truth, presented by the Prince Consort to the Horticultural Society, and erected at South Kensington. We hope much from the application of this material to garden statuary. It has seldom been employed in England, for some strange reason,—in a country which may be said to have the greatest facilities for its manufacture. In ancient Rome terra-cotta was commonly enough employed, and not less so in mediæval Italy. The works in question are placed at the sides of the entrance of the Maze. Two of Rauch's noble 'Victories' are added also. These are 9 feet high, in bronze, and were designed for the late King of Prussia. We believe that these are to be seen amongst the magnificent series of casts from the works of the great Prussian sculptor, which are, with regret be it said, almost unnoticed at the Crystal Palace.

The medal designed by Mr. MacIise for the prize-holders of the 1862 Exhibition, like that of 1851, is to be of bronze, and of the same size as its prototype. The engraver is now producing the dies for it. On the obverse appears Britannia seated on a throne, holding in her right hand a wreath and in her left an olive-branch. Figures representing Raw Produce—the native material unwrought by man, Machinery—the method of man's labour, and Manufacture—the result of that labour, are exhibiting to Britannia their several attributes. Figures representing the Arts, Painting, Sculpture, and Architecture stand behind, as attendants upon Britannia. By a very sensible decision, the Commissioners have resolved not to award medals, or other rewards, to the producers of works of Art:—therefore, the emblems of their professions are seen more as spectators than as interested parties in the decision of the principal figure. Resting before the feet of Britannia, and occupying the whole front of the composition, is placed the British Lion himself.

The number of exhibitors from the other side of the Channel to the forthcoming gathering at South Kensington is far beyond what it was in 1851. 4,425 manufacturers from France have applied for space up to the present time. In 1851 there were but 1,700 French exhibitors in London, and but 2,500 English exhibitors at the Paris Exposition in 1855. French artists (architects, sculptors, painters and engravers) are informed by the *Moniteur* that *bulletins* of inscription, to be filled up by them, may be had at the Palais d'Industrie, and that all applications for admissions into the section of the *Beaux-Arts* must be sent in to the Imperial Commission before the 1st prox. Those of our readers who are interested in this are informed that previously-made applications by artists before the printed *bulletins* were issued, not being in the form prescribed, must be repeated in a more correct manner.

A new School of Art was opened at Hull, on the 11th inst., in connexion with the Department of Science and Art. Fifty students commenced their studies on the evening of that day. Classes for ladies are held every Monday and Thursday morning, from 9.30 to 1.30. Several ladies have already entered these classes, both in the elementary and advanced stages of instruction. A very large collection of casts and examples has been purchased by the Committee, so that every facility now exists for the study and practice of the Fine Arts in Hull, under precisely the system and rules which exist at South Kensington.

A statement of the restorations made in the Cathedral at Hereford has been put forward by the Dean and Chapter, from which it appears that, of the sums borrowed on mortgage (13,000*l.*) under the Hereford Cathedral Restoration Act, from 1859

to 1861, 10,000*l.* has been expended on the internal and external restoration of the north transept and aisles, the south transept, the north aisle of the choir, including Bishop Sainsbury's Chapel, the north-east transept, the south-east transept, the south aisle of the choir, the Chapter House and vestibule, the Lady Chapel and vestibule, and Bishop Audley's Chapel, and the external restoration of the north aisle of the nave, the north porch, the south aisle of the nave and the great cloisters. They have, therefore, 3,000*l.* in hand to meet the balance of existing contracts and the cost of flooring generally (except the choir), repairing and refixing monuments, re-leading part of the roof, repairs of inner stonework, &c. The following additional works are proposed to be executed if funds can be raised for the purpose:—Fitting-up and flooring of the choir, restoration of the external stonework of the tower, lighting the Cathedral for congregational use, and fitting-up the Lady Chapel for service for St. John's parish. These works are estimated to cost 8,000*l.*; towards which the Dean and Chapter have in hand and promised a sum of 3,553*l.* 10*s.* 10*d.*, leaving 4,446*l.* 9*s.* 2*d.* to be provided. They, therefore, appeal to the public for pecuniary aid, and state that, if the funds were forthcoming, the whole of the works in the interior might be completed, and the Cathedral opened in October of next year.

A Russian Church, for the performance of the Greek rite, was inaugurated on the 11th instant, in the new Boulevard leading from the Arc de Triomphe to the Park of Monceaux, Paris. The edifice greatly resembles the Greek Church at Wiesbaden.

An English Church, of granite, has been recently erected at Chamouni, on the left of the path leading to the Montanvert, and removed a short distance from the town.

MUSIC AND THE DRAMA

MADAME LIND-GOLDSCHMIDT. — EXETER HALL. — Mendelssohn's Oratorio of ELIJAH. — TUESDAY EVENING, October 22. — Under the distinguished patronage of Her Royal Highness the Duchess of Cambridge, Her Royal Highness the Princess Mary of Cambridge, Duke and Duchess of Marlborough, Duchess of Argyll, Duchess of Inverness, Marchioness Townshend, Marchioness of Northampton, Marchioness of Londonderry, Marquis Marchioness of Alibon, Marchioness of Westminster, Dowager Countess of Essex, Countess of Poulton, Countess of Portland, Countess of Harewood, Earl and Countess De Grey, Countess Vane, Countess of Leicester, Countess of Ellesmere, Earl and Countess Russell, Viscountess Sydney, Viscountess Palmerston, Viscountess Jocelyn, Viscountess Enfield, Lady Sandys, Lady Ebury, Lady Blayney, Lord and Lady Roebuck, Lady Stanley of Alderley, the Baroness De Rothschild, Right Hon. Wm. Cowper, Hon. Mrs. Cowper, Hon. Mrs. Wellesley, Lady Filmer, Lady Peto, Mrs. Tait (Fulham Palace), Mrs. Adams, Mrs. Betts, Mrs. G. R. Birt, Mrs. Draxer, Mrs. H. A. Bruce, Mrs. Capper, Mrs. R. Ferguson, Mrs. G. G. Glynn, Mrs. Henry, Mrs. Penelope, Mrs. Coleridge Kennard, Mrs. Morrison, Miss Morrison, Mrs. Arthur Otway, Mrs. Pell, Mrs. L. M. Rate, Mrs. Sartoris. — MADAME LIND-GOLDSCHMIDT having generously given her services in aid of the Funds for the completion of a Church, and for the enlargement of the Industrial Institutions in the Victoria Dock district, "London over the Border," under the pastoral care of the Rev. Herman Douglas, the acting Committee have great pleasure in announcing that there will be a Performance in Exeter Hall of Mendelssohn's Oratorio, ELIJAH, on TUESDAY EVENING, October 22, the principal parts by Madame Lind-Goldschmidt, Miss Palmer, Mr. Sims Reeves, and Mr. W. Weiss, assisted by a complete Orchestra and Chorus. Conductor, Mr. Otto Goldschmidt. — Reserved and Numbered Seats, 1*s.* 1*s.*; Unreserved Seats and West Gallery, 10*d.*; Back Area, 7*d.*. Unreserved Seats will be appropriated according to the order of application; and no more tickets will be issued than can be conveniently accommodated. — Applications for tickets to be made at Mr. Mitchell's Royal Library, 33, Old Bond Street; Messrs. Addison & Co., 210, Regent Street; and at the principal Libraries and Musicellers.

LAST WEEK BUT TWO OF ALFRED MELLON'S PROMENADE CONCERTS, THEATRE ROYAL, COVENT GARDEN. Grand Orchestra. — Mdlle. Florence Lancia, Madame Laura Baxter, Mr. Weiss, and Mr. Vernon Rigby, Every Evening. — On Monday, an English Night, on which occasion a New Waltz, by Alfred Mellon, The Ariel, and a New Quadrille, The Diddin, on Nautical Air, by C. Coote, will be performed; on Tuesday next, a Mozart Night; on Wednesday, a French Night; on Thursday, a Mendelssohn Night; on Friday, an Italian Night; and on Saturday, a Volunteer Night. Commence at Eight. Promenade, One Shilling. — Conductor, Mr. Alfred Mellon.

On September 30, Mr. EDWIN BOOTH, son of the late celebrated Junius Booth, will make his FIRST APPEARANCE in England, at the THEATRE ROYAL HAYMARKET, in the character of Shylock, in 'The Merchant of Venice.'

MUSIC IN MADRID.

It is no scandal to assert, that whatever may have been the amount contributed by the land in times past to the world's stock of Art, Spain has, to-day, no place of her own in the empire of European music. A guitar-player or two, — a few *seguidillas*, *modinhas*, and national dance tunes, in which the smallest amount of variety or novelty is to be found, — make up the story of her offerings, so far as we know it in England and France. Still,

wherever there is civilized speech, there will be music, more or less in quantity, home or foreign in quality, let the season be what it will, — music, too, deriving some particularity from the framework in which it is set. A note or two of what has been heard during a few weeks of autumn holiday in Spain may not be without interest.

Down the road from Pamplona, reached in early morning, to Madrid, arrived at four-and-twenty hours later, there was no sound of pipe, or wire, or human voice, save such as ourselves made. The silence of the fierce, scorched, herbless, hilly desert, as lonely and unpeopled as though the land was accursed, was unbroken by the sight or sound of bird or other living creature. In those picturesque halting-places, Agreda and Soria, which displayed the only habitations to be seen during the weary day, not a note was to be caught as we toiled on, under "a heaven of brass" and amid a simoom of dust. Sound there was — in the perpetual cries with which the trustworthy driver of the diligence urged his team of ten forward, and which, mixed with the tuneless jingle of the mule bells, are not yet out of my ears. Anything more doleful and discordant in outcry and accompaniment hardly exists, even in the Pandemoniacal shrieks and gibberish ventured by M. Berioz in his 'Faust.' Never was a showy and brilliant capital (and Madrid is both) approached so dolefully, with such meagre preface or promise in its surroundings.

The Englishman cannot take ten steps from his hotel without being excited by the sight of some characteristic figure or group, which converts familiar pictures into realities. Who does not know the lady in her mantilla and fan, — the bull-fighter, with his quaintly-dressed hair, tasselled cap and sash, — the clean-limbed and clean-lined peasant, unloading his handsome ass, — the mason, taking his *siesta* in the comfortable dust, with one of the stones he has been chiselling for his pillow, — as so many old acquaintances! Yet, in Madrid, they surprise one almost as much as if Wilkie and Lewis and Phillip had not brought them home to us. And a surprise is the swarming Prado, seen by moonlight, with its crowds of graceful pedestrians and admirably turned-out equipages, — and its children going round in dancing-rings under the spare acacia trees, — and its clean water-sellers. Surely, one might listen there for guitar and castanet, — for something, whether national or exotic, not unreasonably. But we only encountered a gnat-like accordion, an asthmatic old barrel-organ, and a harper, who did his best, on the worst of harps, to represent the well-worn 'Miserere' from 'Il Trovatore.' (This, by the way, is a setting of a ferocious modern Spanish romance; hence, possibly, its extreme popularity here.) Lights in the Church of San José directed us as we were strolling homewards to a scene not less full of picture and peculiarity — the funeral of a lady, on whose obsequies much ghastly luxury had been lavished. The building was hung with black draperies laced with gold; an enormous pyramidal catafalque before the high altar blazed with candles, tier above tier; all too few to light up the groups, kneeling or lounging about in attitudes ready made for the painter. There was an orchestral Mass, which, I fancy, may have been of modern Spanish manufacture. More characterless music could not well be, nor any performed in an inferior fashion. But the chanting was good — by male voices, sonorous, and well in tune; and in the quartet of solo voices a *baritone* and a *contralto*, both of fair quality, were to be remarked.

The following evening yielded a thoroughly national exhibition in an old guitar-player, perched on the edge of the kennel in the Puerta del Sol. Street-music could not have a better background than the wide fountain, with its ample sheaf of deliciously cool water, rising in a floating film against the darkness, with the folk who congregate on its brim to gossip or to fill their jars. The guitar-work was of itself the real thing: first, a series of ingenious changes, rung on a theme as short as the *Ciaccona* glossed by Sebastian Bach, with all manner of odd effects, such as I only recollect to have heard from Señor Huerta, — afterwards, a graceful *Nocturno*, in $\frac{3}{4}$ tempo, less

characteristic, but still unfamiliar. We have since come upon more than one guitar going a-roving at night-fall, or touched by mendicant beggar at the church-doors, but have heard nothing so good as this. Another evening hour, whiled away in a shabby public garden, so ill lit with its Chinese lanterns that its haggard, dusty look passed unproved under the cloud of night, introduced us to a slow dance, the "Habanera," neither very graceful nor very decorous, in $\frac{3}{4}$ tempo, which was new in style, but too sickly and lackadaisical, both as to music and motion, not to become wearisome after the first five minutes.

I have inquired for "the where" and "the when" of church-music without the slightest success. It is strange that in a capital so steeped in Roman Catholicism as this the Church should make so little show. Not one building for sacred uses attracts the eye, save it be the Gothic Church of San Geronimo, standing behind the incomparable Picture Gallery, and now (by the way) under restoration. They tell me that little or no service-music, good, bad or indifferent, is to be heard, save in the Royal Chapel when the Court is in the capital. Vespers in the choir of the grave church in the Escorial were as badly executed, when I heard them, as certain Roman vespers which occur to recollection as the *ne plus ultra* of abomination. The player who disported there on one of the four gilt organs, a powerful instrument with a fierce and thrilling tone, was incompetent and offensive in his flourishing vulgarities. Yet what a scene for solemn music is that august chapel, especially for those who have visited the pompous tomb-house of Spanish kings beneath the high altar, and cannot help feeling as if somewhat of the haughty and arrogant spirit of the monarch who raised the enormous pile, even unto this day, haunts its massively arched corridors and cleaves to its granite door-posts! The Escorial Church would be the place of places in which to hear Cherubini's 'Requiem'! A characteristic function was to be seen on Sunday morning, the 1st, in the Church of Jesus of Nazareth, part, it was advertised, of a jubilee service. Hard by the portal of this church is a chapel, with its altar-piece of life-sized coloured sculpture, where the Virgin, flying into Egypt, wears a flapping straw-hat, and the Child another. Within the rails, an *Orgue Alexandre* and a double-bass did duty for orchestra; without them, four men (deacons or choristers) sang a gay mass stoutly and coarsely, but in tune and with accent, with voices not unpleasant, though little cultivated. The execution was as rudely primitive as that of a village service, — strange to meet within fifty yards of the Prado in gay Madrid!

The above paragraphs make up little more than a catalogue of negatives. But no one who has taken pains to gather testimony and recollect facts could feel disappointed at so paltry a gleanings, especially when the time of year is considered. Ere we left Madrid, however, the Comic Opera, or Zarzuela Theatre, opened for its season. Here may such musical creative life as the capital possesses be found. The company is made up of Spanish artists; and though one may (as one might in Germany) fall on versions of known operas by Hérold, MM. Flotow and Auber, and other light foreign composers, the repertory is also fed by native writers unknown on our side of the Pyrenees, such as — to name merely those who are promised for the season just begun — Señors Gaztambide, Barbieri, Arrieta, Vasquez, Oudrid, Fernandez Caballero. A benefit concert afforded us the opportunity of hearing some of the singers and a few specimens of the modern national composers of Spain. That times have changed since Ford's 'Handbook' was written, and that, as a guide, the work is out of date, so far as the present aspect of Madrid is concerned, is not to be denied. The theatre of which he gives so menacing a description is now a spacious, gaily decorated, comfortable building, agreeable to inhabit, easy to see and hear in, one of those available places of amusement which, it seems, we are never to have in London. The stage appointments and dresses are neat, picturesque and liberal; as was to be seen in a concert where every piece was sung with change of scene and in costume. The orchestra was not good (it may

have been a benefit orchestra); the solo singers were more than agreeable. A *seconda donna*, Señora Rivas (with a charming soprano voice), a mature *soubrette* (who manoeuvred her fan and her many skirts to admiration),—a tenor whose organ is sympathetic, and whose method is good,—and a baritone full of animation and spirit, must have surprised those who have been little used to hear of, or to hear, the singers of Spain. If these artists be of average quality, the country has materials for comic opera superior to those commanded at the time present by Germany and Italy. Four artists better trained for their duties are rarely to be met with. A *prima donna* "of other days" who was more ambitious, pleased us less; but her vocal style was, like theirs, good. The chorus was lively and ready. The music chosen, principally short and popular pieces from Spanish comic operas, bore out this pleasant impression. A duett from 'Gil Blas,' by Señor Manzochi (quære a naturalized Italian?) was given by Señor Sanz (the tenor), and Señor Obregon (the baritone mentioned), with so much spirit, that, being itself very piquant and national, an *encore* was resistless. I have not heard anything so genial, or better executed, for many a day. In short, this might prove a world worth looking into. A glance at the score of two comic operas, 'Catalina,' in three acts, and 'Una Vieja,' in one, by Señor Gaztambide, has revealed traces of a vein of nationality which could be worked to good account by a composer more assured in his science and varied in his resources. Both contain pretty music, though the writer is timid in combination and trite in modulation; both are as welcome (after their Spanish kind) as the better known 'Czaar und Zimmermann' of Lortzing, or the 'Stradella' of M. von Flotow. The public appears to enjoy this theatre, since on the first night of the regular opera season not a seat was to be obtained save at a premium. It is a public, too, whose courteous manners, self-respect in point of appearance, and quick pleasure in all that passes, add no little to the satisfaction and cheerfulness of the solitary stranger.

The Italian Opera at Madrid is this winter to be headed by Mesdames de La Grange and Julianne Dejean, with M. Carrion for principal tenor, and Signor Giraltoni, baritone; not one of the above is Italian by birth. What a tale is here told! But a new chapter seems to be opening in the story of Southern art. If Italian opera be going down, Italian drama may be rising. The walls of Madrid announce the performances in tragedy and comedy during coming months of a company led by Signora Santoni, the Marchesa Zambeccari, whom the papers assure the patrons of plays is as great an actress, both in grave and gay parts, as Signora Ristori.

SADLER'S WELLS.—The revival of the Second Part of 'King Henry the Fourth,' on Saturday, calls for special remark. It is now some years ago that this chronicle-play was put up for a few nights as a mere curiosity; but, as now performed, it claims notice as an acting drama. It goes so smoothly and safely in the grooves that it is, we think, likely to gain a permanent occupation of the boards. Truly, the drama in question is a worthy member of an epic series that breathes with the very national life of England, and almost demonstrates with a living certainty the reason wherefore she has attained her conspicuous greatness among the nations. First of all, we have here true men and women, robust and vigorous, though rude and vicious, with all the elements of progressive action in them. They revel, indeed, in exuberant health, and overflow with humour and self-will. There is a determination of character that individualizes each, and manifests a spirit of independence, which is the soul of enterprise and success. Observe, too, out of how small a germ the dramatic action is made to grow. News of the death of Hotspur, the death of Henry the Fourth, and the coronation of Henry the Fifth make up all the drama has of plot; yet what a world of interest the Poet has educed from it by merely grafting on it an extensive, or rather intensive, characterization! We have said the play

is part of an epic series. That series consists of the two parts of 'Henry the Fourth,' and the play of 'Henry the Fifth.' The series is valuable on account of the vast amount of poet-work in their composition; for Shakespeare seems mainly to have trusted to himself in writing them, and to have taken the events direct from Holinshed without resorting to any other dramatist for aid. Every available hint of the historian in relation to character has been eagerly seized by the poet. Henry the Fourth himself is remarkable for dignity, prudence, moderation, and teaches us at once by what means he redeemed, in his latter days, the objectionable traits of his early conduct. Scroop, the Archbishop of York, is also transferred from the historian's page to the dramatist's canvas with accuracy and elegance. The following lines have their origin in a passage of Holinshed:—

But now the bishop
Turns insurrection to religion:
Supposed sincere and holy in his thoughts,
He's followed both with body and with mind;
And doth enlarge his rising with the blood
Of fair King Richard, 'soaped from Pomfret stones':
Derives from Heaven his quarrel and his cause;
Tells them he doth bestride a bleeding land,
Gasping for life under great Bolingbroke,
And more and less do flock to follow him.

—For the companions of the Prince and Falstaff, Shakespeare is somewhat indebted to an older play; but he has thrown the light of his imagination on his predecessor's dullness. Falstaff loses nothing of his importance in this Second Part; and we have, indeed, a new feature in Doll Tearsheet. One might have thought that the scene in which this troll is introduced was scarcely presentable on the stage; but its actual performance dissipates all such notions. We see at once the difference between coarseness and immorality, and accept the former as a necessary shade in an historical picture, as well as fitly illustrating the manners of the time. The humour of it moves, indeed, the audience to extravagant mirth; but it is wholesome foolery for all that. It is a laugh that does the spectator good. The poet's management of the young Prince himself is so delicate that it is scarcely possible to do justice to the exquisite art displayed; but, happily, it is so generally appreciated that it were superfluous to do more than allude to the fact. The interviews between the royal father and the censurable Prince of Wales are among the most remarkable dialogues in Shakespeare. These scenes were most carefully rehearsed by Mr. Phelps and his son. The *Falstaff* of Mr. Barrett is highly praiseworthy; and many of the numerous characters are accurately sketched by the various performers. But the great feature of the revival is the manager's impersonation of *Justice Shallow*, which for individuality and senile astuteness, pretence ending in mere fatuity, is one of the most characteristic things on the modern stage. It is that, indeed, which has given its popularity to this revival, and will, we doubt not, preserve a place for it on the Islington boards so long as Mr. Phelps retains the management of the theatre. We need not add, that the performance commands full houses.

STRAND.—Under the title of 'A Lucky Escape'—a version of the French *vaudeville* 'La Baronne de Blegnac'—has been placed on these boards; Mr. C. S. Cheltnam being the adapter. The burden of the little piece lies on Miss Marie Wilton, who disguises herself as the Baroness to escape the attention of a French regiment in a garrison town, and who is toasted by a bashful lover in response to the descriptions of his brother officers, who are eloquent in the lady's praise without having seen her. When he finds that the lady to whom he stands engaged is an old woman, with green spectacles, the Chevalier is wofully disconcerted; but the removal of the disguise terminates his perplexity. Mr. Belford was amusing in his embarrassment; and Miss Wilton gave force to the character of the heroine. All, in fact, depends on the actors, the dramatists having supplied them with but slight materials for embodiment.

TO CORRESPONDENTS.—J. N.—G. H. F.—D.—T. C. W.—H. J. W.—E. D.—received.

Conchological Works,

By LOVELL REEVE, F.L.S. F.G.S.

CORRESPONDING MEMBER OF THE NATURAL HISTORY SOCIETY OF WÜRTZBURG, AND OF THE LUCERN OF NATURAL HISTORY OF NEW YORK.

In 2 vols. price 2l. 16s. coloured,

Elements of Conchology:

An Introduction to the Natural History of Shells, and of the Animals which form them. By LOVELL REEVE. With 62 Plates of shells and of the Living Animals by G. B. Sowerby and R. Miller.

3 vols. 4to. price 10l. coloured,

Conchologia Systematica:

A Complete System of Conchology; in which the Lepades and Conchiferous Mollusca are described and classified according to their Natural Organization and Habits. By LOVELL REEVE. With 300 Plates of Shells by J. D. C. and G. B. Sowerby.

In 13 vols. 1,614 Plates, price 104l. 2s. 6d. coloured,

Conchologia Iconica;

Or, Figures and Descriptions of the Shells of the Mollusca, with Remarks on their Affinities, Synonymy, and Geographical Distribution. By LOVELL REEVE. Published Monthly in Parts (Part XII now ready), each containing eight Plates, price 10s. coloured. Published also in Genera, separately, a priced List of which may be had on application.

"This great work is intended to embrace a complete description and illustration of the Shells of Molluscos Animals; and so far as we have seen, it is not such as to disappoint the large expectations that have been formed respecting it. The figures of the Shells are all of full size; in the descriptions a careful analysis is given of the labours of others; and the Author has apparently spared no pains to make the work a standard authority on the subject of which it treats."—*Athenæum*.

In preparation,

British Land and Freshwater Conchology;

Being a History of the Terrestrial and Fluvial Shells of the British Islands, and of the Animals which form them. By LOVELL REEVE. Illustrated with Wood Engravings of the Shell of each Species drawn by G. B. Sowerby, and of the Living Animal of each Genus, drawn and engraved by O. Jäwitt.

TO COLLECTORS OF SHELLS.

L. REEVE begs to announce that it is his intention to add to his Publishing Business, at No. 5, Henrietta-street, Covent-garden, a department for the purchase and sale of Specimens of SHELLS.

In addition to the Specimens acquired by him during many years' correspondence with persons in different parts of the world, he has become possessed of the Cabinets of one of our most eminent of living Collectors, comprising about *Five Thousand* Species, chiefly named; and he trusts to be able to make his Conchological Museum a useful source of reference to collectors for naming, as well as for purchasing, Specimens.

SHELLS are collected with more intelligence than formerly. Conchologists are beginning to value Species rather than Specimens; and the old connoisseurship of counting for the possession of rarities at high prices is giving place to the more intellectual aim of procuring examples of types illustrative of form and geographical distribution, leading to the study of the habits and general organization of the molluscos animals which form them.

L. REEVE will arrange to be "at home" in his Museum for the reception of visitors on Mondays, Wednesdays, and Fridays, from twelve till four o'clock, commencing on the 1st of October.

Collections of Shells, with the name and price attached to each specimen, sent into the country to select from, to purchasers of not less than ten pounds' worth.

LOVELL REEVE, 5, Henrietta-street, Covent-garden, W.C.

NEW PUBLICATIONS.

DUTCH PICTURES;

With some Sketches in the Flemish Manner.

By GEORGE AUGUSTUS SALA,

Author of 'William Hogarth,' 'Seven Sons of Mammon,'
'Twice Round the Clock,' &c.

[October 1st.

Now ready, in 2 vols. price 15s.

MABEL'S CROSS: a Novel.

By E. M. P.

"The *Illustrated London News* says:—We hear of a new novel called 'Mabel's Cross' which is said to be considerably above the average in interest and descriptive power. This is saying a good deal in an age when the rule seems to be to have one monumental obelisk of romance with the name of a Bulwer, a Dickens, a Thackeray, a George Eliot, or a Lever, carved upon it, and surrounded for hundreds of leagues by a dead level of dreary three-volume performances."

Now ready, price 5s. small 8vo.

PHOTOGRAPHS OF PARIS LIFE:

Being a Record of the Politics, Art, Fashion, Gossip, and
Anecdote of Paris during the past Eighteen Months.

By CHRONIQUEUSE.

"It requires a woman's sympathy to depict these home-scenes (of French Imperial life), and to sympathize with these home-virtues. La Chroniqueuse has done well to make these charming sketches better known to English hearts and English homes in a collected volume than in the confined sphere in which they first appeared."—*Saturday Review*.

Just published, price 5s.

ABOUT LONDON.

By J. EWING RITCHIE,

Author of 'The Night Side of London,' 'Here and There in
London,' 'The London Pulpit,' &c.

"'About London' displays an amount of industrious research very rarely met with, and a knowledge of men and manners which only experience—and active experience, moreover—can supply."—*Literary Gazette*.

London: TINSLEY BROTHERS, 18, Catherine-
street, Strand.NOW IN COURSE OF PUBLICATION,
Uniformly printed in fcap. 8vo.CAMBRIDGE SCHOOL AND
COLLEGE TEXT-BOOKS.A Series of Elementary Treatises, adapted for the Use of Students
in the Universities, Schools, and Candidates for the
Public Examinations.

The study of Mathematics and Science being now generally introduced into our Public Schools and Colleges, and still further extended by the various Public Examinations, the Publishers have been induced to undertake a Series of cheap Text-Books, specially adapted to the wants of those classes.

In order to secure a general harmony in the treatment, these Works will be Edited by Members of the University of Cambridge, and the methods and processes employed in University teaching will be followed.

Principles will be carefully explained, clearness and simplicity will be aimed at, and an endeavour will be made to avoid the extreme brevity which has so frequently made the Cambridge treatises too difficult to be used by those who have not the advantage of a Private Tutor. Copious Examples will be added.

Now Ready:

ELEMENTARY STATICS. By the
Rev. HARVEY GOODWIN, D.D., Dean of Ely. 2s. 6d.
sewed; 3s. cloth.ELEMENTARY DYNAMICS. By the

THE BANKRUPTCY MANUAL: being a
plain Summary of the whole of the existing Statute Law
relating to Bankruptcy, Compositions and Arrangements with
Creditors, as affecting Traders and Non-Traders, and the Modes of
obtaining Protection for their Persons and Estates. By CHARLES
EDWARD LEWIS, Solicitor.
Richardson & Co. Cornhill.

2 richly bound vols. large 8vo. handsomely illustrated (1,100 pp.),
price 14.

THE LIFE, TIMES, and CORRESPON-
DENCE of Dr. DOYLE (J. K. L.), Bishop of Kildare and
Leighlin. By WILLIAM JOHN FITZPATRICK, J.P., Bio-
grapher of Lord Cloncurry and Lady Morgan. "Full of amusing
and instructive matter."—*Spectator*. "A true portrait of
Athenæum. "Admirable. Perfectly Boswellian in effect."—*Press*.
London: Duffy, 22, Paternoster-row.

SHORTHAND.—PITMAN'S PHONO-
GRAPHIC TEACHER: A Guide to a Practical Acquaint-
ance with the Art of Shorthand, &c.: by post, 7d. *The lessons of*
Students are corrected gratuitously, per post, by Members of the
Phonetic Society.
London: F. Pitman, 20, Paternoster-row, E.C.

PHONETIC READING.—First Book in Pho-
netic Reading, 1d.; Second Book, 2d.; Third Book, 3d.
Children and Adults can acquire the art of reading common books
in one-fourth of the time now spent in learning, by first going
through a course of Phonetic Reading.
London: F. Pitman, 20, Paternoster-row, E.C.

MR. DICKENS'S NEW WORK.

This day is published, the FOURTH EDITION, in 3 vols. of

GREAT EXPECTATIONS.

By CHARLES DICKENS.

SECOND EDITION, fcap. 8vo. 3s. 6d.

TANNHÄUSER;

Or, THE BATTLE OF THE BARDS: a Poem.

By NEVILLE TEMPLE and EDWARD TREVOR.

"Full of beauty of thought, melody of language, and sudden pictures, that rise like visions before the reader. It is
full also of noble purpose and distinct morality. . . . For very many years there has not been a more remarkable poem
offered to the English public."—*Times*, August 2.

CHAPMAN & HALL, 193, Piccadilly.

CHEAP EDITION—FIFTH THOUSAND. Now ready, in gilt cloth, antique, price 3s. 6d.

THE NEAR AND THE HEAVENLY
HORIZONS.

By MADAME DE GASPARIN.

"Earth by Heaven, and Heaven by changeable Earth,
Illustrated and mutually endeared."—WORDSWORTH.

"This is a charming book. Madame de Gasparin has the
touch of genius which has the strange gift of speaking to
every one 'in their own tongue.'"—*Athenæum*.

"The Near and the Heavenly Horizons' is a book full
of beauty and pathos."—*British Quarterly Review*.

"Be persuaded, reader, to get this beautiful volume.
It is just the book for Sabbath afternoons in a Christian
family."—*Eclectic Review*.

"The pictures of nature here are wondrous. This book
speaks to the hearts of us all."—*Macmillan's Magazine*.

"This is by far the ablest book that has yet appeared
on the subject of the life after death. Never before have
we seen such irresistible arguments for the REANIMATION
OF LOVE, and THE REUNION OF FAMILIES IN HEAVEN."

Caledonian Mercury.

"A remarkable book, displaying marvellous powers of
descriptive writing."—*Scotsman*.

"This is a book to be enjoyed and revelled in rather
than criticized. The reader who sits down to it will have
a rare literary treat."—*Scottish Guardian*.

The ANGLO-SAXON SAGAS: an Examination of their Value as Aids to History. A Sequel to the 'History of the Conquest of the Saxons.'

London: J. RUSSELL SMITH, 36, Soho-square.

UNITED KINGDOM LIFE ASSURANCE COMPANY, 8, WATERLOO-PLACE, PALL MALL, S.W.

The HON. FRANCIS SCOTT, Chairman.
CHARLES BERWICK CURTIS, Esq., Deputy-Chairman.

FOURTH DIVISION OF PROFITS.

SPECIAL NOTICE.—Parties desirous of participating in the Fourth Division of Profits to be declared on Policies effected prior to the 31st of December, 1861, should make immediate application. There have already been Three Divisions of Profits, and the Bonuses divided have averaged nearly 2 per cent. per annum on the sums assured, or from 30 to 100 per cent. on the premiums paid, without the risk of copartnership.

To show more clearly what these Bonuses amount to, the three following cases are given as examples:—

Sums Insured.	Bonuses added.	Amount payable up to Dec. 1854.
£5,000	£1,987 10	£6,987 10
1,000	397 10	1,397 10
100	39 15	139 15

Notwithstanding these large additions, the Premiums are on the lowest scale compatible with security; in addition to which advantages, one-half of the premiums may, if desired, for the term of five years, remain unpaid at 5 per cent. interest, without security or deposit of the Policy.

The Assets of the Company at the 31st of December, 1860, amounted to £730,665 7*s.* 10*d.*, all of which has been invested in Government and other approved securities.

No charge for Volunteer Military Corps whilst serving in the United Kingdom.

Policy stamps paid by the office.

For Prospectuses, &c. apply to the Resident Director, No. 8, Waterloo-place, Pall Mall.

By order,

E. L. BOYD, Resident Director.

LEBAHN'S WORKS ON THE GERMAN LANGUAGE, ADAPTED FOR SELF-INSTRUCTION.

Just published, Second Edition, price 3*s.* 6*d.*

Lebahn's First German Course.

"It is hardly possible to have a simpler or better book for beginners in German."—*Athenæum*.

"It is really what it professes to be—a simple, clear and concise introduction to the German language; one, too, which will be equally useful to the self-instructing student and the member of a German class."—*Critic*.

Fourth Edition, price 3*s.* 6*d.*

Lebahn's First German Reader.

"An admirable book for beginners, which indeed may be used without a master."—*Leader*.

Sixth Edition, price 3*s.* 6*d.*

Lebahn's Eichenfels and Dialogues.

"A charming production. The Dialogues are as perfectly adapted to render the student a speaker of this interesting language, as is the Vocabulary for making him a reader."—*Educational Times*.

Sixth Edition, price 8*s.*; with KEY, 10*s.* 6*d.*

Lebahn's German in One Volume.

"To those who would attain a practical use of the language, with a moderate expenditure of time and labour, this work will be a welcome help."—*Illustrated London News*.

Lebahn's Practice in German. Price 6*s.*

"Whoever fails to learn the German language with this help, must have an intellect irredeemably dull and obfuscated."—*Sun*.

Lebahn's Exercises in German. Price 3*s.* 6*d.*

"A volume of 'Exercises in German,' including in itself all the vocabularies they require. The book is well planned; the selections for translation from German into English, or from English into German, being sometimes curiously well suited to the purpose for which they are taken."—*Examiner*.

Lebahn's Self-Instructor in German. 6*s.* 6*d.*

"The student could have no guide superior to Mr. Lebahn."—*Literary Gazette*.

Price 3*s.* 6*d.* each.

Lebahn's German Classics: with Notes and Complete Vocabularies.

PETER SCHLEMIHL, the Shadowless Man. By Chamisso.

EGMONT. A Tragedy, in Five Acts, by Goethe.

WILHELM TELL. A Drama, in Five Acts, by Schiller.

GOETZ VON BERLICHINGEN. A Drama, by Goethe.

PAGENSTREICHE, a Page's Frolics. A Comedy, by Kotzebue.

EMILIA GALOTTI. A Tragedy, in Five Acts, by Lessing.

UNDINE. A Tale, by Fouqué.

SELECTIONS FROM THE GERMAN POETS.

"These editions are prepared for the use of learners who read without a master; and they will be found convenient for that purpose. In each, the text is followed by a glossary, wherein not only the sense of every particular phrase, but also the dictionary meaning of most of the several words, is given in good English. With such aids, a student will find no difficulty in these masterpieces."—*Athenæum*.

Lebahn's German Copy-Book: being a Series of Exercises in German Penmanship, beautifully engraved on Steel. Price 2*s.* 6*d.*

. About Seven Hundred Commendatory Notices of Lebahn's Works have appeared.

LOCKWOOD & CO. 7, Stationers' Hall-court.

APPARATUS AND CHEMICALS,

A Folding, Rigid, and Stereoscopic CAMERAS in variety, combining great portability and lightness, with every Adjustment suggested by the most experienced Operators.

parts of this important improvement in the
Microscope, we are now enabled to make the
addition to any Microscope, when it is really
practicable, at the cost of 7l. 10s. In the case
of new Instruments, the extra price will be
only 6l.

SMITH, BECK & BECK.

September, 1861.

ing Microscopes, Stereoscopes, &c., may be had
on application, or sent post free.

**THE SCOTTISH WIDOWS' FUND
AND LIFE ASSURANCE SOCIETY**

is a purely Mutual Office, in which the whole Funds belong to the
Members; and the Profits are divided among them alone. Since
it was founded, in 1815, its history has been one of constant and
increasing prosperity; and it is now, in possession of Funds, Annual
Revenue and number of Members, one of the largest Life Offices
in the world. The Security presented by the Society to its Mem-
bers and their Representatives is of the most unquestionable char-
acter; while the Returns made in the form of Bonuses are, it is
believed, not exceeded by those of any other similar Institution.
The following is a

**MEMORANDUM OF BUSINESS, BONUSES, FUNDS
AND REVENUE.***Extracted from the Society's detailed Prospectus.*

1. TOTAL ASSURANCES ISSUED	£14,631,734
2. TOTAL BONUSES DECLARED	3,083,000
3. SUMS ASSURED AND BONUSES EXISTING	10,866,861
4. TOTAL CLAIMS PAID EXCEED	3,600,000
5. INVESTED FUNDS	3,671,764
6. ANNUAL REVENUE	435,738

Forms of Proposal, detailed Prospectuses and Reports, and
every information, may be had at the Head Office, or any of the
Society's Agents.

SAMUEL RALEIGH, Manager.
J. J. P. ANDERSON, Secretary.

Edinburgh, 2, St. Andrew-square.

SPECIAL NOTICE.

Proposals dated and lodged at the Head Office, or with any of
the Society's Agents, during the current year, will secure One
Bonus more than those of later date.

**THE LIVERPOOL AND LONDON FIRE
AND LIFE ASSURANCE COMPANY.**

ESTABLISHED 1836.

Offices:
1, Dale-street, Liverpool; 30 and 31, Poultry, London.

FIRE DEPARTMENT.

The Annual Premiums exceed 310,000l., and place it in the first
class of Fire Offices. Its liberality and promptitude in settling
claims have been established in the adjustment of enormous
losses; and its influence in determining rates of Premium has
uniformly been given to proposals for insuring the character of
risks, that high Premiums may be unnecessary.

LIFE DEPARTMENT.

The Annual Premiums exceed 120,000l.; the Accumulated Re-
serve in this department is 707,000l.

RESOURCES.

The invested funds of the Company exceed 1,300,000l. The Li-
ability of Proprietors is unlimited.

SWINTON BOULT, Secretary to the Company.
JOHN ATKINS, Resident Secretary, London.

FIRE POLICIES due at Michaelmas should be renewed by
the 14th day of October, 1861.

**GUARDIAN FIRE AND LIFE
ASSURANCE COMPANY.**

No. 11, LOMBARD-STREET, LONDON, E.C.

Established 1831.

Capital Subscribed—TWO MILLIONS.

Paid up—One Million.

LIFE DEPARTMENT.—Under the provisions of an Act of
Parliament, this Company now offers to new Insurers Eighty per
Cent. of the Profits, at Quinquennial Divisions, or a Low Rate
of Premium without participation of Profits.

Since the establishment of the Company in 1821, the Amount of
Profits allotted to the Assured has exceeded in each year 600,000l.,
which represents equivalent Reversionary Bonuses of 1,058,000l.

After the Division of Profits at Christmas 1859, the Life Assur-
ances in force, with existing Bonuses thereon, amounted to
upwards of 4,730,000l.; the Income from the Life Branch, 307,000l.
per annum; and the Life Assurance Fund, independent of the
Capital, exceeded 1,618,000l.

LOCAL MILITIA and VOLUNTEER CORPS.—No extra
Premium is required for Service therein.

INVALID LIVES assured at corresponding Extra Premiums.
LOANS granted on Life Policies to the extent of their values,
if such value be not less than 50l.

ASSIGNMENTS of POLICIES.—Written Notices of, received
and registered.

MEDICAL FEES paid by the Company, and no charge for
Policy Stamp.

Notice is hereby Given, That **FIRE POLICIES** which expire at
Michaelmas must be renewed within fifteen days at this Office, or
with Mr. SAMS, No. 1, St. James's-street, corner of Pall Mall;
or with the Company's Agents throughout the Kingdom, other-
wise they become void.

Losses caused by Explosion of Gas are admitted by this Com-
pany.

**VICTORIA LIFE ASSURANCE
COMPANY,**

18, KING WILLIAM-STREET, CITY. Established 1833.

Thomas Nesbitt, Esq., Chairman.**O'R. B. Woolsey, Esq., Deputy-Chairman.**

W. K. Jameson, Esq.
John Jones, Esq.
John Nulloth, Esq.
Messrs Standland, Esq., M.P.
Daniel Sutton, Esq.
Walter Charles Venning, Esq.
William White, Esq.

Every description of Life Assurance business is transacted.
Advances are made on Mortgage of Freehold Property, Life and
Reversionary Interests, &c. and also to Assurers on Personal
Security. The Assets are 340,000l., and the Income is over 60,000l.
per annum. Four-fifths of the entire Profits are appropriated to the
Assured. Three divisions of considerable amount have already
taken place. **WILLIAM RATHAY, Actuary.**

**SUN LIFE ASSURANCE SOCIETY,
THREADNEEDLE-STREET, LONDON.**

The Profits of this Society will be divided in future Quinquen-
nial Divisions, and will participate at each division, after three
Annual Payments of Premium have been made.

Policies effected now will participate in four-fifths, or 80 per
cent. of the Profits, according to the conditions contained in the
Society's Prospectus.

The Premiums required by this Society for insuring young
lives are lower than in many other old-established Offices, and
Insurers are fully protected from all risk by an ample guarantee
fund, in addition to the accumulated funds derived from the
investments of Premiums.

No charge for services in the Militia or in any Yeomanry or
Volunteer Corps in the United Kingdom.

Policy Stamps paid by the Office.

Prospectuses may be obtained at the Office in Threadneedle-
street, London, or of any of the Agents of the Society.

CHARLES HENRY LIDDERDALE, Actuary.**LONDON LIFE ASSOCIATION,
21, KING WILLIAM-STREET, E.C.**

Instituted 1806.

President—CHARLES FRANKS, Esq.**Vice-President—JOHN BENJAMIN HEATH, Esq.***Trustees.*

Francis Henry Mitchell, Esq.
Alfred Head, Esq.

Robert Hanbury, Esq.
Bonamy Dobson, Esq.

The London Life Association was established more than fifty
years ago, on the principle of Mutual Assurance, the whole of the
benefits being shared by the Members assured. The surplus is
ascertained each year, and appropriated solely to a reduction of
the premiums after seven yearly payments have been made.

If the present rate of reduction be maintained, persons now
effecting Assurances will be entitled, after seven years, to a
reduction of 75 per cent., whereby each l. of annual premium
will be reduced to 2l. 13s.

This Society has paid in claims more than £4,150,000

And has policies now in force amounting to 6,480,000

For the payment of which it possesses a capital exceed-
ing £750,000

And a gross income from premiums and interest of
more than £30,000

Assurances may be effected for any sum not exceeding 10,000l. on
the same life.

The Society has no agents and allows no commission, never-
theless the new assurances effected in the last financial year
amounted to 287,240l., and the new annual premiums to 10,887l.

LONDON WAREHOUSE: 76, CANNON-STREET WEST, CITY.

RUPTURES.—BY ROYAL LETTERS PATENT.**WHITE'S MOC-MAIN LEVER TRUSS is**

allowed by upwards of 20 Medical Gentlemen to be the
most effective invention in the curative treatment of HERNIA.
The use of a steel spring, so often hurtful in its effects, is here
avoided: a soft bandage being worn round the body, while the
inside of the hip is supported by the MOC-MAIN PAD and
PATENT LEVER, fitting with so much ease and closeness that
it cannot be detected, and may be worn during sleep. A descrip-
tive Circular may be had, and the Truss (which cannot fail to fit)

forwarded by post, on the circumference of the body, two inches
below the hips, being sent to the Manufacturer.

Price of a Single Truss, 15s., 21s., 25s. 6d. and 31s. 6d., postage, 1s.
Double Truss, 31s. 6d., 42s. and 52s. 6d., postage, 1s. 6d.
P.O. O. made payable to JOHN WHITE, Post-officially.

ELASTIC STOCKINGS, KNEE-CAPS, &c.

For VARICOSE VEINS, and all cases of WEAKNESS
and SWELLING of the LEGS, SPRAINS, &c. They are porous,
light in texture, and inexpensive, and are drawn on like an ordi-
nary stocking. Price 6s. 6d., 7s. 6d., 10s. and 12s. each, postage 6d.

JOHN WHITE, Manufacturer, 23, PICCADILLY, London.

DENT, Chronometer, Watch, and Clock
Maker to the Queen and Prince Consort, and Maker of the Great Clock for the Houses of Parliament, 61, Strand, and 34, Royal Exchange.

THE BEST and CHEAPEST TEAS and COFFEES in England are to be obtained of **PHILLIPS & CO.**, Tea-Merchants, 8, King William-street, City. Good strong useful Tea, 3s. 8d., 3s. 10d., 3s. and 4s.; rich Bouquet, 3s. 8d., 3s. 10d., and 4s. Pure Coffees, 1s. 1s. 3d., 1s. 4d., 1s. 6d., and 1s. 8d. Tea and Coffee to the value of 40s. sent carriage-free to any railway-station or market-town in England. A Price Current free. Sugars at market-prices. All goods carriage-free within eight miles of the City.

TEA.—DR. HASSALL'S ("The Chief Analyst of the Sanitary Commission of the Lancet on Food") Report on the Teas and Coffees sold by Messrs. STRACHAN & CO. 25, Cornhill, London, E.C. Having purchased through my own agents, and in the ordinary way of business, a variety of samples of the several qualities of Tea and Coffee vendible by Messrs. Strachan & Co., I have subjected the whole of them to Microscopical Examination and Chemical Analysis. The result of the examinations obtained was in the highest degree satisfactory.

A full Report of the above Analysis, also List of Prices, can be had on application to Messrs. STRACHAN & CO. 25, Cornhill, E.C. London. Cards to all parts of London daily.

ALLSOPP'S PALE ALE, in Bottle, recommended by Baron Liebig and all the Faculty, may now be had in the finest condition of Messrs. HARRINGTON PARKER & CO. 54, Pall Mall, S.W.

SAUCE.—LEA AND PERRINS beg to caution the Public against Spurious Imitations of their world-renowned **WORCESTERSHIRE SAUCE**.

Purchasers should **ASK FOR LEA AND PERRINS' SAUCE**, Pronounced by Connoisseurs to be **"THE ONLY GOOD SAUCE."**

* * Sold Wholesale and for Export, by the Proprietors, Worcester, Messrs. CRUSSE & BLACKWELL, London, &c. &c.; and by Grocers and Oilmen universally.

CAUTION.—SMEE'S SPRING MATTRESS. TUCKER'S PATENT, or SOMMER TUCKER. Comfortable, cleanly, simple, portable and inexpensive. Purchasers are respectfully warned against infringements and imitations, in which somewhat of the general appearance of the **SMEE'S SPRING MATTRESS** is carefully preserved, but all its essential advantages are sacrificed.

WILLIAM SMEE & SONS, having now the entire of the Patent Right, are able to announce the following considerably

REDUCED SCALE OF PRICES.

Size No. 1 for Bedsteads 3 feet wide 37s. 6d.
" " " " " " " " 37s. 6d.
" " " " " " " " 45s. 0d.
Other sizes in proportion. To be obtained of almost all respectable Upholsterers and Bedding Warehousemen.

ESPECIAL NOTICE should be taken that each Spring Mattress bears upon the side the Label, "Tucker's Patent."

FENDERS, STOVES, FIRE-IRONS and CHIMNEY-PIECES.—Buyers of the above are requested, before finally deciding, to visit **WILLIAM S. BURTON'S SHOW-ROOMS**. These contain such an assortment of **FENDERS, STOVES, RANGES, CHIMNEY-PIECES, FIRE-IRONS and GENERAL IRONMONGERY**, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or excellence of workmanship. Bright Stoves, with ornamental ornaments and two sets of bars, 31. 10s. to 33. 10s.; Breasted Fenders, with standards, 7s. to 12. 10s.; Steel Fenders, 21. 10s. to 111.; Ditto, with rich ornamental ornaments, from 21. 10s. to 131.; Chimney-pieces, from 11. 5s. to 801.; Fire-irons, from 3s. 3d. the set to 4. 4s.—**THE BURTON** and all other **PATENT STOVES**, with radiating hearth-plates.

BEDSTEADS, BATHS AND LAMPS.—**WILLIAM S. BURTON** has SIX LARGE SHOW-ROOMS devoted exclusively to the SEPARATE DISPLAY of Lamps, Baths and Metallic Bedsteads. The stock of each is at once the largest, newest and most varied ever submitted to the public, and market prices proportionately low. Those who have tended to make his establishment the most distinguished in this country.

Bedsteads, from 12s. 6d. to £30 0s. each.
Shower Baths, from 8s. 0d. to 25 0s. each.
Lamps (Moderators), from 6s. 0d. to 45 10s. each.
(All other kinds at the same rate.)
Pure Colza Oil, 4s. per gallon.

CUTLERY, WARRANTED.—The most varied assortment of **FABRIC CUTLERY** in the world, all warranted, is on SALE at **WILLIAM S. BURTON'S**, at prices that are remunerative only because of the largeness of the sales. 31-inch ivory-handled table knives, with high shoulders, 12s. 6d. per dozen; dessert to match, 10s.; if to balance, 6d. per dozen extra; carvers, 4s. 3d. per pair; larger sizes, from 20s. to 37s. 6d. per dozen; extra fine ivory, 33s.; if with silver ferrules, 30s. to 50s.; white bone, 25s. per dozen; dessert, 5s.; carvers, 3s. 3d. per pair; black horn table knives, 7s. 6d. per dozen; dessert, 6s.; carvers, 3s. 6d.; black wood-handled table knives and forks, 6s. per dozen; table steels, from 1s. each. The largest stock in existence of plated dessert knives and forks, in cases and otherwise, and of the new plated hair carvers.

WILLIAM S. BURTON'S GENERAL FURNISHING IRONMONGERY CATALOGUE may be had gratis, and free by post. It contains upwards of 400 illustrations of his illimitable Stock of Sterling Silver and Electro-Plated Nickel Silver and Britannia Metal Goods, Dish-covers, Hot-water Dishes, Stoves, Fenders, Marble Chimney-pieces, Kitchen Ranges, Lamps, Gasoliers, Tea-Trays, Urns and Kettles, Clocks, Table Cutlery, Baths, Toilet Ware, Turnery, Iron and Brass Bedsteads, Bedding, Bed-room and Cabinet Furniture, &c., with Lists of Prices, and Plans of the Twenty large Show-rooms, at 55, Oxford-street, W.; 1, 1A, 2, 3 and 4, Newman-street; 4, 5 and 6, Perry's-place; and 1, Newman-mews, London.

STOVES FOR ENTRANCE HALLS, SCHOOL ROOMS, CHURCHES, &c. all made with fire-brick linings, and entirely free from the objection found to so many, which, from their liability to become overheated, are dangerous, and render the atmosphere offensive. These Stoves burn little fuel, may be had with or without open fire, and to burn throughout the cold season, if required, without going out. Illustrated Prospectuses FREE OF CHARGE. **WILLIAM S. DR. DE JONGH'S
(Knight of the Order of Leopold of Belgium)
LIGHT-BROWN COD LIVER OIL,
Prescribed by the most Eminent Medical Men throughout the world, as the safest, speediest and most effectual remedy for

CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE LAMENESS, AND ALL SCROFULOUS AFFECTIONS.

Is incomparably superior to every other variety.

SELECT MEDICAL OPINIONS.
Sir HENRY MARSH, Bart. M.D., Physician in Ordinary to the Queen in Ireland.—"I consider Dr. de Jongh's Cod Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. LANKESTER, F.R.S.—"I deem the Cod Liver Oil sold under Dr. de Jongh's guarantee to be preferable to any other kind as regards genuineness and medicinal efficacy."

Dr. GRANVILLE, F.R.S.—"Dr. Granville has found that Dr. de Jongh's Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oil."

Dr. LAWBRANCE, Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.—"I invariably prescribe Dr. de Jongh's Light-Brown Oil in preference to any other, feeling assured that I am recommending a genuine article, and not a manufactured compound, in which the efficacy of this invaluable medicine is destroyed."

Dr. DE JONGH'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-Pint, 3s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; capsules and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists.

SOLE CONSIGNERS:
ANSAB, HARFORD & CO. 77, Strand, London, W.C.

Offices and Sale Rooms, 133, REGENT-STREET, W., LONDON (late 422, Oxford-street). Instruction gratis to every Purchaser. The Lock-stitch Sewing Machine will Gather, Hem, Felt, Bind, or Stitch, with great rapidity, answers well for ALL descriptions of work, is simple, compact, and elegant in design, the work will not ravel, and is the same on both sides; the speed is from 1,000 to 3,000 stitches per minute; a child 12 years old can work it, and the Machine is suitable alike for the Family or the Manufacturer. Illustrated Prospectus, with Testimonials, gratis and post free.

METCALFE, BINGLEY & CO.'S New Patent Brushes, and Penetrating bleached Hair Brushes, Improved Flash and Cloth Brushes, and genuine Smyrna Sponges, new style Hemming Binder, Corder, &c. Office and Sale Rooms, 133, REGENT-STREET, W., LONDON (late 422, Oxford-street). The Tooth Brushes search between the divisions of the Teeth, the hairs never come loose. M. B. & Co.'s New and Delicious Perfumes—The Fairy Bouquet, The Oxford and Cambridge Bouquet, in bottles, 3s., 3s. 4d. and 5s. each.—Metcalfe's celebrated Alkaline Tooth Paste, per box.—Sole Establishment, 130s and 131, OXFORD-STREET.

DURABILITY OF GUTTA-PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta-Percha Tubing, the Gutta-Percha Company have pleasure in giving publicity to the following letter:—From SIR RAYMOND J. A. VENTNOR, Bart., VENTNOR, Isle of Wight.—"Second Testimonial.—March 10th, 1858.—In reply to your letter, received this morning, respecting the Gutta-Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years; and I am informed that it is to be adopted generally in the houses that are being erected here."—R.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta-Percha Tubing.

THE GUTTA-PERCHA COMPANY, PATENTEES,
13, WHARF-ROAD, CITY-ROAD, LONDON.

BLAIR'S GOUT AND RHEUMATIC PILLS.
Price 1s. 1/4d. and 3s. 9d. per box.

This Preparation is one of the benefits which the Science of Modern Chemistry has conferred upon Mankind; for during the first twenty years of the present century, to speak of a Cure for the Gout was considered a romance; but now the efficacy and safety of this Medicine are so fully demonstrated, by unselected testimonials from persons in every rank of life, that Public Opinion proclaims this as one of the most important Discoveries of the Present Age.

These Pills require no restraint of diet or confinement during their use, and are certain to prevent the disease attacking any vital organ.

Sold by all Medicine Vendors, and at 293, Strand, London.

TEETH.—By her Majesty's Royal Letters Patent.—Newly-invented Application of Chemically Prepared India-rubber in the construction of Artificial Teeth, Gums, and Palates.—MR. PEPHRAIM MOSELEY, Surgeon-Dentist, sole inventor and patentee.—A new, original, and invaluable invention consisting in the adaptation, with the most absolute perfection and success, of CHEMICALLY PREPARED INDIA-RUBBER, as a lining to the gold or bone frame.—All sharp edges are avoided; no spring wires or fastenings are required; a greatly increased freedom of suction is supplied; a natural elasticity, hitherto wholly unobtainable, and a fit, perfected with the most accurate accuracy, are secured; while from the softness and flexibility of the agents employed, the greatest support is given to the adjoining teeth when loose or rendered tender by the absorption of the gums.—To be obtained only at 9, Lower Grosvenor-street, Grosvenor-square, London, W.

DINNEFORD'S PURE FLUID MAGNESIA has been, during twenty-five years, emphatically sanctioned by the Medical Profession and universally accepted by the Public, as the Best Remedy for acidity of the stomach, heartburn, headache, gout and indigestion, and as a mild aperient for delicate constitutions, more especially for Ladies and Children. Combined with the Acidulated Lemon Syrup, it forms an agreeable Effervescent Draught, in which its Aperient qualities are much increased. During Hot Seasons and in Hot Climates, the regular use of this simple and elegant remedy has been found highly beneficial. Manufactured (with the utmost attention to strength and purity) by DINNEFORD & CO. 174, New Bond-street, London; and sold by all respectable Chemists throughout the Empire.

COCKLE'S ANTIBILIOUS PILLS for Indigestion, bile, sick headache, acidity, heartburn, flatulency, spasms, &c.—Prepared only by JAMES COCKLE, 18, New Ormond-street, and to be had of all Medicine Vendors, in boxes, at 1s. 1/4d., 2s. 9d., 4s. 6d. and 11s. each.

KEATING'S PERSIAN INSECT-DE-STROYING POWDER.—This powder is quite Harmless to Animal Life, but is unrivalled in destroying Fleas, Bugs, Beetles, Flies, Cockroaches, Beetles, Gnats, Moths in Furs, and every other kind of Insects in all stages of their life. It is an invaluable remedy for destroying Fleas in Ladies' Pet Dogs. It is perfectly harmless in its nature, and may be applied without apprehension, as it has no QUALITIES DELETERIOUS to ANIMAL LIFE.
Sold in Packets, 1s., 2s. 6d. and 4s. 6d. each, or post free for 14, or treble size for 38 postage-stamps, by THOMAS KEATING, Chemist, 79, St. Paul's Churchyard, London, E.C.

HOLLOWAY'S OINTMENT and PILLS.—Diphtheria, Sore-throat, Quinsy, Mumps, and similar complaints, always abound in wet weather, and are most safely and effectively subdued by rubbing Holloway's Ointment at least twice a day upon the chest and glands of the throat. The Ointment penetrates the skin, reduces inflammation, and heals ulcerations. This treatment is sufficient for curing the most serious and complicated throat affections, provided Holloway's Pills be taken at the same time. When swallowing gives pain, the Ointment alone may be relied on till improving symptoms of recovery are detected. In Asthma, Bronchitis, Pneumonia, Whooping-Cough, the early stages of Consumption, Scrophulous Measles, Holloway's preparations are not less valuable in mitigating their most troublesome features, and ultimately curing.

THE
ALEXANDRE HARMONIUM,
 AT
CHAPPELL'S, 50, NEW BOND-STREET.

NEW ALEXANDRE HARMONIUMS.

	GUINEAS.
THE FIVE-GUINEA HARMONIUM, 4 Octaves, in Oak Case	5
THE SIX-GUINEA HARMONIUM, 5 Octaves, in Oak Case, with 2 Foot-boards	6

These Instruments are lower in price and superior to all other cheap Harmoniums.

THE NEW CHURCH HARMONIUM.
 WITH TWO ROWS OF KEYS.

THESE Instruments are a perfect substitute for the Organ; the upper keyboard has a Venetian Swell, and acts as a Soft or Choir Organ, on which a perfect diminuendo and crescendo can be produced; and the lower keyboard answers the purpose of a Full Organ. The tone of these Instruments more closely resembles that of an Organ than any Harmonium yet produced, being rich and pure in quality. The construction is of a simple character and not likely to be affected by damp, rendering them peculiarly suited to Churches. An additional blower is attached to each Instrument.

NO.		GUINEAS.
1.	EIGHT STOPS (<i>Three and a-half rows of Vibrators</i>), Rosewood Case	45
2.	TWENTY-TWO STOPS (<i>Six rows of Vibrators</i>), Rosewood Case	70
3.	TWENTY-TWO STOPS (<i>Eight rows of Vibrators</i>), Rosewood Case, 2½ Octaves of Pedals	85

ALEXANDRE & SON have taken out a new Patent for the Drawing-Room Harmonium which effects the greatest improvement they have ever made in the Instrument. The Drawing-Room Models will be found of a softer, purer, and in all respects more agreeable tone than any other instruments. They have a perfect and easy means of producing a diminuendo or crescendo on any one note or more; the bass can be perfectly subdued, without even the use of the Expression Stop, the great difficulty in other Harmoniums.

THE DRAWING-ROOM MODEL

IS MADE IN THREE VARIETIES:—

NO.		GUINEAS.
1.	THREE STOPS, Percussion Action, additional Blower, and in Rosewood Case	25
2.	EIGHT STOPS, ditto ditto ditto	35
3.	SIXTEEN STOPS, ditto ditto Voix Céleste, &c. (<i>The best Harmonium that can be made</i>)	60

Messrs. CHAPPELL have an ENORMOUS STOCK of all Varieties of the ordinary kind, which are perfect for the Church, School, Hall, or Concert-Room:—

NO.		GUINEAS.	NO.		GUINEAS.
1.	ONE STOP Oak Case	10	7.	ONE STOP (<i>With Percussion Action</i>) Oak Case	16
2.	Ditto Mahogany Case	12		Rosewood	18
3.	THREE STOPS ... Oak, 15 guineas; Rosewood	16	8.	THREE STOPS ditto	20
4.	FIVE STOPS (<i>Two rows of Vibrators</i>) ... Oak	22	9.	EIGHT STOPS ditto Oak or Rosewood	32
	Rosewood Case	23	10.	TWELVE STOPS ditto Oak	40
5.	EIGHT STOPS ditto Oak, 25 gs.; Rosewood	26	11.	Ditto ditto Rosewood	45
6.	TWELVE STOPS (<i>Four rows of Vibrators</i>)		12.	PATENT MODEL ditto Oak or Rosewood	55
	Oak or Rosewood Case	35			

Testimonials from the Professors of Music of the Universities of Oxford and Cambridge, the Organists of St. Paul's and Westminster Abbey, the Professor of the Harmonium at the Royal Academy of Music, &c. &c., together with full descriptive Lists (Illustrated), may be procured on application to

CHAPPELL & CO., 49 and 50, NEW BOND-STREET.

Editorial Communications should be addressed to "The Editor"—Advertisements and Business Letters to "The Publisher"—at the Office, 20, Wellington-street, Strand, London, W.C.
 Printed by JAMES HOLMES, of No. 4, New Ormond-street, in the county of Middlesex, at his office, 4, Took's-court, Chancery-lane, in the parish of St. Andrew, in said county; and published by JOHN PARSONS, 20, Wellington-street, in said county, Publisher, at 20, Wellington-street aforesaid.—Agents: for SCOTLAND, Messrs. Bell & Bradburn, Edinburgh;—for IRELAND, Mr. John Robertson, Dublin.—Saturday, September 21, 1861.

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 1770.

LONDON, SATURDAY, SEPTEMBER 28, 1861.

PRICE
FOURPENCE
Stamped Edition, 5d.

NOTICE.

On and after Saturday, October the 5th, the price of THE ATHENÆUM will be THREEPENCE.

Thirty years ago, when THE ATHENÆUM came into the hands of its present Proprietors, its price was Eightpence, and its contents, with advertisements, forty-eight columns. Convinced that the circulation of Literary Journals was restricted by high price, and that every advantage offered to the public would bring increase of circulation and authority, the Proprietors reduced the price one-half—to Fourpence. The experiment succeeded, and cheap Literary Journals became the rule.

The Proprietors have always held to the principle then proved. They have given to the public the benefit of every change in the law, increasing the size of the paper without increase of price, until the average has become about sixty columns of literary matter, with forty columns of advertisements, selected so as to be of general interest.

The Proprietors, taking advantage of the abolition of the Paper Duty, have now resolved that on and after the 5th of October the price of THE ATHENÆUM shall be reduced to THREEPENCE.

UNIVERSITY COLLEGE, LONDON.— FACULTY OF ARTS AND LAWS.

SESSION 1861-2.

The SESSION will COMMENCE on TUESDAY, October 15, when Professor CASSAL, LL.D., will deliver an INTRODUCTORY LECTURE, at Three o'clock precisely. Subject:—The Study of Modern Languages and Literature in England.

CLASSES.

Latin—Professor Newman.
Greek—Professor Malden, A.M.
Sanskrit—Professor Goldstick.
Hebrew (Goldsmid Professorship)—Professor Marks.
Arabic and Persian—Professor Rieu, Ph.D.
Hindustani—Professor Syed Abdoolah.
Bengali and Hindu Law—Professor Gannend Mohun Tagore.
Gujarati—Professor Daddabhai Naorji.
Chinese—Professor Chee Yui Tang.
English Language and Literature—Professor Masson, A.M.
French Language and Literature—Professor Cassal, LL.D.
Italian Language and Literature—Professorship vacant.
German Language and Literature—Professor Heilmann, Ph.D.
Mathematics—Professor De Morgan.
Natural Philosophy and Astronomy—Professor Potter, A.M.
Physiology—Professor Sharpey, M.D.
Chemistry and Practical Chemistry—Prof. Williamson, F.R.S.
Civil Engineering—Professor Pole, F.R.S.
Architecture—Professor Donaldson, Ph.D. M.I.E.A.
Geology (Goldsmid Professorship)—Professor Morris, F.G.S.
Mineralogy—Professor Morris, F.G.S.
Drawing—Teacher Mr. F.C.S.
Botany—Professor Oliver, F.L.S.
Zoology (Recent and Fossil)—Professor Grant, M.D. F.R.S.
Philosophy of Mind and Logic—Professor the Rev. J. Hoppus, Ph.D. F.R.S.
Ancient and Modern History—Professor Beesly, A.M.
Political Economy—Professor Waley, A.M.
Law—Professor Russell, LL.B.
Jurisprudence—Professor Sharpey, LL.D.

Residence of Students.—Several of the Professors receive Students to reside with them, and in the Office of the College there is kept a register of parties who receive Boarders into their families. The register will afford information as to terms and other particulars.

Andrews Scholarships.—In October, 1862, two Andrews Scholarships will be awarded—one of £61. for proficiency in Latin and Greek, and one of £61. for proficiency in Mathematics and Natural Philosophy. Candidates must have been, during the academical year immediately preceding, matriculated students in the College or pupils of the School.

A Joseph Hume Scholarship in Jurisprudence of £61. a year, tenable for three years, will be awarded in December of 1861, and in December of every third year afterwards. A Joseph Hume Scholarship in Political Economy of £61. a year, tenable for three years, will be awarded in December, 1862, and in December of every third year afterwards. A Ricardo Scholarship in Political Economy of £61. a year, tenable for three years, will be awarded in December, 1863, and in December of every third year afterwards. Candidates must have been, during the academical year immediately preceding, matriculated students of the College, and must produce satisfactory evidence of having regularly attended the class on the subject of the scholarship.

Mr. Laurence Counsel's Prize for Law, £10, for 1862.

Jews' Commemoration Scholarships.—A Scholarship of £52. a year, tenable for two years, will be awarded every year to the Student of the Faculty of Arts, of not more than one year's standing in the College, who shall be most distinguished by general proficiency and good conduct.

College Prize for English Essay, £5, for 1862.
Latin Prose Essay Prize (Reading-Room Society's Prize), £5, for 1862.

Evening Classes by the Professors, &c. above named, of the respective Classes, viz.—Latin, Greek, Mathematics, Natural Philosophy, French, Geology, Practical Chemistry, and Zoology; also Animal Physiology (Elementary Course), by Mr. Marshall, F.R.S.

Prospectuses and other particulars may be obtained at the Office of the College; also special Prospectuses, showing the courses of instruction in the College in the subjects of the Examinations for the Civil and Military Services.

EDWARD SPENCER BEESLY, A.M., Dean of the Faculty.
CHAS. C. ATKINSON, Secretary to the Council.
August, 1861.

The SESSION of the FACULTY of MEDICINE will COMMENCE on TUESDAY, the 1st of October.

The JUNIOR SCHOOL will OPEN on TUESDAY, the 24th of September.

THE CENTRAL TRAINING SCHOOL OF

ART, at South Kensington, for Male and Female Students, and the METROPOLITAN SCHOOLS OF ART, at 43, Queen's-square, Bloomsbury, for Female Classes only (removed from 27, Gower-street) and at Spitalfields, Crispin-street; Finsbury, William-street, Wilmington-square; St. Thomas, Charterhouse, Goswell-street; Rotherhithe Grammar School, Deptford-road; St. Martin's-in-the-Fields, Castle-street, Long-acre; Lambeth, St. Mary's, Prince's-road; Hampstead, Dispensary-buildings; and Christ Church, St. George's-in-the-East, Cannon-street, WILL RE-OPEN on TUESDAY, the 4th of October, at 10 o'clock.

A LAYMAN, of good family, who took

Honours in Classics and Mathematics, late Fellow of a College, now residing in a Town in Germany, which affords peculiar advantages, PREPARES YOUNG MEN for the COMPETITIVE EXAMINATIONS, with the assistance of Masters. Terms, exclusive of Masters, 120l. per annum.—For further particulars, apply to the Vicar, Vicarage, Kilmerdon, near Bath.

CRYSTAL PALACE SCHOOL OF ART,

SCIENCE AND LITERATURE.—The NEW TERM will COMMENCE on NOVEMBER 1st NEXT, and will CLOSE on JULY 31st, 1862. During the Vacation extra Lessons are given by some of the Professors.

By order of the Committee.

F. K. J. SHENTON,
Supt. Lit. Department.

Sept. 1861.

WANTED, by a LADY, a situation as

GOVERNESS to Young Children, who would require plain English with Music; or, as COMPANION to an Elderly or Invalid Lady. The latter would be preferred.—Address S. L., Post-office, Seaton Carew, Stockton-on-Tees.

A YOUNG LADY desires to ENGAGE herself

as RESIDENT GOVERNESS in a gentleman's family. She would undertake the charge of children under 18 years of age, and is competent to instruct them in English, French, Italian, Music, and Drawing.—Address F. G., Thomas Buck's Library, Turner's Hill, Chesshurst, Herts.

COMPANION.—A LADY, of good family,

wishes to MEET WITH A SITUATION, as Companion to an Elderly Lady, or a Lady in delicate Health. The Advertiser would take upon herself the entire management of the household duties, if required, having had experience. She is a good reader, and of cheerful disposition. The most satisfactory references can be given. No objection to travel.—Address C. M. J., Post-office, 99, Oxford-street, W.

A LADY wishes strongly to RECOMMEND,

as GOVERNESS to Young Children, or as Useful Companion, a Lady, 30 years of age, who has had great experience in tuition, having resided in one family years. Is of ladylike manners, and of most amiable disposition.—Address to A. T., 30, Avenue-road, New-road, Hammer-smith, W.

TO PUBLISHERS.—A GENTLEMAN of capital

is desirous of embarking in the PUBLISHING BUSINESS, either as Partner or by Purchase.—Address, in the first instance, to X. Y. Z., care of Mr. Lindley, 19, Catherine-street, Strand, W.C.

TO PUBLISHERS, AUTHORS, and Others.

A GENTLEMAN, well versed in Scientific and General Literature, who has had much experience in preparing MSS. for the Press, Revising Authors' Proofs, &c., OFFERS HIS SERVICES to Publishers and others requiring such assistance. Researches undertaken in the British Museum, &c.—Address, prepaid, A. F., care of Messrs. Dorrell & Son, Passport Agents, 15, Charing Cross, London.

TO PROFESSIONAL MEN or PUBLIC

COMPANIES.—A Gentleman, who holds an appointment of responsibility in one of the first Institutions in the City, is open to an ENGAGEMENT in the EVENING, after Six o'clock, to keep the Accounts, conduct the Correspondence, &c. of a Gentleman or Company, where the duties of the office would permit of such an arrangement. The highest references can be given.—Address, by letter, R., care of Messrs. Bruce & Ford, Trump-street, City, E.C.

REPEAL of the TAXES on LITERATURE

and the PRESS.—TESTIMONIAL to the Right Hon. T. MILNER GIBSON, M.P.

Subscriptions, limited to One Pound, received at Drummonds, Charing Cross; and by Robert Chambers, Treasurer, 47, Paternoster-row, E.C.
JOHN FRANCIS,
Committee Room,
47, Paternoster-row, E.C.
Hon. Secretary.

MISS HOLTHAM, formerly of Bowdon,

Cheshire, RECEIVES A FEW YOUNG LADIES requiring social yet select Companionship in their Studies.—For Terms and References apply to Miss HOLTHAM, 31, Powis-square, Brighton.

THE COMMERCIAL, ENGINEERING,

and SCIENTIFIC SCHOOL, beautifully situated near CHESTER. This School, recognized by the Secretary of State for India, "as possessing an efficient Class for Civil Engineering," offers a sound English Education, and, in addition, Classes and the Modern Languages. Particular attention is given to Mathematics and Practical Chemistry. The instruction in Drawing is on the system of the Department of Science and Art. Each Pupil is provided with a separate sleeping apartment.—For particulars, apply to the Rev. ARTHUR RIGG, College, Chester.

Now ready at all the Libraries, in 2 vols. price 15s.
MABEL'S CROSS: a Novel. By E. M. P.

"The *Illustrated London News* says:—We hear of a new novel called 'Mabel's Cross' which is said to be considerably above the average in interest and descriptive power. This is saying a good deal in an age when the rule seems to be to have one monumental obelisk of romance with the name of Bulwer, Dickens, a Thackeray, a George Eliot, or a Lever, carved upon it, and surrounded for hundreds of leagues by a dead level of dreary three-volume performances." London: Tinsley Brothers, 18, Catherine-street, Strand.

BY ORDER OF THE LORDS COMMISSIONERS OF THE ADMIRALTY.
Now ready, price 2s. 6d.

THE NAUTICAL ALMANAC and ASTRONOMICAL EPHEMERIS for 1862. John Murray, Albemarle-street, Publisher to the Admiralty.

 Garibaldi, and Plan of Gaëta, price 10s. 6d. cloth.
IN THE TRACK OF THE GARIBALDIANS
 through ITALY and SICILY.
 By ALGERON SIDNEY BICKNELL.
 London: George Manwaring, 8, King William-street, Strand.

The Sixteenth Edition.
WILLIAMS'S (T. S.) MODERN GERMAN
 and ENGLISH CONVERSATIONS, and ELEMENTARY
 PHRASES. The German revised and corrected by A. KOKE-
 MÜLLER. Sixteenth Edition, improved and re-edited. Cloth
 boards, 1860, 2s. 6d.
 A sale of 40,000 copies of this eminently useful little book testifies
 sufficiently to its excellence. It is used in numerous first-rate
 colleges both in England and in Germany.
 Williams & Norgate, 14, Henrietta-street, Covent-garden, Lon-
 don; and 30, South Frederick-street, Edinburgh.

New ready, Vol. XIX. price 6s. of
THIERS' HISTORY OF THE CONSULATE
 and the EMPIRE OF FRANCE under NAPOLEON; form-
 ing a Sequel to the 'History of the French Revolution.' Trans-
 lated from the French. The late Mr. Colburn's Authorized
 Library Edition in 8vo., large type. This important and highly-
 interesting Volume contains—The Island of Elba and Napoleon's
 Return to France—Flight of the Bourbons—Additional Act—
 Champ de Mai—and Napoleon's Departure for Waterloo.
 Published by Willis & Sotherton, 120, Strand.

Just published,
DANTE'S INFERNO (in the Original).
 Illustrated by Gustave Doré.
 In folio, cloth, price 100 francs.

"Here is what may be styled a volume royal, folio, broad mar-
 gined, luminously printed upon the purest paper, and edited, with
 care, from the Cominian text, as the foundation of the present
 version. The telling, bold and dramatic compositions of M. G.
 Doré will obtain admiration from a wide circle. Thousands will
 go down in fancy with the living artist into the shades of Hell,
 and be so impressed by his photographic vigour that they may
 even know how 'in the thinking it reneweth fear' to have once
 seen such monstrous shadows, sullen flames and dismal regions."
Athenæum.

L. Hachette & Co. Publishers, 12, King William-street, Strand,
 W.C.

On September 30 will be published, price 6s. the
NATIONAL REVIEW. No. XXVI.

ONCE A WEEK.

WITH NUMEROUS ILLUSTRATIONS.

This day is published, in 3 vols. post 8vo. price 31s. 6d.

THE SILVER CORD.

By SHIRLEY BROOKS,

Author of 'The Gordian Knot,' 'Aspen Court,' &c.

"A very curious and powerful story."—*Athenæum*.
 "There is a wealth of materials in it that is quite sur-
 prising. Almost every chapter has its own striking situation
 allotted to it, and we are constantly kept on the alert
 watching for something even more startling than all that
 has gone before."—*Saturday Review*.

On the 30th inst. will be published, price 5s. in boards,

THE EIGHTH VOLUME OF

THE RE-ISSUE OF PUNCH.

Also, now ready, handsomely bound in cloth, gilt edges,

Vol. 1 (for 1841).....	6s.	Vols. 4 and 5 (1843)	10s. 6d.
Vols. 2 and 3 (1842)	10s. 6d.	Vols. 6 and 7 (1844)	10s. 6d.

Vols. 8 and 9 (1845) will be published at the end of October, price 10s. 6d.

THE NEW EDUCATION MINUTE.

This day is published, price 2s. 6d. boards,

POPULAR EDUCATION IN ENGLAND.

BEING AN ABSTRACT OF THE REPORT OF THE ROYAL COMMISSIONERS ON
 EDUCATION.

WITH AN INTRODUCTION AND SUMMARY TABLES.

By HERBERT S. SKEATS.

"Mr. H. S. Skeats's 'Abstract of the Report of the Royal Commissioners' is at once comprehensive, concise and clear. All the really important points, either as to matters of fact or suggestion, are compressed into the compass of one small volume. Yet the arrangement is so good, that there is no consequent confusion or obscurity; while the

outline of what has been done, is doing, or is proposed to be done, for the formation of a sound and wide-spread education among the people, is simple, brief and intel-
 ligible, without being bald and uninteresting from its brevity. It is a useful work well done."—*Economist*.

London: BRADBURY & EVANS, 11, Bouverie-street, Fleet-street, E.C.

Just published, fcap. 8vo. cloth, price 2s. 6d.

LECTURES ON NATURAL HISTORY.

By EDWARD JESSE, Esq.

Author of 'Gleanings in Natural History,' 'Anecdotes of Dogs,' 'Windsor and Eton,' &c.

"These Lectures are full of curious and amusing anecdotes; and, whilst highly instructive and interesting to the seafaring man, to whom they were addressed, are worth reading by anybody."—*Athenæum*, August 31.

"A twofold interest is possessed by this little volume. It is interesting in itself, as possessing many well-selected facts relating to various departments of Natural History; and further interesting, as evidencing that neither age nor its infirmities have rendered torpid the desire to benefit his fellow creatures which has always distinguished our veteran author."—*Globe*, Sept. 12.

"These Lectures are brief and lively, abounding in curiously interesting matter and amusing anecdotes, and are calculated to foster a love for Natural History with all who read them, and especially with children."

English Churchman, Sept. 12.

L. BOOTH, 307, Regent-street, W.

EDMONSTON & DOUGLAS'S LIST OF NEW PUBLICATIONS.

A SUMMER VOYAGE to LABRADOR and around NEWFOUNDLAND. By the Rev. LOUIS L. NOBLE. Post 8vo. with 6 Tinted Lithographs, price 10s. 6d.

London: SAMPSON LOW, SON & CO.
47, Ludgate-hill.

LONDON, SATURDAY, SEPTEMBER 28, 1861.

LITERATURE

Our Black Diamonds; their Origin, Use and Value. (Weale.)

To treat with any degree of success such important subjects as coal, collieries and colliers in all their scientific, technical and commercial aspects, demands a very different kind of hand from that which compiled 'Our Black Diamonds.' Some aspects of these subjects, more particularly the commercial, have indeed, occasionally, been pretty fully dealt with, in connexion with local interests or special circumstances. We recently noticed a small volume which took up the geological details of our British coal deposits, and which, though defective, as we pointed out, is yet so superior to the poor little attempt before us, that one might wonder how its compiler could venture to send it forth. As a gratuitous school-room lecture it might, perhaps, pass; as a printed book it can only pass away; and, probably, the only light it will ever throw upon "Black Diamonds" is that which will arise from its conflagration when it may be used for kindling the coals it can never otherwise illustrate.

A writer who issues a little book of only one hundred and four small pages disfigured with such mistakes as *Petrolum* for *Petroleum*, *Adrian* for *Hadrian*, *Hunter* for *Hunt*, and *Lyall* twice for *Lyell*, can hardly be regarded as a subject for literary criticism; particularly when it must be added that he is simply a compiler, and neither an able nor very honourable one. He is so ignorant as not even to know the best authorities on the topics he discourses upon, and so culpably careless as not even to take the trouble to copy from one of the books he professes to have consulted. After vaguely saying, "One of the most recent authorities gives us the following comparative table of the carboniferous wealth of the different countries of Europe and America in 1857," he proceeds to give figures which are largely and grossly incorrect. He states, for instance, that the coal area of Great Britain is 12,800 square miles, which is about *twice too much*, and he might easily have ascertained that Dr. Rogers, a good and late authority, has estimated the same at 5,400 square miles. He next states that France contains 2,000 square miles of coal area, which again is twice as much as the truth, the most probable estimate being 984 square miles. On the other hand, he reports that the coal area of the United States of America is 113,000 square miles, when one of the books which he commends and professes to have consulted copies correctly the estimate of Dr. Rogers, unquestionably the best authority on American coal deposits; and he might have seen that, in this instance, he is wrong by more than 80,000 square miles,—the coal area of the United States being, not, as the author of 'Our Black Diamonds' says, 113,000, but, as Dr. Rogers estimates, about 196,650 square miles. A writer, however, who makes three such blunders about three such countries, giving to two of them twice as much coal as they contain, and to the other hardly above half enough, is not worth further criticism.

Such errors as these, and such productions as this tractate, would, of course, be prevented by the publication of some one complete and careful digest of what is at present known about coal, collieries and colliers, in a volume which should be well arranged and accessible to the means of most. Having respect to the national importance of our great deposits of coal, to the

capital sunk in mining them, and the vast sum derived from selling them, it does appear remarkable that no such volume has appeared. We have, indeed, in our libraries some attempts in this direction, which, at the periods in which they were published, were worthy of various degrees of commendation. 'The History of Fossil Fuel,' which appeared anonymously, but, we believe, was written by a Mr. Holland, was creditable to its author as a mere literary man, without particular knowledge of his subject. Mr. Richard C. Taylor issued, in 1845, a laboriously compiled volume, entitled 'The Statistics of Coal,' and of this volume a second edition, somewhat enlarged by other hands, appeared in 1855. Praiseworthy as this ponderous effort was, it cannot now be relied upon for the principal coal countries, and, least of all, for our own, the coal produce of which has doubled within comparatively few years. We have only found it in any degree serviceable where the figures were likely to be soon amended by precise knowledge; and, of course, it is simply statistical. The statistics of English coal-mines are now, as is well known, officially collected by Mr. Hunt, and published annually. The popularly written volume before named, by the Traveller Underground, appeared in 1853, and presented some pictures of subterranean life and labour which were evidently drawn from personal observation. The great work of Dr. H. D. Rogers on the coal-fields of North America is of recent date, and has received our hearty commendation. The little book published not long since by Mr. Hull has been noticed by us in some detail. To these publications may be added the purely technical volumes of the *Transactions of the North of England Institute of Mining Engineers*, which, though valuable to professional men, will scarcely come under the notice of others. Without enumerating minor subsidiaries to these volumes, and omitting also the merely geological disquisitions on coal appearing in our geological books and periodicals, as well as in foreign publications, we believe we have specified all the principal English works on this subject; and such specification may be serviceable to those who wish at once to ascertain what is available to them in this direction. We have designedly avoided referring to the important topic of colliery explosions and accidents, since that is too extensive for passing comment, and would demand separate and special elucidation.

A source, not only of instruction, but also of entertainment, seems to have been neglected by nearly all the above authors, except the "Traveller Underground,"—we mean the distinctive characteristics and personal peculiarities of the pitmen as a class of men nearly isolated by their habits and the situation of their labour from the communities of their fellow creatures. Of these we have in all about, and perhaps above, 220,000 persons, of whom the mass of mankind know no more than if they were Hottentots. They are born, bred and buried, for the most part, out of sight of the highly-civilized and educated people around them. In Durham and Northumberland, where some 30,000 of these working folk dwell, the larger proportion of them reside in separate clusters of small houses, known as pit-villages, and they have been characterized by odd ways of living and thinking for many years. These the "Traveller Underground" has touched upon, but by no means exhausted; and though the oddities are gradually dying out, and the boundaries between pitmen and other labourers are being slowly broken down, yet enough of distinction remains to reward

careful local inquiry and to afford interesting traits of life below ground. What has already been reported by the author just alluded to we shall not repeat; but we may observe that a Newcastle gentleman, Mr. Thomas Wilson, eighteen years ago, set an example of what may be gleaned in our coal-fields of this kind of entertainment, by reprinting, chiefly we believe for private circulation, an agreeable little volume, entitled 'The Pitman's Pay,' a poem in the *patois*, describing the prominent and peculiar features of a pitman's life chiefly in its domestic aspects, and when the rough, roystering collier of some fifty years before that time roamed the dusky wilds in all his distinctive glory. It was, indeed, almost allowable to him that he should have a little amusement after his own fashion, since, during his youthful toils, he had passed eighteen or nineteen hours a day for weeks together in almost insupportable drudgery. When, about the age of twenty, he became a hewer, his hours of toil were much shortened, but his work was severely trying, although only enduring for eight or ten hours. What underground pit-life and labour then was can be but feebly estimated by what it now is; and while we have listened to the recitals of old colliers, we have wondered how poor humanity, rough and tough as it is in those Cimmerian regions, could suffer the penalties of pit work. Yet the sports of the men and lads after work were rough enough and hardly fitted for relaxation. Bowling was a favourite amusement, and, though scarcely known at present, became quite a passion in the days of the old colliers. Traditions are still rife of the rudeness of this sport, and, as Mr. Wilson says in a note, the bowling-ground on Gateshead Fell was famous about the beginning of the present century. It ran for about a mile, oddly enough, along two very steep hills, and many a game has been loudly and keenly contested there. Adverting to the various and vicious amusements prevalent at the period in this locality, Mr. Wilson says:—

See on their right a gambling few,
Whose every word and look display
A desperate, dark, designing crew,
Intent upon each other's pay.

They're racers, cockers, carders, keen
As ever o'er a tankard met,
Or ever bowled a match between
The Poplin Well and Mawlin's Yett.

On cock-fight, dog-fight, cuddy race,
Or pitch-and-toss, trippet-and-coit,
Or on a soap-tail'd grunter's chase,
They'll risk the last remaining doit.

Here Tom, the plink of bowlers, gain'd
Himself a never-dying name,
By deeds wherein an arduous reign'd,
Which neither age nor toil could tame.

For, labour done, and o'er his doze,
Tom took his place upon the hill;
And at the very evening's close
You faintly saw him bowling still.

—This Tom was the most celebrated bowler upon Gateshead Fell. He was never absent from a bowling-match of any note, and even when feeble with age was frequently to be seen in the summer evenings bowling by himself. It is even reported that when bringing home a coffin for one of his children, he happened to pass some young men engaged in bowling, and could not resist the temptation, but assuaged his paternal grief by setting down the coffin and taking up the bowls. A local journal thus recorded his decease, in 1828:—"Died, at the 'Black Ram,' adjoining Gateshead Low Fell, on the 3rd inst., Thomas Dixon, aged eighty-five. His wife and her brother died a few years ago at the same place,—the former nearly ninety, and the latter ninety-two. Dixon was a very eccentric character, and cuts a figure in 'The Pitman's Pay.' His great delight was

in bowling, in which he invariably spent the greater part of his vacant hours as long as age would permit. But now, in the language of his favourite amusement, he will never 'stride another trig,' his last 'throw' has been 'thrown' without any chance of being 'called back'; and as no man had more friends to 'show him the reet way,' we sincerely hope that in the match of life now over he will be found at last among those who win."

Gateshead Low Fell was once notorious for reputed witches, and Dick Taylor, a pitman, became famous by marrying "the only real witch," according to Mr. Wilson, in the Low Fell. Her name was Nell Bland, and, as our annotator declares, she was one of the party who watched the corpse of Tom Forster the first time he died, and had her arm broken by being tumbled heels over head down stairs at his resurrection, for be it known, contrary to established usage, Tom died twice. After he made his exit the first time, and was laid out a decent corpse, the neighbours, as is customary on such occasions, were sitting up in the same room with the body, and holding what they called a "Lake Wake," when, to their utter astonishment, they perceived the corpse gradually raising its head, until it sat upright. In a moment the room was cleared, and the whole company, that had been the instant before enjoying themselves in cracking jokes and telling stories, were tumbling one over the other down stairs; and more, it is said that poor Nell came off with broken bones. Tom lived many years after this, and when he really died was an old man.

Among the few reputed witches who remained in this vicinity, a terror to evil-doers and even to the rough, rollicking pitmen, Mr. Wilson was personally acquainted with one, of whom he remarks—"I have known one of these poor creatures, many years ago, whose power never extended further than raising a wind to blow off the roof of her neighbour's cottage or shake his standing corn. I am aware that she was accused of more serious mischief; but how far these ill-natured accusations were true it is difficult to say, for I never could discern anything about Mabel that would warrant them, for she was neither deformed nor ugly (two indispensable requisites towards forming a legitimate witch), nor did I ever recognize her frisking about in any other shape than her own. In some other respects, however, she was rather a singular woman. She had a memory that retained the date of every event that had taken place for some miles round the place where she lived. She could give you the day and the hour of all the births and deaths in the neighbourhood during her time. She knew exactly who 'came again,' as she called it, after suffering violent deaths, either in the coal pits or elsewhere, what shape they were in (for they did not always appear in their own), and what they said when they could be prevailed on to speak,—what it was that brought them 'back,—and how long it was before the priest, or some such competent person, got them laid at rest in their graves. All the haunted houses or places she had off by rote, and could have given you the names of all the 'uncanny folk,' or such as had 'bad e'en,' and had amused themselves by plaguing their credulous neighbours. Poor Mabel has been dead more than thirty years."

Other kinds of queer characters had their haunts upon this Low Fell, which, before the division of the common into very small allotments, in compliance with an Act passed in the year 1809, was literally covered with pit and quarry heaps, and afforded a bare and scanty sustenance to the donkeys of tinkers. Amongst

these odd characters was one "Willy Trammel" (Turnbull), who was a kind of halter-follower at fairs, and who had a few sheep upon the Fell, or, perhaps, a curiously-coloured, worn-out horse; for, when the poor quadruped's natural colour did not please him, he was known to paint it according to his fancy; and thus he once rejoiced, it is said, in a blue pony. A strange and yet commonly serviceable pair, also, spent the greatest part of their long lives on the Low Fell. They were vulgarly called "Bella Laing and Tommy";—the woman always preceding the man, by reason, perhaps, of her claim to priority from the nature of her occupation, for she was the village "howdy"; and her practice not only extended amongst the entire adjacent population, but often far beyond. Respecting this woman, Mr. Wilson adds:—"Her usefulness, however, did not end here, for besides being, as it were, the *Alpha* of life, she often rendered very essential service to her fair friends, in particular delicate situations, through the middle and interesting stages of their existence. Tommy was a joiner by trade, made coffins and kept a hearse, and, of course, was the *Omega* of life, whose care was to see us carried to our long homes in a coffin of his own making. The two callings wrought well together, for, if a birth turned out a death, the order for the coffin came, of course, to Tommy; and, as Bella was frequently asked to funerals, it afforded her an opportunity of extending her business among the ladies. They thus carried on a thriving trade for many years, of which life and death were the staple articles, and ultimately acquired, through industry and frugality, considerable property in houses. The square which goes by the name of Laing's Corner was built by them, and left to their children, as well as the large garth in which the Public Rooms and other buildings have lately been erected."

Such are a few notes upon the notorieties of one wild, waste spot adjacent to the pits and pitmen. We have no space to unfold the budget of stories of pit life, habits and superstitions which we commenced collecting, during several evening sittings, in the cottages of the northern pitmen, by firesides which glowed like little furnaces with abundant small coal. Such anecdotes and incidents, however, should be preserved and brought together from various quarters, and especially those which relate to periods of peculiarity now almost entirely passed away. No doubt, careful inquirers and residents in the midst of pitmen in all our principal coal-fields would easily accumulate and contribute striking sayings, and doings, and sufferings of many amongst the two hundred and twenty thousand sons and daughters of subterranean toil. But what is done in this direction, 'twere well it should be done quickly, since such things live only in traditions; and these are fast fading away before habits of grave deportment and sober domesticity. In fact, the oddities and specialties of these colliery communities are already amongst their historical antiquities; and now, in place of the singularly-costumed pitman of the north of England, with his flowered waistcoat, jaunty jacket and smart breeches, you have before you,—at least on Sundays, the accustomed days of gay dress and sport in old times,—a very sober and grave gentleman in black, who, happily, forsakes the bowling-green and the donkey race-course, and frequents the village church or the Methodist chapel. He is now much more likely to be found in the pew, or even in the pulpit, than in the public-house.

Martyrs to Circumstance. By the Hon. Mrs. Yelverton. (Bentley.)

THE Yelverton case, notwithstanding the suit progressing in Scotland, already seems so completely a bygone story that it is difficult for idlers at watering-places, tourists in Spain and Italy, and gentlemen grumbling at the wildness of the partridges, to realize that it was an affair, and for nine days the affair, of the last season. Yet so it was. It was the first good scandal of 1861, and throughout the months when London is supposed to be habitable it did better service, as a stock topic for London dinner-parties, than the hazardous performances of Blondin and Leotard. At first Celtic hysterics excited a large amount of reflex nervous action on this side the Irish Channel, and society indulged in an edifying exhibition of virtuous indignation against the depraved seducer of the simple girl who shared his rug with him on board a steamer, on the first night of their romantic intercourse. Public interest ran so high, that in the course of eight days a provider of cheap literature for the multitude is understood to have made as many hundred pounds by the sale of an illustrated report of the trial, an old plate, originally designed to represent Mrs. Manning, the murderess, portraying the beauties of the new heroine, and an engraving of the Old Bailey, during the trial of Palmer, the poisoner, being put as a picture of the interior of the Irish Court. A few weeks saw an abatement of the fever, but the cause of the excitement still held its place in general discussion, inducing ladies to speak with delicious freedom on the most delicate questions of social immorality, and in due course making our "pretty horsebreakers" the objects of that sentimental admiration which a few seasons before had been lavished on the lady-nurses of the Scutari hospitals. Now that the storm has altogether died out, it will amuse reflective observers of passing manners to learn how the drama, which roused such violent emotion in the minds of thousands of spectators, is regarded by its principal actress. We should, however, be sorry if any words of ours lead any one to throw away five shillings in buying Mrs. Yelverton's 'Martyrs to Circumstance,' which is as silly, dull, and coarse a book as any female of unenviable celebrity could be expected to write. Making due allowances for the general advancement in taste, it may rank with the literature which proceeded from female pens in the seventeenth century. Indeed, in its tone and matter, it offers many points of strong resemblance to the 'Adventures of Rivella.' The same personal vanity which prompted Mrs. Manley, telling the story of her own loves under the name of Rivella, to write, "Her hands and arms have been publicly celebrated,—it is certain that I never saw any so well turned; her neck and breasts have an established reputation for beauty and colour; her feet small and pretty," induces the Hon. Mrs. Yelverton, *alias* Miss Theresa Longworth, writing of herself as Thierna, to rhapsodize about "her tiny feet," and "small ears," and her "tiny golden curls." Here we have a picture of the heroine as painted by the heroine:—

"At first sight I was irresistibly allured towards her; but there was nothing that I could define as striking about her. She was neither handsome, lovely, sweet, nor grand-looking; yet at times she was all these. In stature she was little above the common height, slight in figure and gracefully formed. She had the small feet, hands, and ears, indicative of high breeding. Her features are almost impossible to portray, as they varied with every emotion of the ever-active mind within, to the most extraordinary degree I ever witnessed.

Her skin was delicately white, I may say colourless: the mouth small and firmly closed, showing much decision of purpose. Her eyes were of that deep blue which melts into the shade of the violet, or looks up bright and clear with the tint of the forget-me-not. Under the dark lashes there was usually a dreamy and mysterious expression, as of some awful past, or foreshadowing a future fate of no common vicissitude. It was a strange face, with more underneath than the imagination could ever guess at; but when in conversation there was a magnetic fascination, from the influence of which it was impossible to escape. Her eyes were luminous, and said a thousand things for which words fell short: they flashed with haughty defiance, or grew cold with stern decision; were soft and melting in pity or love, or brimmed over with archness. She was a Lady Macbeth, a Desdemona, or a Diana Vernon in rapid succession, as circumstances called each character forth. *She was in earnest reality what Lady Hamilton so ably personified, and made me both weep and laugh more than I had done for years.*

—Such is the lovely Thierna, as she appears in Part I. of the 'Martyrs to Circumstance,' sustaining the character of an operatic Sister of Mercy, who resides in the Maison de la Mère in Constantinople, and employs herself, when she is not playing Moore's melodies on the *p* and *c* strings of a violoncello, with dashing about the Golden Horn in a caique, and bearing medicines and solace to wounded soldiers on board troop-ships. She is still busy with her musical and charitable avocations, when her cell is broken in upon by Captain (in due course, Major) Cyril Etherington:—

"The cell of Thierna joined the chapel, and was used for the purpose of confession. A wire screen had been let into the partition, and on the chapel-side was placed the prie-dieu, or confessional. Forgetting the heat in my curiosity, I slipped inside to call Thierna. A man on the terrace I deemed an impossibility; but a man it was, in a foraging-cap and dark-blue uniform, standing straight before the open window, and staring into the little cell. Had he fallen from the copper-coloured sky, my eyes could not have opened wider; but other eyes than mine had caught sight of the form. With a bound like a young antelope, Thierna sprang from her writing-table to within a couple of yards of the window, then stopped short, far more confused than when she had worn the placard of her crime. Her heaving breast raised the folds of her white collar, her cheeks were suffused with a rose pink, her eyes looked up in melting azure, as she said in a tremulous voice, 'Cyril! don't you know me, Cyril?' Her voice reached him like an electric wire: he bounded in through the window, and ere I could ejaculate my surprise, the supple figure was folded in the embrace of the stranger; his handsome brown beard and whiskers had got mingled and mixed up in a very odd way in the white veil, some of the folds drooping over his shoulder. Where the small head was I could not clearly distinguish. There was a fluttering in the escaped parts of the garments, like the ruffling of a bird's feathers struggling to get free; and a smothered masculine sound of 'darling! my own darling!' penetrating through the toque part of the head-dress."

If in her personal descriptions the author is complimentary to herself, she is not less so to Major Yelverton. Here is the portrait of her hero:—

"This masculine apparition—for so I was bound to consider him—was not strictly or regularly handsome. There was something more than that; he wore the stamp of power,—of manly, undaunted, fearless bearing. His head was proudly set on, as though it could never bow save to catch the whisper of a woman. His forehead was massive and square, the hair of a rich brown, growing in its own way, guiltless of artificial aid. The eye deep grey, overshadowed by long lashes, full, calm, and decisive. On the brow, which was a little heavy, indomitable will had set her seal, and his face would have had a stern character had it not been relieved by the mouth, which was full, soft, and

might have been a shade too voluptuous, but for the shadow of a silky moustache; his teeth, which were of exquisite form and dazzling whiteness, threw an undefinable charm when he smiled. A soft, handsome, brown beard, I have already described as making acquaintance with the veil of Thierna. A little above the middle height, his shoulders were wide and square, his chest broad and handsome. Strength and power were marked in every limb, without destroying the perfect symmetry and beauty which the shell jacket was well calculated to set off to advantage. It was buttoned up to the throat with tiny buttons, on which was written a word: it might be 'ubique.' 'What in the name of wonder are we sitting on!' said he, in a tone of perplexed discomfort.—'On my bed at night and divan in the day,' she replied.—'But it is nothing but sharp bars of iron,' he said, raising the thin mattress stuffed with chaff; 'do you sleep on this?'—'Yes,' she said; 'and dream I am Saint Lawrence on the gridiron.'—'You would be far better off in a hammock, poor child!' said he, as he drew her gently towards him, and stroked the only bit of smooth hair from her forehead. 'Ah! what has become of it all!' he suddenly exclaimed, as he drew out to its full length the little short curl, for the first time discovering the loss of the long tresses; 'did they cut it off? the monsters!'"

Mrs. Yelverton's admiration of masculine vigour is expressed in the following passage:—

"I think," said I, 'all large, clumsy men have great hearts, little sensitiveness, astuteness, or perception; great solid creatures with an immense capacity for affection, but little of the small artifices and delicate subtleties which usually win it. Cupid makes up to them in quantity for what he stints them in quality. Nine times out of ten if a maid have two lovers, one six feet odd and the other under six feet, (advantages mutual,) the lesser would win her; but it would be the reverse if he was too little or effeminate, for a woman is apt to despise all that too much resembles herself; from five feet eight to eleven is the dangerous height, most wicked, most captivating, most intellectual, and most power.'—'And ought he to have broad shoulders?' remarked Thierna, smiling.—'Exactly so, and the ones you are thinking of exemplify my theory.'"

Such is the style of Part I., which is a high-flown, romantic version of the life of Miss Theresa Longworth in the East, as demonstrated by the evidence adduced in her cause. Parts II. and III. give the reader a similar picture of her after career, as she would wish the public to regard it, modified by a series of avowed fictions which she deems calculated to render the tale more attractive and its heroine more admirable. A striking feature of the work is the bitterness with which she rails at those misguided persons who were her most sanguine supporters, at the first outbreak of the *esclandre*. Against the Irish she breaks forth at every opportunity. The Scotch fare no better at her hands. And on London society she moralizes in the following lofty vein:—

"In a world sincere and in earnest, the simple principle of right and wrong would act admirably and be a safe guiding-star; but in a world artificial to its core, made up of falsehood, shams, and make-believes of all kinds, where nothing is what it seems to be,—in the world which takes sham airings every day over a few hundred yards in Hyde Park, near a putrid piece of water emitting a stench, where the world drives because it is the proper thing to do, when for any benefit obtained the carriages and occupants might as well line the sides of Long Acre;—where the male world leans over the rails and stolidly stares at the ladies, because that is the proper thing, not that any gratification is derived from contemplating the panorama of beauty and fashion, or if there is it is improper to display it (for if Venus herself drove past with her dolphins and shell, she would simply be honoured with a very proper unmeaning stare by the Adonises of the fashionable world);—the world that goes to the opera and appreciates Mozart and Verdi to the same extent that the ass and magpie did the night-

ingale in the fable; which jams itself into flower-shows under pretence of admiring the beauties of nature in the shape of exotics, which are really there but cannot be seen by one-third of the great world assembled; and which crawls along a certain well-gravelled walk so densely crowded by propriety that the only view is, not of nature, but the back of a most fashionable coat and hat, or a large circumference of springy material formed no doubt of horsehair and steel hung over with yards of rich silks and lace, and crowned with an elegant bonnet, from which the spectator infers that the mass of silk and lace before him enshrouds some very proper person;—in this world, as yet unexplored by her, I feared that with her simple lance and shield of right and wrong Thierna would soon be found guilty of heinous misdemeanors, and excommunicated as fractious and unruly. Upon her future husband, therefore, rested my only hope, and certainly from his last feat it was but a slender one; yet he, from his position, must be well versed in those conventionalities which he nevertheless set so outrageously at defiance. But then this was on the Boeophorus and in war time. In European and civilized society he would surely see the propriety of leading his devoted young wife with a silver thread through the maze of conventionalisms, etiquette, and all the proper things to do. I felt an intense curiosity to see how two such very odd beings would go on, and resolved to study the male portion of the proceeding at my earliest convenience."

But the most acrid gall of the lady's bitterness is reserved for those who sympathized with her as the victim of a seducer and a bigamist, and who regarded her hero as a monster of depravity. She is only the victim of circumstance, and so is the brave, generous, high-minded Major Yelverton. It is true that Etherington married Thierna, and then during Thierna's life married a rich widow (a character, in the author's opinion, at the bottom of all the worst mischief of the world), but he committed the unfortunate act under a misapprehension. As to the exact nature of the misapprehension Mrs. Yelverton is at the same time vague and contradictory; leaving the reader with an ill-defined licence to suppose either that the luckless victim of circumstance thought Thierna dead when he made his second match, or that he was not aware it was illegal for a man with a wife still living to marry again.

The purely fictitious portions of the concluding pages raise a suspicion that Mrs. Yelverton is ill satisfied with the part she has taken in the legal proceedings against her quondam husband; for she makes Thierna resolutely decline to aid in the prosecution of Major Etherington for bigamy. The Major also is represented as being to the last (although he is nominally the husband of the rich widow) passionately in love with the fair Thierna, who, in the concluding chapter, tends him in his dying moments, expires on his lifeless body, and shares with him the same tomb.

Such is the outline of the most foolish book that has for some time appeared in prose fiction. Collectors of literary curiosities will probably like to purchase it, to range it on their shelves with the 'Life of Lola Montez' and Smollett's Memoirs of a Lady of Quality; but we should advise those who are not connoisseurs of vicious eccentricities to leave it alone. The extracts we have given will sufficiently inform the public of the character of a writer who promises again to make demands on their attention.

Letters written by John Chamberlain during the Reign of Queen Elizabeth. Edited from the Originals by Sarah Williams. (Printed for the Camden Society.)

Miss Williams, the industrious editor of these Chamberlain Letters, saw them through the

press in the last stages of a severe sickness. Since their appearance in print the poor young lady has passed away. In the Introduction she apologizes for her shortcomings on the plea of her ill health, but there really was no need whatever for an apology. Her work has been done with honesty and zeal, and we have rarely seen a volume in which an eye experienced in such matters detects so little that is careless either in composition or collection. The information supplied in illustration of Chamberlain's text is copious, well derived, and lucid,—not too much made of it, not too little. Miss Williams had either a natural genius for working among State Papers or the happy fortune of falling into able and experienced hands. The volume itself, one of the most charming in the Camden Society series, is a mine of chit-chat, anecdote and gossip. The characteristics of Chamberlain's style are known almost as well as those of Cowper or Walpole. His letters written during the reign of James the First have been printed in the 'Court and Times' (very incorrectly we have found), and in other works, and from these sources have been very freely adopted by modern writers on the men and events of those days. He is a rather sedate person, not a joker of jokes, not a moralizer on life; simply a gossip. Like other men, he has his passions and his preferences, and against these the reader must be perpetually on his guard. He leans to his friends and abuses his enemies; is more than fair to some, less than fair to others. He is particularly unfriendly to Lord Bacon, yet from his correspondence we glean a great number of minute and valuable facts about the Father of Modern Science. A reader will do well to reject his opinions, surmises and impressions, but he may generally accept with confidence his facts.

An extract or two will show with what flush and colour of the time these letters come down to us. Here we have the common talk of the ordinaries and playhouses on the events of the day:—

"Mr. Evers is in Ireland with the Lord Borrough, between whom and Sir John Norris there is lately a solemn pacification made with much counterfeit kindness on both sides. The old deputy is come home very fat they say, both in body and purse, having made a lucky conclusion of his government with the overthrow and death of Feffe Mackhugh, an ancient and troublesome rebel; upon which service he made three knights at his coming away, viz., Calistenes Brooke, Thomas Maria Wingfield, and one Trevire, a Welshman. Sir Thomas Norris's lady was lately brought abed there of three daughters, which the Lord Norris imputes to the fertility of the soil, and exemplifies it by a mare he sent two years ago to his son Thomas that brought two foals."

At the same time a great expedition is being prepared, which we, who come after, know all about, but which exercised the wits of good citizens in 1597. This is just the sort of gossip which would have been heard by a stranger at the Mermaid in Bread Street, or at Tarleton's in Paternoster Row:—

"We have great preparation here for a sea voyage, which troubles our discoursers how or where it shall be employed. The common sort talk of Calais, others of the Islands of Tercera, but the most likely in my opinion is to set upon the King of Spain's navy wheresoever they can find it, or to meet with the Indian fleet. Their whole number consists of fifteen of the Queen's ships, besides the two Spanish ships that were taken the last year (which be new fashioned after the English manner), and of two-and-twenty men-of-war of Holland, and some four-and-twenty fly-boats and hoys that serve for carriage of men and victuals. They have with them 4,000 pressed men, and 1,200 musketeers that come with Sir Francis Vere out of the Low Countries. The voluntaries are thought

will rise towards 2,000. The Earl of Essex is general both at sea and land; the Lord Thomas Vice-Admiral; Sir Walter Raleigh Rear-Admiral, who is newly restored to the executing his place in Court of Captain of the Guard. The Earl of Southampton, the Lord Mountjoy, and the Lord Rich go as adventurers, though some say the Lord Mountjoy is to be Lieutenant-General at land; the Earl of Derby, the Lord Grey, the Lord Windsor and Compton pretend likewise to go, but it is thought shall not get leave. The provisions are hastened on very fast, and it is said the Earl of Essex takes his leave at Court on Sunday next, the 12th of this present, and hopes to be gone within ten days after. The press of gentlemen will be very great, but I will not stand to set down any but one or two of your acquaintance, that is, your cousin Mighell Dormer, whom I can by no means yet dissuade, and Hugh Beston that stands to be treasurer of the journey, though I doubt he shall not be troubled with much receipt, for I am half of our doctor's opinion, that warrants him, if he have it, that a well-saddled rat may carry all his accounts. But his true errand is to be knighted as soon or before Sir Peter Evers, neither doth he dissemble it greatly to his friends, but says merrily he hath been a scabbed squire a great while, and could now be content to be a paltry knight the rest of his time."

Here, again, is a bit of gossip that a stranger would have been certain to pick up at the Mermaid. Southampton was a friend of the players, and his secret marriage with Elizabeth Vernon, the Queen's anger at the event, and his disgrace upon it must have been constantly in the mouths of Shakspeare and Ben:—

"Mrs. Vernon is from the Court, and lies in Essex House; some say she hath taken a venue under the girdle and awells upon it, yet she complains not of foul play, but says the Earl of Southampton will justify it; and it is bruted, underhand, that he was lately here four days in great secret of purpose to marry her, and effected it accordingly."

Southampton certainly effected his purpose of marrying the beautiful maid-of-honour, but his success with the young lady was a grievous offence in the eyes of her aged sovereign.

By and by we have news from the great expedition, which, as every one knows, miscarried through the pride and incompetence of Lord Essex:—

"The Earl of Cumberland is come, and some of his shipping; the rest are said (or rather thought) to be upon the coast, for according to our custom they came scattering, and every man made shift for himself, as though they had played at foremost take up hindmost. They had good hap to miss the Spaniards that lay for them with 30 men-of-war at the Terceras, and removed from the Island of Flores but the day before the Earl came thither. The great expectation of this voyage is come to this, that they took the town and castle of Porto Rico, where they found no great riches, for, having intelligence of their coming, the Spaniards had conveyed away their chief wealth. My lord himself saith that he hath made a saving journey, but they that understand it better say that all he hath brought (whereof the greatest part is sugar and ginger), will not amount to above fifteen or sixteen thousand pounds, which is not half the charge of the setting out, besides the adventure and waste of the shipping and the loss of 600 men, what by sword and sickness. Some find great fault, and say his own wilfulness and want of direction overthrew the voyage, and that if he would have been advised he might have done them all good, but he neglected present profit in hope of greater matters, and so forsook the substance for the shadow. I think the heat of our sea-voyage is well allayed by this and the rest, which, being no better conducted, serve rather to fortify and confirm than hinder the enemy."

And now we hear of practices against the Queen. The following is racy of the time:—

"The day that we looked for Stanley's arraignment he came not himself, but sent his forerunner, one Squire, that had been an under-purveyor of the

stable, who, being in Spain, was dealt withal by one Walpole, a Jesuit, to poison the Queen and the Earl of Essex, and accordingly came prepared into England, and went with the Earl in his own ship the last journey, and poisoned the arms or handles of the chair he used to sit in, with a confection he had received of the Jesuit, as likewise he had done the pommel of the Queen's saddle, not past five days before his going to sea; but because nothing succeeded of it, the priest thinking he had either changed his purpose or bewrayed it, gave Stanley instructions to accuse him, thereby to get him more credit and to be revenged of Squire for breaking promise. The fellow confessed the whole practice, and, as it seemed, died very penitent."

Next we have the following register of two weddings of interest to us in connexion with Bacon, with a record of the sequel of another wedding of which we know something:—

"The seventh of this month the Queen's attorney married the Lady Hatton, to the great admiration of all men, that after so many large and likely offers she should decline to a man of his quality, and the world will not believe that it was without a mystery. The day before Sir John Packington married Mrs. Barnham, one of our London widows. The Earl of Southampton is come home, and for his welcome committed to the Fleet, but I hear he is already upon his delivery."

The juxtaposition was odd. Bacon had proposed to Lady Hatton, and a few years later actually married the daughter of "our London widow," Mrs. Barnham.

There is abundance of such pleasant gossip in Miss Williams's volume.

It should be added, that Miss Williams's Introduction for the first time establishes our knowledge of who and what John Chamberlain was on a sure footing, a point of some importance when his gossip is to be considered in relation to the characters of great men.

Milton's Comus—[*Milton's Comus übersetzt und mit einer erläuternden Abhandlung begleitet*, von Dr. Immanuel Schmidt]. (Berlin, Hande & Spener; London, Williams & Norgate.)

WERE not the avidity of the Germans to study and criticize the literature of foreign countries generally known as a national characteristic, this might be considered a most remarkable book. An exceedingly careful translation of 'Comus,' in which the metre of the original is conscientiously imitated, is the least important part of it. The most curious and interesting portion is the elaborate and closely-printed comment, which is more than three times as long as the poem itself, and which is compiled at a cost of erudition that one would scarcely expect to find elsewhere than in an edition of some ancient classic. Dr. Schmidt has at his fingers' ends everything that everybody has written in connexion with his subject, and though, perhaps, he may not throw much new light upon 'Comus,' he has collected together the rays that have hitherto been widely scattered, so that he who intends to make a separate study of the poem will find all that he requires condensed within the least possible compass.

The principal object of Dr. Schmidt's inquiries is to determine the sources whence Milton derived, not only the subject, but the thoughts and the phraseology of his celebrated Masque: how far he was influenced by his classical studies; how far by his familiarity with the Scriptures; how far by the English poets of a preceding age. He at last arrives at the following general opinion, based on a minute examination of ancient and Elizabethan poets, and proved by abundant citations:—

As the result of my inquiries, I would assert that Milton, in consequence of his intimate acquaintance with both classical and English poets, could not do otherwise than involuntarily imbibe and

utter all sorts of reminiscences of their works; that, above all, he had imbued his imagination with the imagery of the Arcadian school, but that in the work of reproduction his own productiveness was active. Like the Greek dramatists and sculptors, he stood, so to speak, in a *naïve* relation to his predecessors; and by no means disdained to use a material found at hand in order to produce something more perfect. While as a poet he makes Nature subject to herself, and modifies her scenes for his own ends, he likewise borrows from other poets, not only technical peculiarities, but also the material of their figurative language that he may dispose of it at his pleasure. The poetical thoughts appear, as it were, newly moulded, through being assigned to different characters, and simple comparisons are enlarged into situations.

The investigation by means of which this result is obtained is far more interesting than the result itself. Many a reader of Milton, without a tenth part of Dr. Schmidt's erudition or industry, might have arrived at an opinion identical with the above, but there are few who hold within their grasp all the premises to the conclusion. Like the 'Satires' of Persius, the 'Comus' of Milton is an excellent peg whereon to hang comments, and it is probably for this reason that Dr. Schmidt has selected it for the subject of his learned illustrations. Certainly he was not tempted by any enthusiastic admiration for the work upon which he has bestowed so much labour, for the feeling with which he regards it scarcely passes the limits of respectful approbation. Indeed, when he would estimate its merits, he is rather puzzled as to where he shall find a standard. If he would allow it the licence of an ordinary masque, he feels there is a sort of gravity in its tone which cancels its claim to such immunity; if, on the other hand, he would regard it as a drama in the strict sense of the word, he is forbidden so to do by the want of action and character, and by the undramatic style. With Dr. Johnson's declaration, that 'Comus' is "tediously instructive," he is evidently tickled, so much so as to favour the suspicion that he undertook his heavy task as a sort of penance, using the mighty line of Milton as a Franciscan would use a line of stout whipcord. But the suspicion vanishes when we reflect on the intense delight which a commentator can derive from the mere work of comment. No doubt, the pleasure of Dr. Schmidt was exquisite when he could point now to a discussion in single lines, imitated from Euripides; now to an image borrowed from Fletcher or Jonson; now to a choice bit of Platonism, neatly wrapped up in sonorous verse.

And there is, as we have hinted, this particular charm in 'Comus,' that you may comment on it all the way through, beginning with the title. The ordinary English reader knows Comus just as he knows Macbeth, because he is the principal figure in a work of universal celebrity, and accepts him as a matter of course. But directly he begins to ask himself who Comus was before Milton took him in hand, he has already passed the boundaries of general information, and must apply to special scholars. Just mentioned by Philostratus, Comus can scarcely be said to have a footing in the Greek mythology; and there he stands, in a poem of the sixteenth century, a sort of secondary Bacchus, with his attributes clearly defined, and a perfectly intelligible pedigree. And, with a sort of malignant respect for the little known, he expresses a marked veneration for the Thracian goddess, Cotytto, a lady of very ill habits, who however can scarcely be called infamous, as she has no fame at all. Not only are his morals bad, but his pleasures are of the most debasing kind; and whereas his mother Circe allured the wretches, whom she

transformed into swine to retain their intellects, Comus brutalizes the minds of his fellows, though their heads alone assume a bestial form. When this lewd mortal begins to sing:—

We that are of purer fire
Imitate the starry quire, &c.—

Dr. Schmidt evidently thinks that he is a humbug, though he confines himself to the decorous remark, that here there is an ideality which is scarcely in its place.

There seems no doubt that this wicked jolly Comus owes the beginning of his substantiality to Erycius Puteanus, Professor of Eloquence and Classical Literature at the University of Louvain in the early part of the seventeenth century. The book, entitled 'Eryci Puteani Comus, sive Phagesiposia Cimmeria Somnium,' first printed at Louvain in 1606, became sufficiently celebrated to be reprinted at Oxford in 1634, the year in which Milton's Masque was played at Ludlow Castle. The Comus who appears in the drama of Erycius Puteanus as the chief of a fascinating but disreputable throng, so exactly resembles and sings so like the enchanter immortalized by Milton, that there can be no question as to their identity; nor can Mr. Keightley's opinion be slighted, that the Latin book, when reprinted at Oxford, was probably purchased by the English Poet. There is also a mute personage, called Comus, in Ben Jonson's Masque, 'Pleasure reconciled to Virtue,' but he is evidently a Silenus sort of being, and the epithets "Belly god" and "Bouncing Belly," which are applied to him, widely distinguish him from the elegant libertine of Milton. Hence we may assume, that Comus went directly from the Louvain Professor to Milton, without passing *vid* Jonson; though there is reason to believe that the ancestors of the lady and her brother may be found in the *Old Wives' Tale* of George Peele.

These questions as to the origina of Milton's subject are but the broad beginnings of a critical study of 'Comus,' which, if our readers would pursue, they cannot have a steadier or more conscientious guide than Dr. Immanuel Schmidt.

The Book of Farm Buildings, their Arrangement and Construction. By Henry Stephens and Robert Scott Burn, Engineer. (Blackwood & Sons.)

AGRICULTURE is, for the most part, done out of doors. The difference between the wilderness and the cultivated field is little more than one of guidance and degree. The same living seed, the same porous soil, the same vegetable refuse as manure, the same rain-water, air and sunshine, are the causes everywhere of vegetable growth. In the field, indeed, the seed is chosen, placed and covered; while on the waste it is scattered broadcast by the wind, and rests upon the surface; in the one the soil is broken, pulverized, manured; in the other, it is softened only by the rain and thaw, and receives its annual dressing only of fallen leaf. In both, however, the natural agents are the really efficient ones; the cultivator does but choose plants on which they shall be brought to bear, and so prepare the soil that their influence shall be most productive.

The buildings of the farm, to begin with, therefore, are merely houses for the farmer and his labourers, and shelter for his implements and working cattle. So long as only plants are cultivated, agriculture is just a series of operations—drainage, tillage, and manuring—which only give effect to the natural influences of rain, and air, and sun. Well-arranged plantations sheltering from wintry winds in spring,—deep drains enabling the descent of the first warm showers, and thus improving the under-

ground climate at the season of most vigorous growth,—tillage, deep and perfect, multiplying that inner surface of the soil which represents at once the pasturage of the roots and the storeroom of their food,—all these do but intensify the operation of Nature's fertilizing agents; and the sowing-machine and hoe confine their influence to such plants as are worth cultivation. But so long as the farmer merely cultivates these plants he wants no shelter for them. No more buildings are needed on their account than are needed for the wild plants of waste places. And even when he gathers in their fruit, which Nature does not do, excepting shelter for himself, his labourers and tools, but little help of this kind is required. Barns are going out of fashion. The crops of wheat and other corn are heaped up in stacks upon the stubble, and thatched against the rain; carrots and potatoes are pitted in the field. In the one case, the threshing-machine is drawn up beside the rick, and sacks up its grain ready at once for market; and in the other, the measure and the market-cart carry off the roots immediately for sale. In neither need the produce once be housed.

It is not for the sake of plants, but for the sake of animals that we require the elaborate farmeries described in the volume before us. And the reason is plain. The air, which is the very feeding-ground and nurse of plants, is the solvent and destruction of the animal. It is as necessary, indeed, to animal life as it is to vegetable, but in a very different way. If growth in both cases be as the erection of a building, the air is in the one case the very material which the builder uses, while in the other it is useful chiefly as burning waste stuff out of his way; and it is liable at any time to extend its ravages and destroy both the raw material he employs and the result of his labour. A living plant upon the ground, exposed to air, and rain, and sunshine, increases and produces; a living animal similarly placed becomes emaciated, dies and disappears. It is but a moderate estimate of the rate of movement in the air for which we must conclude that during its summer life there beat on the surface of every square inch of green leaf the particles of several hundred thousand cubic feet of air—enough to burn up hundredweights of wood,—that, instead of being consumed, the plant is fed by all this air. Had so much passed by every inch of surface presented by the lungs of a sheep or of an ox, the animal must have been destroyed; the food it ate would have been as completely burnt as if passed through a furnace, and the "furnace" walls themselves would have yielded to the flame. Of course Nature provides that so much air shall not be allowed to act upon the animal; the quantity it breathes is regulated by the capacity of its lungs, and the quickness of its breathing by the coldness of the air; but it is upon our power of influencing this process, and of diminishing its destructive effect that the economy of the meat-manufacture in great measure depends. And it is thus a capital point in the theory of farm-building that air, which is the food of the living plant, is the solvent of the living animal. Indeed, from the simple fence of thorns, whose shelter is explained in Sussex on the ground that a gust of wind once entering a bramble-bush cannot find its way out, up to the most perfect covered yard planned and pictured by Messrs. Stephens and Scott Burn, this is the fact which throughout has, consciously or unconsciously, influenced farm architects. Farmeries, if we except the granary, the stable, and the shelter for implements and manures, are meat-manufactories. Turn over all the plates of plans here bound up,

and you will see every apartment labelled cow-house, feeding-boxes, calf-house, pig-sty, sheep-shed, cattle, cattle, cattle. The object is to conduct the feeding process in shelter, amidst warmer, dryer air than can be had outside. There is less waste in feeding,—a smaller portion of the food is used as fuel,—the air is less destructive.

A modern farmery, accordingly, is an establishment for the manufacture of mutton, beef and pork, enabling the feeding of live stock with less expense of labour and of food. Our authors say that the guiding principle of such erections has not till now been made known. In this, however, they are certainly mistaken. Such men as the late Prof. Low, of Edinburgh, the present borough engineer of Liverpool, and others, have long since pointed out the true principle which ought to guide the architect of such buildings. The connexion *in fact* of all such buildings as are connected *in use* is the principle in question. This for the saving of labour—and such method, whether it be open yards and sheds, or stalls, or boxes, or covered yards, as shall best combine warm air and ventilation with a certain degree of healthful exercise for the cattle, and thus save food from being made mere fuel—these are the two leading considerations which guide intelligent farm architects.

The different ways in which such principles may be carried out and applied in practice to the various circumstances which, in pastoral, dairy, and cultivated farms, English agriculture presents, are well illustrated in the portly volume just published. Plans adapted to the different leading styles of farming are presented; and particulars of construction are described and figured in very great detail. A thousand woodcuts and several dozen plates are expended on the subject, and it is hard to believe that any man in want of guidance to the proper equipment of an estate will fail to find it here.

We are glad to find that cottages and farm-houses, as well as mere farm buildings, have come within the plan of the work. It is as elaborate and precise in this as in any other of its chapters, and a good many pages are occupied in the instruction of landowners, not only on the best modes of construction, but upon their duty at once to set about the task.

History of St. Mary's Abbey, Melrose, the Monastery of Old Melrose, and the Town and Parish of Melrose. By J. A. Wade. With numerous Illustrations by the Author. (Edinburgh, Jack; London, Hamilton & Co.)

OF all Border tours the one that includes Melrose, in the bonny vale of the Tweed, will be found the most perfect. Scotland has no other such relic of that Gothic architecture which Solomon himself seems to have loved above all others, as Melrose. A Member of Parliament who sees the dolomite of his own Senate-house crumbling into dust may be permitted to be jealous when he contemplates the stone of this edifice, and sees the perfect sharpness of the material, and the freshness of the minutest ornaments, after so many centuries of exposure to a climate which reckons nine months of winter and three months of nearly the same.

The church is all that is left of the old ecclesiastical and monastic glories of Melrose (*Mullross*, the "bare point"). On this, however, we have never looked without thinking of Solomon's graceful structure, "the house" for which "he made windows of narrow lights," and among the internal adornments of which was costly material, richly "carved with knops and open flowers"; and, indeed, "with carved

figures of cherubim and palm-trees within and without." If this was not an Early Gothic, with Eastern characteristics, we know not what it was.

The old Cistercian edifice was built within ten years, 1136-46, by that sair saint to Scotland, David the First. Two centuries later, it was destroyed by the English King Edward, but Robert Bruce raised 2,000*l.* sterling, equivalent to twenty-five times that sum at the present time, and the magnificent building of which we now see the ruins was then constructed. Between the hostile English invaders and the barbarous Scottish reformers the fabric has become the wreck which, nevertheless, wins such universal admiration. Scotch heritors have accelerated the ruin by using it as a quarry; but of late years this species of felony has ceased, and we may hope that what remains will be carefully preserved.

Such felony was once fiercely resented by the Scots themselves. When a couple of English knights defaced the tombs of two of the Douglasses, and obtained possession of some land hereabout, the Earl of Angus, a descendant of those Douglasses, proclaimed that the deed should be registered with steel pens and red ink, and the way he wielded the sword and spilt blood at Ancrum Moor shows that the Earl was very efficient in *that* branch of literature.

The locality itself has not changed hands frequently. When it fell from the Church to the Crown, Mary Stuart gave the estates of the Abbey to Bothwell. On his forfeiture, they were conferred upon a younger branch of the Douglasses. Early in the seventeenth century, the Abbey and its possessions were granted by our first James to Sir James Ramsay, who was also created Viscount Haddington, and Earl of Holderness, in England, for his good service in rescuing James out of the Gowry escapade. A century later, partly by grant and partly by purchase, the lands were acquired by the Buccleuchs; and the Duke who is at the head of that old Border family is, at this day, "Commandator of Melrose."

If dust *can* be said to be noble, there is much of the noblest in and about this abbey land and the valley. Mr. Wade enumerates a long list of those who have added a grace or a glory to the spot; and the names recall many a deed of arms, or triumph of science, or achievement of song, or pride of ancestry. This last pride, however, occasionally comes to grief. For instance, the Ormistons were erst great lords of land here; but a writer of the last century reports—"It is said that George Ormiston, late hangman in Edinburgh, was a cadet of this family, if not the representative of it: a memorandum to old families not to be puffed up with pride on account of their antiquity, for they know not what mean offices they or theirs may be obliged to stoop to." They might also do well if they remembered from what mean ancestors they have sprung. Take Mr. Wade's view of the Border blood:—

"The divisional line, between the south of Scotland and the north of England, was in ancient times an ideal one. The inhabitants of both sides were much alike, in manners and occupation. They spoke the same language, the Anglo-Danish dialect of the people who lived north and south of them. They were neither Scotch nor English, properly speaking, and the only name by which they were known, was that of Borderers. After the Romans had left this part of Britain, the Borders became a sort of settlement and refuge for adventurers from many parts. Both English and Scotch, who could remain no longer in their own countries, on account of either treason or crime, occasionally cast in their lot among them. The Border population was an aggregate of all the races of men that had come

into Britain;—of Britons expelled by Anglo-Saxons; of Saxons expelled by Normans; and of Anglo-Normans or Scots, banished for theft and other crimes. The Scots were the men of the hills, and the Picts those of the plains, and both were united into one monarchy in the ninth century, by Kenneth the Second, when the country became known by the name of Scotland. The Borderers divided themselves into families or clans, like the Celtic clans; the names of their clans being for the most part English or French. Chief and vassal lived familiarly together; the one in his stronghold or tower, surrounded by a moat or palisades, and the other in huts erected round about the former. The occupations of both were the same, all being thieves and marauders. They subsisted on mutton and beef, and stole with impunity sheep and cattle from the neighbouring plains. They armed with a long lance or spear, somewhat after the fashion of the Romans; their defensive armour consisting of a quilted doublet, to which were fastened plates of brass or iron. Their expeditions were frequently conducted on horseback. They owned no authority beyond the will of their chief. The kings, whether of England or Scotland, were simply regarded as foreigners. All were by turns Scots, when incursions were to be made into England for forage and plunder; and, in like manner, all were English, when a descent was to be made upon Scotland for the same object. They seldom quarrelled amongst themselves. Where they had power, they showed no mercy, either in robbery or violence. They sometimes, however, committed robberies professionally, observing some rules of honour, such as leaving their victims a portion of their food, furniture, clothing and money. Following the fashion introduced by the Normans, the more rich and powerful assumed armorial bearings. Their arms denoted their manner of life and predatory habits. Those still worn by some families admit of easy interpretation. The field of the escutcheon is generally the sky, with stars and different phases of the moon upon it. And the mottoes, whether in English or Latin, are none the less significant. For example—'Sleep not, for I watch'—'Watch weel'—'Ye shall want ere I want,' and such like."

In the charter of King David to the Abbey of Melrose, we find the words "anno scilicet secundo quo Stephanus rex Angliæ captus est." As Stephen was captured in February, and released in April, 1141, the "second year" of his captivity would seem a chronological error; but that expression is only a proof of the correctness of the drawing up of the document, for in those days the ecclesiastical year commenced in March, and thus a king who was barely two months in imprisonment might be said to be in the second calendar year of his captivity.

We wish that all Mr. Wade's assertions could bear scrutiny as successfully as the record of the monkish lawyer. At page 161, he informs us that Maud, wife of King David, was "daughter of Waldeosus, Earl of Northumberland and Huntingdon, whose mother was *granddaughter* of William the Conqueror." The mother of Maud was the Countess Judith of the Domesday Survey, who was *niece* to the Conqueror,—a fact of which the author becomes cognizant at page 192, when he describes the second abbot of Melrose as being "the younger son of Simon de St. Liz, Earl of Northampton, by his wife Matilda, daughter of Waltheof, Earl of Northumberland, who inherited the earldom of Huntingdon from her mother, Judith, niece to William the Conqueror, who had it for her dower." The author adds of Simon that, suffering forfeiture of his lands, he "assumed the cross, went to Palestine, and soon after died." The fact is, that Simon died a refugee in the Abbey of Charité in France. David married his widow, and therewith added "Earl of Huntingdon" to his many titles. This title was borne by Scottish kings and princes from the date of the marriage of David

with Maud in 1115, to the death of John le Scot, in 1337, with two interruptions when the title was borne by two descendants and namesakes of Simon, the first from 1152 to 1157; the second, from 1174 to 1184.

The biographical sketches of the Abbots of Melrose, the statements of their finances, and the way of life of the community, with a full account of the ruins as they now exist, conclude a volume which, taken altogether, is worthy of the subject which it serves to illustrate.

OUR LIBRARY TABLE.

The Platonic Dialogues for English Readers. By William Whewell, D.D. Vol. III. (Macmillan & Co.)—Dr. Whewell completes his undertaking, of the character of which our notices of the two preceding volumes have made our readers cognizant, by treating the 'Republic' and the 'Timæus,' perhaps the most interesting of all, and certainly the most arduous. The plan adopted is probably the only one by which Plato himself could be brought before the English reader, and Dr. Whewell wrought out all its capabilities. That such an undertaking should be palatable to a publisher is one more proof of the growing taste for philosophy. Few persons are aware that, nearly twenty years ago, Mr. John Mill treated four of the Dialogues, the 'Protagoras,' the 'Phædrus,' the 'Gorgias,' and the 'Apology of Socrates,' in a manner resembling that of Dr. Whewell, so far as was consistent with less extent of space. These were published, without Mr. Mill's name, in 1834 and 1835, in the *Monthly Repository* (Fox, Paternoster Row).

Mysteries; or, Faith the Knowledge of God. 2 vols. (Manwaring).—The author tells us that this work was written in haste, without any preconceived plan, without library of reference, under ill health; that it has neither style, arrangement, eloquence, nor even orthography; that it is badly punctuated and printed, has many errata, no index, not even chapters nor headings, and is altogether "very badly got up." None of this do we dispute; but why was it written at all? Who can be expected to read 219 pages of preface, 249 more of first volume, 504 of second volume, and 89 of astronomical appendix, without any general description, not even so much as a small table of contents? From such book as we have given at it, it really seems that, if the author's faith in himself had been knowledge of himself, he would have waited until he could produce something more to the purpose. We have cast a look upon the astronomy, and we find such stuff as the following:—"What is the rotatory motion of a Primary except revolutionary motion resolved into a Centre, or what is revolutionary motion except excentric rotatory motion, or rotatory motion modified into a motion of translation?" We also find the following:—"Except some force should resist and modify the attracting force, the apple would fall to the earth in an instant of time, and through any distance, however great, in the twinkling of an eye." Enough for a specimen.

Outlines of Arithmetic. By J. Box. (Kent & Co.)—This is one of Ince & Gilbert's Educational Series, and needs no particular remark. The proprietors invite suggestions for improvement: we will give one. We recommend them, in the next edition, to find a better account of the rule of subtraction than the old nonsense about borrowing from the minuend, and paying to the subtrahend. We thought this absurdity was dead and gone.

Shakespeare's Comedy of the Merchant of Venice: with Introductory Remarks; Copious Interpretation of the Text; and numerous Critical and Grammatical Notes, by the Rev. J. Hunter (Longman), is prepared on the same plan, and in much the same manner, as the editions of other plays of Shakespeare by this editor, with a special reference to the Oxford school-examinations.—The projectors of the "Oxford Pocket Classics" have done well in securing the services of Mr. Dawson W. Turner, for the preparation of a neat and cheap edition of *The Knights of Aristophanes, with short English Notes* (J. H. & J. Parker), which is likely to be

of service to the upper forms of schools and the junior members of Universities.—Equally useful to a different class of students is the *Physical Atlas of Great Britain and Ireland, with Illustrative Letter-press*, by W. M'Leod (Longman), designed and adapted to illustrate the physical features of our country more fully than has been attempted in previous works of the kind. There are thirty maps, accurately and neatly delineated by Mr. Weller, exhibiting the mountain chains, courses of rivers with the towns, situated on them, the configuration and geological formation of the different districts, &c., with as much clearness as can be desired. The illustrative text contains an abundance of information on the general subject, besides answering the special purpose of a commentary upon the maps.—We have also before us the following: *Reading, Writing and Arithmetic, and how they may be more Successfully Taught in Elementary Schools*, by R. Floyd, (Longman);—so far as we can see, superfluous and useless: *First French Reading Book, being Easy and Interesting Lessons, progressively arranged; with a Copious Vocabulary of the Words and Idioms contained in the Text*, by Jules Cairon, (Simpkin), well adapted for familiarizing the reader with correct models of French as it is now written and spoken,—and *A Key to Arnold's Henry's First Latin Book; containing Notes, Etymological and Explanatory*, by A. G. Callan (Allan), prepared for the assistance of working-men and other self-instructing students.

LIST OF NEW BOOKS.

Alexander's Gospel according to St. Matthew Explained, 5s. cl.
Bullantyne's Red Eric, or, the Whaler's Last Cruise, 2s. 6d.
Barlow's Manual of the Practice of Medicine, 2nd edit. 12s. 6d. cl.
Beaton's Progressive Exercises on Greek Iambic Verse, 8th ed. 2s.
Bohn's Class. Lib., 'Demosthenes' Oration, trans. Kennedy, 5s.
Bohn's Eng. Gentlemen's Lib., 'Walpole's Correspondence,' 2s.
Burns's Illustrations of Mechanical Movements and Machines, 3s.
Burns's Universal Love of God and Responsibility of Man, 1s. cl.
Christian Year, The, 7th edit. 24mo. 6s. cl.
Currie's Principles and Practice of Common-School Education, 6s.
Dein Mott's Medical Alphabet and Initials for Illuminators, 6s.
Ellis's Commentary on Philippians, Colossians, &c. 10s. 6d. cl.
Fitz-Wygram's Analysis of the History of England, 2nd ed. 2s. 6d.
Froembling's Elements of the German Language, Part 1, 1s. 6d.
Gleny's Properties of Fruits and Vegetables, 12mo. 1s. 6d.
Grady's Book-Making; his Adventures by Sea and Land, 3s. cl.
Hall's Land of the Forum and the Vatican, new edit. 6s. 6d. cl.
Hardcastle's Countess Dale, 3 vols. post 8vo. 21s. cl.
Harris's Episcopal Church Tune-Book, oblong 8vo. 7s. 6d. cl.
Harris and Roche's Bankruptcy Act, 1861, with Notes, 10s. 6d. cl.
Holden's Manual of the Dissection of the Human Body, 8vo. 10s.
James (J. A.), Works of, edited by his Son, Vol. II, cr. 8vo. 7s. 6d.

DEATH OF NICCOLINI.

Florence, Sept. 22.
THE protracted illness of the venerable poet Niccolini ended fatally the evening before last. He died, after months of weary suffering and years of failing health, at the *Liceo* in Via Larga, where he had long resided as Perpetual Secretary of the Academy of Fine Arts, in the seventy-ninth year of his age. His loss adds another to the list of heavy bereavements which Italy has suffered during the past two eventful years, in the death of some of her greatest men and most fervid defenders. To Niccolini, his country owed more than half-a-century of entire patriotic devotion. From the time when he left the University of Pisa, and, following the counsel and example of his friend Ugo Foscolo, entered upon the then thorny and ungrateful career of letters, to the moment when he sat, in the year 1859, full of years and fame, in the theatre called after him, and heard, in the intervals of reiterated salvos of applause, the finest scenes of his finest tragedy, 'Arnold of Brescia,' declaimed before an enthusiastic audience, where a few years previously the printed work had been

strictly prohibited by the censors, the name of Giovanni Battista Niccolini was a watchword of freedom in Italy as that of the staunchest opponent of Austrian influence, and the deadliest and most detested foe to the Court of Rome.

Niccolini was born in 1782, at the Baths of San Giuliano, a small village in the neighbourhood of Pisa, where his father held some government office. Somewhat of his noble patriotic spirit, we may suppose he inherited from his mother, Settimia da Filicaja, a descendant from the Italian poet of that name, who in the darkest time of his country's effeminacy and degradation found voice for the utterance of aspirations for her redemption from slavery, and penned the sonnet containing the celebrated lines so often quoted against her in scorn during the bad old days of the *status quo*, and which Byron has rendered so familiar to English readers:

Were but thy beauty less, or more thy strength,
That men might fear thee more, or less desire!

Happily Niccolini fell on more stirring and hopeful times than those in which his poet ancestor lived and died, and though doomed more than once in his long life to see the banner of his country's cause torn down and trailed in blood and mire by her tyrants, yet the veteran patriot lived to see the dawn of her new day, and the last efforts of his pen were spent in exultingly welcoming the glorious light so ardently looked for through the dreary night-watch of more than fifty years.

In Niccolini, Italy has lost the greatest of her modern poets; and his tragedies, by which, more than by any other of his works, his fame will live, are rivalled by none other in the language, except those of Alfieri, who, though in dramatic power he may often be said to surpass him, yet in nobleness of thought, polish and splendour of style, and that irresistible "slancio," or rushing wind of passion, which animates some of his grandest scenes, must yield the palm to the Tuscan dramatist. Niccolini had moreover a lesson to teach his countrymen over and above that incitement to lofty thought and deed which is the province of his compeers of every age and country; abhorrence of, and resistance to the subtle machinations of the Church of Rome.

The tragedy of 'Nabucco,' which was the work of his youth, and that of 'Arnoldo' the work of his mature years, are splendid examples of the power with which he chastised the sacerdotal caste which had wrought such wrong and woe to Italy, and of which his Arnoldo says with bitter scorn:

Priests have no country!

Again and again, with relentless severity, he ceased not to brand with infamy the unnatural union of priest with despot, and to cry against the fatal alliance of the two powers,

In whose embrace mankind is crushed to death!

Well might Niccolini's name become, as I said before, a sacred watchword in Italy's war of liberation! The names of his other most celebrated tragedies are too well known to need recapitulation: 'Foscari,' 'Giovanni da Procida,' 'Filippo Strozzi,' and many more, are works of European fame. The dramatist's great historical prose work, 'The History of the House of Hapsburg,' on which he was engaged for many of the latter years of his life, has been so often announced as on the point of publication, that now a sort of mystery seems to hang over the inexplicable fact of its non-appearance. A few weeks or months will now probably let in, directly or indirectly, some light upon the matter, and give a hint as to the probabilities of a work being given to the world, which, as I can of my own personal knowledge avouch, was among the best beloved of the poet of all his literary offspring, and on which he rested one of his strongest claims to the reverence of posterity.

Last night, at the *Ave Maria*, or the first hour of dark, an immense concourse of all ranks of persons assembled in Via Larga, to witness the "carrying home" of the poet to his last rest in Santa Croce, where, by especial favour, the municipality of Florence has decreed him a tomb. A long procession wound through the midst of the vast throng, headed by all the officers and the band of the National Guards. The whole municipal body, with the Gonfaloniere, the members and Professors of the Academy, led by their President, Prince Strozzi,

the Director of Public Instruction, and the large body of functionaries under his jurisdiction, followed the bier, which was borne, in Tuscan fashion, on men's shoulders, its splendid embroideries and flower-garlands swaying and flickering in the light of the hundreds of great wax torches carried by the train of mourners, and the long silver-gauzy plumes of "*nebbia*" (or cloud), a beautiful plant peculiar, I fancy, to Tuscany, and which waved round the many-coloured wreaths, like angels' wings in the torchlight, giving a strange spiritual look to the principal feature of the scene. Strangely enough, no train of priests with incense, nasal chant, and lofty silver crosses hooded with velvet bands, led the funeral pageant, as is the Florentine custom. Two only, dressed in their common short surplices, as at a pauper funeral, went before the body. Yet Niccolini had twice received the holy oil during his last days of life, too late, indeed, for the rites of the Church to be anything to him beyond a mere form. All the way from Via Larga to Santa Croce, every street was filled with a dense crowd, and not a few murmurs might be heard as the procession passed against the "*birboni di preti*" (rascals of priests), who "are the born enemies of

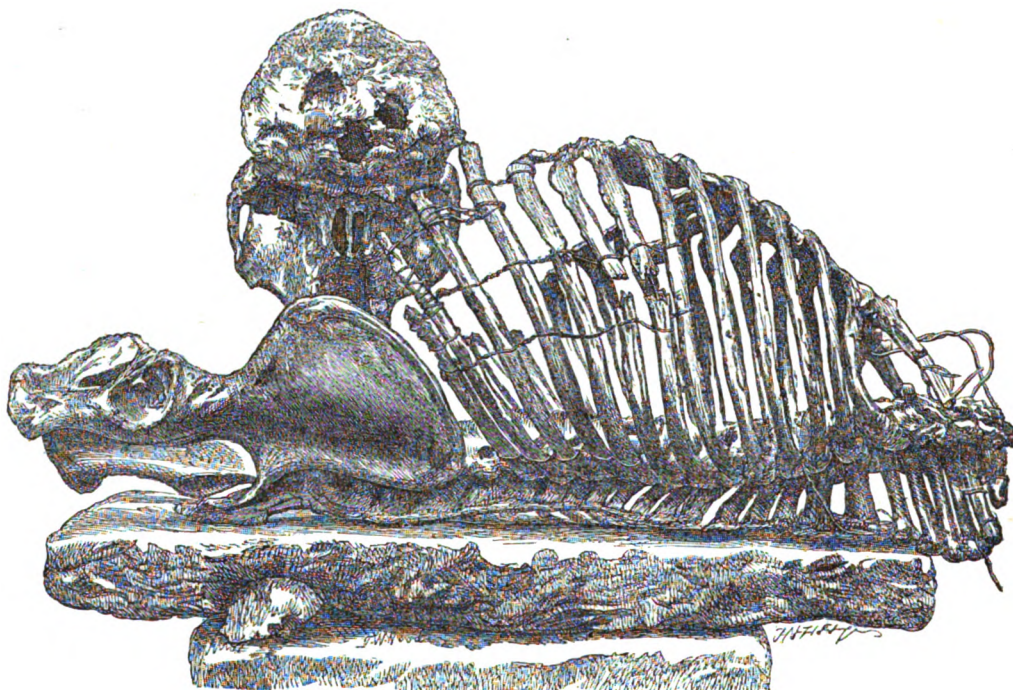

all our great men!" and had not even gone with him to the grave. At Santa Croce the bier with its following passed in; the great doors were shut; the coffin was laid at the foot of the high altar steps; behind it stood the friars of the convent; on either side the mourners with their torches, and all around and above, the great solemn gloom of that venerable nave, with its ghostly monuments and shadowy roof, and the memories of the mighty dead that lie on either hand. A strangely picturesque and moving scene, truly, especially to such as remembered how the friars of Santa Croce were in the days of the Inquisition its chosen ministers of chastisement to Tuscany, and how, even as late as the year 1851, the low-browed door of that sacristy, half hidden now by the deep shadow opened to let out the armed *sbirri*, concealed there by the brethren, who fired upon the crowded citizens within the sacred walls. The friars droned through a brief office for the dead. At its close Prof. Vannucci, a man of eminent literary reputation and a personal friend of the dead, spoke a funeral oration, full of power and feeling, and abounding in passages of such stinging eloquence against the Roman stronghold of bigotry and tyrannous superstition, with

which the deceased poet had so fearlessly done battle all his life, that the faces of the shaven monks, framed in their cowls, turned ashy green and yellow with impotent rage as they stood beside the coffin of their dead foe. For, as whispered one of the mourners, "they thought it rather too hard to be shown up so publicly, in their own house!" (*a casa sua*). The oration ended, the torches were put out, the mourners issued forth into the pure starlight of the Piazza, and Giovanni Battista Niccolini was left to sleep the long sleep beside his predecessors in fame. TH. T.

THE GORILLA.

British Museum, Sept. 21, 1861.

MAY I request that you will lay before your readers the accompanying engraving, from a photograph, of the bones of the trunk of the "King of the Gorillas," with the articulating wires, and, also, of the posterior region of the skull of the same skeleton, exactly in the condition in which they were sent to the British Museum by M. Du Chaillu. The photograph shows the holes in the back of the skull, which Prof. Owen, in answer to an observation made by

Dr. Sclater at the Manchester Meeting, stated that he had not observed; together with the true position of the fractures of the ribs. I repeat my invitation to all who take an interest in the subject to inspect the specimens, and determine for themselves; but, for the sake of those who are unable to visit the Museum, I offer a photographic representation, as the next best corroboration of the correctness of my statements. It will at once be seen that the fractures of the seventh, eighth and ninth ribs on the right side are not situated "at the back part of the chest, where the ribs bend outward and forward, and are so close together as almost to overlap," but are very greatly in front of the position indicated, being as nearly as possible in the middle of the side, where the ribs stand widely apart, and where it is impossible that any bullet, entering the chest in front, could have found its exit. Neither is there the slightest indication of the fractures having taken place "from within outwards"; on the contrary, it is the unanimous opinion of the medical and scientific men to whom I have shown the skeleton that the injury to the ribs was caused by external violence; and this is rendered the more probable by the existence of a fracture of the collar-bone on the same side.

The lateral position of these fractures at once disposes of all Prof. Owen's arguments as to the

mode in which a bullet might enter "in front" of the left side of the chest, without injury to the ribs of that side, and pass out on the other side, breaking three ribs in its exit. It is, also, very significant that Mr. Bartlett and Mr. Wilson, the artists by whom the skin was stuffed, should not have observed any bullet-holes in the chest while the skin was damp and soft, and that they should have noticed the holes in the nape of the neck, and considered them as bullet-holes. Certainly, no taxidermist with any experience could fail to perceive the difference between a bullet-hole made during life, which forces the edges of the wound aside, and a "slit made by the knife after death—in the act of flaying." J. E. GRAY.

M. DU CHAILLU'S ADVENTURES.

8, Winchester Street, S.W., September 25.

THE letter of my brother-in-law, Mr. R. B. Walker, of the Gaboon, specially addressed to the *Times*, having been refused insertion in that journal, although openly signed with his name and corroborated by numerous references, while an anonymous letter in reply is admitted to a prominent place, it is useless my writing further to that journal. As you, however, have republished my brother-in-law's letter from a contemporary, I

am induced to ask you to give place to a few remarks from myself, which appear necessary for a clear appreciation of the case, leaving him to reply (which he is well able to do) more fully in detail hereafter, when he shall have received the papers. My main object is to place my brother-in-law's character and position fairly before the public, so that the nature of his evidence may have due weight, as compared with the anonymous assailant, since M. Du Chaillu has not chosen to meet the moral and scientific accusations which he had himself challenged. The letter received by the last African mail was, as stated therein, a direct reply to the appeal made by M. Du Chaillu in the *Times* to his friends in the Gaboon for corroborative evidence of the authenticity of his travels, scientific discoveries and trading operations.

I would premise, then, that Mr. Walker, so contemptuously styled in the *Times* "a trapper at the Gaboon," an occupation the laurels of which he has, I am sure, no desire to share with M. Du Chaillu, is the son of a Lieutenant in the Navy, and has been for many years (as his brothers were before him) resident agent in the Gaboon for perhaps the largest African mercantile house in the kingdom, Messrs. Hatton & Cookson, of Liverpool. The trading operations of that extensive firm on the

West Coast of Africa are carried on through his agency, and numerous vessels freighted with goods to the amount of tens of thousands of pounds are periodically consigned to him, and their cargoes bartered for native produce—without any connexion whatever with the slave trade.

My brother-in-law's name and reputation as an honest trader and hospitable gentleman are well known (as M. Du Chaillu himself, if he chose, could testify), not only in the Gaboon river, his headquarters, but from Liberia in the north to Benguela in the south, and even far into the interior; and Messrs. Hatton & Cookson, in whose service he has been so long, will bear willing testimony to his honour, ability, probity and veracity.

But Mr. Walker is something more than a mere trader, he is a good linguist, both as respects European languages and native African dialects; a good seaman, frequently navigating his owners' vessels up and down the coast; well skilled in the use of philosophical instruments; a frequent traveller and explorer in the interior for hundreds of miles; and a great reader, especially of all works of African travel, for I have special instructions to send him by every monthly steamer the principal new books, periodicals and newspapers.

There is certainly nothing of the adventurer about him; but although not professing to be a naturalist or scientific explorer, amid his busy mercantile pursuits, he has done something to aid science by various contributions, as the skeletons of the gorilla and chimpanzee in the Museum of the College of Surgeons, and various articles I have presented to the South Kensington, Kew, African Aid Society, Pharmaceutical Society, and Crystal Palace Museums, and my own private collection, will testify. He is now making a large and interesting collection of African natural products, implements, manufactures, &c. for the International Exhibition. Some years ago, before the name of M. Du Chaillu had been heard of here, he sent me a skull and details of an adult gorilla, and this skull and frequent subsequent letters of his were produced before the Zoological Society, and he had hoped to have transmitted a live gorilla and other zoological desiderata to this country before now, had his business operations permitted him to give such matters special attention. These facts are at least evidences of his acquirements and general knowledge, which can be further vouched for by Mr. Daniel Hanbury and Dr. Gray. Here then, I think, I may rest the character and commercial and scientific attainments of my brother-in-law.

A strong point, and properly so, has been made in the recent dispute of the represented discrepancy in the opinions held by my brother-in-law as to M. Du Chaillu now and three years ago. What has wrought this change, if there be any change, it is for Mr. Walker himself to state, as I am sure he will do by an early mail. It may possibly be that the statements in M. Du Chaillu's book are so at variance with what were told him on the spot, and that the accounts received from neighbouring French settlements, from the interior, from the United States and from the Continent of Europe have been of such a nature as to induce him to reconsider and modify any opinion of confidence he might have expressed. But with this matter I have nothing to do. With respect to the disclaimer, by M. Du Chaillu's friend, "Africanus," of any reference to Mr. R. B. Walker for character, I have, however, something to say, and it seems unaccountably strange that Mr. Walker's testimony should now be repudiated, after he had been specially appealed to for support. What are the facts? I had met and spoken once or twice to M. Du Chaillu at Lord Ashburton's and other scientific soirées, when on the 1st of July he called upon me at the International Exhibition Office, sorely out of temper at the criticisms which had been made upon him, stating that many even went so far as to doubt that he had been in Africa at all. He added, that a paper was to be read that evening, by Capt. Burton, on his (M. Du Chaillu's) Travels and Explorations in Africa, at the Ethnological Society; and as my friend, Mr. J. Crawford, would be in the chair, and I had hinted that my brother-in-law some years previously had made

favourable mention of him, would I oblige him by looking up the letters, and attending and reading the passages? Although, as I told him, loth to mix myself up with the controversy, yet on being pressed, I did attend and read portions when called upon by the chairman. After the confusion resulting from the discreditable fracas which terminated that meeting, the Secretary asked me to favour him with copies of the extracts, and I handed over the letters that he might do this himself. Instead of publishing, however, only what I read, I found, to my annoyance, that other passages, personal to myself, which I did not read, also appeared in print. So much, then, for the statement in the *Times*, that "our traveller had referred to a Mr. Walker for corroboration of the fidelity of his narrative, and that the Mr. Walker, whose letter, recently published, denouncing M. Du Chaillu as a scandalous impostor, is not the veritable Walker meant." Whether the American missionary in Georgia, *Wilson*, not Walker, as stated in the *Times* (who was, some years ago, at the Gaboon), or the gentleman who, having been ten years there, and writing now from the spot, with M. Du Chaillu's book before him, and all the antecedents of his career in his knowledge, is the most reliable witness, it will be for the public to determine. I ask confidently, however, whether, in the words of the *Times*, "M. Du Chaillu is not put out of court by the witness he had himself called to character"?

I shall be glad to see the publication of any letters from friends of M. Du Chaillu at the Gaboon, which he may see fit to give to the world, some of which surely ought to have reached him as well as myself.

But all the evidence is not yet to hand, notwithstanding the very strong expressions which are contained in the private letters of my brother-in-law, by this mail, which I place in your hands. For my brother-in-law having scarcely had time to read through leisurely M. Du Chaillu's book before the departure of the mail, the last words in his letter are, that he "is preparing a second and more elaborate letter for publication," which time then prevented him sending.

P. L. SIMMONDS.

Sept. 25, 1861.

I am sure you could not have been aware when you published in your last number the letter of Mr. R. B. Walker, in which Mr. Du Chaillu is denounced as an impostor that he is the very same R. B. Walker, whose two letters, expressing implicit credence in him, were read at a Meeting of the Ethnological Society last season, and which have since been published. These two letters were voluntarily produced and read by his own brother-in-law, Mr. Simmonds, a man of letters who will, I am certain, be ready to testify to their authenticity. Mr. Walker is at one moment the eulogist, and at another the vituperator of Mr. Du Chaillu; in a word, he turns round upon himself without any cause assigned, so as to make his opinion, in either way, utterly worthless.

I place them in opposite columns, and beg you in fairness and justice to Mr. Du Chaillu, and to the gentlemen who introduced him to public notice, to give this statement publicity in your journal:—

Mr. R. B. Walker of the Gaboon, July 22, 1861.

"I in common with most persons doubt that Mr. Du Chaillu ever killed, or assisted to kill a Gorilla, and also of the extent of his travels."

"I will point out a few only of the most gross and glaring of his numerous false statements and exaggerations, which have struck me on a careful perusal of his work, which work is neither more nor less than an amusing fiction, in which the author, knowing the improbability of finding speedy contradiction in England, has given full scope to his apparently very fertile imagination."

Mr. R. B. Walker of the Gaboon, Nov. 1858 & May 1859.

"I presume he is about the only European who has seen the Gorilla in its wild state, and killed it himself. He is also the discoverer of n'koli n'kambo and possesses the only specimen of it ever yet seen by a white man; in fact, the coast tribes know nothing of it, even by report."

"I will not forestall him by recording any of his adventures here. He is no boaster, and I for one place confidence in all he has told me, and I consider that what he relates may be relied on."

"As a whole, it is hard to say whether the author, in his attempt to impose upon and in fact humbug the scientific world displays most mendacity or ignorance."

"Having thus done my best to arrest a career which I will leave others to characterize. I am, &c.,

"R. B. WALKER."

"He has travelled where no white man ever penetrated before. It is from him I obtained the birds that I sent home to Clara."

"An enterprising naturalist with whom I am acquainted, Mr. Paul Du Chaillu, will shortly be in England. I will endeavour to get him to call on you. As Mr. Du Chaillu will be a celebrity in a small way, it would be a feather in your cap to be his cicerone and to lionize him. He is a very nice little fellow. He deserves to be well remunerated for his trouble."

"R. B. WALKER."

SCRUTATOR.

OUR WEEKLY GOSSIP.

Mr. Newton has in the press 'A History of Discoveries at Halicarnassus, Cnidus and Brachida,' being the results of the Expedition sent to Asia Minor by Her Majesty's Government in 1856. The work will of course be illustrated by drawings of Mr. Newton's interesting discoveries.

Our readers will be sorry to hear that Capt. Blakiston's attempt to cross overland from China to India has met with serious obstacles, and that the exploring party has returned to Shanghai. We have a brief note from Capt. Blakiston, under date of Shanghai, July 12, in which he describes his return from the Yangtse Kiang, after penetrating eighteen hundred miles by that mighty river. Capt. Blakiston adds, that he is starting from Shanghai for Japan the very day on which he writes, to get out of the heat. If leave of absence can be obtained, he will return to England.

We are glad to find that the project of erecting a memorial bust of John Locke, as a companion to that of Robert Blake, is progressing favourably. Mr. Arthur Kinglake is at energetic work with the subscription list. A model has been prepared by Mr. E. G. Papworth, under the eyes of Mr. Baily, Roubiliac's fine bust being used as the groundwork, though it has not been slavishly followed in the expression. The result is satisfactory. We particularly notice that, while the lineaments and characteristics of the face have been well preserved, that suggestion of pain which is seen in so many portraits of Locke—particularly in the Oxford portrait—has been got rid of—greatly to the bust's advantage and the spectator's pleasure. Mr. Locke King, the descendant of the philosopher, expresses himself highly satisfied. Somersetshire will have some right to feel proud of its heroes and of its public spirit. In the last century, some members of the Royal Society originated a subscription for a monument to Locke in St. Paul's Cathedral; but from lack of interest or energy, the undertaking failed. It does not appear likely that the present project can fail.

'The Colleen Bawn' was reproduced at the Adelphi on Monday, with the old cast and the old effects. Mr. and Mrs. Boucicault were warmly received by the audience, which was as numerous as ever. A new sensation drama by the same author is underlined, which, like 'The Colleen Bawn,' has already been tested in America. It is entitled 'The Octaroon,' and will, we believe, not be long delayed.

Dr. Madden, author of 'Travels in Turkey, Syria and Egypt,' has a new work on the East in the press, under the title of 'The Turkish Empire in its Relations with Christianity and Civilization.'

The death of William Farren, the actor, does not "eclipse the gaiety of nations," but old play-goers will not hear of it without regret, nor without grateful memory of many a rare enjoyment. Son of an older Farren, of Covent Garden, and the brother of a favourite player at Bath and Dublin, his first appearance in London was made just forty-three years ago, at "the Garden." Then little more than thirty, he took the line of old men, and in particular parts he has never been equalled. His first character was Sir Peter Teazle, his second Lord Ogleby, and there has never since been on the stage such a baronet or such a lord. Of all the cast of 'The School for Scandal,' played on the 10th September, 1818, the Maria of the evening,

Miss Foote (Dowager-Countess of Harrington), is the sole survivor. The last who departed before William Farren was Miss Brunton (Mrs. Yates), the Lady Teazle of the night, now followed by Sir Peter. The others have long since passed away, and no English Theatre at the present moment could produce Sheridan's comedy with so efficient a cast. Joseph, Young; Charles, C. Kemble; Sir Oliver, Terry; Sir Benjamin, Liston; Crabtree, Blanchard; Moses, Simmons; Trip, Farley; Mrs. Candour, Mrs. Gibbs. We may make exception of this last character, however, which Mrs. Wilkins plays better than Mrs. Gibbs and quite as well as Mrs. Glover. The only fault in Mr. Farren's Sir Peter was one common to all its representatives, save the original performer of the part, King, —forgetting that he is only fifty, they make him a ridiculous old fellow of seventy. Farren, however, never forgot that Sir Peter was a gentleman. They who never saw his Lord Ogleby till he played it at his own little theatre in the Strand, can have but a faint idea of the effect he produced in it, in his palmy days, before illness had affected his spirits, his health and his speech. On the seventeen nights he played that part during his first season, the houses were as crowded as when Miss O'Neil was acting Juliet or Belvidera. This was perhaps the most masterly of his delineations, and in one scene of it he, a few years back, took his final leave of the stage. Unequaled as he was in his peculiar line, —the old man—he occasionally departed from it, to show his versatility. He could play young parts with great grace and spirit, was an excellent old woman, and made as striking a Meg Merrilies as Mrs. Egerton herself. These *extra* representations were generally confined to benefit nights. Young, for instance, played and sang Macbeth, Mrs. Glover acted Falstaff or Hamlet, and Edmund Kean, Tom Tug.

Mr. Edward Falkener the author of 'Dædalus,' has just been presented with a gold medal by the King of Prussia, as a mark of His Majesty's appreciation of his work.

Mr. J. J. Walker, of Trinity College, Dublin, draws our attention to some remarks of his at the recent Meeting of the British Association 'On an Iris seen in Water,' with a view to establish the priority of his experiments and observations. The subject of 'Reflected Rainbows' had been discussed in the *Athenæum* and elsewhere; and, so far as the evidence is before us, it appears that Mr. Walker is entitled to the merit of priority in observing and discussing these phenomena. Mr. Walker published, as far back as 1853, a paper on the subject, and made a very full oral communication to Section A. at the Aberdeen Meeting of the British Association in 1859.

Some months since we gave an account of a most ludicrous hoax which the Abbé Domenech had practised on himself by the publication of a dirty German schoolboy's scribbling-book, as a 'Manuscript pictographique des Peaux-Rouges,' at a great cost, defrayed by the French Government. Our account attracted the attention of M. Berjeau, the editor of the *Bibliophile*. He corrects, in his last number, an error which the original Correspondent fell into in attributing to M. P. Lacroix, to whom the book is dedicated, any complicity with the interpretations of the Abbé; but he communicates the substance of a letter which he has since received from M. Lacroix, in which the writer, strange to say, maintains the integrity of the book, notwithstanding the recent exposures. "The 'Livre des Sauvages,' he says, "is not a mystification, as has been affirmed in France, for the purposes of a cause which I abstain from mentioning, and been repeated in Germany and in England without a conscientious information. It is really a 'Manuscript pictographique,' drawn by an *Iroquois converted by a German missionary*; for the German writing is but the explanation of the figures. The only reasonable article which has hitherto appeared was published in the *Temps*; it is signed by Vivien de St.-Martin, a competent judge. The Abbé Domenech, who has seen all that exists of books and MSS. on the North American Indians, knows his business better than any one; but it is possible his commentary may be

subject to revision and correction"! We should suppose so; but the French Governments appear to think otherwise; for we understand, from recent letters, that the book has been withdrawn, and the copies bought up, in order to suppress, as far as possible, the whole publication.

Mr. Dicey wishes to explain away, and it would appear that he can do so satisfactorily, how it comes that his 'Memoir of Cavour' has so much in common with the work of Signor Bonghi:—

"Ischel, 14 Sept. 1861.

"Some years ago a selection of Cavour's writings and speeches was published under his own supervision. Attached to this work was a sketch of Cavour's life, up to the date of publication. This memoir was ill put together, and as a literary production, almost unreadable; but the information contained in it was important and accurate. M. Bonghi was employed by the publishers of the 'Galleria Nazionale dei Contemporanei Italiani' to reproduce this Memoir in a readable form,—a task which he has performed with great judgment and ability. In common with every biographer of Cavour, I have availed myself freely of the facts contained in the official Memoir, and from this circumstance, many of my statements undoubtedly coincide with those of M. Bonghi. On the only occasion, however, on which I have quoted directly from M. Bonghi's Memoir I have mentioned the fact explicitly."

It is reported that Mr. Lowe's new Minute on Education, against which there is good outcry on the part of influential classes, has been suspended. The application of it is postponed for six months; that is, until after the meeting of Parliament. The opponents of Mr. Lowe have certainly for the moment gained their point, and the questions affected by the Minute of July 29 are again thrown open to debate.

The foundation-stone of a monument to Bishop Hooper was laid at Gloucester on the 19th inst., on the spot selected to be that of his martyrdom.

Dr. Wilhelm Pitschner, of Berlin, has undertaken, by order of the Prussian Government, an ascent of, and a stay on, Mont Blanc for scientific purposes. Dr. Pitschner has already once visited "the monarch of mountains," and knew, therefore, how best to equip himself for a stay of three or four weeks on the summit. He is accompanied by a staff of twenty guides, who will have to carry the physical and astronomical apparatus, and who are to assist him in its management in surveying, measuring, taking observations, &c. Among the guides is one of the family of Balmat, an ancestor of whom received the name of Jacques Balmat de Montblanc from the King of Sardinia, in acknowledgment of his astonishing boldness in climbing the glaciers. A large waterproof tent, of English manufacture, is to protect the travellers against the inclemency of the weather, and against those snow-storms which the inhabitants of Chamounix describe when they say, "The Mont Blanc smokes his pipe." The task which Dr. Pitschner has set himself is to compare the result of the present survey with that of former years, in order to ascertain whether the most elevated masses of ice and snow—consequently, the height of the mountain—has been lessened or increased by change of temperature, by the new fall of snow and the melting of glaciers. After this, the microscopic life on such heights, the phanerogamic and cryptogamic formations of plants, as well as the infusoria, which are supposed to lend a reddish tint to large masses of snow, are to be subjects of close examination. Lastly, Dr. Pitschner trusts to make some astronomical observations in the clear atmosphere of Mont Blanc, unimpeded by the vapours and clouds which usually surround our planet. The results of Dr. Pitschner's expedition will be laid before the public in due time.

The Rhenish papers report the death of Baurath Zwirner, the architect of Cologne Cathedral. It will be difficult to replace him in that special capacity. What has been done for the rebuilding of the venerable structure during the last thirty years is entirely Zwirner's work. The completion of the Cathedral was the great task of his life,—he had identified himself with it, as it were; but he, too, has not been allowed to see it finished; and,

again, the old crane on the still fragmentary spire has to look for the master who is at last to carry out the unfinished work of centuries. Max von Schenkendorf, in 1815, sang prophetically—

Seh' ich immer noch erheben
Auf dem Dach den alten Krahn,
Scheint mir nur das Werk verschoben,
Bis die rechten Meister nahen.

Zwirner certainly was "ein rechter Meister,"—one of those whom the poet foresaw with his mind's eye.

Few Guide-books that we have read give any just account of the remarkably picturesque interior of the Church of St. Mary, standing close to the well-known Abbey at Whitby, Yorkshire. After these days of raging renovations, so-called restorations, and the like, it is by no means probable that a large church will be found, not in its original and primitive condition—such as the Mediaeval architect intended it to be, for that is out of the question by mere lapse of time and course of accident—but in that later state which we, for want of a better word, shall call the "unrestored." This curious building has been primarily a Norman edifice, to judge by scant remains in the way of capitals and heavy shaftings still noticeable. Procession of decay and repair has brought odds and ends of other styles of English Gothic. The building appears to have been "*razed*," to use a not inappropriate word to express the cutting down of a church in a seaport town, the roof having been more than once lowered, until now it may be said almost to rest upon the window heads. The dimensions are considerable; the plan cruciform; and, although but a parish church, it has been, as is most frequently the case when immediately adjoining a large monastic establishment, of dignified character. The roof of wood, painted or washed white, has an odd resemblance to that of a cabin of an old-fashioned man-of-war, because of the introduction of no end of little skylights, each giving a ray or two to some corner of the numerous galleries which overload the interior. The "aboard-ship" appearance resulting from this method of lighting is strengthened by the windows being almost invariably introduced sideways and lantern-like, and screened by shallow blinds. The wooden galleries run quite round the interior; and one traverses the chancel-arch without consideration of thereby somewhat resembling the much-abused roof-loft, or ruff, for the original beauty of the arch itself. There is more than one separate means of access from the exterior of the church to these galleries, thereby avoiding interior staircases. The galleries are supported upon iron shafts; they are, consequently upon the razing of the walls, very low. That which crosses the front of the chancel-arch is supported upon bold, twisted shaftings, such as were common enough in the time it was erected, probably that of the second Charles. The front of this gallery is decorated with panels and styles of shallow pilasters, carved with chubby flowers, and still more chubby heads of angels. The pews are the old sleeping-boxes, lined with baize, &c., and in the week-days duly covered with cloths "to keep them clean." The churchwardens considerably reserve three or four of these, in the best situations under the pulpit, for "strangers," of respectability of course, and a placard requests that no inhabitant will occupy them. In the centre of the church hangs a very handsome chandelier, of the old Dutch fashion, with a multitude of branches, and a magnificent globe in the midst of them. The steps to the altar are at the chancel-arch. Round the walls are hung tablets of wood, bearing texts from Scripture, in huge and most irregular lettering, and displaying, whenever two or more come on the same board, a fine contempt for anything like mutual relation. Under the place of the tower is a queer temple-shaped model of a memorial, in coloured marbles, after the fashion of confectioner's Classic,—a dome supported by columns of Ionic character, raised upon circular flights of steps, and covering a pyramidal little stone, on which is placed certain extracts from the *Times*, recording with genuine feeling the deaths of a boat's crew of brave men who ventured seven times in a storm to aid shipwrecked sailors. Futile as is the art of this preposterous little temple, there is a simplicity, a manly plainness

about it that moves one more than a nobler memorial might do. The words, sensible and unepitaph-like, taken from the daily record of the life of England, ring homely to the ear, and, being sterling, win sympathy for those who mourn the stout-hearted dead in this quaint, characteristic fashion. Other memorials may be seen here, and many unusual things observed; amongst which is an interesting indication of the continuation, even to this day, of the ancient employment of brass plates by way of memorials of the dead. These are mere inscriptions, mural or otherwise, but have the interest indicated. Long may the church remain, unrestored as it is, a complete study of bygone fashions, invaluable to artists seeking backgrounds to pictures of many subjects such as may be found in what are called the British Classics.

SCIENCE

BRITISH ASSOCIATION.

SECTION A.—MATHEMATICAL AND PHYSICAL SCIENCE.

MONDAY.

General SABINE having taken the Chair, the ASTRONOMER ROYAL made some remarks on Dr. Hincks's paper, read on Saturday, 'On the Acceleration of the Moon's Mean Motion as indicated by the records of Ancient Eclipses.'—He stated his unaltered conviction that the Tables of Hansen gave the date of the great solar eclipse which terminated the Lydian War, as all the most reliable records of antiquity fixed it, as in the year 585 B.C. He said he must first recall to their remembrance some geographical facts, and he sketched on the board a rough plan of Asia Minor, Upper Asia, the Black Sea, and the Mediterranean. Now, an impassable mountain barrier, which the ancients called Mount Taurus, stretches across between Asia Minor and Upper Asia, leaving only two passes at all practicable for an army: one to the north, along the shore of the Black Sea, celebrated for the well-known retreat of the Ten Thousand Greeks, as chronicled by Xenophon; the other to the south-west of Asia Minor, through which, all the circumstances rendered it highly probable, the invading Assyrian army entered Asia Minor, as it was certain the army of Alexander the Great passed through it in the opposite direction when he invaded Syria, Egypt, and Upper Asia. Now, in the line between this pass and the capital of Lydia it was nearly certain the decisive battle was fought, and calculation from the Tables showed that at the date assigned to the eclipse, commonly called the Eclipse of Thales, because predicted by him, the centre of a total eclipse of the sun actually swept. The Astronomer Royal then explained how Thales was able, by the aid of the Saros, or period of 18 years, 15 days, and 8 hours, to predict the eclipse; and then, if the previously-observed eclipse at the beginning of this cycle occurred in the morning, the odd 8 hours would ensure that this one would occur in the afternoon, as the recorded circumstances of the battle inform us it actually did. He then pointed out how calculation from the same Tables led us to the time and circumstances of the Eclipse of Agathocles, when the Grecian fleet escaped out of the harbour of Syracuse; also to the darkness, which, no doubt, was an eclipse, which was stated to have taken place when the Persian army entered Babylon.

'On Permanent Thermo-Electric Currents in Currents of One Metal,' by F. JENKINS.

'On Binocular Lustre,' by Sir D. BREWSTER.—After noticing the opinion of Dove and other opticians, that this lustre was caused by seeing a more opaque object of one shade through an imperfectly transparent plate of a slightly different shade, as when a number of watch-glasses are placed in a heap, or when a plate of mica is split up by heat into numerous very thin plates, without being entirely disintegrated, in which case it assumes a silvery lustre, Sir D. Brewster went on to state that he had come to the conclusion that this phenomenon was physiological, and not physical, which was obvious from the fact that under the same circumstances, and with eyes equally good,

the lustre was seen by one person and not by another; while those who distinctly saw binocular lustre saw very different things. The physiological character of the phenomenon was proved further by the fact, that the lustre was not seen when the shades of the combined surfaces were slightly, or very greatly, different; and when seen without diagrams it was different from what it was when seen with diagrams; further, it was different when one of the diagrams was formed by white lines upon a dark ground. Binocular lustre had no relation whatever to those varieties of lustre which arose from the combination of lights reflected from the outer and inner surfaces of laminated, transparent, or translucent bodies. In combining geometrical or other figures to represent solids whose parts were at different distances from the eye, the optic axis was in constant play, not only in varying the distance of their focus of convergence to unite similar points at different distances on the two diagrams, but in maintaining the unity of the picture by rapidly viewing every point of its surface. When the two surfaces had different shades or colours, the retina of one eye was constantly losing and recovering the vision of one of them. Each optic nerve was conveying to the brain the sensations of a different tint or colour. The brain was, therefore, agitated sometimes with one of these sensations and sometimes with the other, and sometimes also with both of them combined. It was, therefore, not an unreasonable conclusion that in the dazzle produced by this struggle of flickering sensations, something like lustre might be produced. In studying the subject of lustre, there were some facts deserving of attention. In a daguerreotype, for example, of two figures in black bronze, with a high metallic lustre, it was impossible by looking at either of the pictures to tell the material of which they were made. No lustre whatever was visible; but when the two equally shaded pictures were combined in the stereoscope, the lustre and true character of the material was instantly seen. Another instructive example was seen in the stereoscopic representation of a boy blowing a soap-bubble. The lustre of the watery sphere was not visible in either of the two pictures, but when they were combined it was distinctly seen. In both these cases, and in others of the same kind, tints of similar intensity were combined, as in the case of the suspended papered wall, and there was no ground for assuming that the two surfaces combined appeared at different distances, and that the one was seen through the other, as in Prof. Dove's theory.

'Report from the Balloon Committee,' by Col. SYKES.—Prof. Walker, after the appointment of the Committee at the Aberdeen meeting, having communicated to Col. Sykes his inability to undertake any active labours with respect to carrying out the objects for which the Committee was nominated, Col. Sykes put himself into correspondence with Mr. Langley, a gentleman of Newcastle, who offered to construct a suitable balloon, provided an advance of money were made to him. The correspondence, however, was without result, and Col. Sykes, in consequence, thought it unnecessary to invite the opinions of the other members of the Committee with respect to the objects to be sought for in balloon ascents, as means were wanting, whatever those opinions might be, to give practical effect to them. Col. Sykes was not at the Meeting at Oxford last year; and no action having been taken by the Balloon Committee, it has dropped through and is extinct. Within a few months past Mr. Simpson, of Cremorne Gardens, has constructed a balloon at a cost of 600*l.* (the *Normandie*), with a sufficient capacity to carry two persons to great heights, which might be available for the objects of the Association; the occasion has, therefore, arisen when the re-appointment of a Balloon Committee might take place; and as one of the chief objects of the last Balloon Committee—viz., the verification of the former results of the ascents undertaken by the authority of the Association—remains unchanged, Col. Sykes, with the approval of those members of the late Balloon Committee with whom he has an opportunity of conversing, will move the re-appointment of the Committee, with a grant of 200*l.*

'A Provisional Report on the Present State of our Knowledge respecting the Transmission of Sound Signals during Fogs at Sea,' by Prof. HENNESSY.—This Report was drawn up in accordance with a request made by the President and Committee at the Meeting on Friday, and was therefore necessarily provisional. The objects to be attained by sound signals during fogs are twofold: first, to reveal the presence of ships to each other, or of lighthouses and beacons to ships; second, to reveal the relative directions into which such objects may happen to lie. The Commissioners of Lighthouses and Beacons have collected information upon both of these points; but the comparative extent of the matter referring to sound signals is small, while that collected in reference to optical signals is remarkably voluminous—that this circumstance alone furnishes strong *prima facie* evidence as to the necessity of instituting further inquiries relative to the former subject. This the Commissioners fully acknowledge by distinctly stating that further experiments are required as to the question of sound signals. A brief summary is given of the views of several scientific men; and although such views are far from being all similar, some points of agreement seem to exist. One of these is the necessity of propagating sound close to or along the surface of the sea; another is the superiority of high-pitched notes compared to those of lower tone. In the author's opinion, the question seems to be narrowed into not only thoroughly settling these questions, but also of discovering the best arrangements of sources of sound and of auditory apparatus for detecting the direction of sounding bodies. He suggests, therefore, that experiments should be made—1st, on the best kind of sound for penetrating fogs; 2nd, on the adaptation of the principle of interferences for determining directions; 3rd, on the best mode of utilizing the sound-conducting power of water; 4th, on the best construction of stethophones or double ear-trumpets, for assisting the observer in deciding upon the direction of a given sound; 5th, it might be finally desirable to study the influence of high winds in modifying sounds.

'On the Connexion between Storms and Vertical Disturbances of the Atmosphere,' by Prof. HENNESSY.

'On a Deep-Sea Pressure Gauge'; 'On a Deep-Sea Thermometer'; 'On a Daily Weather Map'; 'On Admiral FitzRoy's paper presented to Section A. relative to the Royal Charter Storm'; and 'On Some Meteorological Documents relating to Mr. Green's Balloon Ascents,' by J. GLAISHER.—The deep-sea pressure gauge was a wide glass cylinder, terminating in a narrow, well-formed tube, the whole filled with water, and an elastic stopper, with an elastic ring below it, the entire enclosed in a brass case, as to admit free access of the sea water,—the pressure of which, in proportion to the depth to which it is sunk, compresses the water by about 22,750th part of its original bulk for each atmosphere of pressure or depth of about 34 feet to which it is sunk. The deep-sea thermometer is metallic; upon one end of a narrow plate of metal, rather exceeding a foot in length, are fixed three scales of temperature, ranging from 25° to 100° Fahr. Upon one of these scales the present temperature is indicated by the point of a needle, which turns upon a pivot in the centre; and on the other scale register indexes are pushed by the needle, one to the maximum, the other to the minimum temperature, where they are retained by friction. To the needle are attached, at equal distances from the centre, by connecting pieces, the free ends of two compensation bars, composed of brass and steel, riveted together, the other ends of the bars being fixed to the above-mentioned plate of metal. The other communications were abstracts made by Mr. Glaisher, at the request of the Committee of the Section, of books lately published by Admiral FitzRoy, and kindly forwarded by him in time for the present meeting.

'On the Theories of Glacial Motion,' by W. HOPKINS.

'On the Great Cold of Last Christmas, and on its Destructive Effects,' by E. J. LOWE.

'On the Compensation of Impressions moving over the Retina,' by Sir D. BREWSTER.

'On Photographic Micrometers,' by Sir D. BREWSTER.

'On the Bathometer, an Instrument to indicate the Depth of the Sea without submerging a line,' by C. W. SIEMENS.—The sea-water being considerably less in density than the rocks which constitute the crust of the earth, Mr. Siemens showed by considerations derived from the integrals expressing the attractive force of any shell of the crust of the earth, that the depth of water under a ship must vary the total attractive force of the earth to such an amount as would become sensible to a very sensitive instrument. He, therefore, devised one consisting of a body of air inclosed in a strong glass cylinder made to support, by its elasticity, a column of mercury contained in a tube open at the bottom and dipping into it, kept at a uniform temperature by being surrounded by melting ice. The tube containing the mercury ends in a ball above, from which rises another tube and ball, the upper ball being still continued into a similar tube. Above the mercury, which rises to the middle of the lower ball, oil of juniper is put until it reaches the middle of the upper ball, and then coloured weak spirit is placed above the oil. The length of the column of mercury may be considered as a measure of the total gravitation of the earth, and the variations of this length are rendered very sensible by the differential apparatus, consisting of the two balls, and read off on a scale of about three inches length attached to the tube rising from the upper ball. The instrument hangs in the cabin of the ship. Her Majesty's Government were kind enough to send a vessel with the author and the instrument to the Bay of Biscay to make experiments with it, and its indications of the depth of water under the ship were found to be within less than 10 per cent. from the truth as determined by the lead.

'On the Photographic Records given at the Kew Observatory of the great Magnetic Storm of the end of August and beginning of September, 1859,' by B. STEWART.—The author remarked that the tendency of this great magnetic storm was to decrease the horizontal and vertical components of the earth's force, and that the disturbing force came in a wave, the period of which was seven hours. He contrasted this lengthened period with that of earth-currents, the period of which is only a few minutes, and supposed that the change in the earth's magnetism is due to the absolute amount of a disturbing force which is of a fluctuating character, and of which the fluctuations produce the earth-currents and Aurora Borealis, which are thus regarded as secondary discharges.

'On the new Minimum Mercurial Thermometer proposed by Mr. Casella,' by B. STEWART.

TUESDAY.

'Report on the Theory of the Exchanges of Heat,' by B. STEWART.—The author gave a sketch of this theory from the time of Prevost, its founder, till the present day, describing in detail the successive extensions it met with from Leslie, Fourier, and Dessains, and latterly from himself and from Prof. Kirchhoff. The great law insisted on was, that the absorption of a particle of any description of light or heat is proportional to its radiation; and it was shown how Prof. Kirchhoff applied this law to determine the constituents of the solar atmosphere.

'Report on Earthquake Wave Experiments,' by R. MALLETT.

'Report on the Theory of Numbers,' by Prof. H. J. S. SMITH.—This Report was in continuation of that which had already appeared in the last volume of the Reports of Proceedings of the Association, and will be printed in full in the next volume,—but it could not be made interesting to our general readers.

'On the Optical Study of the Retina,' by Sir D. BREWSTER.—There were two structures in the retina that could be exhibited by optical means, the one by the successive impulses of light, and the other by the action of faint light entering the eye, or produced within it, either from the duration of a luminous impression, or from a local pressure upon the retina. The first of these structures was best seen by the light of a white cloud, through the slits or apertures of a revolving disc, placed

midway between its circumference and its centre of rotation, in order to protect the eye from light which did not pass through the slits. When the disc revolved rapidly the field of view exhibited neither colour nor structure, but merely a diminution of light. When the velocity had reached a certain point, the field of vision became yellowish white, then yellow and bluish. Occasionally the yellow had the form of a rectangular cross, between the branches of which were four dark spaces. With a diminished velocity the whole field became uniformly blue, and was now covered with the hexagonal patterns formed by deep black lines, the lines being darker at the place of the *foramen centrale*. As there were no fewer than eight different layers in the retina, and it was of great importance to ascertain the functions which they individually performed in conveying visual impressions to the brain, it was only by optical means that this inquiry could be conducted. The anatomist had ably performed his part with the aid of the microscope, and it was probably from the improvement of this instrument chiefly that we could expect any further discoveries, unless the morbid anatomy of the retina should connect certain imperfections of vision with the condition of certain layers of the membrane. When the eye was left in darkness, by the sudden extinction of a light, there were several points at the margin of the retina which retained the light longer than the rest. There could be no doubt that these effects were produced by structural differences. In the case of the *foramen* the difference had been recognized by the anatomist, and was proved by the remarkable phenomena of Haidinger's brushes, and by other optical facts, such as the instability and superior brightness of oblique impressions on the retina. We had, consequently, an optical principle which enabled us to explain the quadrangular structure he had described. It was not improbable, when we looked at the complete structure of the retina, and even of its individual layers, that the structure of each of them might be exhibited optically.

'On the Application of the Principle of the Conservation of Forces to the Mechanical Explanation of the Correlation of Forces,' by J. S. S. GLENNIE.

'On the Resistance of the Ether to the Comets and Planets, and on the Rotation of the latter,' by J. S. S. GLENNIE.

'Contributions to the Report on Selenography,' by W. R. BIRT.

'Notes of Sketches of Parts of the Surface of the Moon,' by Prof. PHILLIPS.

'Meteorological Observations at Huggate, Yorkshire,' by the Rev. T. RANKINE.—This was a continuation of meteorological tables and notes of weather and all remarkable meteorological occurrences during the year 1860-61, which the author has annually presented to the Association for upwards of twenty years.

'On the Deficiency of Rain in an Elevated Rain-Gauge as caused by Wind,' by W. S. JEVONS.—This was a very elaborate and carefully compiled memoir on the subject, but—as the author was not present full justice could not be done to it. He combated the opinion, which he gave references to prove had been maintained so early as the year 1767, that the deposition of vapour on the cold descending rain-drop was the cause of this difference; and, on the contrary, held that it arose from the effects of currents of air giving a more sloping direction to the upper parts of the falling rain than the lower. It gave rise to an animated discussion.

'Remarks on the Temperature of the Earth's Crust, as exhibited by Thermometrical Returns obtained during the Sinking of the Deep Mine at Dukinfield,' by the President of the Association, W. FAIRBAIRN.

'On the Causes of the Phenomena of Cyclones,' by I. ASH.

Prof. ROGERS stated that in a paper which he had published a considerable time since he had put forward the very same views and arguments as the author of this paper.

'On a New Registering Anemometer,' by Dr. MORGAN.

'On Standards of Measurement of Electrical Quantities and Resistances,' by L. CLARKE and Sir C. BRIGHT.

WEDNESDAY.

'On British Rainfall,' by G. J. SYMONS.—The author directed attention to the very contrary opinions current on the question—Is there any secular variation in the amount of British rainfall? After quoting several of the most important opinions, he stated that, in the hope of finally settling the question, he had commenced collecting all known rain-registers, and had already got together more than 6,000 years' observations. He proceeded to invite criticism on the mode of discussion which he intended to adopt, and also on a proposed method of delineation,—the rainfall in 1860, at 241 stations in Great Britain, being laid down on a large map as a specimen.

'On the Laws of Universal Storms,' by W. DANSON.—The author drew the attention of the Meeting to the important subject to all mariners of the researches of Sir William Reid and Mr. Eep, pointing out by the diagrams of their books the simple rules which should guide captains of vessels to know when a storm was approaching, how to prepare for its approach, and to escape with least damage when caught in one. He also exhibited and dwelt upon the practical value of a work called 'The Sailor's Hornbook,' by Capt. Piddington; drew attention to the leading points of Admiral FitzRoy's description of the Royal Charter storm, and other British storms; and concluded by giving some very interesting instances of vessels saved by attending to Sir William Reid's rules, and of vessels lost by neglecting them.

'Physical Considerations regarding the Possible Age of the Sun's Heat,' by Prof. W. THOMSON.—The author prefaced his remarks by drawing attention to some principles previously established. It is a principle of irreversible action in nature that, "although mechanical energy is indestructible, there is a universal tendency to its dissipation, which produces gradual augmentation and diffusion of heat, cessation of motion and exhaustion of potential energy, through the material universe." The result of this would be a state of universal rest and death, if the universe were finite and left to obey existing laws. But as no limit is known to the extent of matter, science points rather to an endless progress through an endless space of action, involving the transformation of potential energy through palpable motion into heat, than to a single finite mechanism, running down like a clock and stopping for ever. It is also impossible to conceive either the beginning or the continuance of life without a creating and overruling power. The author's object was to lay before the Section an application of these general views to the discovery of probable limits to the periods of time, *past* and *future*, during which the Sun can be reckoned on as a source of heat and light. The subject was divided under two heads: 1. On the secular cooling of the Sun; 2. On the origin and total amount of the Sun's heat. We do not know certainly that the Sun is losing any heat at all, and it is certain that *some* heat is generated in its atmosphere by the influx of meteoric matter, and it is possible that the amount thus generated is so balanced as to compensate the loss by radiation. It is also possible that the Sun is now an incandescent liquid mass, radiating away heat either primitively created or thus generated by the falling in of meteoric matter. From astronomical considerations, he showed that none of this matter can come from space beyond the Earth's orbit; and by considerations derived from the disturbances of the inferior planets and the zodiacal light, the author had shown that the amount of meteoric matter could not be nearly enough to give a supply at the present rate for 300,000 years; and these anticipations have been verified by the recent researches of Le Verrier on the motions of the planet Mercury. Then, from further considerations connected with the motion of comets, he shows that this meteoric matter must be derived from spaces very near to the Sun. He then proceeds to estimate how much the Sun cools annually, and concludes that it cannot be more than 1°.4 centigrade annually. He then shows, from facts derived from various sources, chemical and astronomical, that the certain limits are entirely inconsistent with some of Darwin's geological estimates of time.

Under the second head, the author shows that the statement which he first made still holds, with undiminished force, that meteoric action is not only proved to exist as a cause of solar heat, but it is the only one of all conceivable causes which we know to exist from independent evidence. The reasons for this are again given at length. And he concludes: it is, on the whole, most probable that the Sun cannot have illuminated the Earth for 100,000,000 years, and certain that it has not for 500,000,000; and as to the future, that the inhabitants of the Earth cannot continue to enjoy the light and heat necessary for their existence for many million years longer, unless some sources now unknown to us are prepared in the great storehouse of creation by Him who orders all things rightly and well.

'On Geometrical Nets in Space,' by Sir W. R. HAMILTON.

'An Inquiry into the Fundamental Principles of Algebra, chiefly with regard to Negative and Imaginary Quantities,' by C. F. EKMAN.

'On Roots of Substitutions,' by the Rev. T. P. KIRKMAN.

'On the Calculus of Functions, with some Remarks on the Theory of Electricity,' by W. L. RUSSELL.

'On the Symmetrical Form of the Properties of the Plane Triangle,' by T. DOBSON.

'On the Supposed Connexion between Meteorological Phenomena and the Variation of the Earth's Magnetic Force,' by J. A. BROUN.

'On Presentations of Colour under Novel Conditions,' by T. ROSE.

'On some Signs of Changes of the Weather,' by the Rev. P. WALTON.—The author combated nearly all the commonly known rules by which changes of weather have been anticipated, and gave a few rules which, he said, might be depended upon, chiefly derived from the barometer.

'Remarkable Phenomena observed in the Sun at Nova Scotia,' by H. W. CRAWLEY.

'On the Cloud Mirror and Sunshine Recorder,' by J. T. GODDARD.—The Cloud Mirror was simply a mirror of a circular form with the points of the compass marked on its frame; this being presented face upwards to the sky enabled a person to draw with considerable accuracy at any desirable moment the configuration of the clouds relatively to the horizon and to each other. The sunshine recorder was a piece of photographic paper placed in the bottom of a box blackened inside, the top of which had in the centre a small circular hole, through which a slender beam of sunlight could be admitted to pass on to the photographic paper. When the sun did not shine no mark was left on the paper; when it did, its varying diurnal course left a corresponding line on the paper, its position marking the hours of sunshine, and its breadth and depth of shade indicating the greater or less radiating power of the sun.

The PRESIDENT observed that he had once been shown a very simple sunshine-recorder. It consisted merely of a hollow hemispherical wooden disc, concentric with which was placed a glass spheric lens, whose focal length was made exactly equal to the radius of the wooden disc. As the sun moved along in its diurnal course, the concentrated light and heat burned a corresponding line on the bottom of the disc, more or less intense the brighter or less brightly it radiated, and altogether deficient when it was obscured by clouds.

'On the Almanac,' by M. N. ADLER.—This professed to be a system by which any person could retain the entire calendar in his memory with very little practice.

'Observations on an Iris seen in Water near Sunset,' by J. J. WALKER.—In this communication, which might be considered a sequel to and illustration of a paper read by the author at the Meeting of the British Association at Aberdeen, in 1859, a description was given of the observation of this Iris—both of the *primary* and more partially of the *secondary* hyperbolic bow—in the calm sheet of water presented by a widening of the Royal Canal near Dublin, about 5.30 P.M. on 29th September. The sun being then near the horizon, the form approximated to that of the rectangular hyperbola.

Method of interpreting some of the Phenomena

of Light,' by W. T. SHAW.—This communication, though exhibiting much ingenuity, was entirely speculative.

A communication was received, while the Section was sitting this day, from Admiral FITZROY, too late to be submitted either to the Committee of the Section or to the Committee of Recommendations, relative to the Committee which had been appointed by the Association, and the application that it was proposed, at the Oxford Meeting, to make to Government to send out small surveying vessels, to "hunt up the tides" in the Pacific and other oceans. Admiral FITZROY promised to give whatever assistance might be in his power to induce the Admiralty to comply with this request should the Association see fit to make the application at the present Meeting.

SECTION B.—CHEMICAL SCIENCE.

MONDAY.

'On the Cohesion Figures of Liquids,' by Prof. TOMLINSON.

'Report on Field Experiments and Laboratory Researches on the Constituents of Manures essential to Cultivated Crops,' by Dr. VOELCKER.

'On the Composition of Crystallized Moroxite, from Gumillo, near Alicante,' by Dr. VOELCKER.

'On some Points in Connexion with the Exhaustion of Soils,' by J. B. LAWES and Dr. J. H. GILBERT.—The question of the exhaustion of soils is one of peculiar interest at the present time, not only on account of the great attention now paid to the waste of manuring matters discharged into our rivers in the form of town sewage, but also from the fact that Baron Liebig has recently maintained that our soils were suffering progressive exhaustion from this cause, and predicts certain, though it may be distant, ruin to the nation if our modes of procedure be persevered in. The question was one of chemical facts; and the authors had it in view to treat it much more comprehensively than they were enabled to do on the present occasion. They proposed, by way of illustration, to bring forward one special case of progressive exhaustion, occurring in the course of their own investigations, and then to contrast the conditions of that result with those of ordinary agriculture. They had grown wheat for eighteen years consecutively on the same land, both without manure and with different constituents of manure, and they had determined the amounts of the different mineral constituents taken off from each plot. Numerous tables of the results were exhibited. The variation in the composition of the ash of both grain and straw dependent on variation of season was first pointed out. Reverting to the main subject of inquiry, it appeared, that when ammoniacal salts were used alone, year after year on the same land, the composition of the ash of both grain and straw showed an appreciable decline in the amount of phosphoric acid, and that of the straw a considerable reduction in the percentage of silica. The average yield of mineral constituents was very much increased by the use of ammoniacal salts—much more so than when a liberal supply of mineral constituents alone was used. But in neither of these cases was there anything like the yield of mineral constituents that was obtained when the ammoniacal salts and mineral manures were used together, or when farmyard manure was employed. The greatest deficiency indicated was in the silica and the phosphoric acid; and next in order came potash and magnesia. The exhaustion here apparent was, however, not to be wondered at, when it was considered that in these experiments, in which both corn and straw had been annually removed without the usual periodic returns of farmyard manure, there had been taken from the land, by the use of ammoniacal salts alone for sixteen years, as much silica as would require four hundred years, and as much phosphoric acid as would require thirty-two years, and as much potash as would require eighty-two years of ordinary rotation with home manuring, and selling only corn and meat, to remove. Again, in the experiments of the Rev. Mr. Smith, of Lais-Weedon, on the growth of wheat year after year on the same land, the authors estimated that he annually took from each acre about seven times as much potash, about three and a half times as much

phosphoric acid, and about thirty-seven times as much silica, as the ordinary course of practice would do; and yet, after some fifteen years, his crops were said to be not at all failing. The authors did not recommend such practice as that quoted either from their own or Mr. Smith's experiments; but the instances given showed the capabilities of certain soils; and in one case the conditions under which the point of comparative exhaustion had been reached. It was of course impossible to state the limits of the capability of soils generally, so infinitely varied was their composition; but it would be useful to give an illustration on this point. Taking the average of forty-two analyses of fourteen soils, of very various descriptions, it was estimated that it would require, of ordinary rotation with home manuring and selling only corn and meat, about two thousand years to exhaust the potash, about one thousand years to exhaust the phosphoric acid, and about six thousand years to exhaust the silica, found to be soluble in dilute hydrochloric acid, reckoning the soil to be one foot deep. Many soils doubtless had a composition inferior to that here supposed. In a large proportion, however, the amounts of the constituents assumed to be soluble in dilute acid would probably be available for plants before the expiration of the periods mentioned; whilst in a large proportion there would still be further stores eventually available, within a greater or less depth from the surface. But in practice the exhaustion was really by no means so great as supposed in the above illustrations. Where there was no import of cattle food, or artificial, as town, manures, the sale of mineral constituents in corn and meat would be much less than were taken in the authors' estimates. Those amounts of exports from the farm could only be reached when cattle food, or direct manures, were purchased by the farmer; and wherever these courses were pursued judiciously, there was always much more phosphoric acid (the most easily exhausted constituent) brought upon the land than could be exported in the increase of produce obtained. In such cases in many soils potash was more likely to become deficient. Then, again, a not inconsiderable portion of the refuse of our towns was derived from imported food or other matters not obtained from our own cultivated land; whilst by no means the whole of it reached the sewers, and thence our rivers. In conclusion, whilst the authors believed that modern practices did not tend to exhaustion in anything like the degree that had been supposed by some, they would nevertheless insist upon the importance of applying to agricultural purposes as much as possible of the valuable manuring matters of our towns. It was at the same time certain, that if these were to be diluted with water in the degree recognized under the present system, they could then, unless in exceptional cases, be only applicable on the large scale to grass land; and, so far as this was the case, they would, of course, not directly contribute to the restoration to the land under tillage of the mineral constituents sent from it in its produce of corn and meat.

'On the Evolution of Ammonia from Volcanoes,' by Dr. DAUBENY.—This phenomenon had been ascribed by Bischof to the decomposition of bitu-

zineous matters by volcanic heat; by Bunsen to the lava flowing over herbage, and disengaging its nitrogen, which exhibited itself in the form of ammonia; by the author of this paper on former occasions to the direct union of hydrogen and nitrogen in the interior of the earth under an enormous pressure. Now, however, that Wöhler has shown the affinity which subsists between nitrogen and certain of the metals and simple combustibles, some of which, as titanium or boron, combine with it directly with such avidity that the union is attended with combustion; and has also proved that the nitrides formed are decomposed by the hydrated alkalies, ammonia being thereby generated,—it had occurred to the author that a more probable explanation of the occurrence of ammonia in volcanoes might be afforded by supposing such combinations to take place in the interior of the earth, and to be subsequently decomposed by the alkalies which are usually present wherever volcanic action is taking place. In confirmation of this view, he appealed to a late observation made by Signor Guiscardi, a distinguished naturalist at Naples, namely, that metallic titanium had been found evolved from the crater of Vesuvius during a late eruption.

'On Isometric Lines, and the relative Distribution of the Calcareous and Sedimentary Strata of the Carboniferous Rocks,' by E. HULL.—After referring to the observations which had been previously made on the distribution of the Mesozoic Rocks, showing how they become attenuated towards the south-east of England, and expanded in the opposite direction, the author proceeded to show that, north of a central barrier of land which stretched across England from Wales to the German Ocean in Carboniferous times, the sedimentary strata of the Carboniferous system were deposited upon a similar plan—that is, that they expanded towards the north and north-west into Lancashire and Scotland, and thinned away in the direction of South Staffordshire, Warwickshire and Leicestershire. This was established upon a comparison of a number of sections taken from various coal-fields. On the other hand, it was shown that the calcareous strata had been formed upon a plan altogether different from that of the sedimentary strata, properly so called, such as sandstones, shales and clays. This difference, first pointed out by Prof. Phillips, in Yorkshire, was considered to arise from the very nature of things, and the author strongly insisted on the essential distinction between limestones and all other sedimentary strata. It was shown that the carboniferous limestone reached a thickness of about 5,000 feet in Derbyshire, from which centre it diminished westwards and northwards, gradually breaking up by the interposition of shales, sandstones, and beds of coal in the north of England and Scotland, where the limestone appears on the point of vanishing. The conclusions drawn from these observations were the following:—1st. That the shales and sandstones had been brought from the north-west by some great

predominating current which swept the shores of a large North Atlantic continent. That this current in running towards the south-east gradually deposited its sediment, until, in the region of central England (Derbyshire), the waters of the sea in the Lower Carboniferous period had become pure. The same sea—which was muddy in Scotland, less muddy in the north of England—became perfectly clear in central England. In such a sea only could the corals and crinoids, by whose labours the limestones had been built up, flourish to the fullness of their capacities. Hence they accomplished their greatest works in Derbyshire; and just in proportion as the ocean became more highly charged with sediment towards the north-west into Scotland, so did the amount of limestone formed diminish. These variations in the relative development of the two kinds of rocks were illustrated by a series of isometric lines, traced on the map, so that each line represented a thickness of so many feet, beginning with 5,000 feet for the limestone of Derbyshire, and 15,000 for the sedimentary strata of Lancashire and Scotland. These lines assumed the forms of curves, crossing each other from opposite directions. South of the barrier, which stretched from the Malvern Hills in the direction of the estuary of the Thames, the author showed there was another carboniferous tract, represented by the coal-fields of South Wales, Bristol, the Forest of Dean, and a possible band extending along the south of the Thames Valley. It was shown that the sedimentary strata of this tract had been drifted from the south-west, as the strata attained their greatest development in Monmouthshire, and thinned away towards the old barrier in the Forest of Dean. On the other hand, the calcareous beds were most fully developed from the eastward, and decreased towards the west. These changes were shown by another series of isometric lines. The author next referred to America, showing how, according to Sir C. Lyell and Prof. Rogers, the sedimentary strata become most fully developed to the north-east, and thin away to the south-west, in which direction the calcareous strata expand in volume. The phenomena of the two countries of Britain and America were thus shown to correspond, except that the same class of strata was developed in opposite directions; and it was shown that this could be accounted for on the supposition that the same Atlantic continent was the parent of the coal formations of both America and Britain, the generating current having, in the former case, come from the north-east, and in the latter from the north-west.

MONDAY.

'Notes on the Variation of *Tecturella grandis*,' by P. P. CARPENTER.

Prof. WILLIAMSON observed, that it was facts like those brought forward by Mr. Carpenter that were wanted to test the limits of species. Amongst the Foraminifera he had long been acquainted with the extreme difficulty of determining the limits of particular species. The Darwinian theory had made it necessary to study every individual form, so that no species should rest on characters obtained by the absence of intermediate forms.—The Hon. W. ELLIOTT pointed out the extreme difficulty of referring some of the Carnivora and Quadrumana of India to the described species on account of intermediate forms. He instanced the *Viverra Tibetica* and the *V. Bengalensis*.—Prof. BABINGTON said, that nothing could be more disastrous for science than the giving up the study of individual forms. If the Darwinian theory led to the abandonment of our present idea of a species, it ought to lead us to be much more exact in the study of individual forms.

'On the Cosmopolitan Operations of the Smithsonian Institution,' by P. P. CARPENTER.

Dr. WRIGHT read a Letter from Dr. Gray, of the British Museum, addressed to the President of the Section.

Prof. BABINGTON stated, he had communicated with Prof. Owen, who had not seen Dr. Gray's letter, but stated that what he had said in his paper he believed to be quite correct.—Mr. SCLATER stated that he had observed marks on the back of the skull of the gorilla which looked like the impression of a bullet on the back of the head.—Mr. J. BECK stated that he did not expect to be referred to on this subject; but he certainly had looked for the impressions of bullet-marks in the front of the apes exhibited by M. Du Chaillu, and could not find them.

'On a New Mining Larva, recently discovered,' by H. T. STANTON.

'On the Development of the Hydroid Polyps, Clavateella and Stauridea, with Remarks on the Relation between the Polyp and its Medusoid, and between the Polyp and the Medusæ,' by the Rev. T. HINCKS.—The author, after describing the characters of the Medusoid of Clavateella, and comparing it with Stauridea, went into the question of whether the polypidom, or stock which bore the medusoids, or the medusoid itself, which bore the eggs, should be regarded as the perfect animal. Van Beneden regarded the medusoid as the perfect form; but the author was inclined to recognize the medusoid-bearing individual—the stock—as the perfect animal.

Dr. LANKESTER stated that, if plants sent off their hermaphrodite flowers, and these perfected their seeds independent of the stock from whence they came, they would resemble these polyps. In that case, should we call the tree or the flower the perfect individual? The question turned on the use of common words in a scientific sense; and perhaps it would be better to coin new ones entirely. He inquired of Mr. HINCKS how many of the naked-eyed medusæ of Forbes had been traced to polypiferous parents.—Mr. HINCKS, in reply, stated that several had thus been traced. Dr. Wright had traced one of the Bougainvillæ of Forbes to *Eudendrum ramosum*.

'On Barraguta Cotton from the Plains of the Amazon, and on the Flax-fibre Cotton of North America,' by W. DANSON, of Liverpool.

TUESDAY.

'On the Absorbing Power of the Roots of Plants,' by Dr. JEPEN.—The author stated, he

had written this paper since he had been in Manchester, in consequence of the discussion between Dr. Lankester and Dr. Daubeny on the nature of the "vital force" in plants.—Dr. DAUBENY was quite ready to allow that the term "vital force" was conditional. At the same time he felt that some of the phenomena of plant life could not be explained by physical causes. Such, he thought, was the power plants had of selecting one kind of food rather than another, and the power the leaves possessed of decomposing carbonic acid. He then gave some account of Prof. Graham's recent researches, in which he showed that all substances were of two kinds, colloid and crystalline; and that the latter passed into membranes, whilst the former would not. He thought these experiments of Mr. Graham would throw great light on physiological problems.—Prof. WILLIAMSON expressed his conviction that the processes of life did not depend on physical causes. There were always causes acting in the life of plants and animals that no physical principles with which we were acquainted could explain. He instanced the fact of a Hydra taking one of its own tentacles into its stomach with an animalcule. It digested the animalcule, but its tentacle suffered no harm. Mineral bodies were subject to no decay as organic bodies were; and it was this death that showed the existence of a departed vital force from the dead plant or animal.—Mr. LUBBOCK thought the danger of using the term "vital" force or principle was, that persons who employed it thought it explained the phenomena, which in no instance was the case. He thought that the death of marine animals in fresh water, and of fresh-water animals in salt water, was an instance of how physical circumstances influenced life.—Dr. LANKESTER said, that the term "vital force" had been used in various senses, and Dr. Daubeny only accepted it as a provisional term. What he wished to point out was, that in the sense in which it was employed by Dr. Daubeny, it was only equivalent, as Dr. Jepsen had stated, to the "crystallizing force" of minerals, which exercised the same selecting power in crystallizing as the roots of plants did in growing. The only phenomena in plants for which we had really no physical explanation were, the movements of the protoplasm in the interior of the cells of plants, and the locomotive power of unicellular plants and their cilia. These movements were similar to the muscular contractility and nervous sensibility of the highest animals. These movements were, however, dependent on physical causes, and the chemical decomposition of the sugar and protein of our food was necessary for their development. As to death not occurring in the mineral world, this was but another name in animals and plants for change; and change occurred in crystals and in all the physical phenomena of the universe, as much as in organic bodies.

Dr. ROLLESTON stated, that he had obtained the permission of the President to read the letter from Mr. Huxley, which appeared in our pages last week.—Dr. Rolleston then read extracts from a forthcoming paper of Mr. Huxley's, in which he maintained the correctness of his interpretation of the structure of the brain of the monkey in opposition to that of Prof. Owen.

Dr. ROLLESTON read a paper from Mr. Albany Hancock 'On certain Points in the Physiology of the Dibranchiate Cephalopods.'

Prof. WILLIAMSON pointed out the great value of this communication. He did not think the convolutions on the brain of the cephalopods were homologous with those of the higher vertebrata.—Mr. GARNER pointed out the entire difference between the convolutions in the cephalopoda and those of vertebrate animals. He had extensively dissected the cephalopoda, and could confirm many of the conclusions of Mr. Hancock.

'On some Points of Interest in the Structure and Habits of Spiders,' by TUFFEN WEST.

In answer to some inquiries, Mr. WEST stated that the best means for preserving spiders, at present known, is to keep them in tubes or small bottles with proof spirit. The number of British species now known is over three hundred. The south-eastern counties would, probably, well reward research for new species.

'Remarks on the late Increase of our Knowledge of Struthious Birds,' by P. L. SCLATER.

'On *Daphnia Schafferi* and other Fresh-Water Crustacea,' by the Rev. A. R. HOGAN.

'On the Arrangement of Hardy Herbaceous Plants adopted in the Botanic Garden, Liverpool,' by the Rev. H. HIGGINS.—This paper led to a discussion, in which the necessity of rendering our museums and gardens more instructive and educational by proper labelling was dwelt upon.

'On the Migration of the Herring,' by T. M. MITCHELL.—This paper led to a long and interesting discussion, in which Mr. M'ANDREW, Mr. MANCHESTER, Capt. WOODALL, and Mr. LUBBOCK took part.

A Report was also read from Mr. PEACH, 'On the Herring Fishery of the North of Scotland.'—It seems that the take of herrings is decreasing on the coasts of England, while it is increasing on the coasts of Ireland. Great quantities of fish are necessarily destroyed by the present method of catching them, and the question of greatest interest was how to prevent this destruction.

'On the Relative Pauperism in England, Scotland, and Ireland, 1850—1860,' by F. PURDY.—This paper treated of the relative pauperism of England, Scotland and Ireland during the ten years ended in 1860. It pointed out that each country had its own Poor Laws, and its separate administrative machinery. Poor Laws had existed in England for more than two centuries; but in Scotland there was nothing worthy of the name before 1845; and in Ireland they were introduced in 1838. In England the average number of paupers was 892,000; in Scotland, 121,000; in Ireland, 96,000; or, 3.9, 4.0, and 1.5 per cent. on the population respectively. It was stated, that those who had devoted themselves to study the working of the English Poor Laws, were opposed to the system of "out-door relief," from the difficulty of testing the applicant's claim, and from the fear that it may be perverted to the depression of wages. It appeared that for 1 in-door pauper in England there were 6 out-door; in Scotland, 14; but in Ireland '03 only. Though pauperism is lowest in Ireland, it was shown that in Scotland, where nearly all the relief is *out-door*, the resident Irish were greatly pauperized, for 1 in 13 was there a pauper; but in Ireland only 1 in 274. According to the most recent statistics there were 43,810 pauper lunatics in the United Kingdom. England having 33,068, Scotland 5,103, and Ireland 5,639 of this unfortunate class. On each 10,000 of the population, England has 17, Scotland the same, and Ireland 9 only. The Commissioners who in 1858 reported upon the Irish lunatic asylums, stated that there were 3,350 "insane poor at large and unprovided for." This would, if they were to be included hereafter as paupers, raise the Irish ratio considerably. In the ten years 92,000,000. had been raised by poor-rates. In England, 78,000,000.; Scotland, 6,000,000.; and Ireland, 8,000,000. But of the English portion, 18,000,000. were for purposes quite unconnected with relief to the poor. The sums actually spent in relief to the poor were, for England, 54,767,000.; Scotland, 5,918,000.; and Ireland, 6,656,000., respectively equal to a rate per head on the population of 5s. 9½d., 3s. 11½d. and 2s. 1½d. The proportion was nearly triple in England, and double in Scotland, that which sufficed for Ireland. Comparing the amount expended in 1860 with that of 1851 it appeared that in England it was now 10 per cent., and in Scotland 25 per cent. higher. In Ireland, on the other hand, it was now 60 per cent. lower. The yearly cost per pauper was, for England, 6l.; Scotland, 5l.; and Ireland, 7l. Ireland stands highest here, because relief in the workhouse is dearest *individually*, though, in its ultimate effects, the most economical and the least demoralizing. The comparison on the rate in the pound on the property-tax assessment was here made in respect of the seven years ending in 1860, there being no return for Ireland previous to 1854. The relief to the poor during that period was equal to an annual tax, on the Schedule A. assessment, of 1s. 1d. in England, 11½d. in Scotland, and 10½d. in Ireland. It was considered remarkable that, however diverse the pauperism of the three kingdoms had otherwise been, yet, in this relation, there was considerable uniformity—England only exceeding Scotland by 1½d. and Ireland by 2½d. in the pound. The rate per head on the population of the assessments under Schedules A., B. and D. was computed to show the relative wealth of the three countries; this in England was 11l. 17s.; in Scotland, 9l. 13s.; and in Ireland, 3l. 11s. Taking these in conjunction with previous ratios, it would appear that the pauperism has been *inversely* as the poverty of the three countries—England, the wealthiest, and most pauperized; Ireland, the poorest, and least pauperized; Scotland, coming between, but much nearer to England, both in wealth and in pauperism. It was asked, in conclusion, if Ireland, under the judicious administration of her Poor Laws, has reduced her pauperism to a quantity which, at

the present day, is less than *one per cent.* of the population, under what conditions can we hope that similar results may be achieved for England and Scotland? But it was observed, that something beyond statistical information is required for the satisfactory solution of this important question.

These papers were all purely technical, and elicited considerable discussion, but not of a character suited for report in these columns.

TUESDAY.

Prof. THOMPSON, of Belfast, presented his final Report of 'Experiments on the Gauging of Water, by means of V Notches.'

W. FAIRBAIRN, President of the Association, presented a paper containing a series of 'Experi-

ments on the Effects of Vibratory Action and Long-continued Changes of Load upon Wrought-Iron Bridges and Girders.'—He said this was a subject of great importance as affecting the construction of tubular and plate bridges, and also the lattice and trellis bridges. Fifteen years ago experiments were made which led to the construction of the Conway and Britannia tubular bridges on the Chester and Holyhead Railway, and determined the form in which such structures should be designed. Since that time some thousands of bridges had been built entirely of iron. The requirement of five tons per square inch on the part of the Board of Trade appeared to be founded on no fixed principle. It was well known that the power of resistance to strain of wrought iron depends very much upon the form in which it is combined, and unless the proportions of the parts were permanently established, the five-ton tensile strain might lead to error. For the purpose of making experiments upon the influence of vibration in causing the rupture of beams and bridges, he had constructed a small iron-plate beam of 20 ft. clear span, and 16 ft. deep, representing the proportion of one of the girders of the Spey Bridge, and exposed it to conditions similar to those of a bridge subject to changes of load as produced by the passage of trains, and in proportion to the heaviest rolling load. The beam was first loaded to one-fourth of its breaking weight, and it sustained a million changes of load without injury. The load was then increased to nearly one-half the breaking weight. With this weight the beam gave way, after 5,175 changes. It appeared, therefore, it was not safe to build bridges in which the rolling load would bear this proportion to the breaking weight. The beam was taken down and repaired, and the experiments were then renewed. The load was then reduced to two-fifths the breaking weight, and 25,900 changes of load were sustained. Lastly, the load was reduced to one-third, and the experiments were still proceeding, the beam being uninjured after 2,727,754 changes. In calculating the strain upon the area of the metal after deducting the rivet-holes, which, it must be remembered, were larger in proportion in this small beam than in bridges, he found that the beam would sustain no deterioration with strains of nearly 7½ tons to the square inch. With ten tons to the square inch the beam broke after 5,172 changes. Now, as the limit of elasticity was reached at about 9 tons per square inch in ordinary boiler-plates and bridge-plates, it would appear that it was unsafe to load structures subject to a continually varying load beyond that point. Within those limits, however, there was no evidence that a deterioration of structure took place. For the present, he would advise that in all beams and girders, tubular or plain, the permanent load or weight of the girder and its platform should not, in any case, exceed one-fourth of the breaking weight; and that the remaining three-fourths should be reserved to resist the rolling load in the proportion of six to one. He earnestly directed attention to the laws which governed the resisting powers of girders exposed to transverse strains, to the best principles of uniting the joints, and, above all, to the selection of the best material, which, in the parts of the girders subject to a tensile strain ought always to sustain a test of from 22 to 24 tons per square inch. The use of superior metal for the bottom of the girders would give an increase of from one-fifth to one-sixth in the strength. There was no economy—and he wished particularly to impress this on the Section—in the use of inferior iron for this purpose, and its employment inevitably led to a loss of character in the structure and danger to the public.

Lord WROTTESELEY expressed his satisfaction that Mr. Fairbairn, with that public spirit which characterized him, was continuing those experiments which the Iron Committee, of whom he (Lord Wrottesley) was chairman, had commenced, but which they were not able to continue, through the discontinuance of the Government grant.—Mr. FAIRBAIRN said he was glad to state that the Government had acted in a more liberal spirit to himself, and had granted 150*l.* to conduct the experiments.

Mr. D. CHADWICK, Secretary of the Manchester

Cotton Supply Association, read a paper, 'On Recent Improvements in Cotton Gins.'—A description was given of the old Indian churka, one of which was exhibited to the Meeting, and the invention of the American saw gin, by Eli Whitney, was also noticed and described. On the recent visit of Dr. Forbes, the superintendent of the cotton gin factory of the late East India Company, to Darwhar, he introduced an improved cotton gin, based upon the principle of the Indian churka. This churka gin had subsequently been improved by Mr. John Dunlop, of Manchester, and Messrs. Platt Brothers, of Oldham, and the improved machines were exhibited to the Meeting. The improvements in Messrs. Platt's machines consisted in the application of spike rollers revolving at different speeds in connexion with vibrating machinery, which transmits the cotton to the ordinary churka rollers. The effect of this is to enable the machine to be supplied with cotton at intervals instead of continuously with the fingers. The machine is intended to be worked by power, and requires the attendance only of a child thirteen years of age. Mr. Dunlop's machine was less expensive, more compact, bearing a closer resemblance to the original churka, and was intended to be worked by hand.

Mr. T. BAZLEY, M.P., said the machines before them were wonderful improvements on the old churka. He noticed the destruction of fibre and the waste occasioned by the American saw gins, and said he had seen cotton in the market selling for 7*d.* per lb. which, if cleaned by a roller gin, would have sold for 2*s.* per lb. The injuries inflicted upon the raw cotton were not so great as upon the long fibre cotton, because the teeth of the saws allowed the short fibres to go through without severing them. During the last few years, an improved kind of roller gin, known as the Macarthey Gin, had been introduced in America. An intimate friend of his had obtained one of these gins, and placed it in the hands of Mr. Dunlop, who had made a large number of these gins, which the Cotton Supply Association had forwarded to the various cotton-producing districts of the world. But when he turned to the machine which had been constructed by Mr. Platt, that appeared to him to be the machine best adapted for the cleaning of a very large quantity of cotton in a short time without injury to the fibre. He was very glad to see these machines in the room, though he feared they should soon be in the position of the cook who had all the appliances for cooking a good dinner, but was without the mutton and the beef to cook. He was afraid unless very serious efforts were made, this great industry of theirs would be very much depressed.—Mr. ASHWORTH said he believed the Indian cotton, which, as now cleaned, was worth 4*d.* per lb., would be worth 5*d.* per lb., if cleaned by the cotton gins exhibited.

Mr. J. F. BATEMAN, President of the Section, made a communication, 'On Street Pipe Arrangements for Extinguishing Fires.'—He had hoped that a paper would have been read on this subject by Mr. Rose, of the Manchester Fire Brigade, but as that gentleman had been called away by the illness of a relative, he (Mr. Bateman) thought it right that the proceedings of the Section should not terminate without some observations being made on the subject. Nothing could have been much worse than the arrangements made for the extinction of fires some fifteen years ago, and nothing could be much worse than the state of things which existed at the present day in the City of London. In most large towns, as Manchester and Glasgow, for instance, where the supply of water had been taken into the hands of the Corporation, the best preparations had been made for the extinction of fires. But in London, the fire-engines and the brigade were maintained by contributions from the different insurance companies, and it was therefore evident that their interest only lay in preventing the destruction of property that was insured. It was clear this was a state of things which ought not to exist in this country. Some twelve or fifteen years ago he turned his attention to the subject of the extinction of fires. The old wooden plug or fire-cock was then generally in use, and it still continued in use in some parts of the

country. Mr. Bateman described the construction of the branch stand-pipe, with which he had replaced the old plugs in Manchester and other towns, and stated that as a general rule these stand-pipes had been found sufficient without the use of fire-engines. He also explained the principle upon which the water-pipes were laid down in Manchester; so that within reach of nearly every block of valuable buildings in Manchester and the neighbourhood, there were from two to three sources of water supply, and ten or twelve fire-cocks within a hundred yards. Then came the question of pressure. It was popularly supposed that water could be thrown to any height; but this was not so. About eighty or ninety feet was the greatest height water could be thrown by a fire-engine. The highest mills in Manchester were from forty feet to sixty feet, and experiments had been made to show that at the low pressure the stand-pipes would throw ninety feet.

Mr. C. W. SIEMENS explained a system of telegraphic communication adopted in Berlin in the case of fires, by means of which immediately after a fire occurred the police at every station in the town could be informed of the occurrence, and of the district in which the fire had occurred. He said it was found by the adoption of this system that the fire-engine was generally on the ground five minutes after the alarm had been given. He also explained and exhibited a system of railway signalling extensively adopted on the Continent, which rendered collisions almost impossible.

Col. Sir H. JAMES, R.E. described the process of 'Photozincography,' by means of which photographic copies of the Ordnance maps are cheaply multiplied, either on their original or on a reduced or enlarged scale. The process is applicable to the reproduction of old manuscripts and old printed books. A copy of Domesday Book (the part relating to Cornwall taken by this means) was exhibited to the Meeting. The process consists in taking a photographic collodion negative, which is intensified by means of bichloride of mercury and sulphate of ammonia. Paper, deprived of its size, is saturated with a solution of gelatine and bichromate of potash. The paper thus prepared is exposed to the light beneath the negative, the result of which is that the parts which have been exposed to the light become hardened and insoluble. The whole is then inked with a greasy ink and afterwards washed in water, which removes the ink from all the parts except those on which the light has acted. A transfer to stone or zinc is then taken in the ordinary way, and copies are printed. Sir Henry James then described an improvement which had lately been made in the process, by means of which a reduced copy of a map or plan could be made, in which the minor detail (which would be useless on a reduced scale) could be omitted, and the names of places and other features of the plan given in full-sized legible characters.

Mr. HAWORTH read a paper explaining his patent for improvements in Street Railways, by the addition of a fifth or perambulator wheel to the carriages, running as a guide in a central groove between the trams. It was calculated that a saving of 35 per cent. would be effected by this plan.

Mr. VIGNOLES expressed his opinion that if any street railway were ever adopted, Mr. Haworth's system would be the one. He had never seen a more promising system.

PINE ARTS

NATIONAL GALLERY.

SEVERAL pictures of importance have been added to the National Gallery during the present month. The best however among them are not entirely new to the Art-student of London; they were exhibited by Mr. Alexander Barker at the British Institution in 1858. The largest of these, although to us the least interesting, is a picture by Ortolano, a Ferrarese artist, connected both in blood and by pencil, with Garofalo. It represents St. Roch, St. Sebastian and St. Demetrius; the latter figure, in military costume, full of individual character and

in a striking attitude, elicited special commendation from Lanzi. Scanelli also praised it highly when in the parish church of Bondeno. A singular picture by Carlo Crivelli is welcome as a characteristic example of the painter, and as an historical curiosity; it being said to represent the Beato Ferretti, ancestor of the present pontiff, Pio Nono. He wears a white monastic habit, and kneels before an apparition of the Virgin surrounded by angels, in the sky. The picture is signed OPUS KAROLI CRIVELLI VENETI, and may be considered a parody upon the usual composition of St. Francis receiving the stigmata. Festoons of large apples and pears are seen suspended in front from the top of the picture, and are made, amusingly enough, to cast a shade upon the sky of the landscape. Two Lunettes, or arched pictures, painted by Fra Filippo Lippi for Cosmo de' Medici, from the Palazzo Riccardi, formerly the Palazzo Medici, deserve very careful attention. They are among the best and most pleasing examples of the painter. One of these pictures was exhibited at the British Institution by Mr. Barker, the other belonged to Sir Charles Eastlake, and is now presented by him to the National Gallery. It represents the Annunciation, and is full of curious and interesting details. The angel kneels reverently before the Virgin. His head is remarkably boyish. This Lunette is marked with the device adopted by Cosmo and Lorenzo de' Medici, three feathers tied within a ring, carved on the pedestal which supports a vase of lilies. The other picture, evidently the companion or one of the same series, represents seven saints, seated on a long stone bench. They are St. Francis, St. Lawrence, St. Cosmo, St. John the Baptist, St. Damian, St. Anthony and St. Peter Martyr. The countenance of Savonarola when very young is clearly traceable in St. Francis, and both the Medici are also supposed to be there under their respective names of Cosmo and Lorenzo. The colours are clear and brilliant, and the composition of the figures is extremely graceful. The rich deep-green foliage is the same in both backgrounds. An interesting picture by Pietro della Francesca has also been added from the Uzielli Collection. It was formerly in the sacristy of the Cathedral of Borgo San Sepolcro, and is valuable from the great rarity of his known works. It has also a technical interest from its having been left in an unfinished state, and, therefore, retaining indications of different stages in the artist's method of work, which, had the picture been more advanced, would have disappeared. A very fine and striking full-length portrait of an Italian nobleman, dressed in a long black robe, with a red cross on the left breast, which is rather of the Order of St. Stephen than of Malta, as stated on the picture. The cross of the latter, although similar in shape, was always white. This noble picture has been presented by Mr. G. F. Watts, the artist, and serves well to raise our knowledge of Pontormo in his best capacity, since his unsettled habits of style—sometimes imitating the German school, and at others surpassing the most extravagant Florentine anatomists in long limbs and violent attitudes—lead too often to his being misrepresented in public galleries. A very pleasing example of his portraiture was previously deposited in the Gallery.

It is rumoured that the Turner pictures will shortly be brought back to the National Gallery; but we hope the rumour is not true. The rooms are already sufficiently filled with pictures; and, when so densely crowded as we remember to have seen the rooms at the Manchester Exhibition, and as those adjoining are at the Royal Academy Exhibition, all real enjoyment of each individual picture is sacrificed. We can hardly urge too strongly the importance of speedily adding to the present building; and we recommend with extreme earnestness the plan of building an additional wing into the barrack-ground at the back. Now that so many pictures have been successfully covered with glass, the question of atmosphere requires less and less consideration; and it certainly is a pleasure to see the ease and readiness with which the multitudes in the present locality can run in and out of the building. The new pictures are all placed on the right-hand wall, immediately at the top of the staircase, with the exception of the Pontormo, which is

appropriately hung in the new Hall, which contains the *chefs-d'œuvre* of the Venetian school.

FLORENCE EXHIBITION.

Florence, Sept. 21.

It is now nearly a week since the first Italian Exhibition of Art and Industry was opened here by the King in person. The city is wearing her best holiday suit. Such a national festival is calling forth all her charms and all the graces by which she throws into the shade the more modern and regular beauties of many a stately capital. From all parts of the Peninsula, crowded trains full of visitors are daily assembling; theatres and promenades are thronged with strange faces, and the overflowing *cafés*, whose long-accustomed *habitués* are forced to put up with the green benches outside the doors, resound with a strange medley of curt Piedmontese dialect, guttural Milanese, and nasally-cadenced Neapolitan. It is indeed a family gathering time for the long-separated children of the soil, and, as such, putting aside its political and industrial importance to Italy's future, it is a time of deep interest and significance, even to strangers to her blood, especially to such as have kept step with her, earnestly and lovingly, through her ordeal of danger and temptation. The Italians call this Exhibition, and call it well, "a repetition of the vote of universal suffrage." It is an earnest of what free Italy can and will do when time and tranquillity shall have given breathing space for her efforts.

I might have taken up a considerable space in the columns of last week's *Athenæum* with the details of the solemn Inauguration ceremony, wherewith "*Vittorio nostro*" opened the first Italian Exhibition last Sunday, and with a description of the beautiful *locale* which has been prepared for it outside the Porta a Prato in the incredibly short space of eighty-four days. I might have told of the banners and the *Vivas*, and the many thousands of enthusiastic spectators, with not a bayonet nor a sabre among them to keep order—a thing hitherto unknown in Continental solemnities—who welcomed the soldier-king with shouts and waving handkerchiefs to the great octagon throne-room of the Exhibition Palace, where he utterly declined the grand velvet and gold chair set for him under the canopy, and stood, now here, now there, beside his cousin, portly Prince Carignan, in the circle before it, while Ciardi's Chorus of Salutation was sung by a great body of voices, accompanied by an immensely numerous orchestra, and the Marchese Cosimo Ridolfi, as head of the Royal Commission, spoke a short opening address, which the King answered, as is his wont, in a few pithy words of acknowledgment. But descriptions of festal doings in Italy have of late been as rare in English journals as the banners and hangings in Florentine streets on such occasions; and I will only record how the whole ceremony closed with Carlo Romani's national hymn to "the Cross of Savoy," its solos being sung with more patriotic feeling than perfection or power of voice, by Madame Piccolomini, now retired from the stage and married to a young Romagnole noble of large estate. The very evident emotion with which the fair *cantatrice* gave the closing words of the hymn, "God protect our King and thee!" won her the distinction of a special introduction to his gallant Majesty and a gracious touch of the royal hand. The last staves of the music were drowned in torrents of loyal *Vivas*, in the midst of which "our Vittorio" made his exit and went his way back to the Pitti, where, by the way, he seldom sleeps, preferring a less luxurious *glé* in the unceremonious retirement and country air of some one of the royal villas in the neighbourhood, whence he can return in the forenoon to Florence, or even scurrying away to Pisa for a day's shooting among the rough copse wood and stately stone-pines of its picturesque Cascine.

But, to return to the Exhibition, the building appropriated to it, or rather the permanent kernel of the building, is the *ci-devant* station of the Leghorn railway, its terminus being now removed to a more central position within the walls. The whole body of this very extensive building is now

floored and ceiled with transparencies in compartments, each of which is painted in excellent taste with the arms of some of the cities and towns of Italy which have contributed to the Exhibition, Rome and Venice included. This forms the double nave, so to speak, of the building, with an immense range of temporary amplifications—suites of lofty rooms—galleries—cafés, &c., added to it on either side. At the further end of the nave a gay and pleasant garden has been laid out, containing a pavilion filled with a rare collection of hot-house plants, some of them choice and fantastic orchidæ, from Prince Demidoff's celebrated conservatories. There is, moreover, a glazed chamber in the midst, especially appropriated to the *Victoria Regia* in its warm-water tank, where it is expected to flower next month. Glazed galleries inclose the garden and lead to the throne-room, where the weekly concerts are to be held. Several portions of the building, particularly the upper galleries, are as yet quite unfinished, and the bales and packages whose contents are destined to fill them are, it is said, yet on their road to Florence. The cattle show, for which very extensive accommodations are preparing, will not be opened till October, and on every side much yet remains to be done.

The impression produced by a glance over the contents of the Italian Exhibition is that Italy from her own arts and manufactures is capable of supplying, more or less perfectly, the requirements of an enlightened and refined people, although assuredly she at present seems to excel far more in articles of luxury than in those of first necessity. Her excellence in wood-carving and inlaying far surpasses that of her iron-work and earthenware, and her silks and velvets have made greater progress than her sewing-cotton and linens; and if one reflects for a moment on the unnatural political and social régime under which she has bowed for so long, it is hardly to be wondered at. Of all the greater branches of Italian industry, the silk-manufacture is perhaps the most largely represented, as might naturally be expected. A great space is filled with its products, both raw and manufactured, from almost every part of the Peninsula. The silk-growers of Upper Italy appear to bear away the palm from all their rivals in the quality of their raw silk, both white and yellow; and that produced by the Romagna seems the most inferior, both in colour, strength and richness. Among the manufactured specimens, the furniture brocades turned out by the looms of Piedmont and Lombardy, and some of those sent from Naples, are of a splendour, both for design and quality, which halts but a little, if at all, behind the manufactures of Lyons. Gold and silver *moire*, and gold-brocaded silks for church vestments, too, are among the most advanced branches of this industry. The linens and damasks for table use, although very far behind what England can show in beauty of finish, are yet in all respects very promising, and have generally in Italy the advantage which a great number of our most plausibly elegant table-linen manufactures have not, of containing no admixture of cotton, and of consequently enduring unfrayed the scrubbing and thumping of several generations of washerwomen, as did the household linen piled in the lavender-scented oak-presses of our grandmothers. Tuscany furnishes a great quantity of the best goods of this kind, as well as all the varieties of towelling, sheeting, &c., less tempting to look at, but more reasonable and far more durable than ours. The display of ribbons does not rise above a very humble mediocrity in either colour, pattern or quality. It seems strange that the looms of Milan and Turin, which send out such really magnificent brocades, and those of Genoa, whose velvets may safely be classed beside those of Lyons, should fail so signally in the speciality of ribbons, and succeed in giving them but a far-away likeness to their gay and graceful kindred of France. Versatile Naples has contributed products of all kinds to the National Exhibition. Pianos, carriages, silks, linens, hemp cloths, and a dozen more kinds of manufactured articles, besides a very beautiful though not very numerous display of wrought-coral ornaments, which, with singular bad taste, have been crowded into two lower shelves of a sort of glazed *étagère*, where

they make no appearance whatever, and where numbers of visitors never discover them at all. Nothing can exceed the elegance of the bracelets, brooches and other ornaments of mixed red and white or of pale rose-coloured coral, worked with infinite taste into knots, posies and cameos of rare delicacy and finish. The Florentine and the Roman mosaics, handsome as they are, look heavy and graceless beside this exquisite manufacture; and one feels quite provoked at the stores of good material wasted in cutting those massive strings of rich flesh-coloured coral beads which look too heavy to adorn any throat but that of a Juggernaut idol, when they could be turned into such elegant and becoming trinkets as these.

The show of jewelry is chiefly from Turin and Milan, and though it contains some handsome gems, the visitors of French or English Exhibitions will hardly think it worth a glance. Not so the beautiful sword presented to the King by the Modenese citizens, which lies in the same room. The rich chasing of the entire scabbard is worthy of the best days of Mediæval Art, and the hilt is adorned with a small silver statue of Italy in jewelled and enamelled robes, and the top of her diadem formed of a single fine emerald. Another popular free-will offering which the King has allowed to be exhibited, is the banner presented to him by the women of Brescia, after the campaign of '59. It now leans against a column in the throne-room, where scarcely a glimpse can be caught amid the heavy folds of the silk, of the rich and elaborate embroidery with which it is adorned. The ground is, of course, of the sacred tricolor, enriched with needlework of gold and coloured silks.

Italy is yet a mere beginner in these grand displays of national competitive industry, and that the Italians are too apt to look upon them rather as the pretext for a beautiful show than as a means of aiding in the manufacture of the great mass of articles of primary necessity better and more cheaply than they could otherwise be produced. But if Italy have yet to go to school in these matters, she must be allowed to be a willing learner and apt at her book, as this Exhibition amply proves. The next such National Italian Fair will show many a mistake rectified, and (Imperial policy permitting!) a wider and richer field for competition in the yet enslaved provinces. Italy's commercial improvement increases steadily in proportion to the extension of her political liberty; in proof of which assertion I need only point to the results of the manufactures of Upper Italy as compared with those of the provinces lately liberated from Bourbon sway. The arts, indeed, are not unworthily represented by the works received from Naples and Sicily; but the manufactures of the lower portion of the Peninsula are at a sorely low ebb, and the new régime must be allowed to work there freely and extensively before we can hope to see them flourish.

I must not close this letter without noticing one very remarkable feature in our Italian Exhibition, or rather at its door of entrance. I mean the gigantic Romagnole, brought hither for the express purpose from Faenza, who acts as porter, or rather stands sentinel at the threshold from morn to night, with his towering stalwart figure, fresh, good-humoured, simple face, and richly-laced royal porter's costume—mighty cocked-hat, ponderous silver-headed staff, spotless silk stockings and all—the wonder and admiration of *gamins* and nursery-maids, and the glorious ideal and Italian rendering of gallant Lord Bateman's "proud young porter," as the fair Sophia found him at her truant lover's castle-gate on her arrival in England after "crossing the sea." TH. T.

MUSIC AND THE DRAMA

MADAME LIND-GOLDSCHMIDT.—EXETER HALL.—TUESDAY, October 22, will be given Mendelssohn's Oratorio of *ELIJAH*, the principal parts by Madame Lind-Goldschmidt, Mr. Sims Reeves, Miss Palmer, and Mr. W. Weiss.—Reserved Seats, 11. 1s.; Unreserved, 10s. 6d.; Back Seats, Area, 7s. Tickets to be obtained at Mr. Mitchell's Royal Library, 38, Old Bond Street.

SADLER'S WELLS.—On Saturday, M. Casimir Delavigne's miscalled historical tragedy of 'Louis the Eleventh' was produced for the first time

under Mr. Phelps's direction; the rôle of the eccentric monarch being supported by the manager. We have before shown in what respects M. Delavigne's portrait is untrue to the king's historical character, and the part he really played at a great political crisis in the fortunes of the country over which he reigned; nevertheless, the dramatist has contrived a theatrical sketch which is so striking in its result, and so skilfully combined in its elements, that no actor, either in England or France, of any pretension has ever failed in his attempts at its embodiment. It was at one time the fashion to decry the authorship of this play, and to attribute its success wholly to the player. But the fact we have stated tells a very different tale; and a fuller and impartial analysis of the drama proves it to be a work of considerable merit, and restores to the author the reputation which, after their fashion, the actors would engross all to themselves. The character is, indeed, one so full of contrasts and variety, that any performer with any facility of utterance and action must produce in it a temporary effect; and the credit for these qualities belongs entirely to the dramatist whose talent has produced them, and whose skill has arranged them in a thoroughly artistic manner. For this kind of part Mr. Phelps, in particular, has shown on previous occasions, a special aptitude, and we therefore never had a doubt that he would be successful in this. The first evening, however, was far from realizing what we had expected. The actor was timid and cautious, and moved as if treading between ploughshares. There was hardly any need for such excessive care and nervous anxiety. The result was, of course, to deprive the performance of brilliancy in the points. The character appeared to us to be merely sketched in pencil. No doubt on succeeding evenings Mr. Phelps will add colour, and throw in his lights and shadows, by which much that is now wanting will be supplied. But we suspect it will yet take him time before he gains the requisite boldness to do justice to himself. His last act was his best; his dying struggles still to retain his crown were expressive, true to nature, and realized a most legitimate dramatic as well as a strong moral effect. The comparative inferiority of the previous scenes, as we have stated, will, we have no doubt, be ultimately remedied; and we shall take an opportunity in fitting time of testing our prediction. Mr. Edmund Phelps, we are glad to say, exhibited more than his usual energy in *Nemours*, and worthily extorted applause; but Mr. Elmore, in the Physician, was by far too demonstrative, and exceedingly rude. There were also other of the characters which we should like to have seen better cast; for, though scarcely more than outlines, the real interest of the play depends on their being efficiently filled up and supported. The tragedy was picturesquely appointed, and the groupings were pleasingly arranged; and thus much of the weight produced by the inadequate acting was in a degree lightened. But improvement in many respects must be introduced, as to the proper histrionic features of the getting-up, before the performance of the drama can become so attractive as it might be made. In a word, every part in this tragedy ought to be well played.

OLYMPIC.—On Monday, at the re-opening of this house, Mr. Daly's clever play of 'Married Daughters' was performed. Mrs. Leigh Murray as Mrs. Carey, and Mr. Horace Wigan and Mrs. Emden as the thriving tradesman and his contented spouse, were admirable representatives of the worthy couple and their important mother. Mr. Cook, as the Uncle, and Mr. Cooper as the Waiter, were also capital. The gentlemen and ladies of the cast were enacted by Mr. G. Murray and Mr. W. Gordon, Miss Marston and Miss Cotterell, who carefully impersonated the several characters. Mr. Robson also appeared as Tom Twig, in the farce of 'Catching an Heiress,' and sang 'The Country Fair' with his usual power, point and astonishing versatility.

TO CORRESPONDENTS.—J. S.—R. E. L.—P.—H. R. E.—M. P.—J. C.—J. J. W.—received.

THE FOLLOWING NEW WORKS

WILL SHORTLY BE PUBLISHED BY

SMITH, ELDER & CO.

NARRATIVE OF THE NORTH CHINA CAMPAIGN OF 1860;

Containing PERSONAL EXPERIENCES of CHINESE CHARACTER, and of the Moral and Social Condition of the Country: together with a Description of the Interior of Peking.

By ROBERT SWINHOE, of H.M.'s Consular Service in China, Staff Interpreter to Sir Hope Grant during the Campaign. With 5 Illustrations and Plan. Demy 8vo. price 12s. cloth.

THE CORRESPONDENCE OF LEIGH HUNT.

Edited by his ELDEST SON. With a Photographic Portrait. 2 vols. post 8vo.

HISTORY OF THE FOUR CONQUESTS OF ENGLAND.

By JAMES AUGUSTUS ST. JOHN. 2 vols. 8vo.

THE LADY'S GUIDE TO THE ORDERING OF HER HOUSEHOLD, AND THE ECONOMY OF THE DINNER TABLE.

By A LADY. Post 8vo. price 10s. 6d. cloth.

NEW VOLUME OF "FAIRY TALES" BY HOLME LEE.

THE WONDERFUL ADVENTURES OF TUFLONGBO

AND HIS ELFIN COMPANIONS IN THEIR JOURNEY THROUGH THE ENCHANTED FOREST, WITH LITTLE CONTENT.

By HOLME LEE, Author of 'Legends from Fairy Land,' &c. With Illustrations. Small post 8vo. price 3s. 6d. cloth.

SELECTIONS FROM THE WRITINGS OF JOHN RUSKIN, M.A.

1 vol. post 8vo. with a Portrait, price 5s. cloth.

HOUSEHOLD EDUCATION.

By HARRIET MARTINEAU. A New Edition. Post 8vo.

THE FOUR GEORGES:

SKETCHES OF MANNERS, MORALS, COURT, AND TOWN LIFE.

By W. M. THACKERAY. Crown 8vo.

LOVEL THE WIDOWER.

By W. M. THACKERAY. Crown 8vo.

THE EARLY ITALIAN POETS.

From CIULLO D'ALCAMO to DANTE ALIGHIERI (1100—1200—1300). In the Original Metres, together with Dante's Vita Nuova.

Translated by D. G. ROSSETTI. Part I. POETS CHIEFLY BEFORE DANTE. Part II. DANTE AND HIS CIRCLE.

EXPERIENCES OF AN ENGLISH SISTER OF MERCY.

Small post 8vo.

ROBERTSON'S (late Rev. F. W.)

LECTURES AND ADDRESSES ON LITERARY AND SOCIAL TOPICS.

Third Edition. Post 8vo.

NEW NOVELS.

WARP AND WOOF;

Or, THE REMINISCENCES OF DORIS FLETCHER.

By HOLME LEE, Author of 'Against Wind and Tide,' &c. 3 vols. post 8vo.

SAID AND DONE.

In One Volume.

CHEAPER EDITIONS.

L A V I N I A.

By the AUTHOR of 'DOCTOR ANTONIO,' 'LORENZO BENONI' 2s. 6d. cloth.

FRAMLEY PARSONAGE.

By ANTHONY TROLLOPE. 1 vol. post 8vo. price 5s.

SMITH, ELDER & CO. 65, CORNHILL.

New Editions are now ready of all the Books in
WATSON'S EDUCATIONAL SERIES.
 Specimens post free on application to the Publisher.
 George Watson, Publisher, Glasgow; W. Kent & Co. London.

MR. DARWIN'S NEW WORK.
 Now ready, a New Edition, with Additions and Corrections,
 post 8vo. 14s.
ON the ORIGIN of SPECIES, by MEANS
 of NATURAL SELECTION; or, the Preservation of
 Favoured Races in the Struggle for Life. By CHARLES
 DARWIN, M.A. F.R.S.
 Also by the same Author, 10th THOUSAND, post 8vo. 9s.
A NATURALIST'S VOYAGE ROUND the
WORLD.
 John Murray, Albemarle-street.

Just published,
THE INDUCTION COIL: being an Explana-
 tion of the Principles of its Construction, with a Descrip-
 tion of Experiments illustrative of the Phenomena of the Induced
 Current. By H. M. NOAD, Ph.D. F.R.S. &c. With 40 Wood-
 cuts, cloth, 3s.
 W. Ladd, 11 and 12, Beak-street, Regent-street, W.

Sixth Edition, price 4s. 6d., counters adapted to the same,
SYLLABIC SPELLING and READING.
 By Mrs. WILLIAMS, Author of the 'Conversations on
 Grammar.' With Copper-plate Engravings. Revised and cor-
 rected by her Daughter, LADY LEIGHTON.
 Whittaker & Co. Ave Maria-lane, London.

GEOLOGICAL MAPS.
A GEOLOGICAL MAP of ENGLAND and
WALES, by SIR RODERICK I. MURCHISON, D.C.L.,
 &c. Fourth Edition. Scale, 25 miles to the inch, beautifully
 coloured. Sheet, 5s.; mounted in Case, 7s.

A GEOLOGICAL MAP of ENGLAND and
WALES, by ANDREW RAMSAY, F.R.S. and G.S. &c. Scale,
 12 miles to the inch, beautifully coloured. Sheet, 11. 1s.; in Case,
 11. 5s.; on Roller, 11. 10s.

"As regards maps, the novice in this country will find the
 guide he requires in the beautiful Map of England and Wales, by
 Professor Ramsay, which contains, in a condensed form, the
 result of the labours of many men continued through half a
 century."
Quarterly Review.

London: Edward Stanford, 6, Charing Cross, S.W.

In a few days, fcap. 8vo. (with Map of Confederate Europe),
THE NEW KORAN; or, Text-Book of Turkish
 Reformers, in the Teaching and Example of their esteemed
 Master, JAIDU MORATA.

The book of the Syrian prophet opens a gateway through what
 has hitherto been considered an insurmountable barrier to Mus-
 sulman progress. It separates spiritual religion from dead forms
 and superstitions; offers a common ground of reconciliation to
 Christians, Jews and Turks; and promises to bring about, by
 moral and pacific means, a far more important reformation in the
 East than is likely to be effected by Abdul-Azis or the sword of
 the Wahabites.

London: Geo. Manwaring, 8, King William-street, Strand.

MR. NEWBY'S NEW PUBLICATIONS.

NEW NOVELS IN THE PRESS.

The ANCHORET of MONTSEERAT.
 By Mrs. KELLY, Daughter of the late Mrs. Sherwood, Author
 of 'The Lady of the Manor,' &c. 3 vols. 31s. 6d.

The FRIGATE and the LUGGER: a
 Romance of the Sea. By C. F. ARMSTRONG, Author of
 'The Two Midshipmen,' 'The Cruise of the Darling,' 'The
 Medora,' &c. 3 vols. 31s. 6d.

The COST of a CORONET: a Romance
 of Modern Life. By J. M'GREGOR ALLAN, Author of
 'The Intellectual Severance of Men and Women,' &c. 3 vols.
 21s.

CONSTANCE DALE. 2 vols. 21s.
 "The Author of 'John Halifax' will find a powerful rival in
 Charlotte Hardcastle. This book, like Miss Mulock's, displays
 the impress of a master mind: it is striking, not only for original
 ideas, for unusual talent, but great genius."—*Advertiser.*

OULVERLEY RISE. By Julia Corner,
 Author of 'The Histories of England, France, Spain,' &c.
 3 vols. 31s. 6d.

"It will increase the reputation of Miss Corner."—*Observer.*
LIFE in the LAND of the FIRE-
WORSHIPER. Edited by FREDRIKA BREMER. 3
 vols. [Second Edition, just ready.]
 "It will not fail to interest every intelligent reader."—*Observer.*
 "It amuses, civilises and instructs."—*Globe.*
 "This book stands out—with air, light and colour—a true liter-
 ary success."—*Spectator.*

RECOLLECTIONS of a FIVE YEARS'
RESIDENCE in NORWAY. Price 5s.
 "Decidedly the best guide-book to Norway."—*Advertiser.*

VICTORIA AS I FOUND IT: During
 Five Years of Adventure in Melbourne, on the Roads, and
 the Gold Fields. By HENRY BROWN. 1 vol. post 8vo.
 10s. 6d. [Just ready.]

THE MANUAL of HAPPINESS. By
 the Rev. HENRY BARRY, A.M., Rector of Draycot, Wilts,
 Author of 'Cesar and the Britons,' &c. Edited by his
 DAUGHTER, Author of 'Mabel,' 'Cross Roads,' &c. Price 5s.
[In the Press.]

Madame d'EGVILLE MICHAU's TREA-
TISE on DEPORTMENT and DANCING. Price 1s. 6d.

"We recommend this little brochure, with its unpretending
 common sense, to the perusal of parents and guardians, as well as
 to the young people for whose benefit it is more especially in-
 tended. If they will lay to heart and follow out the sugges-
 tions, they will not only walk better, dance better, and be more
 elegant in 'deportment,' but they will stand a chance of being
 considerably wiser during the process."—*Athenæum.*

HISTORICAL LESSONS: in English
 and French. By the Author of 'Lessons on Objects,' &c.
 Price 3s. 6d. *[In the Press.]*

MISS STRICKLAND'S LIVES OF THE ENGLISH QUEENS.

Complete in 8 vols. post 8vo. (each containing between 600 and 700 pages), with many Portraits, price 31. cloth; or any
 vol. separately, price 7s. 6d. to complete sets,

LIVES OF THE QUEENS OF ENGLAND, FROM THE NORMAN CONQUEST.

By AGNES STRICKLAND.

DEDICATED BY EXPRESS PERMISSION TO HER MAJESTY.

A New Edition, revised, corrected and augmented; and embellished with Portraits of every Queen.

"These volumes have the fascination of romance united
 to the integrity of history. The work is written by a lady
 of considerable learning, indefatigable industry, and careful
 judgment. All these qualifications for a biographer and an
 historian she has brought to bear upon the subject of her

volumes, and from them has resulted a narrative interest-
 ing to all. It is a lucid arrangement of facts, derived from
 authentic sources, exhibiting a combination of industry,
 learning, judgment and impartiality, not often met with
 in biographies of crowned heads." *Times.*

Also, complete in 6 vols. with numerous Portraits, price 63s. cloth; or any vol. separately, price 10s. 6d. to complete sets,

MRS. GREEN'S LIVES OF the PRINCESSES OF ENGLAND, from the NORMAN CONQUEST.

MEMOIR of BARON LARREY, Surgeon-in-Chief of the Grande Armée. From the French. London: Henry Renshaw, 326, Strand.**THE MINIATURE QUARTO BIBLE.** An edition of the Scriptures prepared especially for the use of those to whom lightness, large type, and superior finish are recommendations. Handiness and legibility are the characteristics of this Bible. It is printed upon the finest 'toned' paper, and contains copious Critical Notes, Parallel References, Coloured Maps, &c. &c. The volume measures about 7 inches by 9, and is not more than 3/8 in thickness. The Miniature Quarto Bible is kept bound in every variety of style, from plain morocco to "Bagster's flexible Turkey morocco." Also in elaborate antique bindings. Silver and Gilt Mountings of the newest patterns. Cases and presentation oaklets always ready. Prices from 21s.**ARABIC READING LESSONS.** Consisting of Selections from various Authors including a variety of styles, which are provided with an interlinear English translation, and a grammatical Analysis of the text. There is also a compendious Grammar. Post 8vo. 5s.

** Hebrew, Chaldee, and Syriac Reading Lessons, on the same plan.

A COLLATION of the PRINCIPAL ENGLISH TRANSLATIONS of the BIBLE, in Parallel Columns. Elegantly printed with red borders and headings. Quarto, price 12s.**HAYTER'S PERSPECTIVE and DRAWING.** Illustrated with very numerous Woodcuts and coloured Plates. Sixth Edition. Octavo, price 15s. "We cordially agree with the Author of this elegant work, that multitudes of persons have been deterred from studying the principles of Perspective, by the repulsiveness of the mode in which the necessary information has been presented. The whole of these very instructive lessons are lavishly illustrated, and the dialogues are replete with admirable and just observations on ancient and modern art."—*Asiatic Quarterly Journal*.**BAGSTER'S SERIES of CHURCH SERVICES;** elegant, readable, and durably bound. Every style of Binding and Mounting. To be had of all Booksellers.**BAGSTER'S CONSECUTIVE CHURCH SERVICE.** In every style of Binding and Mounting. To be had of all Booksellers.

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 1771.

LONDON, SATURDAY, OCTOBER 5, 1861.

PRICE
THREEPENCE
Stamped Edition, 4d.

NOTICE.

The price of THE ATHENÆUM is from this date THREEPENCE.

Thirty years ago, when THE ATHENÆUM came into the hands of its present Proprietors, its price was Eightpence, and its contents, with advertisements, forty-eight columns. Convinced that the circulation of Literary Journals was restricted by high price, and that every advantage offered to the public would bring increase of circulation and authority, the Proprietors reduced the price one-half—to Fourpence. The experiment succeeded, and cheap Literary Journals became the rule.

The Proprietors have always held to the principle then proved. They have given to the public the benefit of every change in the law, increasing the size of the paper without increase of price, until the average has become about sixty columns of literary matter, with forty columns of advertisements, selected so as to be of general interest.

The Proprietors, taking advantage of the abolition of the Paper Duty, have therefore resolved that the price of THE ATHENÆUM shall in future be THREEPENCE.

UNIVERSITY COLLEGE, LONDON.—EVENING CLASSES OF LATIN, MATHEMATICS, GREEK, AND NATURAL PHILOSOPHY.

FOUR COURSES OF FIFTEEN LECTURES each will be delivered by the Professors in the College of the respective subjects, on TUESDAYS and THURSDAYS, from 7 to 9 p.m. Latin.—The Lectures by Prof. Newman will begin on Thursday, October 17, and continue till Thursday, February 6, inclusive. The subjects of the Lectures will be—Livy, Book V., with comment on the Progress of the Constitution; Cicero, two Muretus. Several Lectures will be delivered on Latin Etymology, and its dependence on other languages.

Mathematics.—The Lectures by Prof. De Morgan will begin on Tuesday, October 23, and continue till Tuesday, February 11. In these Lectures the attention of the student will be specially directed, first, to the acquisition of more power of computation than is usually gained in schools; secondly, to the fundamental points of geometrical and algebraical reasoning.

Greek.—The Lectures by Prof. Malden, A.M., will begin on Thursday, February 13, and continue till Thursday, June 5. The subject of the Lectures will be the Poems of *Æschylus*; and Prof. Malden will also employ part of the time in Lectures upon the Structure of the Greek Language.

Natural Philosophy.—The Lectures by Prof. Potter, A.M., will begin on Tuesday, February 13, and continue till Tuesday, June 5. Fee for each Course, 12 s. 6d., and for the four Courses together, 50 s.; to Masters of unendowed schools and Ushers, under an arrangement proposed by Lord Brougham, for the application of the Patriot Fund, the fee will be, for a single Class, 10s.; for the four Classes 40 s.

OTHER EVENING COURSES.

French.—By Prof. Ch. C. Class on Wednesday and Friday, 7 to 9 p.m. Theoretical and Practical Study of the French Language.—The Lectures will begin on Wednesday, October 16, and continue during the whole session. Fee, 4 s.

Geology.—By Prof. Morris, F.G.S., Thursday, 7 p.m., February to May. The course will include the general principles of Geology and Physical Geography. Fee, 12 s.

Practical Chemistry, Birkbeck Course.—By Prof. Williamson, F.R.S., and assistants. For persons practically engaged in Manufactures. A Course of 15 Lessons, of two hours each, on Mondays and Thursdays, from the beginning of May to the end of June. Hours, 7 to 9 p.m. Fee, including the cost of materials, &c., 2 s. The course will include the most important ordinary operations of the Laboratory.

Animal Physiology.—By John Marshall, Esq., F.R.S., in February, March and April.

Zoology.—By Prof. Dr. Grant, F.R.S., in May and June.

Jurisprudence.—By Prof. Sharpe, LL.D., commencing 28th October.

Political Economy.—By Prof. Waley, M.A., commencing 4th November.

English Law.—By Prof. Russell, LL.B., commencing on the 8th November.

Civil Engineering.—February, March, April and May. By Prof. Poole, F.R.S. Mem. Inst. C.E.

Architecture and Construction.—By Prof. Donaldson, M.I.B.A., Ph. D., during the entire season.

For further particulars, the respective Prospectuses may be obtained at the Office of the College.

EDWARD SPENCER BEESLY, A.M.,
Dean of the Faculty of Arts and Laws.

CHAS. C. ATKINSON, Secretary to the Council.
Sept., 1861.

QUEEN'S COLLEGE, CORK.

SESSION 1861—62.

The Select College Committee have made arrangements for a Class of Natural Science on three days in the week, to be conducted by the Rev. W. B. Cunningham, of Prestonpans, and Mr. Keddie, of Glasgow. It will meet at Twelve o'clock.

JAMES BONAR, Secretary to the Senatus.
New College, Edinburgh.

MINERALOGY.—KING'S COLLEGE, LONDON.

London.—Professor TENNANT, F.G.S., will commence a COURSE of LECTURES on MINERALOGY, with a view to facilitate the study of GEOLOGY, and of the Application of Mineral Substances in the ARTS. The Lectures will begin on Friday Morning, October 4th, at a o'clock. They will be continued on each succeeding Wednesday and Friday, at the same hour. Fee, 2 s. 2 s.

R. W. JELF, D.D., Principal.

PHYSIOLOGY.—ELEMENTARY COURSE

by PROF. BEALE, M.B. F.R.S.—These Lectures will be given at King's College, London, on WEDNESDAY EVENINGS, during the Winter Session, at Eight p.m., commencing on October 18th. Every alternate Lecture will be devoted to the Demonstration of Microscopical Specimens, which will be passed round in Portable Microscopes. Fee, 1 s. 1 s. 6d.—For Syllabus apply to J. W. CUNNINGHAM, Secretary.

King's College, London.

THE MICROSCOPE in CLINICAL INVESTIGATION.

Including the Chemical and Microscopical Examination of URINE, SPUTUM, VOMIT, &c.—Dr. BEALE proposes to commence a COURSE of LECTURES and DEMONSTRATIONS on the above subject on October 4th, at 9.30 a.m. Illustrative specimens will be exhibited in portable Microscopes. The Demonstrations will be given at King's College Hospital on the first and third Fridays of the month, during the Winter Session, at 9.30 a.m.—Forwards of admission, apply at the Secretary's Office, King's College.

THE WIFE of a PHYSICIAN, living at the

West-End of London, between Bond-street and Regent-street, wishes to hear of a YOUNG LADY to join her two Daughters, aged 16 and 18 years, in their DAILY STUDIES. An accomplished French Governess residing in the house; and it is thought that the opportunity of securing careful daily teaching and home comfort may be appreciated by some in the neighbourhood, who objects to the associations of a school or college classes.—Address R. H., 21, Piccadilly.

TO PUBLISHERS.—A GENTLEMAN of capital

is desirous of embarking in the PUBLISHING BUSINESS, either as Partner or by Purchase.—Address, in the first instance, to X. Y. Z., care of Mr. Lindley, 19, Catherine-street, Strand, W.C.

TO REPORTERS.—WANTED, immediately,

a REPORTER for a Liverpool Daily Paper. He must be experienced, and perfectly competent as a Verbatim Reporter.—Apply to the Editor of the 'Daily Post,' Lord-street, Liverpool.

THE PRESS.—A Gentleman, long engaged on

a Morning Paper, having a considerable portion of his time unemployed, wishes to arrange for the EDITING or SUB-EDITING of a Metropolitan Weekly Paper; or to WRITE ARTICLES for Country Papers. He would undertake the Management of a Local Paper within two hours' railway ride from London.—Address R. S., care of C. H. May, 23, Clement's-lane, City.

TO NEWSPAPER PROPRIETORS.—The

Advertiser offers his Services for the Management of the Publishing Department of a Daily Journal. Has had several years' experience, and is thoroughly conversant with all details in connection with the business.—Is possessed of untiring energy, and can be well recommended.—Is a competent Book-keeper and Accountant.—Address R. W. H., 10, Hill-place, Edinburgh.

BOOKSELLERS and PUBLISHERS.—

WANTED, by a Gentleman of great experience in the Bookselling and Publishing Trade, a SITUATION where responsibility and confidence are required. Is able to take the management of the business in the absence of the Proprietor, and superintendence for some years past. Understands the Export Trade; good Correspondent. First-class References.—Address F. J., Post-Office, Croydon.

REQUIRED A GENTLEMAN, having a good

knowledge of EDUCATIONAL and GEOGRAPHICAL LITERATURE, to represent an English Firm, and to introduce their Publications to the Heads of Schools and Colleges throughout the United Kingdom.—Apply, by letter, stating qualifications and salary expected, addressed D.M.T., Post-office, 180, Strand, London.

TO PUBLISHERS and BOOKSELLERS.—

The ADVERTISER is desirous to obtain a SITUATION as above. Has had 17 years' experience in a large Publishing House, and well versed in making up Publishing, Commission, and Paper and Print Accounts.—Address T. S., 77, Fleet-street, E.C.

TALES WANTED.—80 s., 50 s., 20 s., and 10 s.

will be given for FOUR suitable ORIGINAL TALES, according to their length and interest. Only Tales of to-day, of a pleasant, sprightly nature, are desired. Historical and "Bohemian" Novelties, and all Translations, are quite useless. Strict confidence concerning authorship will be observed, the names not being required for publication. Unacceptable MSS. will be carefully returned, but no guarantee given in case of accident.—Address NOVILLER, care of Messrs. Carle & Lamb, 133, Salisbury-square, Fleet-street, London, E.C.

GERMAN and FRENCH LANGUAGES.—

TO PRINCIPALS of COLLEGES, GOVERNMENT SCHOOLS, and OTHERS.—An English Gentleman, aged 48, who has from childhood mostly resided on the Continent, and had very great experience in Tuition, from having been many years Professor of Modern Languages and Teacher Examiner in a Foreign University, as well as French and German Master in several Public Schools—one of which is Government Institute for the Education of the Daughters of the Noblesse.—Wishes to obtain, about New Year, in his own country, a Scholastic or other engagement, suitable to his acquirements. He is thoroughly acquainted with the principal European languages; has travelled extensively in both hemispheres in an extremely responsible capacity, and is prepared to furnish the highest official testimonials and private references. In a place of trust, could offer adequate cash security. A Partnership in a really first-class School, in which advertisement would zealously devote himself to the department of Modern Languages, (usually taught with so little success in Great Britain,) Letters, from the highest official testimonials and private references. In a place of trust, could offer adequate cash security. No. 17 of CATALOGUE just ready, and will be sent on application.

MR. SKEET'S ANNOUNCEMENTS.**TRAFFORD'S WORKS.****TOO MUCH ALONE. By F. G.**

TRAFFORD, Author of 'City and Suburb.' A NEW and CHEAPER EDITION, in crown 8vo. price 5s. cloth, will be ready immediately.

"We can cordially recommend 'Too Much Alone' to any reader in quest of a thoroughly good novel. It is a well-conceived, well wrought-out story; but we regard it less as a present success than the commencement of a successful career."—*Athenæum*.

"'Too Much Alone' is an exceedingly suggestive phrase, and what it portends is admirably realized in the novel of which it is the title. It is a thoroughly good novel, both in conception and execution, and ought at once to secure for its author an honourable popularity. Among the rare combination of qualities which distinguish it, is its downright reality which yet does not preclude an infusion of ideal grace into a story of domestic life."—*Spectator*.

CITY AND SUBURB. By F. G.

TRAFFORD, Author of 'Too Much Alone.' A NEW and CHEAPER EDITION, in crown 8vo. price 5s. cloth, will be published early in 1862.

"This is a first-class work, and cannot fail to attract universal attention. It is one of the most interesting and instructive novels we have ever read."—*London Review*.

"In pathos, sentiment and vigour the author is almost equally at home, and we do not hesitate to say that he will be carried to a high station amongst the romance writers of the day."—*Press*.

"Sustains the author's right to hold a very high position among contemporary novelists."—*Spectator*.

"We feel assured that the author is destined to hold a high place in the ranks of English novelists."—*Literary Gazette*.

"Will repay perusal with interest."—*Decidedly interesting.*

"Opens with great effect. Ruby reminds us of Thackeray's most successful female character—Trix."—*Globe*.

"Has more than common interest attached to it."—*Observer*.

"We can unhesitatingly recommend the novel to all dwellers in 'City and Suburb.'"—*Critic*.

"The author has given us a really pleasing novel. The story is replete with interest."—*Morning Chronicle*.

"The announcement of a new work from this author's pen cannot fail to excite curiosity, and arouse expectation of that which is so dear to a novel reader, a really genuine, good novel. In the present instance that expectation is fulfilled: 'City and Suburb' is more than equal in ability and finish to the author's preceding works."—*Morning Post*.

FORTY YEARS' MILITARY and

PERSONAL ADVENTURES in Portugal, Spain, France, Malta, New South Wales, &c. &c. By Lieut.-Col. BUNBURY. 3 vols. with Illustrations, 31s. 6d.
[Immediately.]

SECOND EDITIONS.**FOUR YEARS IN BURMAH.**

By W. H. MARSHALL, late Editor of 'The Rangoon Chronicle.' 3 vols. with Illustrations, 21s.

"A golden store of experience pleasantly and attractively set before the public. All who desire information regarding the resources of the country will do well to consult this book."—*Athenæum*.

MEMOIRS OF AN ATTACHE

(F. P. WERRY, Esq.) at the COURTS OF ST. PETERSBURGH and VIENNA in 1812-18. 1 vol. with Portrait, 8s. 6d. cloth.

"The work of a gentleman who was attached to the British Embassies at St. Petersburg and Vienna during the eventful period from 1812 to 1818. His letters are evidently those of a well-educated man, who was intimately acquainted with the complicated politics of his time, and many of them possess no little interest in a historical point of view."—*Spectator*.

CHIEFS OF PARTIES. By

D. O. MADDYN, Esq., Author of 'The Age of Pitt and Fox,' &c. 3 vols. post 8vo. 21s.

"In all the book there is refreshment and agreeable illustration."—*Athenæum*.

DEDICATED BY SPECIAL PERMISSION TO HER MAJESTY.

In Imperial Folio, half bound in Russia or Morocco, price 5l. 15s. 6d.

THE ROYAL ATLAS

OF

MODERN GEOGRAPHY:

IN A SERIES OF ENTIRELY ORIGINAL AND AUTHENTIC MAPS.

By ALEX. KEITH JOHNSTON, F.R.S.E. F.R.G.S. Geographer to the Queen for Scotland; Author of the 'Physical Atlas,' the 'Dictionary of Geography,' &c.

Beautifully Engraved and Coloured by W. & A. K. Johnston.

With a COMPLETE INDEX to EACH MAP, Containing References to nearly 150,000 Places in this Atlas.

Opinions of the Press.

Athenæum, August 10, 1861.

"Under the name of 'The Royal Atlas of Modern Geography,' Messrs. Blackwood & Sons have published a book of Maps, which for care of drawing and beauty of execution appears to leave nothing more to be hoped for or desired. Science and Art have done their best in the magnificent book. Mr. A. Keith Johnston answers for the engraving and printing to those who love clear forms and delicate bold type we need say no more. All that should be, these maps are: honest, accurate, intelligible guides to narrative or description. A very good feature is the Index of Names attached to each plate, with the easy mechanical arrangement of lines by which any particular name that may be sought is at once found on the map. Of the many noble Atlases prepared by Mr. Johnston and published by Messrs. Blackwood & Sons, this Royal Atlas will be the most useful to the public, and will deserve to be the most popular."

Morning Herald.

"There is scarce any science which has of late made such progress as that of cartography. But the culmination of all attempts to depict the face of the world appears in the 'Royal Atlas,' than which it is impossible to conceive anything more perfect. The only way to test the value of maps is to select those spots which one thoroughly knows, and from them to judge of the remainder. Never did an Atlas stand this searching examination so well as the folio work just published by the Messrs. Blackwood, and bearing on its title the honoured name of Keith Johnston. We have carefully gone over the coast-lines and the interior delineation of several portions of Europe, and of North and South America, with which we happen to be familiar, and so far as we have examined, there is not merely not an error, but the absolute perfection of accuracy. . . . The most magnificent geographical work that has ever issued from the press. Considering the labour expended on it, and the style in which it is got up, its cheapness is not its greatest marvel."

Guardian.

"This is, beyond question, the most splendid and luxurious, as well as the most useful and complete, of all existing Atlases. To a habitual consulter of maps (which every reader of history and every man of science ought to be) there can hardly be a greater luxury than these beautiful sheets, which it is a pleasure for the eye to travel over, and upon which a vast quantity of the finest and most delicate work represents a more than corresponding mass of various information. In one large but not cumbersome folio volume, Mr. Keith Johnston has given us as perfect an Atlas as can well be desired, embracing the results of all the most recent discoveries in every part of the world, as well as most of the territorial changes that have lately occurred in Europe. . . . A close examination of several different parts of Europe, which are very familiar to us, satisfies us of the remarkable accuracy with which the work is done; it is very rarely that we miss even a new road, where, according to the scale of the map, a road should have been given."

Examiner.

"There has not, we believe, been produced for general public use a body of maps equal in completeness to the Royal Atlas just issued by Mr. A. K. Johnston. . . . In beauty and clearness of engraving it has never been surpassed, and the fulness of information in such maps as the five representing the United Kingdom, (England and Scotland each being enlarged so as to fill two maps, upon which the name of every hamlet has been entered), or the two representing India, is marvellous."

Economist.

"All who are acquainted with the admirable maps of Physical Geography issued by Mr. Keith Johnston some years ago, will be prepared to expect much from this new Atlas of General Modern Geography. It is a magnificent volume, to whose preparation and production the author has devoted nearly five years of constant labour, while it embodies the results of his systematic study of practical geography for more than a quarter of a century. In comparing this beautiful and valuable Atlas with previous collections, every one must be struck, not only by the immense special index in geographical knowledge, but by the greatly-increased power of representing that knowledge to the eye in the course of the last thirty years."

Saturday Review.

"The completion of Mr. Keith Johnston's 'Royal Atlas of Modern Geography' claims a special notice at our hands. While Mr. Johnston's maps are certainly unsurpassed by any for legibility and uniformity of drawing, as well as for accuracy and judicious selection, this eminent geographer's Atlas has a distinguishing merit in the fact that each map is accompanied by a special index of remarkable fulness. The labour and trouble of reference are in this way reduced to a minimum. The number of places enumerated in the separate indices is enormous. We believe indeed that every name which appears in the maps is registered in the tables; and as each place is indicated by two letters, which refer to the square formed by the parallels of latitude and longitude, the method of using the index is extremely easy and convenient. Accompanied by the General Index which is promised, this Atlas will be undoubtedly the best of its sort that has yet been published. . . . We know no cartographer's maps which we can more warmly recommend. The accuracy, wherever we have attempted to put it to the test, is really astonishing."

RECENT PUBLICATIONS.

LORD DUNDONALD'S AUTOBIOGRAPHY.

"Ought to be a prize-book in every military and naval school." *London Review.*
"We may safely predict for this work an unbounded popularity. A narrative of heroic adventure, every line of which should be perused by Englishmen."—*Times.*

"A valuable contribution to the historical literature of England."—*Blackwood's Magazine.*
"The career of Lord Dundonald recalls that of Raleigh and Herbert of Cherbury. This work will take its place with our best naval histories."—*Athenæum.*

"A work which, once read, will imprint itself on the memory for ever. It is an admirable work."—*Spectator.*
"More full of interest than one of Marryat's novels." *Economist.*

FRANCATELLI'S COOK'S GUIDE.
Price Five Shillings.

"Francatelli's 'Cook's Guide' is an admirable manual for every household where pleasure, health, and economy are consulted. The whole book has the merit of being exceedingly plain, and of containing sufficient cross references to satisfy a Parisian, and of being so serviceably arranged in all its parts that we defy you to miss any of the consolations intended for your physical infirmities." *Times*

Also, by the same Author,

The MODERN COOK. 13th Edition.
8vo. 12s.

EAST LYNNE: a Story of Modern Life. By Mrs. HENRY WOOD. 3 vols. [Now ready.]

"So full of incidents, so exciting in every page, so admirably written, that one hardly knows how to go to bed without reading to the last page."—*Observer.*

"East Lynne" is excellently worked out. The Author really understands country life, and she sketches odd or strange characters."—*Spectator.*

From the SATURDAY REVIEW, Sept. 28, 1861.

"Upon the whole, then, we are able to speak very favourably of this new Cyclopædia. Its great recommendation is not its comparative cheapness (though the cost only averages about half-a-guinea a volume), but its originality, completeness, and general trustworthiness. We may express a hope that its enterprising Publisher will have no reason to regret his considerable venture. He is not likely, we think, to have to complain of want of patronage, if it is sufficiently remembered that any one of his four great Divisions may be purchased separately as a work complete in itself. Few may be able to afford the whole series; but there are many who will be glad to procure, for example, a Biographical Dictionary, while others will require, for their peculiar tastes or studies, the Geographical Cyclopædia, or that of the Arts and Sciences, or of Natural History."

From the SPECTATOR, Sept. 28.

"The English Cyclopædia is a work that may safely be consulted by the most advanced students, and is likely to hold its own as the most complete work of reference in the language, until some great revolution in Science has taught us how blindly our wisest philosophers are still groping in the dark."

BRADBURY & EVANS, 11, Bouverie-street, Fleet-street, E.C.

LITERATURE

THE AMERICAN WAR.

Specimen Articles of the New American Cyclopædia. Edited by George Ripley and Charles A. Dana. (Appleton & Co.)

Sir Edward Bulwer Lytton told his constituents on Wednesday week that he for one does not regard Democracy as on its trial in the present conflict of North and South. We are glad to have this speech from one of the philosophic statesmen of our day—from a man who has been a Secretary of State, and who may be one again. We think Sir Edward right in his view of this great question; and we hope that his opinion is shared by the Conservative party, in whose cause he fights. Some who profess to be Liberals talk of the war in Virginia as the failure of popular institutions: a mistake which undoubtedly arises from incorrect information about men and events in that great country, so near to us in sympathy and so far off in knowledge.

Correct information about America has become with us a daily want. While the Great Republic held its prosperous course, we were content to think of the Americans as a people separated from ourselves by certain peculiarities and humours, by guessing and calculating, by whittling and chewing, by lecturing and expectorating—by a love of mint julep, cock-tail, brandy-smash, and other ferocious drinks—by an eager interrogation of strangers—by a habit of sitting with feet out of window and legs over chairs—by a strong nasal intonation, and by a general readiness to whip all creation. We were content to have our droll and amusing cousins portrayed to us by such historians as Mrs. Trollope and such orators as Mr. Gough. But a change has come down upon the spirit of our dream. The farce has deepened into tragedy, and we have missed the transformation-scene. Our pleasant caricaturists will not enable us to understand the events now shaking the institutions of the New World. Widow Barnaby's friends, we see, are not the women of whom we now read in Baltimore and New Orleans—the women who turn their pretty lawns into breastworks and their elegant drawing-rooms into casemates, who send powder and shells in the coffins of their dead sons, who talk familiarly of the scalp of President Lincoln, and subscribe for the rope which is to hang President Davis. The reign of that complacent genius, which sufficed to discount a whole nation over the table of a bazaar in Cincinnati, is at an end. The greatest of all our humourists is now at fault. We have laughed, and shall laugh again, over the eccentricities of Mr. Jefferson Brick; but Jefferson Brick does not help us one whit to an understanding of Mr. Jefferson Davis. We must seek our knowledge elsewhere.

Messrs. Ripley and Dana propose to write 'A Popular Dictionary of General Knowledge, especially devoted to American History, Biography, Geography, &c., and supplying the great Want of Correct Information concerning the Present State of America and Distinguished Living American Men.' A few specimens of what they intend to do have been placed in our hands; and from these specimens we will extract a few columns of information, more or less new to English readers, on men whose names and deeds come warm to us on every sheet from Boston and New York.

First of Jefferson Davis, President of the Confederate States. Davis is, to ordinary readers,

the enigma of the American war. Mr. Lincoln is commonplace. General Fremont they can comprehend. They have known of Fremont for years, and have had more than one opportunity of fairly judging his calibre. But who a year ago had heard the name of Jefferson Davis? When he is first heard of, he is a giant in fame. Until he has done the most difficult and considerable thing in modern history—torn asunder a compact community of the Anglo-Saxon race—he is a mere obscure official in a cabinet at Washington, with no more presence in the world, no more visible action on events, than an English Under-Secretary of State. A small man, of feeble frame and rather mean appearance—an excellent clerk—a quick, irritable overseer, who had once been a soldier, like every American, and who had actually seen a little service, greatly unlike the majority of American colonels and generals, no one, even among the few who on this side of the Atlantic had ever heard his name, imagined he was going to prove either the good or the evil genius of his country—next to George Washington the most interesting person in its history as an independent State. We are not yet in full possession of his secret. We hear somewhat vaguely that his treachery to the Union extends over many years; that the secession was accomplished in his mind, like the murder of Cassio by Iago, long before it could be accomplished in fact. But why was he not found out? The officers of a whole army cannot be corrupted in secret—arms, artillery, ammunition, cannot be lodged in particular arsenals without the accounts at head-quarters showing it. Was the whole Government in the plot? Were twenty millions of people conspirators?

While waiting information, we are glad to have these authentic notes on the story of President Davis's life up to the breaking out of the civil war:—

"Davis, Jefferson, an American soldier and statesman, born June 3, 1808, in that part of Christian co., Ky., which now forms Todd co. Soon after his birth his father, Samuel Davis, a planter, who served during the revolutionary war in the mounted force of Georgia, removed with his family to Mississippi, and settled near Woodville, Wilkinson co. Young Davis received an academic education, and was sent at the usual age to Transylvania college, Ky., which he left in 1824 to enter the U.S. military academy at West Point, where he was graduated in 1828, and was appointed brevet second lieutenant. He remained in the army seven years and served as an infantry and staff officer on the north-west frontier in the Black Hawk war of 1831-32, with such distinction that, March 4, 1833, he was promoted to a 1st lieutenancy of dragoons, in which capacity he was employed in 1834 in various expeditions against the Comanches, Pawnees, and other hostile Indian tribes. He resigned his commission, June 30, 1835, returned to Mississippi, and became a cotton planter, living in retirement till 1843, when he began to take an active part in politics on the democratic side, and in 1844 was chosen one of the presidential electors of Mississippi to vote for Polk and Dallas. In Nov. 1845, he was elected a representative in congress, and took his seat in December of that year. He bore a conspicuous part in the discussions of the session on the tariff, on the Oregon question, on military affairs, and particularly on the preparations for war against Mexico and on the organization of volunteer militia when called into the service of the United States. While in congress, in July, 1846, the 1st regiment of Mississippi volunteers, then enrolled for service in Mexico, elected him their colonel. He promptly left his seat at the house, and overtaking his regiment in New Orleans on its way to the seat of war, led it to re-enforce the army of Gen. Taylor on the Rio Grande. He was actively engaged in the attack and storming of Monterey,

Sept. 1846; was one of the commissioners for arranging the terms of the capitulation of that city; and highly distinguished himself in the Battle of Buena Vista, Feb. 23, 1847, where his regiment, attacked by an immensely superior force, maintained their ground for a long time unsupported, while Col. Davis himself, though severely wounded, remained in the saddle until the close of the action, and was complimented for his coolness and gallantry by the commander-in-chief in his despatch of March 6, 1847. At the expiration of the term of its enlistment, in July, 1847, the Mississippi regiment was ordered home; and Col. Davis, while on his return received at New Orleans a commission from President Polk as brigadier-general of volunteers, which he declined accepting on the ground that the constitution reserves to the states respectively the appointment of the officers of the militia, and that consequently their appointment by the federal executive is a violation of the rights of the states. In Aug. 1847, he was appointed by the governor of Mississippi, U.S., senator to fill a vacancy, and at the ensuing session of the state legislature, Jan. 11, 1848, was unanimously elected to the same office for the residue of the term, which expired March 4, 1851. In 1850 he was re-elected for the ensuing full term. In the senate he was chosen chairman of the committee on military affairs, and took a prominent part in the debates on the slavery question, in defence of the institutions and policy of the slave states, and was a zealous advocate of the doctrine of state rights. In Sept. 1851, he was nominated candidate for governor of Mississippi by the democratic party, in opposition to Henry S. Foote, the candidate of the union party. He resigned his seat in the senate on accepting the nomination, and was beaten in the election by a majority of 999 votes; a marked indication of his personal popularity in his own state, for at the 'convention election,' two months before, the union party had a majority of 7,500. After his defeat Col. Davis remained in retirement until the presidential contest of 1852, when he took the stump in behalf of Gen. Pierce in Mississippi, Tennessee, and Louisiana, where he rendered essential service to the democratic party. In 1853 he was appointed by President Pierce secretary of war, which post he held till the accession of President Buchanan in 1857. His administration of the war department was marked by ability and energy, and was highly popular with the army. He proposed or carried into effect, among other measures, the revision of the army regulations; the introduction of camels into America; the introduction of the light infantry or rifle system of tactics; the manufacture of rifled muskets and pistols and the use of the Minié ball; the addition of four regiments to the army; the augmentation of the sea-coast and frontier defences of the country; and the system of explorations in the western part of the continent for geographical purposes; and for the determination of the best route for a railroad to the Pacific Ocean. Having been previously re-elected on his retirement from the war department, Col. Davis re-entered the senate for the term ending March 4, 1863. In the sessions of the 35th congress he has been conspicuous in the discussions on the French Spoliation Bill, which he opposed, and on the Pacific railroad for the southern route, of which he is a zealous and most influential advocate."

A life of the President of the United States is also given. Mr. Lincoln is better known on this side of the Atlantic than Mr. Davis. Having been a candidate for the Presidency he has, of course, suffered from a couple of biographers—one hostile, one servile, in tone and statement. The following is more moderate and trustworthy than the 'Memoirs of Abraham Lincoln,' which we have had to review in former times; the declaration of opinion on Slavery at the close being very important in connexion with the recent proclamations of General Fremont in his military district:—

"Lincoln, Abraham, an American lawyer and statesman, born in a part of Hardin co., Ky., which is now included in Larue co., Feb. 12, 1809.

His ancestors, who were Quakers, went from Berks co., Penn., to Rockingham co., Va., and from there his grandfather Abraham removed with his family to Kentucky about 1782, and was killed by Indians in 1784. Thomas Lincoln, the father of Abraham, was born in Virginia, and in 1806 married Nancy Hanks, also a Virginian. In 1816 he removed with his family to what is now Spencer co., Ind., where Abraham, being large for his age, was put to work with an axe to assist in clearing away the forest, and for the next ten years was mostly occupied in hard labour on his father's farm. He went to school at intervals, amounting in the aggregate to about a year, which was all the school education he ever received. At the age of nineteen he made a trip to New Orleans as a hired hand upon a flat boat. In March, 1830, he removed with his father from Indiana, and settled in Macon co., Ill., where he helped to build a log cabin for the family home, and to make enough rails to fence ten acres of land. In the following year he hired himself at twelve dollars a month to assist in building a flat boat, and afterward in taking the boat to New Orleans. On his return from this voyage his employer put him in charge as clerk of a store and mill at New Salem, then in Sangamon, now in Menard co., Ill. On the breaking out of the Black Hawk war in 1832 he joined a volunteer company, and to his surprise was elected captain of it, a promotion which, he says, gave him more pleasure than any subsequent success in life. He served for three months in the campaign, and on his return was in the same year nominated a whig candidate for the legislature; but the county being democratic, he was beaten, though his own election precinct gave him 277 votes and only 7 against him. He next opened a country store, which was not prosperous, was appointed postmaster of New Salem, and now began to study law by borrowing from a neighbouring lawyer books which he took in the evening and returned in the morning. The surveyor of Sangamon co. offering to depute to him that portion of his work which was in his part of the county, Mr. Lincoln procured a compass and chain, and a treatise on surveying, and did the work. In 1834 he was elected to the legislature by the highest vote cast for any candidate, and was re-elected in 1836, 1838 and 1840. In 1836 he obtained a licence to practise law, and in April, 1837, removed to Springfield, and opened an office in partnership with Major John F. Stuart. He rose rapidly to distinction in his profession, and was especially eminent as an advocate in jury trials. He did not, however, withdraw from politics, but continued for many years a prominent leader of the whig party in Illinois. He was several times a candidate for presidential elector, and as such in 1844 he canvassed the entire state, together with part of Indiana, in behalf of Henry Clay, making almost daily speeches to large audiences. In 1846 he was elected a representative in congress from the central district of Illinois, and took his seat on the first Monday of Dec. 1847. In congress he voted for the reception of anti-slavery memorials and petitions; for motions by Mr. Giddings for committees to inquire into the constitutionality of slavery in the district of Columbia, and the expediency of abolishing the slave trade in the district; for various resolutions prohibiting slavery in the territory to be acquired from Mexico. He voted forty-two times in favour of the Wilmot proviso. On Jan. 16, 1849, he offered to the house a scheme for abolishing slavery in the district by compensating the slave-owners from the treasury of the United States, provided a majority of citizens of the district should vote for the acceptance of the proposed act. He opposed the annexation of Texas, but voted for the Loan Bill to enable the government to defray the expenses of the Mexican war. He voted also in favour of river and harbour improvements, in favour of a protective tariff, and of selling the public lands at the lowest cost price. He was a member of the whig national convention of 1848, and advocated the nomination of Gen. Taylor. In 1849 he was a candidate for the U.S. senate, but the legislature was democratic, and elected Gen. Shields. After the expiration of his congressional term, Mr. Lincoln applied himself to

his profession till the repeal of the Missouri compromise called him again into the political arena. He entered with energy into the canvass which was to decide the choice of a U.S. senator in place of Gen. Shields, and it was mainly to his exertions that the triumph of the republicans and the election of Judge Trumbull to the senate was attributed. At the republican national convention in 1856, by which Col. Fremont was nominated for president, the Illinois delegation ineffectually urged Mr. Lincoln's nomination for the vice-presidency. On June 2, 1858, the republican state convention met at Springfield, and unanimously nominated him as candidate for U.S. senator in opposition to Mr. Douglas. The two candidates canvassed the state together, speaking on the same day at the same place. The debate was conducted with eminent ability on both sides, and excited universal interest. In the course of this debate Mr. Lincoln said, in reply to questions from his antagonist: 'I do not now, nor ever did, stand in favour of the unconditional repeal of the fugitive slave law. I do not now, nor ever did, stand pledged against the admission of any more slave states into the Union. I do not stand pledged against the admission of a new state into the Union with such a constitution as the people of the state may see fit to make. I do not stand to-day pledged to the abolition of slavery in the district of Columbia. I do not stand pledged to the prohibition of the slave trade between the different states. I am impliedly, if not expressly, pledged to a belief in the right and duty of congress to prohibit slavery in all the United States territories.' He said further, in explanation of these answers: 'In regard to the fugitive slave law, I have never hesitated to say, and I do not now hesitate to say, that I think, under the constitution of the United States, the people of the southern states are entitled to a congressional fugitive slave law. Having said that, I have had nothing to say in regard to the existing fugitive slave law, further than that I think it should have been framed so as to be free from some of the objections that pertain to it, without lessening its efficiency. And, inasmuch as we are not now in an agitation in regard to an alteration or modification of that law, I would not be the man to introduce it as a new subject of agitation upon the general question of slavery. In regard to the other question, of whether I am pledged to the admission of any more slave states into the Union, I state to you very frankly that I would be exceedingly sorry ever to be put in a position of having to pass upon that question. I should be exceedingly glad to know that there would never be another slave state admitted into the Union; but I must add that, if slavery shall be kept out of the territories during the territorial existence of any one given territory, and then the people shall, having a fair chance and a clear field, when they come to adopt their constitution, do such an extraordinary thing as to adopt a slave constitution, uninfluenced by the actual presence of the institution among them, I see no alternative, if we own the country, but to admit them into the Union. In regard to the abolition of slavery in the district of Columbia, I have my mind very distinctly made up. I should be exceedingly glad to see slavery abolished in the district of Columbia. I believe that Congress possesses the constitutional power to abolish it. Yet as a member of congress I should not with my present views be in favour of endeavouring to abolish slavery in the district of Columbia, unless it would be upon these conditions: 1, that the abolition should be gradual; 2, that it should be on a vote of the majority of qualified voters in the district; and 3, that compensation should be made to unwilling owners. With these three conditions, I confess I would be exceedingly glad to see Congress abolish slavery in the district of Columbia, and, in the language of Henry Clay, "sweep from our capital that foul blot upon our nation." The result of the election was a vote of 125,275 for the republican candidates, who were pledged to the election of Mr. Lincoln, 121,190 for the Douglas candidates, and 5,071 for the Lecompton candidates. Mr. Lincoln had thus a majority of more than 4,000 on the popular vote over Mr. Douglas; but the latter

was elected senator by the legislature, in which his supporters had a majority of 8 on joint ballot.—On May 16, 1860, the republican national convention met at Chicago, and on May 18, began to ballot for a candidate for President. The whole number of votes was 465—necessary to a choice, 233. On the first ballot Mr. Seward received 173½, Mr. Lincoln 102, Mr. Cameron 50½, and Mr. Bates 48, while the rest were scattered among several candidates. On the second ballot Mr. Seward had 184½, and Mr. Lincoln 181. On the third ballot Mr. Lincoln had 354, Mr. Seward 110½, Mr. Dayton 1, and Judge McLean ½ a vote. The nomination of Mr. Lincoln was subsequently made unanimous on motion of the chairman of the New York delegation.

General Fremont's proclamation against slavery has excited the fiercest passions in America, and the highest hopes among a certain class of politicians in Europe. It is the proclamation of a principle. General Fremont has been already a candidate for the Presidency, and it is understood that he is still a favourite with the Republicans. Many believe him to be "the Coming Man." It is certain that he has put the question of what they are fighting for clearly before his countrymen. It is certain that, in doing so, he has acted without the formal sanction of the cabinet—as republican generals are apt to do in time of war. Will he be able to carry his point against the Lincolnite politicians, and change the war of State Rights into a war of Abolition? That is, perhaps, the most momentous question now before the world. The last despatches talk of his being disavowed, superseded, arrested. We doubt the correctness of this news. But should it be true that Mr. Lincoln, afraid of raising such an issue as the liberation of four millions of negroes, has chosen to break with the republican party, and to punish its champion—what then? The republican party is the party with strong convictions, the fanatical and fighting party, the descendants of the Ironsides. Will they submit to carry on a mere commercial and political war? Will their leader submit? Those who want light on this question will be glad to seek it in the story of General Fremont's past life as here briefly recorded:—

"Fremont, John Charles, an American explorer, born in Savannah, Ga., Jan. 21, 1813. His father was a Frenchman who had settled in Norfolk, Va., where he supported himself by teaching his native language. His mother, whose maiden name was Anne Beverley Whiting, was the daughter of an opulent and prominent Virginian, connected by marriage with the Washington family. She was left an orphan at an early age, and when seventeen years old was persuaded by her relatives to marry Major Pryor, a rich and gouty gentleman forty-five years her senior. This union was childless and unhappy, and at the end of twelve years was terminated by a divorce which the friends of both parties combined to procure from the legislature. Major Pryor soon married his housekeeper, and Mrs. Pryor married Mr. Fremont. He died in 1818. The widow, with three infant children, settled in Charleston, S.C. At the age of fifteen John Charles entered the junior class of Charleston College. For some time he stood high in college, and made remarkable attainments in mathematics. 'But about this time,' says Mr. Bigelow, one of his biographers, 'he became acquainted with a young West Indian girl, whose raven hair and soft black eyes interfered sadly with his studies.' His inattention and frequent absences at length caused his expulsion from the college. After this event he obtained employment as a private teacher of mathematics, and took charge at the same time of an evening school. In 1833 he obtained the position of teacher of mathematics on board of the U.S. sloop of war *Natchez*, which was then in the port of Charleston, from which she sailed on a cruise to the coast of South America. Fremont was absent in her for more than two years, and

on his return to Charleston received from the College which had expelled him the degrees of Bachelor and Master of Arts. Shortly afterward he passed successfully a rigorous examination at Baltimore for the post of Professor of Mathematics in the Navy, and was appointed to the frigate *Independence*; but he soon resolved to quit the sea, and engaged himself as a surveyor and railroad engineer on a line between Charleston and Augusta, Ga. Subsequently he assisted in the survey of the railroad line from Charleston to Cincinnati, and particularly in the exploration of the mountain passes between South Carolina and Tennessee. He was engaged in this work till the autumn of 1837, when, in consequence of its suspension, he accompanied Capt. Williams of the U.S. army in a military reconnaissance of the mountainous Cherokee country in Georgia, North Carolina, and Tennessee. In anticipation of hostilities with the Indians this survey was rapidly made in the depth of winter, and was Fremont's first experience of a campaign amid mountain snows. In 1838-9 he accompanied M. Nicolle, a Frenchman, and a distinguished man of science, in explorations of the country between the Missouri and the British line. These explorations were made under the authority of the Government, and, while engaged in them in 1838, Fremont received from President Van Buren, under date of July 7, a commission as Second Lieutenant in the Corps of Topographical Engineers. While at Washington in 1840, employed in the preparation of the report of these expeditions, Fremont became acquainted with Miss Jessie Benton, a daughter of Col. Thomas H. Benton, at that time a senator from Missouri. An engagement was formed, but as the lady was only fifteen years of age, her parents, notwithstanding their high personal regard for Fremont, objected to the match, and suddenly, probably through the potent influence of Col. Benton, the young officer received from the War Department a peremptory order to make an examination of the river Des Moines upon the western frontier. The survey was rapidly executed, and shortly after his return from this duty the lovers were secretly married, Oct. 19, 1841. In the following year Fremont projected a geographical survey of the entire territory of the United States from the Missouri River to the Pacific Ocean, the feasibility of an overland communication between the two sides of the Continent being a leading idea in his scheme of explorations. He accordingly applied to the War Department for employment on this service, and having received, at his own suggestion, instructions to explore the Rocky Mountains, and particularly to examine the South Pass, he left Washington, May 2, 1842, and on June 10 began his expedition. * * His Report of the expedition was laid before Congress in the winter of 1842-3. It attracted great attention both at home and abroad. It was praised by Humboldt in his 'Aspects of Nature,' and the London *Athenæum* pronounced it one of the most perfect productions of its kind. Immediately after the publication of his Report, Fremont planned a second expedition of a much more comprehensive character than the first. He determined to extend his explorations across the continent, and to survey the then unknown region lying between the Rocky Mountains and the Pacific Ocean. In May, 1843, he commenced his journey with thirty-nine men, and, in pursuance of his instructions, proceeded up the Kansas River far enough to ascertain its character, and then crossed over to the Platte, which he ascended to its source in the mountains, where the Sweet Water, one of its tributaries, springs from the neighbourhood of the South Pass. He reached the Pass on Aug. 8, went through it, and saw the head waters of the Colorado flowing toward the Gulf of California. On Sept. 6, after travelling over 1,700 miles, he came in sight of the Great Salt Lake, of which no accurate account had ever been given, and of which very vague and erroneous notions were entertained. His investigations effected important rectifications in our geographical knowledge of this portion of the continent, and had subsequently a powerful influence in promoting the settlement of Utah and of the Pacific States. From the Salt Lake he proceeded to the

upper tributaries of the Columbia River, whose valley he descended till, on Nov. 4, he reached Fort Vancouver, near the mouth of the Columbia. On Nov. 10, he set out on his return to the States. He selected a south-east route, leading from the lower part of the Columbia to the Upper Colorado, through an almost unknown region, crossed by high and rugged mountain chains. He soon encountered deep snows, which impeded his progress and forced him to descend into the great basin, and presently found himself in the depth of winter in a desert, with the prospect before him of death to his whole party from cold and hunger. By astronomical observation he found that he was in the latitude of the bay of San Francisco; but between him and the valleys of California was a range of mountains covered with snows which the Indians declared no man could cross, and over which no reward could induce them to attempt to guide him. Fremont boldly undertook the passage without a guide, and accomplished it in forty days, reaching Sutter's Fort on the Sacramento early in March, with his men reduced almost to skeletons, and with only thirty-three out of sixty-seven horses and mules remaining, and those that survived so weak and thin that they could barely walk while led along. He resumed his journey March 24, and, proceeding southward, skirted the western base of the Sierra Nevada, crossed that range through a gap, entered the great basin, and again visited the Salt Lake, from which, through the South Pass, he returned to Kansas in July, 1844, after an absence of fourteen months, during the greater part of which he was never out of sight of snow. The Reports of this expedition occupied in their preparation the remainder of 1844. Fremont was brevetted Captain in Jan. 1845, and in the spring of that year he set out on a third expedition to explore the great basin and the maritime region of Oregon and California. The summer was spent in examining the head waters of the rivers whose source is in the dividing ridge between the Pacific and the Mississippi Valley, and in October he encamped on the shores of the Great Salt Lake. From thence he proceeded to explore the Sierra Nevada, which chain he crossed again in the dead of winter with a few men to obtain supplies from California for his party, with whom, after perilous adventures among the mountains and some successful encounters with hostile Indians, he made his way into the valley of the San Joaquin, where he left his men to recruit, and went himself to Monterey, which was at that time the capital of California, to obtain from the Mexican authorities permission to proceed with his exploration. Permission was granted, but was almost immediately revoked, and he was peremptorily ordered to leave the country without delay. Fremont as peremptorily refused to comply. His men, exhausted by the hardships they had suffered, and destitute of supplies and animals, were in no condition to re-pass the mountains and the deserts from which they had just emerged. The Mexican Governor, General Castro, mustered the forces of the province and prepared to attack the Americans, who were only sixty-two in number. Fremont took up a strong position on the Hawk's Peak, a mountain thirty miles from Monterey, built a rude fort of felled trees, hoisted the American flag, and, having plenty of ammunition, resolved to defend himself. He wrote to the American Consul at Monterey, in reply to a private message, March 10, 1846: 'We have in nowise done wrong to the people or the authorities of this country, and if we are hemmed in and assaulted here, we will die, every man of us, under the flag of our country.' The Mexican General formed a camp with a large force of artillery, cavalry, and infantry, in the plain immediately below the position held by the Americans, whom he hourly threatened to attack. On the evening of the 4th day of the siege, Fremont, tired of inaction, withdrew with his party, and proceeded towards the San Joaquin. The fires were still burning in his deserted camp when a messenger arrived from General Castro to propose a cessation of hostilities. Without further molestation, Fremont pursued his way northward through the valley of the Sacramento into Oregon. Near Tlamath Lake, on May 9, he met a party in search

of him with despatches from Washington, directing him to watch over the interests of the United States in California, there being reason to apprehend that the province would be transferred to Great Britain. There was also reason to believe that General Castro intended to destroy the American settlements on the Sacramento. Fremont promptly retraced his steps to California. General Castro was already marching against the settlements. The settlers rose in arms, flocked to Fremont's camp, and under his leadership the result was that, in less than a month, as Col. Benton says in his 'Thirty Years' View,' 'All the northern part of California was freed from Mexican authority, independence proclaimed, the flag of independence raised, Castro flying to the south, the American settlers saved from destruction, and the British party in California counteracted and broken up in all their schemes.' On July 4, Fremont was elected Governor of California by the American settlers; and on the 10th of that month he learned that Commodore Sloat, who commanded the U.S. squadron on the coast, had taken possession of Monterey. Fremont proceeded to join the naval forces, and reached Monterey with his 160 mounted riflemen on the 19th. Commodore Stockton about the same time arrived at Monterey with the frigate Congress, and took command of the squadron with authority from Washington to conquer California."

A quarrel arose between two superior officers, each of whom had power over Fremont. Fremont obeyed the one who was subsequently disavowed at Washington, and for this technical offence he was tried by a court-martial, which found him guilty of mutiny, disobedience of the lawful command of a superior officer, and conduct to the prejudice of good order and military discipline, and sentenced him to be dismissed from the service.—

"A majority of the members of the court recommended him to the clemency of President Polk. The President refused to confirm the verdict of mutiny, but approved the rest of the verdict and the sentence, of which, however, he immediately remitted the penalty. Fremont promptly declined to avail himself of the President's pardon, alleging as a reason: 'I do not feel conscious of having done anything to merit the finding of the court; and this being the case, I cannot, by accepting the clemency of the President, admit the justice of the decision against me.' He accordingly forthwith resigned his commission as lieutenant-colonel. The friends of Col. Fremont and a large portion of the public considered this court-martial and the charges that led to it as an attempt, in the language of one of his biographers, 'instigated by professional and personal jealousy to break down the character and to ruin the prospects of an aspiring and deserving rival.' On Oct. 14, 1848, Fremont started upon a fourth expedition across the continent, at his own expense. With 33 men and 120 mules he made his way along the upper waters of the Rio Grande through the country of the Utahs, Apaches, Comanches, and other Indian tribes, then at war with the United States. His object was to find a practicable passage by this route to California. In attempting to cross the great Sierra, covered with snow, his guide lost his way, and Fremont's party encountered horrible suffering from cold and hunger, a portion of them being driven to cannibalism to sustain life. All of his animals and one-third of his men perished, and he was forced to retrace his steps to Santa Fé. Undaunted by this disaster, he gathered around him another band of 30 men, and after a long search discovered a secure route, which conducted him eventually to the Sacramento in the spring of 1849. He now determined to settle in California, where in 1847 he had bought the Mariposas estate, a very large tract of land, containing rich gold mines. His title to this estate was contested, but after a long litigation it was decided in his favour in 1855 by the supreme court of the United States. In 1849 he received from President Taylor the appointment of commissioner to run the boundary line between the United States and Mexico. Regarding this appointment as intended to signify Gen. Taylor's disapproval of

the court-martial which had dismissed him from the army, he accepted it to show his sense of the value of the good opinion of that distinguished soldier. The legislature of California, which met in Dec. 1849, elected him on the first ballot one of the two senators to represent the new state in the senate of the United States. He consequently resigned his commissionership, and departed at once for Washington. * * He voted against Mr. Seward's amendment providing for the abolition of slavery in the district of Columbia, which, however, only received five votes; he voted against an amendment providing that if a free person in the district of Columbia should induce a slave to run away, or should harbour a fugitive slave, he should be imprisoned in the penitentiary five years; he voted for the bill suppressing the slave trade in the district; he also voted against an amendment authorizing the corporations of the district to prohibit free negroes within their limits. Fremont returned to California in the first steamer that sailed after the adjournment of Congress; he was prevented from returning to Washington next session by a severe attack of fever contracted upon the isthmus. In the state election of 1851, in California, the party which had opposed the introduction of slavery, and had placed the proviso against it in the state constitution, was defeated. As Fremont was one of the leaders of this party, he failed of re-election to the senate, after 142 ballotings in the state legislature. The next two years he devoted to his private affairs, and visited Europe in 1852, where he spent a year, and was received with distinction by many eminent men of letters and of science. In 1850, while he was in the senate, Baron Humboldt, on behalf of the King of Prussia, had sent him 'the great golden medal for progress in the sciences.' At the same time the Geographical Society of Berlin elected him an honorary member. A few months earlier the Royal Geographical Society of London had awarded him the 'founder's medal' for his 'pre-eminent services in promoting the cause of geographical science.' While in Europe he learned that Congress had made an appropriation for the survey of three routes from the Mississippi valley to the Pacific. He immediately returned to the United States for the purpose of fitting out a fifth expedition on his own account to complete the survey of the route he had taken on his fourth expedition. He left Paris in June, 1853, and in September was already on his march across the continent. The result of this fifth expedition was satisfactory. He found passes through the mountains on the line of lat. 38° and 39° N., and reached California in safety after enduring great hardships. For fifty days his party lived on horseflesh, and for forty-eight hours at a time were without food of any kind. In the spring of 1855 Fremont with his family took up his residence in New York, for the purpose of preparing for publication the narrative of his last expedition. His name now began to be mentioned in connexion with the Presidency by those who were combining to act against the democratic party on the basis of opposition to the extension of slavery. In April, 1856, he was invited to attend a meeting in New York of those who opposed the Kansas policy of President Pierce. In his letter of reply he said: 'I heartily concur in all movements which have for their object to repair the mischiefs arising from the violation of good faith in the repeal of the Missouri compromise. I am opposed to slavery in the abstract and upon principle, sustained and made habitual by long-settled convictions. While I feel inflexible in the belief that it ought not to be interfered with where it exists, under the shield of state sovereignty, I am as inflexibly opposed to its extension on this continent beyond its present limits.' The republican national convention, which met at Philadelphia, June 17, 1856, deeming this letter satisfactory, nominated Fremont for the Presidency by a vote of 359 to 196 for John McLean, on an informal ballot. On the first formal ballot Fremont was unanimously nominated. He accepted the nomination in a letter dated July 8, 1856, in which he expressed himself strongly against the extension of slavery and in favour of free labour. A few days after the Philadelphia convention adjourned, a national American convention

at New York also nominated Fremont for the Presidency. He accepted their support in a letter dated June 30, in which he referred them for an exposition of his views to his forthcoming letter accepting the republican nomination. After a most spirited and exciting contest, the presidential election resulted in the choice of Mr. Buchanan by 174 electoral votes from 19 states, while Fremont received 114 votes from 11 states, including the 6 New England states, New York, Ohio, Michigan, Iowa, and Wisconsin. Maryland gave her 8 electoral votes for Mr. Fillmore. The popular vote for Fremont was 1,341,514; for Buchanan, 1,838,232; for Fillmore, 884,707. In 1858 Mr. Fremont returned to California, where he has since resided."

The war found him ready; and a great command on the Mississippi places him in the foremost rank of American personages. His plans for a descent of that river to New Orleans have been the subject of much discussion; but still more important to the issues of war is the proclamation against slavery which he has recently put forth. General Fremont, at all events, knows what he is fighting for; and whatever the professional politicians may think about his wisdom in proclaiming it, the majority of men feel a certain relief from their uncertainties in his declarations, and the partisans of his views receive them with exuberant delight.

Lieutenant-General Sir Ralph Abercromby, K.B., 1793—1801: a Memoir. By his Son, James Lord Dunfermline. (Edinburgh, Edmonston & Douglas.)

Sir Ralph Abercromby may fairly be numbered amongst those men who, unfortunate in their lives, are fortunate in their deaths. A simple man, devoid of genius, but of inflexible honesty, stainless morality, high principle and lofty aim, he represented, in an eminent degree, those qualities which have contributed far more than splendid and subtle intellect to the formation of our national greatness. Of gentle, but not patrician, descent, from the commencement to the close of his life he found the ruling principle of his conduct in the motto proudly borne by his descendants, *Vive ut vivas*—Live so that you may live. He would do no service, however honourable it might be in the estimation of the world, which his conscience did not thoroughly approve; and he would wear no honour which was not, according to his chivalric standard, a well-earned acknowledgment of arduous labour and of sterling benefits conferred on the country he loved with patriotic ardour. Such a man finds many obstacles to rapid success. On the outbreak of the American war, the liberal principles inherited from his grandfather, Alexander Abercromby, of Tulliboddy, the representative of Clackmannan county in the Union Parliament, and a bitter foe of the Stuarts, caused him to disapprove the colonial policy of the ministry, and prevented him from taking an active part in the war that terminated in favour of the United States. Born in 1734, and gazetted to a cornetcy in the Dragoon Guards, he was debarred by conscientious scruples from active service, with the exception of a brief period when he acted as a subaltern officer under Prince Ferdinand of Brunswick, till 1793, when he took the command of a brigade in the campaign in Flanders, under the Duke of York. A man who could, from such motives, consent to wait for distinguished employment till he was nearly sixty, may be justly pointed to as an example of that independence and firmness which are the most valuable elements of the British character. But when he had been advanced to a position of prominent command, and had

entered on the eight years' career that terminated in glory, the genius of ill luck still seemed bent on accompanying him. It was his misfortune, until he was sent to the Mediterranean, either to participate in undertakings which he did not approve, and which were destined to meet ignominious conclusions, or to hold distasteful command, or to render services which subjected him to misconstruction, and almost to disgrace. In the campaign in Flanders, his chief distinction was won by his masterly management of a disastrous retreat, "the hideous details of which," to use the language of his son and biographer, "have been so often given to the public that it would be painful and superfluous to repeat them, and the more so as nothing new can be added." His command in the West Indies from 1795 to 1797, though it eminently conduced to the prestige and power of Great Britain, was so irksome and disagreeable that he begged to be released from its complicated duties. His command in Ireland, from 1797 to 1798, where his prudent energy roused against him a storm of obloquy, and earned for him the condemnation of Pitt, terminated in a resignation which was voluntary only in form. His expedition to Holland in 1799, opening with the brilliant success of the Helder, for which he alone was to be credited, terminated in a humiliation for which he was in no way responsible. In the following year his expedition to Cadiz, owing to circumstances over which he had no control, was another unfortunate failure. But the time had at length come when he was to achieve that highest glory of which he had always been ambitious, and in which his exertions were to find a proper end. In 1801, he took the command of the expedition sent to dispossess the French in Egypt, and died on board Lord Keith's flag-ship, the "Foudroyant," seven days after he was struck down by a spent ball, at the battle of Alexandria.

A commander meeting his death on the field of battle receives the fullest possible measure of that sympathy which generous natures feel for any man who expires in the discharge of his duty. If his eyes close on the defeat of his troops, the faults and misfortunes of the day are forgiven in consideration of his forfeited life. But when he dies in the arms of victory, he instantly becomes the object of his country's gratitude and the idol of its affection. He is the centre of the regret felt by survivors for the brave who have fallen; in the same way that, had he escaped the perils of the contest, he would have been the chief object of their acclamations. Nelson's cry was "A Peerage or Westminster Abbey!" A nation has its honours for the dead as well as its rewards for the living; and it was in the former that the services of Sir Ralph Abercromby, K.B., the hero of Alexandria, met their fitting recognition.

The motive which induced the late Lord Dunfermline, Sir Ralph Abercromby's third son, to construct the present Memoir of his distinguished father would have been a matter of conjecture, had the author not candidly avowed it in his introductory chapter. "So many lives," says his Lordship, "of those officers who distinguished themselves in the Army and Navy during the protracted war with France have been written, that it has repeatedly been remarked as an omission that no authoritative account of the character and services of Sir Ralph Abercromby had ever been given to the public." In this is to be found the author's object. He did not enter on his task, because the public required further information relative to Sir Ralph's services, for he had no particulars to give about them that had not for years been matter of history. His aim was simply to

render his father those biographic honours which so many of his illustrious contemporaries had received. Regarded in this light, as a tribute of filial love, the Memoir commands a degree of respect to which its purely literary merits and historic value by no means entitle it. It is brief, but tedious; meagre, and yet verbose. The narrative is cumbered with extracts from official correspondence, which, besides being in some places ungrammatical and in other places inexplicably involved, tell the reader nothing worthy of remembrance that he did not very well know before. But Lord Dunfermline's worst fault, as a biographer, is the diplomatic coldness of his style. He seems to have written under a nervous fear of entertaining his readers, and an excessive dread of treating his subject with vulgar familiarity; the consequence of his timidity being, that scenes, which ought to have been painted with the vigour and brightness of strong feeling, are washed in with a neutral tint of well-bred propriety.

The following passage is a fair specimen of the way in which his Lordship tells an anecdote:—

"An able and distinguished Scotch nobleman, who had taken a warm and prominent part in defence of the French Revolution, happened to come to Edinburgh, where he was deserted and avoided by most of his former acquaintances and friends. Sir Ralph, thinking that such intolerance was calculated to be very mischievous in its consequences, and that exclusion from society was not justified by differences of opinion on political subjects, marked his disapproval of this conduct by doing an act of courtesy to a nobleman with whom he had no previous acquaintance, and the object of which could not be mistaken under the circumstances in which it was tendered. The compliment was strongly felt, and always kindly remembered, by the individual to whom it was paid."

In the year 1773, Sir Ralph Abercromby was returned to Parliament by the county of Clackmannan, the interest of Sir Laurence Dundas turning the hotly-contested election in his favour. Using the standard of the present day, the reader may find it difficult to appreciate the conduct of the successful candidate, who disdained to vote against his principles to support Sir Laurence in the House of Commons, and yet could feel it incumbent on his honour that he should vote against his principles in Stirling county to support Sir Laurence's son.—

"Sir Laurence Dundas, who was at that time desirous of acquiring political power in Scotland, decided the contest by exercising his influence in favour of Sir Ralph, under the expectation that by so doing he became entitled to control the votes in Parliament of the candidate whom he supported. There was not the very slightest foundation for this expectation on the part of Sir Laurence; and, accordingly, Sir Ralph resented his interference, and a breach between them ensued. Although Sir Ralph resisted the assumed right of control, he did not forget the obligation which he owed to Sir Laurence for his support. He repaid it, by uniformly voting for the son of Sir Laurence in his repeated and severe contests for the county of Stirling, which were so close as to make a single vote of real value, and that at a time when there was no agreement in their political opinions, and when Sir Ralph was strongly urged by personal friends to take a different part."

The following story of Sir Ralph's conduct on his passage to the West Indies has been, with variations, told of many persons—amongst whom Jeremy Bentham is one:—

"The Glory, in which Sir Ralph sailed with Admiral Christian, kept at sea as long as possible, but was ultimately obliged, after a vain struggle of seven weeks, and after having been exposed to the very greatest danger, to return to port. This was of course most disappointing and disheartening to Sir Ralph, but Admiral Christian in writing to

a friend remarks, 'that his demeanour on this occasion was so calm and composed, that it was an example to be admired and followed by all who witnessed it.' The following anecdote is of no importance, but as it has been preserved by others as characteristic, I have inserted it. At a moment when the Glory was known to be in the most imminent danger, the confidential servant of Sir Ralph rushed into the cabin where he was with Admiral Christian, and addressing him said, 'We are going to be drowned.'—'Very well,' replied Sir Ralph, 'you go to bed.'"

On his return from the expedition to Holland, Sir Ralph was offered a peerage, but he declined it, being, as Lord Dunfermline asserts, "unwilling that his name should be permanently associated with a service of which the result had been so humiliating to the country." He displayed similar good feeling in declining a grant of Carib lands, in acknowledgment of his services in Holland:—

"A rumour having reached Sir Ralph that there was an intention to act on the suggestion of the King, with respect to a grant of Caribbean lands, he, on the 30th of November, 1799, addressed the following letter to Mr. Dundas:—'It has been hinted to me that in consideration of the services I may have done in the way of my profession I am to receive a grant of Caribbean lands, or a sum of money arising from them. If it is thought that I am deserving of any mark of public favour, it is from the public alone that I can receive it. I am not a beggar or a covetous person to ask private honours or private grants. Good God, sir, what opinion should I have of myself, were I to profit from the crimes and forfeitures of such a set of miscreants as the Caribs! I hope I shall trouble you no more on my services or their rewards. As long as my mind and body remain entire, I am bound to the service of my country.'"

The best written passage in the entire volume is that which describes the removal of Sir Ralph from the field of battle,—the care shown by the prostrate commander for the soldier's blanket giving a touch of true pathos to the scene:—

"It has never been ascertained at what precise time Sir Ralph received the wound which proved to be mortal. Colonel Abercromby states that his tent being at some distance from that of Sir Ralph, he did not see him when the first alarm of the French attack was given, and did not afterwards meet him until about break of day, in the rear of the reserve, when the principal attack had been made, and he then gave him orders relative to the movements of the troops. Colonel Abercromby did not afterwards see Sir Ralph until near the close of the action, when he found him in a small work about the centre of the line, where there were some guns firing on the enemy. Colonel Abercromby observed that the clothes of Sir Ralph were cut, and that there were marks of blood on them. He asked if he was wounded, and he answered 'Yes, by a spent ball, but it gives me no uneasiness,' but he added that he felt considerable pain in his breast and side from a blow he had received from a French dragoon who rode against him, when the cavalry broke in on the right. General Ludlow and Colonel Abercromby urged in the strongest manner that his wound should be examined, but he persevered in refusing, assigning as his reason, that there were many poor fellows worse wounded than he was, and that the surgeons were more usefully employed in attending to them. Sir Ralph dismounted, and walked about with apparent ease, watching earnestly the manoeuvres of the enemy. After an interval of half an hour, he complained of being very faint, and sat down on the ground, with his back to the parapet of the redoubt. General Ludlow then sent for one of the surgeons of the Guards, who were nearest at hand, but only a mate could be found. The mate looked at the wound, and found that the ball had entered the thigh, and Sir Ralph was again pressed to leave the field, but he would not do so until the firing had ceased, and the enemy had completely retired. As soon as the firing ceased, Sir Ralph

was removed to the tent of Colonel Abercromby, where the wound was again examined by a skillful surgeon of the Guards, who, not finding the ball where he expected, advised that Sir Ralph should be carried on board a ship, to which he at once assented, and he was conveyed on board the *Foudroyant*, Lord Keith's flag-ship. Sir Ralph was placed on a bier, and an officer who was present took a soldier's blanket, and was adjusting it under his head as a pillow, when Sir Ralph asked, 'What is that you are placing under my head?' The officer replied that it was only a soldier's blanket, on which Sir Ralph said, 'Only a soldier's blanket! a soldier's blanket is of great consequence, and you must send me the name of the soldier to whom it belongs, that it may be returned to him.' This was accordingly done, and the blanket was duly restored, Sir Ralph himself having given directions to that effect. Sir Ralph would not allow his son to accompany him to the beach, but frequently desired him to go to General Hutchinson, and to attend to his duty. Although the ball could not be extracted, sanguine hopes of recovery were entertained. On the 26th of March, the symptoms caused anxiety, but Sir Ralph rallied, and during the 27th he conversed with his son on various points connected with the public service with much composure, but in that night he became feverish, and at eleven o'clock on the night of the 28th of March he expired without pain or suffering."

Sir Ralph Abercromby, in his boyhood, was educated first at the Jacobite school at Alloa, and afterwards at Rugby, where he remained until eighteen years of age. He then became a student in the University of Edinburgh, and in 1754 went to Leipsic to prosecute the study of the Civil Law, in order that he might fit himself for the Scotch Bar, of which his father and his grandfather lived to become the oldest members. It was not till he returned from Leipsic that he relinquished the plan of entering the legal profession.

The Letters and Works of Lady Mary Wortley Montagu. Edited by Lord Wharcliffe. Third Edition, with Illustrative Notes and a New Memoir by W. Moy Thomas. Vol. II. (Bohn.)

Those only who shall read the Letters of Lady Mary Wortley Montagu by the light of Mr. Thomas's Memoir will be able to understand and do justice to her character. The genius of Pope gave currency and permanency to his malignant inventions; and yet they have been, we suspect, little more damaging than the misinterpretations of his commentators. Pope knew that blows struck at random would not hurt; but the commentators assume that he was always striking at random—beating the air,—leaving the public to interpret between him and his hate; and that one-half the vile women, real or imaginary, hinted at or described by Pope were meant for Lady M. W. Montagu. She was "Sappho," of course, although Pope had half-a-dozen Sapphos, and some of them before he had ever set eyes on Lady Mary. She was Phryne and Fufidia, and Artemisia and Flavia, and Chloe and Avidien's wife. According to the interpretation of one or other, she appears in four different characters in one disgraceful, but unacknowledged, poem. There "Lady Mary" opens the ball with "Lord Fanny." In the next page she figures as Fufidia; then she is directly named as "M—ue"; and lastly, she is the shameless "Lady M." Surely these could not all represent the same woman?—indeed, "Lady M." was understood by their contemporaries to have been Lady Mohun, and anecdotes were current and are recorded of the disgraceful fact to which Pope alluded, but to which, though very apt to our purpose, we cannot more particularly refer. A careful and critical examination of all the several characters

under which she is believed to have been depicted by Pope, and of the anecdotes of Walpole, would, we are convinced, prove the malignity of the poet, the blind guess-work of the commentators, and the credulous folly of the clever Horace. Pinkerton records that Walpole told him "Lady Wortley Montagu was a playfellow of mine when both were children: she was always a dirty little thing." Whether this was a dream of the one or the other is of little consequence; the anecdote made its impression on the public mind, and remained uncontradicted until some one pointed out its absurdity by directing attention to the fact, that Lady Mary was a married woman of twenty-seven or twenty-eight years of age when Horace Walpole was born. Then, again, we were told that she was the great friend of "Moll Skerriitt" the mistress of Sir Robert Walpole, and some of the Letters written during the embassy were addressed in Dallaway's edition "to Miss Skerriitt." Mr. Thomas has now shown that the letters have no address; that they were probably written to Miss Smith, the daughter of the Speaker, and that Lady Mary did not at that time even know Miss Skerriitt. So we have the well-known story of Lady Mary having visited the interior of the seraglio, at the critical moment when the Sultan, according to the custom popularly believed in, was about to select one of his wives by "throwing a handkerchief." The scandalous tale concludes with the significant fact that Lady Mary's son was born during her sojourn at Constantinople "in the spring of the year 1718." Curious indeed! and when we look at the portrait of that son in after-life, an engraving of which is prefixed to this volume, and observe his lofty turban, his flowing beard, and complete Turkish costume in which he delighted to appear, the scandal does seem to be but too probable. Unfortunately, however, Lady Mary never was and never could have been inside the seraglio; and the son was born in England three years before the mother set out on her travels. So again we have the story told by Malone, on the authority of Col. Erskine, of M. Rémond, with the addition that "Lady W. Montague had two children by the Frenchman alluded to, and this amour was the cause of her being separated from her husband." Now, as Mr. Thomas has shown by the letters of the "French wit" himself, she never saw him, except in the brief period of her passing through Paris on her way home with her husband from Constantinople in 1718, and again for a brief period in London in 1720, when the Frenchman, intent upon speculations in South Sea stock, complained that he had little reason to be satisfied with her, having found English ladies "incapable of friendship and of love." At all events, the French "wit" took his final departure for Paris in 1720, and Lady Mary lived with her husband for nearly twenty years afterwards.

Then we have Walpole's "obscure history," as he calls it, of the life she led when in Italy, to which we alluded in our former notice. The poor lady was suffering when she left England, and continued to suffer more or less for the rest of her life. Within two years of her residence in Italy the physicians twice despaired of her. They recommended her to try the waters of Lovere, and she was removed there at great risk. At that obscure place she partially recovered, and there she continued to reside for many years. Let us show, not in an "obscure history," founded on malicious reports, but in a veritable history given in a letter to her daughter, what was really her daily life:—

"I have been these six weeks, and still am, at my dairy-house which joins to my garden. I believe

I have already told you it is a long mile from the castle, which is situate in the midst of a very large village, once a considerable town, part of the walls still remaining, and has not vacant ground enough about it to make a garden, which is my greatest amusement, it being now troublesome to walk, or even to go in the chaise till the evening. I have fitted up in this farm-house a room for myself—that is to say, strewed the floor with rushes, covered the chimney with moss and branches, and adorned the room with basins of earthenware (which is made here to great perfection) filled with flowers, and put in some straw chairs, and a couch bed, which is my whole furniture. This spot of ground is so beautiful, I am afraid you will scarce credit the description, which, however, I can assure you, shall be very literal, without any embellishment from imagination. It is on a bank, forming a kind of peninsula, raised from the river Oglio fifty feet, to which you may descend by easy stairs cut in the turf, and either take the air on the river, which is as large as the Thames at Richmond, or by walking [in] an avenue two hundred yards on the side of it, you find a wood of a hundred acres, which was all ready out into walks and ridings when I took it. I have only added fifteen bowers in different views, with seats of turf. They were easily made, here being a large quantity of underwood, and a great number of wild vines, which twist to the top of the highest trees, and from which they make a very good sort of wine they call *brusco*. I am now writing to you in one of these arbours, which is so thickly shaded, the sun is not troublesome, even at noon. Another is on the side of the river, where I have made a camp kitchen, that I may take the fish, dress, and eat it immediately, and at the same time see the barks, which ascend or descend every day to or from Mantua, Guastalla, or Pont de Vie, all considerable towns. This little wood is carpeted, in their succeeding seasons, with violets and strawberries, inhabited by a nation of nightingales, and filled with game of all kinds, excepting deer and wild boar, the first being unknown here, and not being large enough for the other. * * Perhaps I shall succeed better in describing my manner of life, which is as regular as that of any monastery. I generally rise at six, and as soon as I have breakfasted, put myself at the head of my weeder [sic] women and work with them till nine. I then inspect my dairy, and take a turn among my poultry, which is a very large inquiry. I have, at present, two hundred chickens, besides turkeys, geese, ducks and peacocks. All things have hitherto prospered under my care; my bees and silkworms are doubled, and I am told that, without accidents, my capital will be so in two years' time. At eleven o'clock I retire to my books: I dare not indulge myself in that pleasure above an hour. At twelve I constantly dine, and sleep after dinner till about three. I then send for some of my old priests, and either play at piquet or whist, till 'tis cool enough to go out. One evening I walk in my wood, where I often sup, take the air on horseback the next, and go on the water the third. The fishery on this part of the river belongs to me; and my fisherman's little boat (where I have a green lustrating awning) serves me for a barge. He and his son are my rowers without any expense, he being very well paid by the profit of the fish, which I give him on condition of having every day one dish for my table. Here is plenty of every sort of fresh-water fish (excepting salmon); but we have a large trout so like it, that I, that have almost forgot the taste, do not distinguish it. We are both placed properly in regard to our different times of life: you amidst the fair, the gallant, and the gay; I in a retreat, where I enjoy every amusement that solitude can afford."

What a fine contrast this to the "reports" which so interested Walpole! The truth is, that this active, clever woman, who, on her return from Constantinople, introduced inoculation into England, could find useful occupation even in an obscure Italian village. Here is another picture of her Lovere life:—

"Experience has confirmed to me (what I always thought), that the pursuit of pleasure will be ever

attended with pain, and the study of ease be most certainly accompanied with pleasures. I have had this morning as much delight in a walk in the sun as ever I felt formerly in the crowded Mall, even when I imagined I had my share of the admiration of the place, which was generally soured before I slept by the informations of my female friends, who seldom failed to tell me, it was observed, I had showed an inch above my shoe-heels, or some other criticism of equal weight, which was construed affectation, and utterly destroyed all the satisfaction my vanity had given me. I have now no other but in my little housewifery, which is easily gratified in this country, where, by the help of my receipt-book, I make a very shining figure among my neighbours, by the introduction of custards, cheesecakes, and minced pies, which were entirely unknown to these parts, and are received with universal applause; and I have reason to believe will preserve my memory even to future ages, particularly by the art of butter-making, in which I have so improved them, that they now make as good as in any part of England."

Mr. Thomas has done something to clear up the mystery of Lady Mary's quarrel with Pope; he has a happy conjecture as to the cause: yet what a heap of untruths must be swept away if his simple explanation be received! See how the case stands on the authority of the biographers and commentators. First, Lady Mary told Lady Pomfret that "when she became much acquainted with the Duke of Wharton, Mr. Pope grew jealous, and that occasioned the breach between them." But Lady Mary's granddaughter, the delightful Lady Louisa Stuart, says, "Her own statement was this, that at some ill-chosen time when she least expected what romancers call a declaration, he made such passionate love to her, as in spite of her utmost endeavours to be angry and look grave provoked an immediate fit of laughter, from which moment he became her implacable enemy." The last of Pope's biographers calls this "declaration" the "one special cause"; but as we have shown there are two special causes, and Lady L. Stuart's was not published for a century or more after the event. But the curious inquirer is not yet able to decide; for Mr. Dallaway, the editor of Lady Mary's works, favoured with the Bute manuscripts, and presumptively informed of the family traditions, said, half a century before Lady L. Stuart published her anecdote, that the more immediate cause of quarrel was the publication of the 'Town Eclogues,' which had been when Lady Mary left England confidentially entrusted to Pope, yet somehow they got into the hands of Curll, who published them. Fortunately Dallaway's immediate cause of quarrel is disproved by the awkward fact, that three of the 'Town Eclogues' were published many months before Lady Mary left England. Spence assures us also, in Lady Mary's own words, that "she did not know the cause. I got a common friend to ask Mr. Pope why he had left off visiting me. He answered negligently that he went as often as he used to do. I then got Dr. Arbuthnot to ask him," and with no better success. Again, she confirms this: "I have got fifty or sixty of Mr. Pope's letters. You shall see what a God-dess he made of me in some of them, though he makes such a devil of me in his writings afterwards, without any reason that I know of." Other causes have been assigned, and were noticed in our review of the first volume.

A like critical examination is required of all the applied and inferred satires upon her. One, for example, and we could quote a dozen, is described as "undoubted," and the first open manifestation of the quarrel:—

—hapless, Monsieur much complains at Paris
Of wrongs from Dutchesses and Lady Maries.

Curll, we suspect, in his Key, first gave application to this passage with an "I believe," and

it is generally supposed that years after, Pope by a note (quarto, 1735) endeavoured to apply it to Lady M. W. Montagu. But Curll will not, we suppose, be quoted as an authority; and Pope's note, be it remembered, never appeared in any earlier or any subsequent edition published in his lifetime, although his hatred and malignity continued to his last hour. Was the application a mere afterthought? If not, if the Lady Mary from the first was intended to apply to Lady Mary W. Montagu, and is illustrated by Walpole's story of her having intrigued with and cheated Monsieur Rémond, who was the Dutchess, her partner both in the intrigue and in the fraud? This satire carries double, and yet we have no word of explanation from the commentators. We should like to ask those gentlemen whether there may not have been some other Lady Mary, of whom Monsieur—not one Frenchman, but hundreds—had reason to complain? What says Pope?—

The Crown of Poland, venal twice an age,
To just three millions stinted modest Gage;
But nobler scenes Maria's dreams unfold,
Hereditary realms and worlds of gold;
Congenial souls, whose life one avarice joins
And one fate buries in the Asturian mines.

The history of these people—more strange than a romance—we have not time to dwell on. They and their relations were expatriated Jacobites, and desperate and ruined gamblers in the Mississippi scheme. Maria was the Lady Mary Herbert, daughter of the titular Duke of Powis, sister to William, Duke of Powis; “modest Gage” was the brother of the mysterious “Mrs. W.”—Mrs. Weston—of Pope's Letters, and, some reports say, married to Lady Mary, others to her sister Lady Lucy. We doubt both stories; but perhaps he ought to have been married to Lady Mary. It was asserted by Lady Carrington's friends, that Lady Mary had involved her aunt to an extent hardly credible. She certainly had great influence over her; but we suspect that all the Powis family were gamblers, and we have seen a list of debts to an enormous amount, for which Lady Mary and Lady Carrington were jointly responsible. “Monsieur,” that is, all who suffered, complained and very naturally; and Pope complained too, and with as much reason. Pope's sister was one of the sufferers. Pope's brother-in-law died the very year the ‘Dunciad’ was published, and, no doubt, Pope had during his illness learnt that his sister had lent 1,100*l.* to Lady Carrington. This may be a mere speculation, but is sufficient to show that the question ought not to be decided without reference and without explanation.

Mr. Thomas has bestowed great attention and exercised a sound judgment in the chronological arrangement of the undated Letters. We know the difficulties of such labours under any circumstances; but in this instance they were made tenfold greater by the bold and blind tamperings of Dallaway. As a matter of course, we do not always agree with him, although when we differ it is with respect and hesitation. Thus, for example, we have doubts as to 1722 being the date of the letter of Sarah, Duchess of Marlborough. It is quite true that Dallaway has given what he calls a fac-simile of that letter with the date of “Sep.,” but we have little more faith in his fac-simile than in his editorial assertions. The Dutchess's writing is scarcely intelligible. The “Sep.,” “Nov.,” or “Dec.” would not generally be distinguishable, and Dallaway, who, to make his own reading of a letter clear, ventured to insert words in the text, would, having decided that the date was “Sep.,” have it made plainer by the copyist. Lady Mary could not, as assumed, have written to the Dutchess in September, 1722,

about the death of her son-in-law, the Earl of Sunderland, who died in April; the widowed Dutchess could not call that son-in-law, who was probably within eight or ten years as old as herself, “a valuable young man.” For these, and other reasons, it is obvious to us that the party referred to must have been the Dutchess's grandson, Robert Earl of Sunderland, who died in 1729. But he died in November, and, therefore, we suspect that the date should be “Nov.” or “Dec.”—very different in type, but easily mistaken in the hieroglyphics of the Dutchess. So in respect to the letter to her daughter dated March the 1st, which Mr. Thomas suggests should be 1755, we should say that the date must be 1754. Mr. Thomas has been misled by Dallaway, followed by Lord Wharnccliffe, who says in a note that Lord Coke died in 1755, whereas he died in May, 1753; and in a letter of the 23rd of June, 1755, on the death of the Earl of Drumlanrig, leaving a young widow, Lady Mary makes some reflections on the situation of young and rich widows, and concludes, “as I have already said of M. Cooke [Lady Mary Coke].” Dallaway, to fortify his own blundering, has actually transferred this reference from one letter to the other. This tampering we discovered by a comparison of the letters, as printed by Mr. Thomas from the originals, although the consequences do not appear to have struck him. No editor, indeed, can be sufficiently vigilant to escape from all such misleading influences.

As to Lady Mary's writings or works, as they are called, we are not satisfied, and perhaps never shall be. Mr. Thomas appears to have felt bound to introduce whatever had been produced in Lord Wharnccliffe's edition as written by Lady Mary, and this may have been necessary to satisfy the public. Thus he republishes the whole volume of letters which appeared in 1767, although he expresses an opinion as strong as our own that not a line in it was written by her. There are, too, among the poems many for which the authority is insufficient. That they were found among her papers in her handwriting proves little. Squibs and ballads and trifles were in her time commonly circulated in manuscript, and as commonly copied. Mr. Thomas, it appears, has never seen the volume the contents of which she is said to certify were all written by her. We warn him, forming our opinion from Lord Wharnccliffe's edition, that it cannot be confidently relied on.

NEW NOVELS.

Hills and Plains: a Very Old Story. 2 vols. (Smith, Elder & Co.)

HERE is “a perfect novelty” in the novel line, and a remarkably entertaining book into the bargain. Although these “hills and plains” are in India, there is no fear of the most inveterate novel-reader being bored by long descriptions of foreign scenery, or confounded by learned allusions to historical recollections, either ancient or modern. It only pretends to be just what it really is—a pure, unadulterated, gossipy novel, and, as such, valuable in these degenerate times, when the name of novel is so often used as a mere blind to ensnare the unwary reader into a theological discussion or a lesson on geography or history.

The plot of this story is slight, but one of daily occurrence in India, if not in the mother-country. A young man and a young woman both determine to marry as soon as they can, and settle on anything, or nothing, rather than remain a day longer than is absolutely necessary in single blessedness. They meet—take it for granted that they are in love—and are made

man and wife at the earliest opportunity. Of course, they become tired to death of each other at the end of a few weeks, especially the lady, who, on the plea of ill health, retires to the Hills for change of air and society, hoping to make a little recreation for herself by carrying on an old flirtation or two with which the fact of her marriage has slightly interfered. The poor husband remains on the Plains—very hot, very hard at work, very much in debt, and, in short, a victim to his wife's extravagance and his own folly. His subsequent illness, Flora's remorse (aided by the indifference of her old lover), and her final reformation, are prettily, and even touchingly, related, towards the end of the second volume. By far the most interesting characters in the book are the mother-in-law, Mrs. Ochter, and her three daughters (“spins” seems to be the correct term in Anglo-Indian language). Esther is a particularly pleasant heroine, and Capt. Stapleton, the hero *par excellence*, is quite worthy of her, in spite of the numerous faults which we are told he possesses, but which we forgive and forget very soon after making his acquaintance.

The picture of society in the Hills is, we dare vouch for it, a perfectly true one, and will be most interesting to those who have ever undergone the process themselves, or who have any relations or friends still residing in that quarter of the globe. Even to those who have no connexion with India, the book cannot fail to be amusing. We might venture to indulge in a hope that the Anglo-Indians are not quite so vulgar, and that their peculiar style of “slang” is a little less offensive than is here represented. The writer certainly possesses much skill and facility of writing, and withal a thorough knowledge of his subject.

As a specimen of his ability, we quote the description of the dowager Mrs. Ochter:—

“About three o'clock in the afternoon of a sunny day in March, Mrs. Ochter, laid on a sofa in one parlour, was sleeping the after-tiffin sleep of the just. Let us gaze for a moment on her recumbent form and rosy face, from which, sadly out of keeping, however, a middle-aged native female, plump as her mistress, but ever so much more wrinkled, is warding off curious flies. Mrs. Ochter must have been handsome once, for her features are still good; but whether from high living, or want of exercise, she looks rather apoplectic now, and so cannot disguise from our ears the horrible fact that she snores rather loudly. Her neatly-laced cap has slipped off, too, and reveals a white spot large as a five-shilling piece—which no mortal eye, except her ayah's, ever gazed upon—where hairs ought to have been; but it is not fair to inspect too closely, without due warning, the good madam whom it would be flattery to call middle-aged. Her daughters are in the next room, far from being sleepy; indeed, they are as noisy as young birds in a nest, and a great deal pleasanter to look at.”

But for a full-length portrait of the young ladies, we refer the inquisitive reader to the book itself.

Mabel's Cross. 2 vols. (Tinsley Brothers.)

‘Mabel's Cross’ is, apparently, the work of a very young lady of romantic disposition and Scottish origin. The scene is laid in a glen in the Highlands, full of chieftains, and lairds, and retainers, and where everybody is related to everybody else. There is a bull and a fire, very much like the general run of bulls and fires,—and there is a tiresome old Scotch aunt, who tells about her “forbears,” and “Auld Warld ditties,” and “puir laddies” and “bonnie lassies,”—and there is a dreadful Irishman, who carries a shillelagh, and is always getting into some scrape or other, and swearing that, “Och! then, be the blessed St.

Patrick, its afther doing something to the murdering villain he'll be"; and who makes himself quite as odious as an Irishman can do.

There does not appear to be any particular hero or heroine to this novel; but there are five or six young ladies, with five or six young gentlemen to match, who spend most of their time in meeting each other out walking, and carrying on little underhand flirtations, or in taking tours on the Continent in small detachments, accompanied, of course, by their respective parents. Their conversation is about as unlike anything in real life as can possibly be conceived by the most vivid imagination. Marion, the wit of the party, tries to ask, in a playful manner, if her cousin Alan has seen her brother coming up the glen. She accordingly exclaims:

"Up! up! Sir Alan, to the turret, and tell me what thy far-seeing eyes can discover. The shadow of Time's scythe strikes falsely if an hour has not sped since Angus, my laggard brother, with the Covenantish maidens from Falconbridge, should have entered the glen. The thirsty sun will have emptied the chalices of my favourite flowers before we reach the mountain side."

How Alan resisted the temptation of giving "the little maiden" a good box on the ear for talking such nonsense does not appear. But a still more trying scene ensues when the haughty young lady, Helen Clavering, encounters, somewhere in the neighbourhood of Avignon, some "Scottish kinsmen," who, happening to make some foolish and commonplace remark upon the fine weather and the beauty of the country, receive a severe lecture for their pains:—

"Helen looked up archly on hearing this panegyric of Capt. Forsythe, and said, 'Surely I have not heard aright! Can these be the sentiments of one of the sons of Scotia—one of Ossian's Children of the Mist? Oh! Capt. Forsythe, I would not have one of our friends in Glenfullagh hear so disloyal a speech.' Then, throwing back her head, and with arms uplifted, as if invoking some spirit of the air, she repeated, in a mock heroic tone, a supposed address to Fingal."

Which address must really have made the whole party feel so very hot and uncomfortable, that we spare our readers a repetition of it, only hoping that it is not the usual habit of Scotch young ladies to interrupt "the social meal" by such outbursts of enthusiasm (for this little interlude is supposed to take place at the breakfast-table, between the first and the second cups of tea).

We pass over the hard-hearted old laird who seriously forbids "his constant dove to mate with the fierce eagle of the cliff" and sternly declares that "the dark current which flows through the veins of the Menteiths, stained as it is with cruel wrongs to our persecuted ancestors, must never mingle with the purer stream of the race they have injured." What right any respectable elderly gentleman of the nineteenth century has to suppose that his daughter would be likely to attend to an injunction delivered in such insane language, we cannot guess. It seems to us that poor Lillian was perfectly justified in making her escape from so tiresome an old fool at the first opportunity that offered itself. What her sister Mabel's "cross" consisted of we have yet to discover, unless it signifies a secret attachment to a very High Church young clergyman, who grieves, in silence, over her Presbyterian principles, though he does not seem to have been at much pains to convert her. He keeps, however, a very sharp look-out upon all the young ladies of his own flock, and does the "pastor" with energy and goodwill, and the strictest impartiality. When, for instance, Marion tremblingly craves permission to attend a Highland pibroch meeting, Cyril Herbert looks very grave, and solemnly remarks that she

"seems to have forgotten that it will take place on the 1st of November, which being the Festival of All Saints there will be services in his church at Burnside." The fair penitent, however, has made up her party, and cannot get off her engagement, so she goes to the baggage meeting with a heavy heart, and the tolling of the church bells breaks with "an ominous sound upon her imagination." She meets with the just reward of her disobedience; for the party is attacked by a bull; Tim Doolan, the Irishman, gets drunk and runs away; and last, but not least, in her cup of bitterness, Marion herself is insulted by the clown of a travelling circus! She fancies he bears some resemblance to Tim Doolan, and incautiously proclaims this suspicion to her companion, Sir Mike Donovan. Upon which, the clown calls out, with all the audacity and ready wit of his vocation,—"Perhaps, Sir Knight, the young lady may prefer the counterfeit representation to the original; in which case I am quite willing to accept the change." Most refined and genteel clown! We hoped he was to have turned out to be a duke in disguise, and have married Marion, at least; but his well-meant attentions are very ill requited; for we read that "Marion coloured deeply, and, with a haughty glance at the painted varlet, took Mabel's arm, and walked rapidly away in another direction." Unfortunate clown! It does not appear that his talents for wit and humour were appreciated out of his own immediate circle. We do not even find, at the final wind-up of the story, that any London manager offered him an engagement at one of the minor theatres for the forthcoming pantomime, though surely such jests as the one recorded ought to have ensured the poor fellow a handsome weekly salary, and elicited roars of laughter from the gallery every evening. We are sorry for the "painted varlet," who appears to be by far the most lively character in the whole book.

Celtic Inscriptions on Gaulish and British Coins. By Beale Poste. (J. R. Smith.)

WE agree with Mr. Poste that "the readers of these observations will find a mention of ancient Britain in the following pages, which may be perhaps new to them," and we confess that we should ourselves be in the same boat with the supposed readers had it not been our lot to read Mr. Poste's earlier lucubrations. As it is, we have already had some experience of this gentleman's theories, and are not surprised that, in incorporating the substance of his former papers in the present volume, he has hardly, if at all, modified them. But for this, we might, in common with almost any one else who may take up this book, have admired the courage of a man who claims for the Celtic language or literature to be the sole exponent of the arts and antiquities of ancient Britain, and who, in the year of grace 1861, does not scruple to reproduce theories that might have suited the O'Conors and O'Briens of the last century, or the amusing writer of the 'Etruria Celtica.' It is not, indeed, possible, to argue with a man who is content to ignore nearly all that has been done by other scholars before him—who complacently tells us, speaking of Speed, Carte, Hume, Henry, Turner, Lingard, Lappenberg and Kemble, that "the labours of these as a general characteristic have been of little benefit; indeed, that they have frequently been of great disservice and detriment in giving the weight of their names to crude, unfounded and injudicious, though perhaps fashionable, theories of the day," and who, dealing with one of the most hypothetical of his own suggestions, coolly adds, "that he is

well convinced that no other explanation of it will ever be given worthy of the least attention" (p. 40).—adding, too, that in his opinion the late Archdeacon Williams was "one of the illuminati in the literature of the last half-century!"

To attempt to convince this writer, or any of his followers (if indeed there should be any), is, we feel, a hopeless task, but, for the honour of the study of Numismatics (which would indeed be imperilled were such a work to pass by unnoticed), we shall proceed to point out some of the most salient errors. Were we to do so fully, it would be requisite to take page by page of this volume, for there is scarcely any one that does not contain some statement or some theory wholly at variance with the knowledge of the practised numismatist.

To begin with the Gaulish coins and inscriptions, we beg to express our entire dissent from such translations as *Arivos Santonos* ("Arivos the Santon"), *Atisios Remos* ("Atisios the Remian"), and the like; and still more, to protest against the notion that, in such an inscription as *Sequano(tu)os* or *Contoutos*,—there is any latent reference (as Mr. Poste imagines) to *tios* or *tywys*—the word assumed by him to mean "chief" in ancient British. It would upset every principle of sound philology to suppose such a combination of Latin or Greek and Celtic, even though it may be true that, in some cases, Celtic names with classical terminations are found on some of these early coins. In a somewhat similar manner, Mr. Poste adduces a well-known Gaulish coin with the legend *ATEULA*—and tells us, that it ought to read "AT VLAT," to mean, "the Devotee of Mars," the reverse *VLATOS*, being "the name of *VLAT* himself, that is, Mars, with the Greek termination *os* added," the fact being, that the proposed reading is to an experienced numismatist simply impossible. Mr. Poste adds a series of translations equally improbable, and for which we have no evidence but his "ipse dixit," such as *CINGETORIX* and *VERCINGETORIX* for "King" and "High King" respectively; *TASGETIOS* "the chief," *EPENOS* the "prince," &c. Of these, we can only say, that, if they should approve themselves to any Celtic scholars (not forgetting the late Archdeacon Williams, who, we know from our own experience, was credulous even for a Welshman), the latter must be much more ready to accept assertions without proof than are the bulk of numismatists.

As another instance we may add that, finding in Lelewel's '*Type Gaulois*' certain inscriptions on coins referring to Rouen, such as *SVTICOS RATUMACOS* and *OSVTICOS RATUMACOS*, Mr. Poste instantly concludes that *SVTICOS* must be the classical form of the Welsh *swyddog*, "a magistrate"; and, since the *o* in old Celtic forms the definite article, that the whole legend, *OSVTICOS RATUMACOS*, must mean "*The magistrate of Rotomagus*," i. e. Rouen!

When we turn to his account of British coins, we do not find his views more happy or more intelligible. Thus, what can we say of a writer who, speaking of Cunobeline, tells us that "he was very much devoted to Roman interests; Latinized so much that some of his legends might almost pass for Latin; indeed, various of them are only reclaimed for the Celtic by one or two words of the reverse"? If this be a true description, all we can say is, that the sooner numismatic studies be given up the better: for if the legends on the coins of Cunobeline be not wholly Latin, we are entirely at a loss to conceive what they can be. The fact is, that if any British coins can be found that are purely classical, not only in their workmanship and language, but also in the types exhibited upon them, they are those of Cunobeline. Not only

do we find in them such types as the Pegasus, the seated Sphinx, Victory slaying the Bull, Apollo seated with a Lyre, the Bull butting, &c., all of which at once recall the characteristics of the Imperial Roman coinage,—but even the more usual British devices, as the Boar, appear under a form manifestly Romanized, and exhibit Roman influences, if not the actual workmanship of Roman artists.

The real reason of Mr. Poste's Celtic ideas is, that he assumes a certain name, TASC, or TASC, or TASCIO, which occurs on many British coins, to be a Celtic word, with the further assumption that it means "Imperator" or "Ruler."

It is worth while to pause for a moment, and to see how he has arrived at such a strange conclusion. His argument, condensed, is somewhat as follows:—A series of coins read on the reverse TASC. F, or TASC. FIR (more or less contracted), while others read COM. F., and on the obverse some other names, as, for instance, CUNOBELINUS F. TASC FIR, he thinks, is doubtless a contraction for TASC. FIRBOLG or FIRCOBERTUS, the "Emperor of the Belgæ"; and so, in the same way, COM. F. he takes to mean the "Community of the Firbolg."

Now, in the first place, we have no authority whatever for any such title as FIRBOLG, though the name may possibly occur in some mythical Irish annals; and, secondly, the whole theory falls to the ground so far as numismatics are concerned, as the coin on which Mr. Poste relies for his hypothesis really reads FIL, and not FIR. More than that, COM. F. for COMMUNITAS FIRBOLG is simple nonsense. Even were it possible that the second word rightly represents the F. or FIR, it could only be rendered in Latin by COMMUNITAS BELGARUM; assuredly not by a barbarous compound of Latin and Celtic. In fact, unless a student came to the coins with a preconceived theory, which he was determined to maintain *à tort et à travers*, no one could fail to see that the whole legend of these coins, whether contracted or not, is purely Latin, CUNOBELINUS TASC. FIL. (or TASCIOVANI FIL., as later and more perfect coins determine the full legend to have been) being perfectly like the well-known and contemporary Roman legend AUGUSTUS. DIVI. FIL., &c. Last, not least, it may as well be remembered, that Cunobeline had nothing to do with the Belgæ, and never could have ruled over any of their tribes. If this be so—and that this is so really, we fearlessly appeal to all practised numismatists—all Mr. Poste's notions of the meaning of TASC, or TAX, or TASCIOVANUS in pure or Latinized Celtic, simply vanish from the scene—and we may dispense with the corroboration he alleges from such names as PRASUTAGUS, TAXIMAGULUS and the like; the first of which, by the way, depends entirely on another coin he has incorrectly read VRE-RCI, but which recent discoveries have shown to be VRE-BOD or VERBOD (the name probably of some now forgotten city). Nor indeed is this all the improbability attached to Mr. Poste's rendering of this coin. On its obverse occurs the word TASC, which he has already (as we have stated) determined to mean "Emperor." We have therefore a coin reading on one side PRASUTAGUS REX, &c., and on the other "IMPERATOR," an arrangement which, if genuine, there is no numismatist but Mr. Poste who would not call unique. We will only add here, as a specimen of Mr. Poste's method of dealing with language, that he actually supposes a coin lately found, and which reads TASCIOVANTIS, "to be a regular and proper participle of the present tense, and answering precisely to the *Imperantis* of the Latins." In other words, he imagines an unlikely Celtic root, to which he adds a possible Latin termi-

nation, and then as the whole word (according to his scholarlike notions) has become a Latin one, he declines it as if it were pure Latin! With some experience in the philological changes of more than one language, we can safely say, that we have met with nothing analogous to this, except in the barbarous jargon of Jersey, in which island compounded words were (probably are still) heard, consisting of English words with French endings. Whether such a system is likely to have been ever adopted upon any coins, of any people, we are content to leave our readers to judge for themselves.

Mr. Poste goes on to speak of certain sons of Cunobeline, who struck coins, which have, he says, come down to the present day. His sons were, he states, Adminius, Caractacus, Togodabnus and Belinus, of whom the last alone has left no numismatic records. Now, with regard to the first, there is literally no evidence to prove that a coin which reads, according to Mr. Poste, on the obv. AMMINUS, and on the rev. DUN—has anything to do with Adminius; and, with regard to the second, the whole hypothesis rests (as do so many other of Mr. Poste's suggestions) upon a blundered reading, long since rejected by every one but our author. The fact is, there are several coins reading EPP. or EPATI, which Mr. Poste persists in reading KEPATI, with a type probably derived from that of the coins of Gades in Spain,—that of Hercules with the lion's skin over his shoulders. Now where these folds cross under the chin of the hero, the enthusiasm of our author discerns a K; having found the K, he at once reads KEPATI, and assumes that this legend must contain the true form of the name of Caractacus; and it never seems to occur to him, that the son of the "Romanizing" Cunobeline was not very likely to use Greek letters on his money, if he struck any. We may add, that the "various symbols upon them, as bucrania, i.e. skulls of oxen, circles of dots, cases of sacrificial knives, double circles, serpents, &c.," so far from "upholding the nationality of the Britons and of the Druidical Religion," as Mr. Poste supposes, are for the most part creatures of his luxuriant imagination, derived from various adjuncts more or less degenerated, such as the hind legs of the horses, or the misplaced wheels of the Macedonian staters, to which, as is well enough known, the majority of both Gaulish and British coins may be ultimately traced back. In conclusion, we cannot forbear remarking that it is impossible to read three pages of this work without feeling that the writer, however zealously he may have pursued his researches, is really no numismatist, or acquainted with what may be called the alphabet or most elementary part of the science. What can we say of a writer who gravely speaks of "the Roman custom commenced by Julius Cæsar of exhibiting mere mortals *on the circulating medium" (p. 18), and who asserts, a little further on, that "Philip the Second of Macedon was the first monarch who introduced his name on any coinage"?—Surely Mr. Poste can scarcely possess the slenderest knowledge of the Greek coinage, if he really believes what his language would lead us to suppose. Again, when he speaks of the "British type inscribed QUANGETH, that is, QUANGES, or CANGI, an ancient state of the island, a reading which caused some difficulty a few years since," Mr. Poste seems quite unaware that the letters he reads as qv are nothing more than the prolonged legs of the horse, a usual type of the coins to which he refers, and that the real legend on this and similar specimens is written shortly ANTED, and on fuller and more perfect specimens ANTEDRIGV?

Mr. Poste will rank in future with the authors he so loves to quote, the O'Briens, O'Conors and O'Flahertys, and be looked up to as an authority by those who believe in the legends of Gildas, Nennius, or Geoffrey of Monmouth.

The Human Foot and the Human Hand. By G. M. Humphry, M.D. (Macmillan & Co.)

Those persons, if there be any, who only think of their feet as instruments for kicking, walking, and dancing, and of their hands as troublesome organs to be kept clean and from picking and stealing, will be interested in Dr. Humphry's labours. Indeed, those who would take any interest in the discussion just now going on about the relation of the gorilla to man, will find that the feet and hands present the most remarkable differences between ourselves and those anthropomorphous apes. The great distinctive differences between the feet of man and all lower animals, according to Dr. Humphry, are as follows:—1. In man the several parts are fitted and bound together in a compact firm manner, so as to combine strength and elasticity in the highest degree; in all other animals the foot is more or less sprawling where the toes are divided. 2. The toes of man are shorter than in any of the lower animals, in proportion to the foot; in the monkey the foot is all fingers, not having proper toes at all. Our feet are not intended for organs of prehension, a fact that shoemakers have taken too great advantage of, and prevented the toes from moving at all. If man was intended to be solidungulate, as shoemakers will have him, he would have been provided with natural hoofs, like an elephant or horse. 3. The size of the great toe. This is man's most distinguishing feature. It would puzzle Mr. Darwin to calculate the length of time it would take to develop the gorilla's thumb into a great toe; but as long as the beast presents this miserable apology for a great toe, and has an equally undeveloped heel-bone, so long will man remain at an unapproachable distance, and all idea of blood relationship must be given up. For, as Dr. Humphry remarks, this structure "of the foot is found to have a correspondence with the formation of the head," and may be taken to be an index of intellectual as well as of physical capacity.

Then this foot has its perfection of development. It is seen in the Greek statues. Compare those beautiful feet with Chinese feet, Egyptian feet, nay, even with modern English feet, and it will be seen how great a claim the foot has on our attention, if we would attain the perfection of human form. General disease of the body will produce distortion of the feet. But in nine cases out of ten where the foot is contorted and ugly, it arises from some injudicious management. Of course, the subject of shoes comes in for our author's consideration; and he agrees with Professor Meyer and all other sensible anatomists that the foot was never worse off than at the present day. Shoes should be made to fit the foot, but the present fashion is to make the foot fit the shoe; so that instead of having amongst us feet that could be compared with those of Greek statues, we have feet distorted and deformed. And this, too, amongst a people who laugh at the Chinese! Dr. Meyer's book has been translated into English, and we hope by this time is in the hands of every shoemaker in Great Britain. We do not recollect, however, whether it deals with heel-pieces, but as these inventions appear to be increasing in height, to prevent the dress, without diminishing its enormous extent, from drabbling in the

dirt, we add Dr. Humphry's musings on this point. The heel-piece, he says,—

"should not be high, because it makes the step less steady and secure, and at the same time shortens it, and impairs the action of the calf-muscle. A high heel-piece, moreover, renders the position of the foot upon the ground oblique, placing the fore part at a lower level than the heel; thus the weight is thrown too much in the direction of the toes, and they are driven forwards and cramped against the upper leather of the shoe. The high-heel of a boot, therefore, tends to aggravate the evils which are caused by the insufficient and ill-adjusted space which is allowed to the toes."

A good foot is not only characteristic of man and his intellectual faculties, but in each individual the foot receives an impress from the mind. To walk well, says the Professor, we must will well:—

"We have little difficulty in recognizing three chief classes among pedestrians. *First*, there are those who pay too much attention to the movements, who walk with a pompous strut, or a mincing gait, or affect some style or other. We are naturally very little inclined in favour of such persons; indeed, we have usually to make an effort not to be decidedly prejudiced against them. *Secondly*, there are those who pay too little attention to their movements, who do not seem to be sufficiently alive to the responsibility attaching to the possessors of so noble a structure as the human frame, and who do not give themselves the trouble to exert the powers of the glorious mechanism with which they are charged. They slouch, or dawdle, along in a listless lazy manner. Instinct tells us, and tells us rightly, to beware how we trust such persons with the conduct of our affairs, or with any office of responsibility. We feel that the lack of energy manifested in the guidance of their limbs is, too probably, a feature of character, which unfits them for the active duties of life; and we know that such men are not usually successful in their calling. *Thirdly*, there are those who show, by the firmness and precision of their step, and by the regularity in the succession of the movements by which the step is made, that they are conscious of the dignity of their species, of the responsibility attendant on that dignity, and of the respect due to themselves. Such men we feel are likely to pursue their avocations energetically and methodically, as well as with punctuality. Many points of character peep out in the way men walk. Our poet tells us that in one we may read—

rascal in the motions of his back
And scoundrel in his supple sliding knee.

Another has a halting, shuffling, undecided gait; while a third walks in a bold, determined, straightforward, erect and independent manner. One has a cautious, parsimonious step, as if sparing of shoe-leather, or afraid to trust the ground; he has, however, probably, trusted the funds with considerable investments. Some walk with long, pretentious, measured strides; others make short, quick, insignificant steps. Some, again, are hurried, fussy, noisy; while others glide along in a quiet, shrinking, unpretending, it may be timid, manner."

But from the Foot we turn to the Hand. One of the most important uses of the foot of man is that it sets the hand free. Amongst the lower animals, we find the fore feet often used independently. The kangaroo, the squirrel and the rat are familiar instances, and this becomes more decided amongst the monkeys; but the great distinction between man and the lower animals is that whilst his feet support his body, his hand is left free to be the great minister of his wants as an intellectual being. The hand, with its marvellous capacity of movement, is one of the most wonderful instruments in the animal world. Without it, it is difficult to imagine that even the mind of man could have been developed, so dependent is mind on body; but on the other hand, it is obvious that the very delicacy and refinement of this organ would have unfitted man for existence, without the direction of his mental

faculties. The structure of the hand gives our author the opportunity of explaining the nature of the skin, and the growth of hairs and nails. The structure of each finger is detailed, and the question of the reason for the ring being usually placed upon the fourth finger is raised. It is shown that the ring-finger is more or less protected by the other fingers, and it owes to this circumstance a comparative immunity from injury, as well probably as the privilege of being selected to bear the ring in matrimony. The left hand is chosen for a similar reason; a ring placed upon it being less likely to be damaged, than it would be upon the right hand. The ancients, however, are said to have selected it from a notion that the ring-finger is connected with the heart by means of some particular nerve or vessel which renders it more favourable for the reception and transmission of sympathetic impressions, the left hand being selected because it lies nearer the heart. But of course the anatomist finds no structure to account for this strange impression.

"Why do we shake hands? It is a very old-fashioned way of indicating friendship. Jehu said to Jehonadab, 'Is thine heart right as my heart is with thine heart? If it be, give me thine hand.' It is not merely an old-fashioned custom; it is a strictly natural one, and, as usual in such cases, we may find a physiological reason, if we will only take the pains to search for it. The animals cultivate friendship by the sense of touch, as well as by the senses of smell, hearing and sight; and for this purpose they employ the most sensitive parts of their bodies. They rub their noses together, or they lick one another with their tongues. Now, the hand is a part of the human body in which the sense of touch is highly developed; and, after the manner of the animals, we not only like to see and hear our friend (we do not usually smell him, though Isaac, when his eyes were dim, resorted to this sense as a means of recognition), we, also, touch him, and promote the kindly feelings by the contact and reciprocal pressure of the sensitive hands. Observe, too, how this principle is illustrated by another of our modes of greeting. When we wish to determine whether a substance be perfectly smooth and are not quite satisfied with the information conveyed by the fingers, we apply it to the lips and rub it gently upon them. We do so, because we know by experience that the sense of touch is more acutely developed in the lips than in the hands. Accordingly, when we wish to reciprocate the warmer feelings we are not content with the contact of the hands, and we bring the lips into the service. A shake-of-hands suffices for friendship, in undemonstrative England at least; but a kiss is the token of a more tender affection."

Then comes the question of right-handedness. Why do we not use our left hands? Our author states that he is not aware of any anatomical reason. He does not think the tendency to use the right hand is congenital, because some men are left-handed. Nevertheless he admits that there must be a greater predisposition, a sort of obliging tendency in the right hand, as it is the used hand of all nations. But why should not man use both hands alike? The answer is, that by the use of one hand we acquire a greater degree of skillfulness and dexterity than we should do if both hands were equally employed:—

"The exclusive use, for instance, of the right hand in writing, cutting, &c., gives it a greater expertness than either hand would have had if both of them had been accustomed to perform these offices. Hence, we usually find that persons who are left-handed are rather clumsy-fingered, because, although, in them, the left hand is used for many purposes which are commonly assigned to the right, yet the conventionalities of life interfere a good deal. The pen and the knife, for instance, are still wielded by the right hand. Accordingly such persons are neither truly right-handed nor truly left-handed; and they do not commonly

acquire so great skill in the use of either hand as do those whose natural tendency is more in harmony with custom."

Dr. Humphry is not a believer in Cheiromancy. He has not a word to say in favour of getting the fortune told by the look of the hand. We could have wished he had said a little more about palmistry; surely there was some foundation for it. But modern men of science throw over so unceremoniously all the beliefs of their ancestors, that they will not even stop to gather up the poetry and feeling that gathered round the dear old conceits, however false. Hear how he passes sentence on that half-black art which made our grandmothers tremble:—

"You will estimate the value of the science of Cheiromancy when you hear that equal furrows upon the lower joint of the thumb argue riches and possessions; but a line surrounding the middle joint portends hanging. The nails, also, come in for their share of attention: and we are informed that, when short, they imply goodness; when long and narrow, steadiness but dulness; when curved, rapacity. Black spots upon them are unlucky; white are fortunate. Even at the present day Gipsies practise the art when they can find sufficient credulity to encourage them."

We take leave of this little volume, convinced that, whoever will take the trouble to read it will not only be amused, but if not already learned in the mysteries of anatomy, will gain much profitable instruction.

The Journals of Frederick von Gentz—[*Tagebücher von Friedrich von Gentz*, mit einem vor und nach Wort von Varnhagen von Ense] (Leipzig, Brockhaus.)

THE literary remains of Varnhagen von Ense are a perfect Pandora's box of scandal, of which Miss Ludmilla Assing holds the key. We have had from it already the 'Correspondence of Alexander von Humboldt,' the perusal of which produced so painful a sensation; next came 'Letters to a Female Friend,' in which Varnhagen vented his spite on Mr. Carlyle; after this came a more harmless, but more stupid book in the shape of 'Correspondence between Rahel and David Veit,' suitable solely for German readers; while, last of all, we receive the volume we have now under consideration, which is not inferior in scandalous interest to any of its predecessors. But the Journals, though valuable to a considerable extent in a political sense, are even more so in a personal sense, because they enable us to appreciate the character of this confidant of emperors and princes, the right hand of Metternich, and one of the warmest promoters of the Holy Alliance.

The Journals are, to a certain extent, an *impromptu fait à loisir*. Although written day by day, in 1819, Gentz excerpted all the passages which he thought to possess any posthumous value, and burned the originals. The pettiness of detail in what is left surprises us; but, before all, the cynicism and self-complacency with which the author describes his intrigues with princesses and actresses, and more disgusting liaisons. From his own confessions, Gentz never refrained from any vice which gratified him, nor was he particular as to the sources whence he derived the means wherewith to gratify his passions. Judging from his own Journals, he was a poor creature; but he possessed the peculiar talent of being all things to all men. His versatility, which enabled him to change his stand-point at any moment, because he really cared for nothing, save himself—his intimate acquaintance with persons and things—and his skill in writing French, rendered him very well fitted for the part he played, ere Prince Metternich made

him his assistant. He was, in fact, a species of political private correspondent with various high personages, whom he informed of the state of affairs in Vienna, and who evinced their gratitude by paying him handsomely. This was especially the case with England. We find him receiving drafts from that country for 9,000 florins, and, again, the round sum of 500*l.*; while from Prince Czartoryski, among others, he received 500 ducats, and a ring worth 400 more. This is what Gentz calls his "unexpected income." At the same time he drew up manifestoes, when they were ordered and paid for, for the Swedish Government, the Viennese Cabinet, and for the banished Louis the Eighteenth. We cannot help thinking of the public writers in Spain, who sit in the street, ready to employ their pen for the first comer. But Gentz's customers were crowned heads, princes and ministers; while those of the *Ecrivista* are love-sick girls and poor workmen: and the payment followed the same ratio. At a later date he even began to believe in the principles he defended, which at the outset was not always the case, as his Journals sufficiently prove. Most amusing, too, is the opinion he forms of his own value. Thus, we find him writing in 1814:—"The political aspect is gloomy, owing to the mediocrity and incompetence of nearly all the actors; as I have nothing to reproach myself with, my confidential acquaintance with this lamentable state of things, and all the wretched creatures who govern the world, far from saddening me, delights me; and I enjoy the spectacle, as if it were being performed expressly for my amusement."

The important portion of this volume is the journal kept during 1809, and written entirely in French. It is published exactly as first written, under the influence of the terrible blows dealt upon Austria at that period. It is remarkable through the bitter reproaches the most loyal generals cast upon the Emperor Francis, the Archduke Charles, and other great personages. Public opinion has long been decided about the Archduke; he was a good commander, and well versed in the theory of war, but he wanted initiative, and was apt to be satisfied with minor successes. As we were not aware, however, that such views were entertained in Austria so far back as 1809, we purpose to give some illustrative extracts.

In 1802, Gentz was attached to the Austrian Cabinet as Councillor, with a salary of 4,000 florins. He sent the English Ministry regular reports of the state of affairs in Vienna; but the Count Cobenzl kept him so thoroughly in the dark that, in spite of his extensive political connexions, he reported the most peaceful prospects to London in 1805, even after Austria had combined with Russia to fight France, and the outbreak of hostilities was imminent. He complains bitterly that "England began to care much less for him, as it was evident that he was excluded from court secrets." The result was that Gentz proceeded to Dresden in 1806, and the silence of his court at his departure insulted him more than the most violent reproaches would have done. At the same time financial matters were in an unsatisfactory position; but, for all that, he was always in the highest circles, and fell madly in love with a Princess of Courland, "the last great passion that attached him to a woman." The year 1807 he spent at Prague with the princess, where he was a *personnage de consequence*, though he cannot explain why. In 1808, a large credit was opened for him in England, which freed him from all his cares, while Madame de Staël formed his acquaintance, and wrote to Vienna "that he was the first man in Germany."

It was not till 1809, however, that the Stadion Ministry, which had resolved on collecting its strength for a fresh contest with Napoleon, recalled Gentz to Vienna, when his first task was drawing up the manifesto of war. The French diary begins in June of that year, after the battles of Aspern and Essling. There was at that day a strong peace party, at the head of which stood Prince Joseph Lichtenstein, and they combined their efforts to overthrow Stadion. Although the latter had a powerful supporter in the Empress, who was enthusiastic for the continuance of the war, the peace party had hopes of success, because the Emperor listened to the advice of other persons besides his minister, and might in the long run be induced to follow it.

O'Donnell gave Gentz opportunity to inquire into the state of military affairs and the temper of the army. The report deserves quotation, as throwing a new light on the events of that memorable campaign:—

O'Donnell is convinced that, unless Heaven effects a miracle, Archduke Charles cannot save us. "He has throttled the empire—he has dug an abyss into which he will hurl himself." What else can you expect from a man who has no *fond*, no principles on which to work? He has no soul; he only knows the smaller passions—selfishness, false pride, and envy. Since he has been able to boast of beating Napoleon, he considers his work ended; and he will see the monarchy overthrown without feeling any great emotion in consequence. His behaviour in the early part of the campaign is explicable through a single fact. So soon as he knew that Bonaparte was with the army, he committed one error on the top of the other. We knew already that he was compelled to fight and win the battle of Aspern with a knife at his throat. But the strongest fact is, that, in the middle of the battle of May 22, he was attacked by such a weakness, that he issued the order to retreat. John Lichtenstein and other generals took the greatest trouble to dissuade him from his design; and as, most fortunately, at the very moment he gave the eventful order the enemy evidently began to give way, no more was heard of it. O'Donnell assures me of the accuracy of this anecdote, which the generals conceal among themselves like a crime.

Another remark of O'Donnell's is equally curious: he declared that the Archduke resembled one of those cocks whose beak is pressed on to the table, and a chalk mark drawn over it; the cock believes that it is fastened down by this chalk line: it flutters its wings, but imagines that it cannot remove its beak from the table. The island of Lobau was the Archduke's chalk mark. After the battle of Wagram it is Count Palffy, a confidant of the Empress and ardent member of the war party, from whom Gentz picks up crumbs of information:—

He imparted to me many details about the story of the last battle. At length—though truth and reason gain the victory too late—everybody is agreed as to the utter incompetency and disgraceful nothingness of Archduke Charles. The entire army yells at it. His scandalous inaction after the battle of Aspern, his extraordinary conduct up to the battle-day of Wagram, were not sufficient to enlighten the public: one trait more was required—the despondency he displayed at the first disaster of that battle. "From the moment when he commanded the retreat of the left wing," says Palffy, "the disorder became general and fearful. After the battle he sent Colloredo to the Emperor to inform him that he could not fight longer; that he needed a peace, or, at least, an armistice; and that he had only 35,000 men left on whom he could count." Instead of dismissing him on the spot, the Emperor proposed to meet him on the next day, when they would arrange the negotiations for an armistice. The Emperor set out on the 10th, and the armistice was concluded on the 12th.

We are really surprised to find that Varn-

hagen gave the sanction of his name to all this scandal about a truly brave man, who, as even Thiers allows, displayed extraordinary energy; for Varnhagen was himself present at the battles of Aspern and Wagram, and has described them in a masterly manner. He was witness at Aspern how the Archduke seized the flag of the Zach regiment, placed himself at the head of the wavering columns, and by his example led the troops to victory. At Wagram, again, it was owing to his exertions that, after the most murderous battle of modern times, the Austrian army left the field in such good order that from July to October it was an open question whether the war should not be continued. But we seek in vain a foot-note or remark drawing the reader's attention to these facts; and it is only a further proof, were it needed, that Varnhagen was an ultra-bilious man, who batted on malice. But to return to Gentz and his confessions.

The utter want of feeling on the part of the Emperor, the journalist goes on to say, was a phenomenon of at least the same importance as the incompetence of the Archduke. He watched the whole progress of the action from the top of a hill, and gazed on it as a spectacle which in no way affected him. When the battle began, he coldly said, "I feel assured that matters will go badly with the left wing, because Rosenberg is there." On September 23, Gentz received confidential communications from Count Stadion, which fill up the sketch of the Emperor's extraordinary weakness:—

It is impossible to reckon on this man for only a quarter of an hour: in order to be sure of him, you ought to be able to remain with him every minute of the twenty-four hours. It is not sufficient to hold the promise of his signature: notes ready to send off are frequently altered, when one or the other phrase-maker or intriguer interferes. He travels to Budweis, to carry out a change in the command of the army. Stadion arrives only a day after him: the Emperor says to him, at four in the afternoon, "All is arranged: the letters will be sent off at once." At nine o'clock Stadion returns and finds all the arrangements upset. The Emperor stammers a few excuses, and informs him that he has removed Prohaska, the chief of the staff chosen by Grüne, but that the rest will remain as they were. Even in reference to the present moment Stadion has said to me more than once: "I am perfectly well aware that the Emperor will desert us,—that he will slip away after a lost battle, and commend us to God." I remarked to him more than once how frightful the idea seemed to me of exposing ourselves to fresh accidents of war with such an utterly wretched being. He sighed, for what could he answer? A thousand times I was on the point of asking him the serious question, "How could you undertake a war to the death under the orders of a man of such a stamp as this Emperor?" but I had never the courage to express this too indelicate remark. And yet I consider this the chief accusation against Count Stadion. The levity with which he entered on so painful a career was the first cause of our ruin.

After the battle of Wagram, Gentz was for the settlement of a peace at any price. With delight he registers every remark about the incompetence of the leaders and the bad condition of the army, because it confirmed his views. He constantly strove to bring the leaders of the war party over to his ideas; and when the negotiations with Napoleon were suspended, because the latter demanded the surrender of Trieste, he was terribly angry at the exaggerated importance attached to that town. But the great obstacle to peace was the Empress. As she could not be a happy wife, owing to the state of her health and other reasons, she appeared to have formed the resolution of being a great woman and dying as a heroine

The Emperor was eventually pressed on all sides, and yielded; upon which Count Stadion handed in his resignation, and Metternich took the Ministry of Foreign Affairs. It is characteristic of his future policy, that we find him blaming his predecessor because he had tried to make the nation enthusiastic for the war. But the new minister was not on a bed of roses, if we may believe our reporter:—

The Emperor, surrounded either by his brothers (there are half-a-dozen of them here now for his birthday) or attending on his dying, oft-delirious wife, carried away by the exaltation of a person who believes she no longer belongs to this world, or listening to two thick heads, who accompany him everywhere—Wrbna (who has become colossally stupid) and General Kutschera—is only the shadow of a sovereign, while he still fancies he governs. The most perfect anarchy has taken the place of the government. And these wretches speak from time to time of the resumption of hostilities. Good God! they wish to carry on a war while they have 70,000 sick, whom they do not know how to cure; and entire regiments want rations; while every branch of the administration is sick with disorder and stagnation!

From all quarters Gentz collects evidence in support of his peaceful views. We have Radetzky talking of the temper of the army, anxious for an entire change of the dynasty, and the Prince of Hesse fully confirming him. At length Gentz was rendered happy. Bubna and Prince Lichtenstein were sent off to negotiate peace, which they speedily effected. Gentz gives some interesting details with reference to their mission, from which we will make the following extract, showing the great Napoleon's opinion of the Austrian army:—

Bubna had several interviews with Napoleon; some alone, others accompanied by Prince Lichtenstein. On one occasion Bonaparte was violent with the Prince; it was in the matter of the famous project to raze the walls of Vienna. The Prince said to him, "You will not do it, Sire!"—"Why not?" Napoleon objected.—"Because it would be opposed to your character." This annoyed Napoleon, and he answered, "My character remains as it always was; I do not alter, and allow nobody to lecture me." After this scene he was reconciled to Lichtenstein, and was never otherwise with Bubna. Once he told the latter the whole history of his life, from the siege of Toulon upwards. He talked with his wonted simplicity and openness about the events of the last campaign, and said, among other things, "My prominent advantage over you is being constantly on the offensive, in great things as in small, and at every moment. I act only on the defensive when I do not see you; as, for instance, at night: but so soon as I perceive you I assume the offensive again, form my plans, and compel you to fly before my movements." He assured him that he never formed a plan beforehand, but always at the moment when he surveyed the enemy's position and detected his probable designs. "Your army would be as good as mine if I commanded it; any other army that measured its strength with you, Russian, Prussian, &c., would assuredly be beaten." With reference to politics, he remarked, "I repeat that it was never my intention, nor will it be so, to injure you. But will you leave me at rest? I wish to believe that this peace will last five or six years; but then you will pick a quarrel again, unless everything alters with you. Why complain about the loss of a patch of land, which will belong to you again some day? All this can endure so long as I live. France cannot carry on a war beyond the Rhine. A Bonaparte could do it; but with me all will be over."

Gentz, the malicious, is careful to append a rider to the above. He considers that Napoleon was ever regarded too tragical; it would have been more beneficial to look at the other side of his character—the political Harlequin, the Cagliostro. Bonaparte was a man of the moment; but there was very little of

organized plan, bold system, or completeness of glance about him. The close of the Journal of 1809 is equally characteristic of the writer:—"Herewith ends one of the most memorable epochs of my life. Few persons know so well as I do the true, serious and lamentable history; I am destined to be some day its historiographer." We reach 1810, and that peace Gentz so earnestly desired; and yet we find the departure of Maria Louisa for her marriage with Napoleon causing him a deep melancholy, though the state of his health may have had something to do with it. He declares that the evening of the day on which the marriage was solemnized "was one of the saddest in his life, and he cried like a child; for the most gloomy thoughts filled his mind." In the same year he gives us a piquant characteristic of Metternich: "he believes in his good luck, and that is a prominent quality. He has fortune and winning manners; but he is light-minded, conceited, and devoted to pleasure. If his planet favour him, he can give the State a good direction; but a new crisis would overthrow him." But Gentz himself did not neglect his pleasures; for he finds a new deity, the Princess Solms, "the loveliest woman his eyes ever beheld," with whom, when her "brutal" husband withdrew, he spent some glorious weeks.

The two following years may be passed over unnoticed, to reach the Year of Liberation, in which Gentz was called upon to draw up the Austrian manifesto. Still he does not find much to praise in the great upheaving of nations; for a week before the battle of Leipzig he writes:—

On the 4th of October, Count Metternich paid a visit to Prague, where Murat's Neapolitan envoy and the Danish Count Bernstorff were awaiting him. He remained there till the 7th. I had many important conversations with him, especially on German affairs, whose future destiny was a difficult problem. The spirit aroused through the general opposition to French dominion in Germany had so grown, especially in Prussia, that the war of liberation was not unlike a war of liberty. This gave rise to serious considerations and apprehensions: and the idea that the overthrow of a despotism established on the revolution, might lead once again to a revolution instead of a restoration, was constantly alluded to by myself in those conversations.

In the same year, Gentz was appointed Court Councillor by the Emperor, and received a present of 2,000 florins. Now he was "stamped a great gentleman," he exclaims in delight; and his Journal overflows with his feelings. Curious enough, and characteristic of the man, is his rejoicing at the overthrow of Napoleon at Leipzig, "because he had drawn on himself his personal hatred." In the beginning of 1814, Gentz was recalled to Vienna, and was not sorry to escape the fatiguing and dangerous campaign; but he had other matters to attend to besides politics. "Through the arrival of the Duchess de Sagan the stay of Prince Metternich at Baden (by Vienna) became very stormy. My relations to the Prince had taken a serious turn, and I had often to pay dearly enough for the honour of being his confidant and intermediary."

About the Congress of Vienna, the entire proceedings of which Gentz noted down, but eventually burned, we learn but little from this volume. Still we find that Talleyrand made Gentz a present of 24,000 florins, and Castle-reagh gave him 6,000 ducats with the fairest promises for the future. It is not surprising, therefore, that Gentz vents all his malice on Prussia, and holds her guilty of fostering the war, which it is notorious was on the point of breaking out among the allies, when Napoleon's return from Elba restored a temporary amity. The Journal referring to the Congress closes with the following words, which show that it

was worth while fishing in troubled waters in those days:—

This year closed brilliantly. Since my visit to Baden my health has been excellent, better than it has been for years. My position in the world, even if it has not grown, has at any rate attained fresh lustre through the Congress and the presence of so many strangers of distinction. In the two last months I had, in addition to the sums my relations with Bucharest procured me, 48,000 florins of extraordinary revenue. My total incomes in the year 1814 amounted to at least 17,000 ducats. I paid many debts, improved my household and did my people many acts of kindness. 1815 began under tolerably favourable auspices for me; as regards public affairs, I see it is useless to fancy that they will ever fulfil the vain dreams in which enthusiasts indulge, and which I have eternally resigned. *Ergo sit felix et faustum!*

From 1815 to 1818 the Journals are missing, and the volume closes with that of 1819, during which year Gentz conducted the protocols at the Vienna Congress. From it we will only quote one remark, which he makes on December 14:—"Present at the last and most important sitting for the regulation of the 13th article of the Federal Act (the measures against the press and the universities), and played my part in one of the greatest and most worthy results of the deliberations of our age. A DAY MORE IMPORTANT THAN THAT OF LEIPZIG!"

OUR LIBRARY TABLE.

Footnotes from the Page of Nature. By the Rev. Hugh Macmillan. (Macmillan & Co.)—In this volume, in four chapters, of which one is dedicated to Mosses, a second to Lichens, a third to Conifers and the fourth to Fungi, the author gives a brilliant sketch of some of the lowest forms of the vegetable world. It does not claim to be a scientific treatise dealing "with particular orders and species," but simply a popular history of the uses, structural peculiarities, associations, and other interesting facts connected with the humblest forms of plant life. The book is therefore a work *de minimis*; it deals with things invisible to ordinary mortals, or visible only in their grosser forms. The problem he had to solve was how to make these *êtres de raison* interesting to the general reader. To do that successfully considerable descriptive power and a good deal of dexterity in blending the manifest with the imaginary are indispensable requisites, which we are happy to say Mr. Macmillan possesses. To a considerable scientific acquaintance with the microcosm before him, he adds the happy art of knowing how to select and condense, and fix the attention of the reader upon salient points, the luminous foci of natural history, leaving its darker recesses to those who have a taste to tread them. He is especially happy in dealing with those strange bodies called phytosoz, quasi-animals quasi-plants, born in the cell of a moss or a seaweed, but gliding about like some veritable animalcule, and forming the most marvellous of the marks that have yet been discovered among the great sub-classes of Acrogens and Thallogens. For what we know of these extraordinary productions we are indebted to the Achromatic Microscope, an instrument which few general readers possess, and still fewer can use. To understand its results they must therefore see with eyes not their own; and they can employ no better ones than those of the Rev. Hugh Macmillan, who writes well because he writes clearly and forcibly on a subject which he knows.

Rambles in Search of Ferns. *Rambles in Search of Mosses.* By Margaret Plues. (Houlston & Wright.)—These little books may guide beginners through the first difficulties of finding out and identifying the more common of the ferns and mosses. The illustrations are good enough to answer their purpose; the plants are described by compound English names, which are generally translations of their systematic ones; and the scientific information is relieved by sketches of scenery, by dialogues and conversations, by poetical

quotations appropriate and otherwise, and by theological platitudes tagged on here and there for no earthly purpose we can see except it be to eke out copy and please the *Evangelical Magazine*. The preacher who, finding he had still plenty of time before him, lugged an anecdote into his extempore prayer, had the merit of originality in impropriety; but there is impropriety or irreverence without originality,—there is, in fact, pious vulgarity, displayed when a collector of ferns, rejoicing over a full fernery, cries, “and the samples of this marvellous creation come into our hands because the Lord our God brings them to us.” The Rambles in search of Ferns and Mosses are to be followed by the publication of Rambles in search of Lichens, Seaweeds and Fungi, in which it may be hoped there will be found less divinity and more botany.

Linear Perspective Simplified. By J. Holt. (Holt).—A book of rudiments: we do not see in what the simplification consists.

Singular Properties of the Ellipsoid and Associated Surfaces of the Nth Degree. By the Rev. G. F. Childe. (Macmillan & Co.; Juta, Cape Town).—Most of our readers would not understand any point of this book, except that the author caught Prince Alfred at Cape Town, and got permission to dedicate. The author has worked out a number of general relations with care and ingenuity.

The Nautical Almanac for 1865. (Murray).—Four years in advance, as usual. Poor Franklin! did he or did he not run through the almanacs he took out with him? One Nautical Almanac is more like another than are any two volumes of any other series. In 1865 we learn that there will be (October 19) a partial eclipse of the sun, visible all over Great Britain, throughout which the sun will set before the eclipse is finished.

Of religious publications we have received:—*The Lex Evangelica; or, Essays for the Times, proving that Holy Scripture is the only Infallible Interpreter to Reason in search after Religious Truth; being a Reply to 'Essays and Reviews,'* by the Rev. W. S. Burnside (Hamilton).—*Twelve Obscure Texts of Scripture illustrated according to the Spiritual Sense,* by Mary C. Hume (Manwaring).—*Avas-I-Hind; or, a Voice from the Ganges; being a Solution of the True Source of Christianity,* by an Indian Officer (Manwaring).—*The Revelation, with a Short, Plain, Continuous Exposition,* by the Rev. S. Smith (Ridgway).—*Clerical Papers,* by One of Our Club (Parker).—*Some Modern Difficulties respecting the Facts of Nature and Revelation,* by the Rev. J. Moorhouse (Macmillan).—*The Doctrine of Atonement by the Son of God,* by H. Solly (Whitfield).—*Three Sermons, composed for Delivery at the Opening of a New Organ at St. Chrysostom's Church, Everton,* by the Rev. H. B. Wilson (Longman).—*A Farewell Sermon, preached in Westminster Abbey,* by the Rev. T. W. Weare (Parker).—*Papal Aggressions on the Realm of England resisted from the Introduction of Christianity to the Reformation,* by the Rev. R. Potter (Seeley).—*Prophecy Unfolded; or, Eternal Redemption: with Providential Agencies, the Second Advent of the Lord Jesus Christ, the Restoration of the Jews, &c.,* by J. Coleman (Bateman).—*A Crystal from Cloud-Land; or, Theology 'Made Easy,'* by META(A)AOFOS (Manwaring).—*Right and Might; or, the Bishops and Beggars of the Nineteenth Century* (Simpkin).—*A Letter to the Bishop of London on the Subject of the Present Religious Movement in Italy,* by the Rev. L. M. Hogg and T. P. Woodcock (Rivingtons).—*The Further Revision of the Liturgy, with reference to the Clergy, 'Essays and Reviews,' &c.* (Hamilton).—*The Messages of the Prince, and how they were received* (Parker).—*Amendments in the Book of Common Prayer, prepared by the Committee of the Liturgical Amendment Society (Ireland),* (Hamilton).—*Church Extension in Liverpool: Remarks on the Census of Liverpool,* by the Rev. A. Hume (Tinsling).—*and The Perfect Gift: a Poem, by One of the Crowd, addressed to the Readers of 'Essays and Reviews'* (Andrew).

LIST OF NEW BOOKS.

Bennister's Temples of the Hebrews, crown 8vo. 10s. 6d. cl.
Bristow's Glossary of Mineralogy, crown 8vo. 12s. cl.
Castlin's Life amongst the Indians, post 8vo. 6s. cl.
Circle of the Sciences, new edit. Vols. 8 and 9, cr. 8vo. each, 5s. cl.

County Society, 3 vols. post 8vo. 31s. 6d. cl.
Cunningham's Readings on New Test., James to Jude, fc. 8vo. 6s. cl.
Davidson's Precedents in Conveyancing, 2nd edit. Vol. 3, 2s. 10s. cl.
Dickens's Works, illust. 'Old Curiosity Shop,' Vol. 2, cr. 8vo. 7s. 6d.
Dobell's Lectures on Germs and Vestiges of Disease, 8vo. 6s. 6d. cl.
Dumas's Hist. Lib., 'Page of the Duke of Savoy,' fc. 8vo. 2s. bds.
Examination of what Catholics really believe, fc. 8vo. 1s. swd.
Examination Papers for Civil Service of India, July, 1861, fol. 2s. 6d.

What's the Amount? or, Expeditious Method to find it, 18mo. 1s.

THE GORILLA.

London, October 8, 1861.

PERMIT me to observe that a photograph does not always give the precise testimony required by him who uses it; it may tell more than was wanted: it may represent an object in a position which conveys an erroneous idea of the facts at issue: it may show a manipulation and not a natural structure. In the engraving of the chest of the Gorilla, in your last number, the ribs are shown not only in an unnatural position, but the photograph has also shown the wires by which they have been pulled and kept apart. Their true position, in the medium state of breathing, is shown in the well-articulated skeleton in the British Museum, from which Mr. Fenton's photograph was taken, which was published a few years ago. The ribs are near or far apart according to the respiratory movements, in one phase of which they might be near enough to be fractured by a ball striking obliquely at the curve where such fracture of contiguous ribs is shown. The position chosen for the photograph is such as to make the wound appear less toward the back of the chest than it really is; the thorax has been turned so far over as to bring the inner surface of the breast-bone into view. The engraving errs, moreover, in showing the fractures of the ribs on the left side, instead of on the right side, where the outlet wound in the skin is situated. But to those cognizant of the strange course of gunshot chest-wounds, described in the records of military surgery, and of the frequent discrepancy of the situation of the holes in the skin from the course taken by the ball, the place of the fracture, as erroneously shown in the engraving, purporting to be from a photograph, would not imply an impossibility of the ball having traversed the subcutaneous tissue some distance before tearing its way out. The true position, however, of the fractures, where the right ribs “bend outwards and forwards,” and the correspondence of the wounds in the tegumentary and bony walls of the chest of the great Gorilla, closely accord with the course of a gunshot such as I have described and believe to have occurred.

But to men of common sense, Dr. Gray's figure of the two places of injury in the skeleton of the Gorilla will be testimony favourable to M. Du Chaillu, however experts may differ in their scientific explanations of the precise course of the gunshot or slugs. In his original account M. Du Chaillu writes:—“Once more he paused, and, raising his head, began to roar and beat his breast. Just as he took another step towards us we fired, and down he tumbled, almost at our feet, upon his face, dead”—(‘Explorations,’ &c. p. 304). Interpellated at Manchester on this point, M. Du Chaillu stated:—“In the case of the one in the British Museum, which was killed by his man and himself, his gun was loaded with a bullet, and the man's contained several pieces of iron. One of the shots hit the animal in the neck, and the other in the chest”—(Report of the Discussion on M. Du

Chaillu's Paper read before the Geographical Section). I have recorded my reasons for believing that the ribs were fractured during the beast's lifetime, and by a force striking from within outwards. Dr. Gray rests his statement to the contrary upon an alleged “unanimous opinion of all medical and scientific men”; just as he invoked the general concurrence with him “of all sportsmen” in regard to the entry and exit shot-holes in the skin. But “*error latet in generalibus*.” One name of note in either category would have served him better; and such, I think, we should have had if he had been quotable. As regards the wound in the neck and occiput, might it not be asked before pointing the finger of scorn at the traveller,—“Did he and Gambo fire precisely together? At what distance did they stand apart? Was one shot a few seconds after the other? Could the Gorilla have moved its head after receiving the chest-wound?” My disposition is to place the balance of such possibilities to the credit of the narrator of the event. I am, however, no indiscriminate advocate of M. Du Chaillu, as some writers without discrimination have represented me to be. As the Naturalist having had the good fortune to receive for description all the previous evidences of the Gorilla that had reached this country, I felt most desirous to obtain information as to the habits of the animal. I could obtain from the Gaboon, previous to 1859, only the accounts derived by the missionary or trader from the natives. M. Du Chaillu's letter of June 13th, 1859, from the Gaboon, was the first intimation of a white man having penetrated to the haunts of the Gorilla, and having seen the living brute. R. B. Walker's letter to Peter Lund Simmonds, Esq., of May 3rd, 1859, testified, as I afterwards learnt, that Du Chaillu was “about the only European who had seen the Ngeena or Gorilla in its wild state, and had killed it himself.” I nevertheless tested carefully every statement in Du Chaillu's book respecting this animal with the physiological deductions afforded by its known structure; and those statements, Dr. Gray and Mr. Waterton will permit me to say, do stand that test.

My satisfaction in obtaining this additional and most valuable knowledge received, however, a rude shock by the avowal which almost bore an official character coming from an experienced colleague, that the skins of the Gorillas, Kooloo Kambas, &c. brought over by M. Du Chaillu had not undergone the usual European preservative operations in the forest, but had been brought to the coast by the blacks, and might there have been obtained by a man who had never penetrated into the interior. The state of preservation of the cuticle and hair in these skins was, however, plainly incompatible with their exposure to the influences of the hot and moist atmosphere of the Equatorial African forest, during the time requisite for their being so transported from the haunts of the Gorillas and Kooloo Kambas to the coast. It was compatible, according to my experience, only with the speedy application after the flaying of the animal, of that arsenical compound, which Europeans who penetrate these forests in quest of rare animals carry with them. The common test showed that the arsenical paste had been so applied to the skins; to this prompt application, the preservation of the hair and cuticle had been due, and my inference was that the European who had applied it, was the same whom a Gaboon trader had testified to have been the only one who had seen and slain a living Gorilla. I therefore gave M. Du Chaillu the benefit of this evidence of his veracity at the Anniversary Meeting of the Royal Geographical Society, under the conviction that false witness had been borne against him in regard to the manner and place of the preparation of his skins.

There was a second test of his truthfulness, and of the fact of M. Du Chaillu having been, as he describes, in the Gorilla forests; it was afforded by the skin of the young male Gorilla, which he states to have tied up with a “little light chain fastened round the neck” (p. 210). Now, it does not seem to me to be improbable that this young male should have been much less manageable and tameable than a younger and more infantile female Gorilla;—the difference of the age is shown not only by the size

but by the state of the dentition, described in my paper read at Manchester. Is it true that this young male was kept chained by the neck during the period described by M. Du Chaillu? If so, the skin and hair should exhibit marks of the chain. They do exhibit such marks unmistakably. I could multiply other instances, which have yielded to my mind the comfortable proof that Zoology has been enriched by observations made for the first time by an intelligent Naturalist on the habits of living Gorillas and Chimpanzees in their native woods.

When I listened to M. Du Chaillu's exposition of these habits before a crowded audience, first at the Royal Geographical Society and then before the Royal Institution in Albemarle Street, I was impressed with a conviction of his capability of noting down his observations in the vivid and impressive style in which these notes are incorporated in the book. But as to his merits as a geographical explorer I have offered no opinion, and as to his antecedents I know nothing. I feel bound, however, to testify that in all the business interviews I have had with M. Du Chaillu he has impressed me as being a frank, truthful, liberal-minded man, more desirous that the public should benefit by the rarities which he has brought to us from a deadly and dangerous country than as seeking any mere personal profit.

RICHARD OWEN.

SHAKESPEARE'S GARDEN.

The following letter to the Rev. G. Granville, Vicar of Stratford-on-Avon, is so interesting to the lovers of Shakespeare, that we have no hesitation whatever in placing it before our readers:—

"24, Essex Street, Strand, Sept. 13, 1861.

"Dear Sir,—I read in the *Athenæum* in the Spring of what you were doing for the Home of Shakespeare; of the trees which the Committee had already planted, and of what they hoped for. It was said, 'a fine fig-tree is climbing up the west wall and will give us green figs in time,' and it was asked, 'who will give to Shakespeare a hardy vine, one that will bear him the "purple grapes"?' This house is built upon part of the substructure of Essex House. The two lower storeys have the old thick walls. The garden is where the old terrace once was; twenty feet and more above the adjoining Temple Garden. Under it is a long lofty vault, and in it are two old vines. I do not pretend that they are as old as Elizabeth's time; but I have a fond hope that their ancestor's leaves gave grateful trellis shade, as one of them does now. Their roots are somewhere, no doubt; the old mortar in the vaulting must be very good to give such fruit. Now my family is so romantic as to believe that Shakespeare must have many a time walked up and down our bit of terrace; have sat at the end with my Lord Essex and Lord Southampton, admiring the moonlight on the river or jesting with 'Night' Templars over the parapet wall; must have drunk some sack in the cellar, and taken water at 'the stairs.' It is even believed that hardly at Stratford is there anything so little altered and so near to Shakespeare's footsteps as our paved garden. Hence my writing, that the year before last I reared a vine by bending down a shoot from the oldest one; that it is well-rooted now, and though this season and the last have been unfavourable it is in excellent health; and that, if it so please you and the other members of the Committee, the Autumn being come, I would have it taken up and carefully packed, and sent at the proper time for transplanting in its 'New Place.' I am not unused to vines; I think that very soon it would 'bear the purple grapes.'—I am, your obedient servant,

JOHN J. COLE."

Of course the vicar and the Birthplace Committee very gladly accept the appropriate present. We hope the plant may thrive.

NOTES ON THE HISTORY OF PERSPECTIVE. (No. 1.)

October 1, 1861.

I can find nothing on the history of Perspective which deserves the name. What there is amounts only to epitome: and even this in a vague and frequently inaccurate form. A few rough notes

may at once interest the geometer and the artist, and be of use to any one who meditates a larger undertaking. Without pretending to exhaust the subject, or even to mention every celebrated writing, I digest a few scraps which I have collected by actual examination of the works which, as the French say, make epoch, from the time of the Greeks to that of Brook Taylor. The artist will perhaps be surprised at the omission, and at the slightness of the mention, of works which are of celebrated fullness of description or multiplicity of examples. But I have nothing to do except with additions of new power.

Perspective, *perspectiva*, is an old name for optics. In this sense it was used, for the first time perhaps, by Roger Bacon, whose friend and pupil, John Peckham, Archbishop of Canterbury, did as much to spread the word as any one, by his work on optics, '*Perspectiva Communis*,' which lived till the invention of printing, and then went through many editions. In spite of doubts recently raised I continue of opinion that Bacon's "*John of London*" is no other than Peckham, and that he is also the "*Auctor Perspectivæ*" to whom Bacon refers in the '*Opus Tertium*.' If so, it is some proof of the notoriety which this work had attained, that Bacon distinguishes Peckham by reference to the optics, when really quoting one of his logical works, of which it is otherwise known there were several. Peckham, or Peccamus, is of that notoriety under which a name is transfigured. Baldi, while calling him *Betsan*, laughs at the ignorance of those who call him *Pisano*: and Schott calls him *Peckham*.

All the authors on *perspectiva*, optics, are set down in one place and another as writers on what we now mean by the word; Bacon, Peckham, Alhazen, Vitello, &c. Some historical epitomists have even given critical accounts of the draughtsmanship of these optical writers, praising or blaming their manner of performing processes on which they never cast a thought nor wrote a line. The earliest work on Perspective in catalogues is the '*De Sculpturâ*' of Pomponius Gauricus, Florence, 1504, in which *perspectiva* is a title-page promise. And this means optics, if anything; and the optics is about the eye, which, we are informed, may be large, small, middling, prominent, &c.; after which we are introduced to the nose. Those who made catalogues did not look into books; those who looked into books did not correctly say what books they used: and these two negatives do not make an affirmative, unless positive falsehood or absolute confusion have a right to the name.

We shall come to the time at which the word took its restricted meaning, and the manner in which the restriction gradually arose. In the meanwhile I will point out that the old sense lived in our language until after the Revolution. The small pocket Galilean telescope which we now call an opera-glass was the *perspective glass*, the *pocket perspective*, of Swift and Defoe, through which Gulliver watched the Blefuscians, and Robinson Crusoe the cannibals. And the word here does not mean a thing to spy through, but is a synonym of optic: the "*optic-glass*" would have done as well, and was, in fact, a tolerably common technical name. So that the readers of Milton should be aware that though "*Tuscan artist*" is undoubtedly poetry for Galileo, "*optic glass*" is merely prose for a telescope. Henceforward by *perspective* I mean nothing but the geometry of a picture: the art of drawing on a tablet what we should see through the tablet if it were transparent.

To be perfectly respectable, a science must trace up to some disputed passage of a classical author; perspective begins in Vitruvius, and with as much of difficulty as could be reasonably desired. In the preface to the seventh book Vitruvius gives an account, for contrast with himself, of Zoilus, of whom he himself cannot exactly tell whether he was crucified, or stoned, or burnt: but whichever it was it served him right. He, Vitruvius, is quite a different sort of person, who starts in a proper way from what his predecessors in architectural writing have done: for Agatharchus first painted a scene in perspective. The passage is as follows in the Bipont edition:—

"*Ignitur tales ingressus eorum habens, quos ad propositi*

mel rationes animadverti preparamus, inde sumendo progredi coepi. Namque primum Agatharchus Athenis, Æchylo docente tragicodiam, scenam fecit, et de ea commentarium reliquit. Ex eo moniti Democritus et Anaxagoras de eadem re scripserunt, quemadmodum oportet ad oculum oculorum radiorumque extensionem, certo loco centro constituto, ad lineas ratione naturali responderi; uti de incerta re certe imagines edificiorum in scenarum picturis redderent speciem, et quæ in directis planisque frontibus sint figuratæ, aliæ abscedentia, aliæ prominentia esse viderantur. Postea Silenus de symmetriis Doricorum edidit volumen . . ."

Here is a perfect description of a perspective design, in all that relates to the point of sight, or centre, to which all the picture lines run whose originals recede direct from the picture. Here is one *vanishing point*, to use another technical term, by knowledge of which Agatharchus drew a scene for the tragedy of Æschylus. The abruptness of the introduction does not seem to have troubled the critics. For myself, I have long been accustomed to consider Vitruvius as a sort of stocking with nothing but darns,—a text entirely composed of conjectural emendations. This, no doubt, is an error in extent; but it resembles the error of supposing the orbit of a planet to be an ellipse: either is a good first approximation, and small corrections can be applied as they are wanted. To conjecture the way back, it is a good plan for a person who has not access to manuscripts or old editions to procure an old translation. In the present passage, the translation made by Jan Martin for Henry II. of France (Paris, 1547, folio), one of the oldest of all, has, in the place of *Namque primum*, the words *en laquelle j'ay fait comme*; and Vitruvius, in his exhibition of his predecessors, is made to compare himself to the draughtsman, who gives a representation of objects in due relations of size and prominence. There seems more sense in this than in dashing into a list of writers on architecture by an account of the invention of scene perspective. Whether Jan Martin found sense, or made it, is a point which I leave to those who can consult unamended texts.

From all the accounts of tragedy in the time of Æschylus, it seems next to impossible that he could have had painted scenes, or any scenes at all. Accordingly, some scholars, noting that Aristotle expressly says that Sophocles was the first who used scenes, and that Horace says that Æschylus was the first who made a stage of planks or beams, have inferred that Vitruvius is speaking of the stage, and not of the scenes. The use of an elevated platform is not exactly a method of representing on a plane the far and near of buildings by lines converging to a point. But it seems there have been those who thought Vitruvius more likely to have meant this than to have named Æschylus when he ought to have named Sophocles. And yet those scholars must have known that their author was far from impeccable: for instance, he had just given Zoilus a palpably wrong date. It really is a question whether Vitruvius or his transcribers must answer for the invention of the astronomers Eudemon, Callistus, and Melo. The Bipont editors have only reinstated *Calippus*; whether the more recent editors have done as much for Eudemon and Melo I do not know.

The old text made Æschylus another designer, the teacher of Agatharchus; probably omitting the word *tragicodiam*. And this error, if it be one, got about: Barbaro, presently mentioned, spread it in Italy, Montucla in France, Cowley in England. Jan Martin says that Agatharchus acted *à la suasion d'Æschylus son précepteur*. Perhaps Vitruvius wrote *Æschylo suadente*, which became by corruption *docente*, by critical emendation *docente tragicodiam*, good technical Latin for exhibiting a tragedy. This again I must leave to those who can judge. My business is to show that Perspective has a proper dignity of origin, though certainly it cannot compete with the invention of the representation of the heavens on a globe. Few readers are now aware that this has been attributed to Nausicaa, who played at ball with her companions on the Phæacian beach when the washing was done, and awoke the shipwrecked Ulysses. Little could Homer imagine that a Coreyean lady who tried her hand at grammar would twist his words into an account of the invention of the sphere of the heavens; and that serious writers would hand

down the tale until a German professor, Weidler, would find it requisite to give it as part of the mythology of astronomical history. And Weidler has acquitted himself with such gravity that Montuola—to whom my copy of Weidler belonged—wrote the indignant word *solitæ* opposite to the entry in the index, *Nausicaa invenit sphaeram*. Some other writers have done the young lady a better turn by making Telemachus marry her,—the least he could do after her handsome behaviour to his father, and what any modern novel writer would have remembered; but sometimes *bonus dormitat Homerus*.

The above is not altogether digression, for it is necessary to take the sphere of the heavens away from the Phœcean princess; and if we give her Telemachus instead, it will be better for all parties. The representation of the sphere is the next great step in perspective; it was made by Hipparchus (B.C. 150) in what is now called the *stereographic projection*. This is the oldest picture on record of which the details are known. The eye is placed, on the sphere, opposite the lowest point of the hemisphere which is to be represented, and the picture plane is the circle which divides the two hemispheres. This is a very bad place for the eye; much too near to the picture: but there is full compensation in the two remarkable properties which this place of the eye exclusively possesses. First, all circles on the sphere are circles in the picture; secondly, the angle made by two circles on the sphere is the same as the angle made by their representations in the picture. This second property was unknown to Hipparchus; and no one of the long chain of writers on the planisphere detected it. Not that it was well away; the tremendous work of Clavius on the astrolabe, many of the demonstrations of which have such complex diagrams that the woodcuts are repeated three and even four times in one proposition, to save the student from utter despair, would have been cut down to a comparative trifle if Clavius had known the second property. Even when discovered, it excited so little remark that the name of the discoverer was allowed to become unknown. Delambre could trace it no further than to the works of a respectable but obscure author of a century and a half ago, Leadbetter by name. The late Mr. Galloway traced it to Halley, who says he received it from De Moivre, who is probably the discoverer, for he is very unlikely to have been routing old authors on a subject so little akin to his own pursuits, even supposing the property to have been thus obtainable. It is singular that, often as the stereographic meridians and parallels had been carefully laid down for the construction of maps, no good eye had ever taken hold of the fact that every meridian cuts the parallels at right angles on the map, the same as on the globe.

For a long time this was the only projection of the sphere in use, and so it got the name of *stereographic*, as if it were the only stereograph; and of the *planisphere*, as if it were the only way of representing a sphere on a plane. The first work on this projection is by Ptolemy, who does not expressly attribute the invention to Hipparchus, to whom, throughout his writings, he seems to give all he can. Other Greek writers give it to Hipparchus, who certainly must have had some mode of figuring the heavens, and of drawing deductions from his diagrams. The probable truth is, that Ptolemy found enough in the works of his predecessor to indicate the existence of this projection in the mind of the writer; and that he himself investigated the demonstrations and developments which are found in his own tract.

No two things could be more severed in thought than these two applications of one principle; to this day the scene-painters and the map-makers have little or no notion of their arts being in very close relation. But I cannot leave the Greek period without taking notice of a third perspective undertaking, the most celebrated of the three. The Conic Sections, which Apollonius (B.C. 200), and perhaps some of his predecessors, made a systematic branch of geometry, are nothing but perspective representations of a circle, in the widest sense. It would, perhaps, have been well for geometry if Apollonius had taken a hint from the

scene-painter, and had introduced the use of the vanishing point, or rather the inverse passage from the converging lines to their original parallels. In our century an immense body of geometry, of generality far exceeding that of the Greeks, has been constructed upon the perspective principle. So easy is this geometry of projections that the Tough-yarn family object to it; I mean the descendants of the schoolmaster mentioned by Walter Scott, who prided himself on having drawn up a memorial which it would take a week to understand. I should prefer, if I knew the name, to derive them from the gentleman who hesitated at paying his dentist, saying, "Sir! the last man pulled me about the room for a quarter of an hour, but you have done it at a jerk." More than thirty years ago, I showed a teacher from the country some models for teaching solid geometry, to avoid the confusion which arises from drawing solids on a plane. He asked me whether I was not afraid of making the subject too easy; I could but answer that, let it be as easy as it might, there was plenty of trouble ready up above. And this is the case with the new projective geometry, and with all other branches of thought: make a plaything of what was difficult, and you will find no more than a difficulty in what was impossible.

The reader will find a collection of places in which classical writers refer to perspective in the work of Dutens on the discoveries of the ancients, who refers to Plato, Pliny, Lucian, and Philostratus. But he has missed Heron, whom Stevius mentions as alluding to the subject. Dutens, strange to say, did not know Heron, and so has missed the steam-engine as an ancient discovery. For certainly Heron did describe a steam-engine, which would have ground corn at, perhaps, a shilling the quarter loaf.

I now leave the Greeks, and shall proceed, in the next number, to the earliest modern European history of the subject.

A. DE MORGAN.

POPULAR ASTRONOMY IN SIAM.

Bangkok, July 20, 1861.

I was sitting pondering in the verandah of my residence—it was the 27th of February, 1858—deeply depressed in my mind, for I had just returned from the sick-bed of one of the junior officers attached with me to the Consular Service, and there seemed no hope of his surviving many hours. It was full moon; the orb shining under all its tropical splendour rendered every boat floating on the river distinctly visible. An hour might have passed thus pensively when the stillness previously prevailing was broken, as if by preconcerted signal, from all parts of the town, far and near; the air was rent by the cry and shouting of the people; muskets and heavy guns were fired, and the bells in the Wats, or Buddhist temples, mixed their sonorous peals in the general stir. Crackers and squibs, which were let off in numerous directions, conveyed the idea of a well-maintained platoon fire. Is this an insurrection, a rebellion I thought I. An uproar like this I had never heard before since my sojourn in Bangkok. I summoned the servants of the house, and now I learned that the moon had just commenced to be eclipsed; and that, according to the belief of the Siamese, they thought that luminary attacked by a great dragon. For the purpose of assisting her in the contest, and to scare away the monster, these noises were made. I believe a similar idea prevails amongst the Chinese. Shortly before twelve o'clock that night Mr. F. breathed his last. It made a deep impression upon us who were engaged with him in the Consular duties, and, I believe, upon numerous others. One of our colleagues, attacked by the same disease, had already been sent to England a few weeks previously, as a chance for recovery, and at his departure Mr. F. enjoyed the best of health. Five months later I suffered from the same disease, and I was sent for recovery to Anhing, on the eastern bank of the Gulf of Siam, so famed for its salubrity that the King, who himself has a cottage there, calls it the Sanatorium for Europeans. Those were lonely days which I passed there; but I soon got strength, and, after a three weeks' sojourn, I considered myself well enough to

return to my duties in Bangkok. The pretty schooner, the Coral Queen, once the yacht of a noble Earl of authority in the Royal Yacht Squadron, came to convey me back to Bangkok. Her present master and owner had his lady on board, and several gentlemen availed themselves of the opportunity to pay a short visit to Anhing. Towards evening we got under way. It was annoying that we should have run on a sandbank at night, near the bar, and there we were lying until late in the following afternoon; the schooner bumping, and the sun shining in all its force upon us. At last we got off; the tide being with us, we reached the mouth of the Nieman speedily, and passed Packnam. The moon was full and bright, the evening lovely, and—what a wonder!—there were but few mosquitoes; and we sat on the quarter-deck, enjoying the cool air, after our sunning on the sandbank. We were now approaching a reach of the river, where there were some Wats and a Burmese village; and, from both banks of the river, such an uproar arose, caused by the beating of drums, sounding of conchs, the beating of tin pans and other noisy instruments, intermixed with shouting and the discharge of musketry, that the little company on the schooner's quarter-deck looked inquiringly at each other. This sudden change, where shortly previously all had been hushed—the ripple of the water on the vessel's bow in making her way, and our conversation, the only interruption—was certainly very marked; but it was soon explained,—a glance at the moon showed us that the shadow of the earth was creeping upon her. The thick fringe of trees along the bank of the river hid our schooner from the multitude assembled to assist the moon in her struggle. Our skipper of the Coral Queen intended to astonish them. Two large rockets rose simultaneously from her deck, exploding over the rabble. What a shout they set up! the noise of the ascending rockets and the bursting overhead was so sudden. Mayhap they imagined the dragon himself come down upon them. We could not help on board of the Coral Queen bursting out in loud laughter, and even assisted them in shouting. The tide was now against us, and the schooner had to come to anchor. I arrived next morning in Bangkok, almost entirely restored from the attack of the pernicious disease.

These reminiscences, as just related, have been called back to my memory by the eclipse of the sun of the 8th of July this year. As merely a partial eclipse, only about eight or nine digits lying under the shadow, it was very interesting, the atmosphere at Bangkok being clear. So accurate had been the calculations of the King of Siam's astrologers, that at the instant when the faint shadow or penumbra showed itself on the disk, and forthwith the bells of the Wats began to toll, the platoon-fire of the crackers commenced, as on the former occasion, intermixed with musketry and great guns. Equal in precision as the commencement was pronounced, all noise ceased when the shadow commenced to pass away.

It is certainly astonishing how correct the Siamese astronomers are in their calculations with regard to heavenly phenomena. Their method is crude. M. de La Loubere, the Envoy of Louis the Great to Siam, in 1687, brought, on his return to Paris, a Siamese manuscript with him referring to their calculations of the movements of the sun and moon, which Cassini, the celebrated Academician, explained. He remarks, that the method adopted is extraordinary. No tables are used, only the four arithmetical rules, namely, addition, subtraction, multiplication and division of certain numbers, of which neither their formation nor to what they relate becomes evident.

Attached to the king's household are a number of astrologers and prognosticators. Dr. Bradley, in his 'Bangkok Calendar for 1860,' tells us that P'ra hora tibawdee, with a salary of one hundred and twenty ticals (about 15*l.*) per annum; Koen chopt torama palat Krom, with forty ticals (5*l.*); and Koen teppa Yakawn palat Krom, with an equal stipend, are the superintending officers of that department. Their small salaries give another proof of the assertion, that the value of a prophet is underrated in his own country. In former reigns, when their prognostications turned out false, they

received a sound castigation. Whether that practice still exists I cannot tell.

Wonders do not cease. So closely upon the eclipse of the sun a comet makes its appearance! The King, to allay the fears of his subjects, issues a royal proclamation, a regular broad sheet (you receive herewith a copy, which the Rev. Samuel J. Smith, Baptist Missionary, has had the goodness to translate for me). It is highly curious, but much too long for insertion in the *Athenæum*. I shall quote merely the commencement and some of its particular points. It is headed, "A Royal Proclamation":—

"Be it known to all Government Servants, great and small, and all the inhabitants, Siamese and Chinese, that in the year Ra:ka (Cock), third of the Decade, there will be a comet as in the year Ma:më (Horse), tenth of the Decade. But an accurate statement as to the precise day when it will appear, and how long it will be visible, cannot yet be made. When the proclamation for the New Year was issued, there would have been a remark on that subject, but reliable detail was not in readiness. Events of this kind can be pre-announced. Some of them with great precision, as solar and lunar eclipses; others of them can be announced only as events that do, or are about to take place. Therefore, let not those who see them fear, nor let them say what may create disturbances."—"With reference to strange phenomena that have appeared in the heavens, if evils arise from them, two kinds have been noticed: 1st, scarcity of rain during the rainy season, or a superabundance of rain; 2ndly, varieties of diseases afflict men, elephants, horses, oxen and buffaloes. As when the comet at the close of the year Ra:ka (Cock), tenth of the Decade, made its appearance, there was a pestilence, causing at one time the death of many buffaloes; and in the rainy season of the year Ma:më (Horse), there was a drought; then, at the close of the year Ma:më and the commencement of the year Wok (Monkey), the Cholera raged."

In continuation of this admonition, the King advises his subjects to be industrious, in order to avoid scarcity; and should there be apprehensions of disease, as, for example, small-pox, they should hasten to the places appointed for vaccination. If the cholera makes its appearance, then they must accustom themselves to cleanliness and not retain their previous filthy habits. In order to purify the air, they should burn in their houses gum benjamin, and use camphor-water externally and internally.

Various other exhortations follow. Then he states:—"The King is respected by the masses as a protector. Persons in distress from litigation and other causes appeal to him for assistance, as children in difficulty appeal to their parents. Therefore the King is designated as one whom the people honour in the manner they do their parents, and he is affectionately disposed towards them, as in the same manner parents are truly and tenderly disposed towards their children. He therefore puts forth these suggestions that his subjects may protect their persons and lives, in anticipation that calamities might come, instances of which already there have been known."

The King continues his remonstrances, and amongst other remarks, he likewise refers to the superstitious belief that comets are the precursors of war; but he says:—"When wars take place, it is because men with each other create the causes. Comets do not incite men to war"—a maxim which I wish to press upon the minds of those who rule the destinies of the East and the West."

ROBERT H. SCHOMBURGK.

BAVARIAN LAW OF MARRIAGE.

Near Munich, Sept. 1861.

I went a few days ago to see a peasant's marriage in the village church. To the wedding guests I should suppose the ceremony in the church was the least interesting part of the day, but to me it offered greater attractions than the eating, drinking and dancing, which lasted from eight in the morning till eight at night, with only an hour's interval for the marriage service. Though I say the wedding guests, you must not suppose that the fact of their being invited frees them from expense:

they are rather hosts than guests, for the chief costs of the music and food have to be defrayed by their contributions. Every one is expected to give from nine to fourteen shillings as his share of the entertainment, and consequently on this occasion many rich peasants absented themselves for trivial reasons.

The little village church wore an air of unusual importance as the time drew near. Two violins climbed into the organ gallery, accompanied by a chorus. Soon after the wedding party appeared, the men in long coats almost touching the ground, and adorned with those white metal buttons particularly affected by the peasants, as they are often *Zwanzigers*, and enable men to wear their purses upon their coats—an improvement on Iago. The married women wore a black hat made of otter's fur, and costing about thirty-five shillings, in shape and look like a muff sewed up at one end. The unmarried had black peaked hats of the Vandyke order, with a gold cord twisted round. The bride appeared in married costume. Her dress consisted of a long black silk apron, bodice and sleeves in one piece, into which a handkerchief fitted at the top, so as to cover the shoulders and give most opportunity for colour. This is not a bride's usual dress, but its adoption is explained by reasons that unfortunately apply to a great number of Bavarian weddings. The Church does not allow brides who have children already to appear in the white raiment and the wreath that typify virgin innocence. I am told that a peasant who was found guilty of deceiving the church in this respect, and marrying in the virgin apparel to which she was not entitled, was fined about 20*l*.

But we are waiting in the church while the procession enters. The best man, with an air of great importance, which never deserts him from first to last, brings a basket holding two bottles of wine, and gives it to the sacristan. Then the pair come to the altar; the service is read, and the union is consummated by the priest binding their hands together with two lappets that hang from his shoulders. The mass now begins, with full orchestral accompaniment. The worthy parish priest seems rather puzzled by Gregorian requirements, and intones with an amount of original quavering, pronouncing the words first and then huddling in the notes, that would scarcely be accepted by amateurs of Catholic Church music. So long as instruments and singers keep together, the effect is creditable; but every now and then a bit of solo breaks in, and ends in a squeak, which has to be drowned by vigorous *ensemble*. After the mass, the sacristan brought out the two bottles of wine; and the whole wedding party passed round behind the altar in rotation, making an offering in a little plate as they went in, and drinking some of the wine when they came out. The bridegroom drank first, then the bride, then all the men, then all the women, and the priest placed the glass to their lips. On leaving the church, the newly-married couple distributed copper pieces among the children of the village, the bride giving to the girls, the bridegroom to the boys.

Such was the marriage ceremony that I witnessed; and I do not describe it merely as a national show, but rather for the purpose of alluding to the marriage laws of Bavaria, and the effect they have on the people. I have already referred casually to the difficulties put in the way of marriage; and many facts have come to my knowledge since I treated the subject. The question is intimately connected with the question of free trade, which has just been debated in the Bavarian Chambers, and ended in a victory of the Reactionary party. Allusions were made to the marriage law, and the proletariat of illegitimate children produced by it, by some of the speakers; and, in some of the writings on the free-trade question, I find similar references. One pamphleteer defends the restrictions on trade as being restrictions on marriage, and asks, what would become of towns if every one in them was allowed to marry? Another, on the opposite side, traces the process of a forbidden marriage, and shows that the only result is the birth of illegitimate children, and that the support of ille-

gitimate children, with the constantly recurring expenses of applying for permission to marry, costs far more than a legitimate marriage would have cost, besides giving no return whatever for the money. "While I am writing this," he says, "my servant girl, aged fifteen years, comes in dressed for a feast-day, and says that her father and mother are to be married to-day, so that she must henceforth be called by her father's name. Twelve times her father's application for licence to marry was rejected, and each time he had to pay fees for lawyers," &c. &c. I told you in a former letter of a couple who tried to get married in vain for fifteen years, and spent in that time two hundred florins on their applications. I may add on my own knowledge that of two servants I had this last winter, one was engaged eighteen years, the other seven, during which her lover married another woman for money, and returned to her on the death of his first wife. The mere application for permission is expensive. It has to be made in writing to the magistrate, has to be protocolled, and referred to a body of "trustees of the community"; the magistrate's answer is also in writing, and is sent by a messenger. It is quite intelligible that, when all this bureaucracy has to be set in motion for the mere purpose of deciding if two poor people shall be allowed to marry, the poor people's money must go to defray other expenses than those of maintaining their family.

E. W.

OUR WEEKLY GOSSIP.

THE Duke of Manchester, we hear, is engaged in preparing from his family papers a couple of volumes for the press, illustrative of the history of English society from Queen Elizabeth to Queen Anne. The work is expected for the coming season.

The late Duke of Buckingham left behind him a private diary, which diary is to be immediately published. No man in our time led a stranger life, or lived more behind the political scenes, than the late Duke. If he has entered truly what he saw and what he heard, his book must be curious in the highest degree.

Mr. Murray has in the press, among other novelties for the coming season, 'The Story of Lord Bacon's Life,' in which all the known materials for an estimate of the Great Philosopher will be brought together, and an answer will be made—by way of narrative—to the misrepresentations of the critics of his career.

Mr. Charles Darwin has prepared for publication a small work, containing his experience 'On the Fertilization of British Orchids by means of Insects.' It will form a sort of sequel to his work, the 'Origin of Species.'

The long-announced volumes on the Crimean War, by Mr. Kinglake, are, at length, in a forward state. The third and fourth volumes of Mr. Carlyle's 'Frederick the Great' are rapidly approaching completion. These works may be confidently expected during the coming year.

Capt. Burton, the traveller, is, we hear, writing an account of his experiences of Mormon life, under the title of 'The City of the Saints.'

Mr. H. F. Chorley has in the press a book of personal gossip, called, 'Twenty-Five Years of Musical Recollections.'

The Messrs. Longman, among many other novelties, have in the press or in preparation, Lives of 'Sir M. I. Brunel,' by Mr. R. Beamish, and of 'John Rogers,' by Mr. J. L. Chester,—'A Narrative of the China War of 1860,' by Lieut.-Col. Wolseley,—'The Chase of the Wild Deer in the Counties of Devon and Somerset,' by Mr. C. P. Collins,—'Volumes VIII. and IX. of Mr. Spedding's edition of Lord Bacon's works,—'Thebes, its Tombs and their Tenants,' by Mr. A. H. Rhind,—'Egypt's Place in Universal History,' a translation from the German of Baron Bunsen, by Mr. C. H. Cottrell,—and a 'History of Market Drayton,' by the Rev. J. R. Lee.

Messrs. Hurst & Blackett are preparing for the next season, besides two or three works which we have already named separately, 'The Life and Correspondence of Admiral Sir Charles Napier,

K.C.B., by Major-Gen. Napier, — 'The Life of the Rev. Edward Irving,' by Mrs. Oliphant, — 'Literary Women of France,' by Miss Kavanagh, — 'Travels in the Holy Land,' by Fredrika Bremer, translated by Mary Howitt, — 'Memoirs of Queen Hortense (mother of Napoleon the Third),' edited by Lascelles Wrexall, and 'Lights and Shadows of French Military Life,' by the Author of 'Flemish Interiors.'

We have to record a handsome concession on the part of the Spanish Government—the opening up of the great archives at Simancas to the deputies of our Master of the Rolls. The interest of the papers at Simancas cannot be overestimated. They are the documentary history of Spain, and of all the countries which have had political relations with Spain. From the reign of Henry the Eighth to the time of Cromwell they are of vast importance for our own history, and every student working in recent years upon those periods, has turned wistfully but unavailingly towards Simancas for the light which it, and it only, could afford. The priestly influence was against all search. At length, the embargo has been taken off. Mr. Brewer, of the Rolls, has just returned from Simancas, where it has been arranged that Mr. Bergenroth, a most competent English and Spanish scholar, shall calendar and abstract the documents relating to our history.

Mr. John Brougham's burlesque, 'Po-ca-hon-tas,' which created quite a furor in the United States, will be produced at the Princess's on Monday. It is founded on one of the most generally known stories associated with Indian life.

The next character undertaken by Mr. Edwin Booth at the Haymarket will be Sir Giles Overreach, in Massinger's 'A New Way to Pay Old Debts.'

Mr. Alfred Wigan will re-open the St. James's Theatre on Monday, the 14th inst.

There are so many erroneous ideas on the Continent as respects the space proposed to be devoted to the Fine Arts in the forthcoming Exhibition of 1862, especially in comparison with that in Paris in 1855, that it seems very desirable to correct them. The building for the Fine Arts in England is of a far more substantial character than that in the Allée Marbeuf. The one is of brick and iron, intended to be permanent; the other was of timber and plaster, and only temporary. On this account, if on no other, there will be much less space in England than in Paris. According to official documents, the Rez de Chaussée in Paris, devoted to oil-pictures only, contained 12,503 square metres of hanging space, or about 171,633 square feet, of which France, according to the account of 'Prince Napoleon's Visits,' retained 7,445 square metres or full three-fifths. The upper gallery at Paris contained about 3,100 square metres, of which France retained four-fifths. In England, the whole space devoted to the Fine Arts contains only 72,068 square feet of hanging space, less than half that in Paris; and this England equally divides with foreign nations, retaining only 36,034 square feet, or exactly one-half. England asked in Paris 12,000 square feet of wall space for paintings in oil and water-colour engravings and works of architecture; and, according to Mr. Redgrave's accurate report, occupied 10,490 square feet, being considerably less than one-sixteenth of the whole French space. France has been accorded 10,000 square feet of space for 1862, which is nearly one-seventh of the whole space for the Fine Arts. And when it is remembered that she has no school of water-colour painters to provide for, the proportion in her favour is still greater. In 1855, England took a small side gallery, whilst the large saloons were appropriated by France and other Continental nations. In 1862, all the space will be equally excellent, and equally divided, not only as to area, but as to the nature and structure of the galleries between England and the countries she has invited. Moreover, the United Kingdom is to be represented by the works of a hundred years, whilst in France the works were those of living artists.

Arthur Smith, the angler, died on Tuesday, at the early age of thirty-seven. Mr. Smith was the younger brother of Albert, and for many years

the business manager of the Mont Blanc Exhibition. To him the bulk of Mr. Albert Smith's property was left by will, and it is no great secret that Arthur made an exceedingly kind and liberal construction of the will as regards the other parties nearly concerned. His memory will be cherished by many friends.

A friend who has been interested by the recent extract in the *Athenæum* on the Crown Jewels, sends us the following Official Report on the Tower Fire in 1841. Many of our readers will be glad to read it in connexion with Prof. Tennant's admirable description of the Imperial Crown, already quoted in these columns:—

"To the Commissioners of Police, Whitehall Place.

"Gentlemen,—Having received information, at 11 o'clock P.M., on the 30th of October, that the Tower of London was on fire, I proceeded at once with a large body of police towards that fortress. On reaching Tower Hill at a quarter-past 11 o'clock at night, I perceived that the fire had gained a considerable ascendancy, and was rapidly increasing. On obtaining an entrance through the gates, I proceeded towards the small Armoury, which I found on fire, both on the right and left of the principal entrance, and the flames rapidly descending from the roof to the first and ground floors. I gave directions to the inspectors and constables under my charge to render every possible assistance in checking the fire and saving property, and I feel it but an act of justice to the inspectors and constables to say, that their exertions exceeded anything I have ever witnessed. At about half-past 11 o'clock at night I saw Superintendent M'Cleane, of the 'P' Division, who was assisting in removing arms, &c. Perceiving the flames were rapidly approaching the Jewel House, I expressed my deep anxiety to him for the safety of the valuable treasure deposited therein. Mr. Swift, who had charge of the Crown Jewels, came up an instant afterwards, on his way to the Jewel House; I suggested to him that the jewels ought to be at once removed, as the building where they were deposited was in danger. Mr. Swift replied, that he was thinking of removing them, and requested us to accompany him to the Jewel House, which we did. A Mr. Pulford, of the Croydon Railroad, was also there. On reaching the Jewel House, the outer door was opened by Mr. Swift. On entering, I perceived that the jewels could not be got at, there being a strong iron grating between us and those valuable treasures. Mr. Swift here gave directions to the warders to force the grating, in which we assisted, and after much difficulty an aperture was made sufficient to admit one person. I, by the desire of Mr. Swift, forced myself through, as it was very narrow; Mr. M'Cleane and Mr. Swift were standing outside the aperture, and Mr. M'Cleane held a candle through the bars to light me, and received, with Mr. Swift, the Regalia, as I handed it to them. The first that attracted my attention was the new crown in a glass case, and having removed the latter, I handed the crown to Mr. Swift. I then removed the case off a second crown, and handed it to the same gentleman; and all the other valuable articles, consisting of crowns, royal spurs, sceptres, bracelets, swords, salt-cellsars and a service of Communion-plate, which I passed through without difficulty to those gentlemen; but on reaching the last article, a silver font, I found the aperture not large enough, and in consequence, Mr. M'Cleane, Mr. Pulford and a warder of the Tower, by united efforts with a large crowbar, broke away another bar of the grating. While this was being effected, there were repeated cries for us to leave the Jewel House, as the fire was at our heels. Superintendent M'Cleane said, 'Pierse, don't stir till you have got the font.' I resolved not to move till I had secured it. It was carried out by the warder, assisted by Mr. M'Cleane and Mr. Pulford. As we emerged from the dark passage, the heat was so great as to shrink up my hat, and burn the tail of Mr. M'Cleane's coat, besides suffering on our faces from the intense heat. Afterwards, Mr. M'Cleane asked Mr. Swift if he knew the faces of the men who removed the jewelry to the Governor's house, and he replied that they were the warders, and I said, 'Then it is all right.' I immediately after-

wards accompanied Mr. Swift to the Governor's house, and there saw that the whole of the jewels and various articles, which I had previously handed out of the Jewel Room, were perfectly safe.

W. F. PIERSE, Superintendent."

—We are sorry to hear that no reward was ever bestowed on Mr. Pierse for his gallant behaviour.

Our Correspondent "Cantab," writing from Norton Malton, October 1, 1861, makes some additional remarks on the interesting church at Bridlington, in Yorkshire:—

"I was somewhat astonished to find myself accused of omissions in my remarks on the old Priory Church, at Bridlington. I intentionally omitted reference to many things, or should have alluded, amongst others, to the fine font, the new pulpit of wood and stone, of very chaste and elegant design, the large western perpendicular window partially filled with stained glass, and the new stained-glass east window, inserted within the last twelve months in the place of two of very mean and inefficient description. Of it, of course, no notice could be expected in the 'Guide-Book.' The pattern is of the Jesse order, the colours of the draperies being very rich, and the prevailing ground tone a delicate blue. With regard to the church collar, I think your Weekly Gossip intends it to be inferred that it was only used as an instrument of punishment for 'turbulent boys.' This, however, was not the case. The last time it did duty was about forty years ago; and it was then worn by a man who had been guilty of some misdemeanour. It is attached to the pillar at such a short distance from the floor of the nave that it would be impossible for the culprit to stand in an upright position. I may be wrong, but I am under the strong impression that the restoration work, executed a few years since under the direction of Mr. Scott, was chiefly, if not altogether, confined to the interior of the church. Certainly the roof of the north aisle was in such bad condition last year that the rain found its way through, and did serious injury to the organ. I may add that there is a very interesting drawing in the vestry, representing the exterior of the church, with its two fine western towers, &c., according to the original plan of its size and arrangement. The foundations of the walls which surrounded the church and priory buildings may still be traced in the fields. The site of the fishpond is also clearly discernible, and the archery butts still form two mounds in a field near the 'Applegarth,' the ground originally occupied by the priory orchard."

Dr. Pantaleone, so eminent as a man of science, and as a physician well known to the English at Rome, from which city he was expelled by the Papal Government early this year, is about to settle at Nice, where he will resume practice.

The recent death of Madame Rose-Chéri, occasioned by her natural devotion to her sick child, took all Paris completely by surprise. On Friday, the 20th ult., there was not the slightest symptoms of the approaching calamity, and on the following Sunday she had fallen a victim to one of the most fatal species of sore-throat. Her funeral, which took place on Tuesday, the 24th, was attended by an immense throng of celebrities in art and literature, the chief mourners being MM. E. Lemoine, Lesueur, and Victor Chéri. The religious offices were performed in the church at Passy, whence the train proceeded to the cemetery at Montmartre. Orations were spoken at the tomb by Baron Taylor, M. Léon Laya and M. Samson, who respectively represented the Association of Dramatic Artists, the Dramatic Authors' Society, and the Comédie Française. Madame Rose-Chéri was born at Étampes, on the 27th of October, 1824. Her parents were Baptiste Cizos and Sophie Juliette Garcin, both provincial artists, and she appeared on the stage at the early age of five. She came to Paris with a letter of recommendation addressed to M. Bayard, but though she was immediately engaged at the Gymnase, she held but an humble position until, on account of the sudden indisposition of Mdle. Nathalie, she played at a short notice the principal female character in 'Une Jeunesse Orageuse.' In less than a month her celebrity was established, and she remained almost to the day of her death the leading star of

the Gymnase. Her marriage with M. Montigny, director of that fashionable house, took place in 1847. She has left three children, the eldest of whom is six years of age.

Germany has lost her greatest historian, and the University of Heidelberg its brightest ornament. Prof. Friedrich Christoph Schlosser died on the morning of the 23rd of September. Born, in 1776, at Jever, in East Friesland (the liberating breath of the sea may be felt in all his works), he attained the rare old age of eighty-five years. A strong constitution enabled him to work with an energy and perseverance seldom to be met with, and to produce a series of historical works which, by their vast and solid learning, their copiousness, their sound judgment and their strictly moral stamp, have made his name an undying one in German literature. Schlosser has contributed largely to the diffusion of historical knowledge throughout Germany, and his influence on the reigning views taken of Church and State cannot be too highly appreciated. Last year he had the satisfaction of seeing completed the fourth edition of his famous History of the Eighteenth Century. His last work, a volume of Studies on his favourite author, Dante, appeared a few years ago.

Further discoveries of antique marbles have been made at Cyrene by the expedition under the command of Lieuts. Smith and Porcher, who have, as noticed in the *Athenæum*, already sent a valuable consignment of similar relics of Art to the British Museum. What the Trustees intend to do with these works it is difficult to surmise, the hideous sheds which have for some years disfigured the grand portico in Great Russell Street being almost filled with the beautiful sculptures Mr. Newton brought home. Some of the new marbles, which were in fragments, have within the last few days been put together and may now be seen, on application, at the British Museum. They consist of a splendid statue of Apollo, about seven feet high with the lyre in one hand, resting on a stump, round which circles a serpent. The head of the god, which, as is most common in statues of the period in which it was executed, is rather small, has a noble and dignified expression; the hair is clustered and knotted behind, crowned with laurel, which last is characteristically somewhat stalky, that is, the leaves are small in proportion to the size of the stalk sustaining them. The original surface of the whole work is in a wonderful state of preservation, being very clear and white and sharp. The one hand resting on the lyre, the other has been thrown up above the head, as in the statue of the Apollino; the figure is naked above the hips, where the drapery is gathered in free folds, to fall to the feet, which are sandalled, the sandals bearing a great heart-shaped shield or stud holding the thong between the toes. These extremities are rather large, and therefore a little out of proportion. The lyre is a good deal broken, and, as might be expected, imperfect; it is decorated with a row of small shields along the frame, such as the Amazons are usually represented as holding on their arms. There are holes in the bow for metal strings. On the stump by the side of the statue is a bow and quiver. A statue of Bacchus, rather smaller than the preceding, does not equal it in design or execution, being liney, and is decidedly later in date. This work is also naked to the hips, the robe, however, returning behind the back and drooping from one shoulder in front. It is perfect in preservation, with the exception of one arm lost and some very trifling injuries to the draperies; with the remaining arm the statue holds a bunch of grapes. A small statue of Jupiter Ammon, represented, as on the coins of Cyrene, horned, and, as such a unique example in sculpture, we believe. Amongst these works are also two other small statues, one certainly representing Juno: these are hardly so meritorious in design or execution as even the Bacchus. Far superior to these are two minor statues, and several finely wrought fragments, notably one of a leg, a portion of a draped male figure and six hands, all of which are worthy of attention. To us the most interesting of all these discovered re-

maines is a small but most admirably designed group of a nymph struggling with a lion; the boldness and vigour of the execution of this small work are also considerable. Two well carved figures of boars and a score of less important fragments make up the list of statues in this interesting addition to our national collection.

SCIENCE

The Forests and Gardens of South India. By Hugh Cleghorn, M.D., Conservator of Forests, Madras Presidency. (Allen & Co.)

THIS volume will be useful to the officers of the forest department of Indian administration, and to students of the botany of Asia. The Conservator of Forests compiled it from official papers not easily accessible, during the scanty leisure of a twelvemonth's furlough on sick certificate. Dr. Cleghorn has not aimed at producing a book for the general reader, his style being formal and his matter fragmentary; but he has published a work containing much information of a valuable kind, and in a convenient form, for all whom it may concern, or every one interested theoretically or practically in the botany of India.

The Bombay Government laid claim to the forests of the western coast for the first time in 1805. The Company's right of sovereignty was proclaimed in 1807; and commissioners were appointed to fix the boundaries of the forests. Ever since then the conservancy of the forests has occupied more or less of the attention of the rulers of India. The races destined to rule the other varieties of mankind hate waste, being frugal and calculating; and the British in India, whilst promoting clearings to enlarge the area of the food-bearing soil, witnessed with disapprobation the reckless ravages of the native contractors and traders, who for present gain were producing pernicious and permanent denudation. The earliest reports published were those of Dr. Wallich, the first of which, on the Salween forest north of Moulmein, appeared in 1827. Dr. Wallich laid the foundation of a system of conservancy; but his rules were too stringent to last. Green timber continued to be felled; no attention was paid to the renewal of the trees; large logs were sawn up into short lengths; and often the felled timbers were left lying in the forest until burnt by the periodical fires. It was not until 1846, that the Forest Department was organized under the superintendence of Dr. Gibson. Naturally enough, the European nations of the Continent dependant upon wood for fuel, the French and Germans especially, have surpassed the English, who burn coal, in the study of forestry. It is only of late years that the importance of regulating the clearing of the Indian forests has forced itself upon public attention. A Report presented to the British Association for the Advancement of Science, in 1851, by a committee, consisting of Dr. Forbes Royle, Col. Baird Smith, Col. R. Strachey and Dr. Cleghorn, declared that neither the government nor the community were deriving the advantages they ought to receive from the Indian forests. These forests were wantonly destroyed and wastefully neglected; and valuable products were perishing in their depths. The denudation of the mountain crests is in temperate climes a source of serious evils, as the droughts and floods of France demonstrate amply; but in tropical countries the evils are proportionally far more important and grave, for there the water supply depends upon the forests, and upon the water supply depends the supply of food. Drought and famine are identical in India; and forestry is one of the arts by which the rulers of it must combat and prevent the

famines which still periodically decimate its millions of improvident people.

Considering the vast importance of the subject, we could have wished that the leisure of Dr. Cleghorn had permitted him to produce a more condensed and readable compilation than the volume before us. "It is simply," as he says himself, "a compilation of papers, commencing with three annual reports which indicate the progress of the department, and which are followed by a memorandum on Kumari,—an injurious practice which destroys vast quantities of the most valuable timber,—and by other memoranda bearing more or less on the subject of Indian forests." A chart shows the position and extent of the most valuable forests growing within the Madras Presidency, of teak, sal and sandalwood. The book is enlivened and illustrated by thirteen lithographs, representing forest life and scenery. A bibliography of Indian botany occupies sixteen pages of Dr. Cleghorn's volume; but "the remaining portion of it, having been too late for the printer, will appear in the next Forest Report." The Conservator of Forests has brought together much valuable information on Indian woods, not merely the well-known teak, sal, sandal, chittagong, ebony, black, satin and amboyna, but paley fustic and iron wood,—woods of all kinds, useful and useless, with strange properties and stranger names. He submits for discussion projects for soldiers' gardens; and suggestions of sites for new sanatoriums among mountain ranges, still roamed by wild elephants. In a word, Dr. Cleghorn's book, if not a meritorious literary composition, is a valuable contribution to the business of governing and improving British India.

SOCIETIES.

ENTOMOLOGICAL.—Sept. 2.—J. W. Douglas, Esq., President, in the chair.—Mr. Scott exhibited some Hemiptera, of species not yet recorded as British, found in the New Forest and Monmouthshire.—Mr. Douglas exhibited a large Noctua, the *Orodema apicina* of Guénée, found alive on board a ship in the London Docks, lately arrived from Porto Rico. This species is remarkable from the fact, that its native country is yet unknown, the few examples yet captured having all been found in this country, in situations which admit of no doubt that they have been accidentally imported.—Mr. Stevens and Mr. Brittingham exhibited some fine Coleoptera from South Africa and Assam.—Mr. Stainton exhibited *Nonagria Elymi* received from Stettin, and a male example of *Laniocampa Querola*, from the Rev. J. O. Morris, remarkable for the abbreviated form of the antennae.—Mr. Bond exhibited *Litharia Camiola*, *Dianthacia capeophila*, and an apparently new species of Hodena, taken by Mr. Barritt near Dublin during the present summer.—Prof. Westwood made some observations on the adhesion of the anthers of flowers to the heads of bees and other insects, and its supposed effect in assisting the fecundating process by causing the pollen granules to be conveyed from one flower to another: he exhibited two large species of *Sphex* from North America; he had lately observed these insects in the Oxford Museum to have, not only their heads, but their bodies and limbs completely covered with pollen masses.—Mr. J. Walker communicated some 'Notes on the Habits of certain Diptera, and the Parasites infesting them,' with descriptions of those not hitherto described.

MEETING FOR THE ENSUING WEEK.
Mon. Entomological, &c.

FINE ARTS

STONE OF THE NEW PALACE.

The Commons Committee have made their Report, which is so far satisfactory that we find the evil much less extensive than is commonly imagined.

The remaining conclusions of the committee are of a purely negative order. The objects of inquiry were:—the extent and position of the decay;—the causes to which it is attributable, taking into consideration the composition of the stone and the influences exerted upon it by moisture and the acids of a London atmosphere;—the best means of preserving the stone from further injury, and the qualities of the stone to be recommended for future use in public buildings to be erected in London. The committee carefully inspected the whole of the building, examined many witnesses who had been connected with it since the commencement or concerned in the processes employed for arresting its decay, and suggesters of other remedies. To a sub-committee of scientific chemists was delegated an examination of other metropolitan buildings in which magnesian limestone has been employed. The committee invited, by advertisement, that suggestions apt to the inquiry should be made to it. With regard to the extent and position of the decay it is difficult to give an exact account, but it appears to have first made its appearance on the earliest-executed portions of the building, about seven years after their erection,—the evil is, however, by no means limited to time in this way, seeing that some portions of quite recent erection, in Old Palace Yard, are in as bad a condition. In the earlier works, those towards the river, the decay is more apparent in the lower portion of the building, and is there confined to zones, or general levels, which would seem to suggest that it depends as much upon position in the building as upon the use of any particular beds of stone. In the newest work the decay occurs in more varied positions, and under circumstances which it is exceedingly difficult to appreciate. Contrary to common expectations, the committee found, on examining the upper and more exposed portions of the building, but little comparative damage, but in places, as in some of the inner courts, less exposed to the thorough effects of the weather, it was considerable, the worst spot being a small archway leading to the Reporters' Gallery, near the entrance to Westminster Hall. It is concluded, therefore, that the stone is much more liable to decay in damp and sheltered situations, than in open ones. "In the east and north fronts the worst symptoms occur in the ashlar between the upper and lower mouldings of the plinths, and under the first cornice, where the exposure is inconsiderable; but the dampness, arising from the drip of the mouldings and from the action of capillary attraction, in places where projections hold the moisture, appears to exercise an important influence." It does not appear that the placing of the stones in their natural bed, or in the same relative position as they occupied in the quarry, as is commonly supposed, has any influence on the decay or preservation of the building, for stones which were found horizontally in the quarry have often been placed perpendicularly in the building, and used for purposes of the most delicate decoration, without any injurious result. For instance, the elaborately-carved shields of arms under the range of the first-floor windows;—the stones used for these, though universally placed perpendicularly to their natural position in the quarry, present, so far as the committee are aware, few, if any, symptoms of decay. It is not easy to estimate the extent of the decay on the whole surface; for so recent a building it is doubtless considerable, but the change of colour in the stone, and the "fretting out of the surface," which are suggested as the first symptoms, cause apprehension that the mischief is more extensive than is actually apparent. One of the witnesses, Mr. T. Quarm, clerk of the works in chief under Sir C. Barry, thought the decay, after proceeding to some depth in the stone, stopped of itself, after which an induration of the stone took place, and the evil "healed up," as he phrased it. The committee do not consider this opinion a satisfactory one, notwithstanding some few indications in its favour. The injury appears for the most part on the plain surfaces, those more elaborated, unless under projections, being little affected. At present the decay does not affect the stability of the building. The causes of the decay are thus far elucidated. It appears that the originally accepted Bolsover

stone was found not obtainable in sufficiently large blocks; recourse was therefore had to that from the quarries at Mansfield Woodhouse, presumed to be the source of the material employed in the perfectly-preserved Southwell Minster; from the same cause this also was abandoned, after a considerable quantity was employed, which it is decided has since stood "remarkably well." Here we may stand amazed that a stone, found to be durable through ages of trial in the best-preserved building in England, should be abandoned because the blocks were small! We have not observed it to have been the custom of ancient architects to insist upon using large blocks, but the direct contrary. More amazing than this is the fact that, owing to a shifting of responsibility, the offer of one of the Commissioners, who was particularly well qualified, to examine the material before it was employed, was not accepted; because, forsooth, the salary of 150*l.* per annum demanded for this inestimable service could find no sponsors: "there being a difficulty with regard to the party who was to be held responsible for this unimportant amount; and the matter was thus left to persons who admit that they had little or no prior experience of this description of stone, though they evidently entertained suspicions of the durability of some of it they were employing." As to the character of this last, the contractor and his foreman stated it was, in general, extraordinarily good; other witnesses maintained the direct contrary, and that even in the quarries themselves some specimens were in a state of decomposition. One of the building foremen declared that, knowing certain beds in some of the quarries were liable to decay, he abandoned them. The Chemists, who make a separate Report, state that the unequal permanence of the stone may be attributed "to such structural differences as may be comprehended under the term 'state of aggregation.'" The general evil may arise from the diffusion of acids in the London atmosphere. Sulphuric acid, not only corroding and rendering soluble the earthy carbonates existing in the stone, but forming with magnesia a readily crystallizable salt, sulphate of magnesia, remarkable for the large proportion of water it contains, exerts an influence almost identical with that of frost upon the particles of stone. This opinion is further borne out by the existence of marked efflorescence of sulphate of magnesia upon those portions of the stone where exfoliation has taken place. The committee do not recommend any entire coating, by any preservative process, of the whole building; but that it should be watched, and some efficient process applied when decay declares itself. When this may be important, and occasioned by the fall of rain on an upper projecting and exposed surface, a cover of sheet-lead or zinc is recommended. In extreme cases the decaying stone might be replaced. As to the processes for preservation, the committee are of opinion that no satisfactory one has been yet invented, nor the decay arrested nor prevented by those as yet applied. As to future precautions, none can be recommended in the short space of time available. The same cause has prevented a decision on the final question, as to desirable stones for future use. Both the magnesian limestones and Portland stone would require careful watching and selection. One of the committee, Mr. Burnell, well qualified for his voluntary task, went to Paris to inquire into the practice of the French architects, and found that the stone employed by them, though very different from that of the Houses of Parliament, suffered also from decay, although in a comparatively pure atmosphere and in a wood-burning locality. The committee recommend watching; the preparation of a record of the present condition of the building; experiments with preservative materials and agents; local renovation; and express a confident hope in the early appearance of a remedy for the evil—although they do not even hint an authority for such expectation.

FINE-ART GOSSIP.—Mr. G. G. Scott's design for the reconstruction of the lantern of Ely Cathedral, which is to be considered a memorial to the late Dean Peacock, who himself did so much for the preservation and restoration of

the noble church over which he presided for so many years, is to be commenced forthwith. The estimated cost of the work is about 61,000*l.*; promises of subscriptions sufficient to justify the commencement of this work having been received, no further delay will occur. Like the existing lantern, the new one is to be of oak, cased in lead; and a grand improvement in the aspect of the entire edifice is anticipated from the fact that Mr. Scott has designed the openings in it in better keeping with the character of the general architecture surrounding it than is now the case. The decoration of the ceiling of the nave, by Mr. L'Estrange, with a series of circles containing Old Testament subjects, inclosed in appropriate minor decorations, is advancing, as is the new choristers' school.

Messrs. Lavers & Barraud are rapidly progressing with the execution of the large west window in stained glass for Christ Church, Hants. This is the gift of Admiral Walcott, M.P., to the Abbey Church, and may be said to form part of the extensive restorations made therein under the charge of Mr. B. Ferrey. It is of a Perpendicular character, divided into four stages or rows, of six lights each: the total height is 32 feet 6 inches, the width, 12 feet 4 inches. The three lowest stages are traversed by upright mullions, perfectly straight. The head is filled in with tracery, in the central top-light of which is represented Our Lord, with his arms extended in the form of a cross, the triangle and the dove embodying the presence of the Holy Trinity and forming the crown, as it were, to the subject of the entire work, *Te Deum*. In the side portions of this head are disposed the Heavenly Host, a crowd of Ministering Angels, &c. In the smaller intervening spaces are placed the Alpha and Omega, the Martyr's Crown and Palm. In the next lower tier of lights are placed the Prophets, Saints and Martyrs, with appropriate emblems. Beneath this are the Apostles, grouped in threes, in each of the four middle compartments, illustrating the Holy Church throughout the world. Next to the Apostles, and completing this line of compartments, are represented two Bishops of Winchester, St. Swithin and William of Wykeham. In the next and third tier the subjects illustrated are, "When thou tookest upon Thee to deliver man," &c., and "We believe that thou shalt come to be our Judge": the former being illustrated by the Birth of Our Lord in the stable at Bethlehem, the Adoration of the Shepherds, and Offerings of the Wise Men; the latter, by Our Lord sitting in Judgment, surrounded by Angels blowing trumpets and groups of beatified Saints. Beneath these, and forming the foot of the whole work, are six smaller panels or divisions, containing busts of the four Evangelists; and on the two outermost spaces St. Ambrose and St. Augustine, each writing, and inspired by an Angel reciting the *Te Deum*. The general arrangement of this large and very imposing work is by Messrs. Lavers & Barraud; the design by Mr. J. M. Allen. The disposition of the masses of colour, so far as can be shown at present by the large portion of the entire work arranged to be seen, promises to be effective and broad, while it is harmonious and various to a high degree, so that the whole cannot but be remarkably impressive when placed, a few weeks hence, in the church itself. We observe with great satisfaction, that the peculiar requirements of stained glass, distinct as these are from those of picture-painting, have been carefully attended to; and although the result cannot be considered irreproachable, it shows a vast advance upon the chill, tame and low-toned works, which so often misrepresent the powers of the art.

MUSIC AND THE DRAMA

ROYAL ENGLISH OPERA, COVENT GARDEN, under the Management of MISS LOUISA PYNE and MR. W. HARRISON, WILL OPEN for the SIXTH OPERATIC SEASON, on MONDAY, October 21st, when will be presented (first time) an entirely New Opera, by Howard Glover, to be entitled 'BUY BLAS.' Further particulars in future Advertisements.

SEPTEMBER MUSIC IN SEVILLE.

Cádiz, September.

No living person may hope to see the world of believers wholly disabused of its old fixed ideas.

Italy will, for many, continue to be the land of song "till King Sebastian comes back,"—the towns of Spain so many haunts where, on the cool of summer nights, a romantic amount of serenade, fandango and castanet-work is to be found, as people in fancy dresses dance and make love beneath the moon. And the same dear credulous folk who have not got nearer to reality than such as is described in 'Santo Sebastiano,' or 'Gonsalvo de Cordova,' or what their elders have told concerning the sunny holidays (then rare, and, as such, precious) spent by young merchant or squire in the South, will still issue their doleful jeremiades over the want of music in England, and most of all on the dead stillness of Babylon "out of the season." How whimsically a column of the *Times* for a September day,—promising Mr. Mellon's "Mozart night" at Covent Garden; Choral contests for the Many, Opera Concerts for the Choice, at the Crystal Palace; Selections from 'Simone Boccanegra' at "The Oxford"; Opera companies moving to and fro in England; announcing the splendid Birmingham Festival as just over, and the Hereford one as to come,—brought this amount of uncorrected fallacy before me an hour ago, I should despair of making any one believe, who had not just been passing a few days in the richly picturesque city of Seville; and there (like the writer) tried his best to come at popular music, or such music that exists, in any shape.

Not even in Italy—and that is saying much—has the amount of what I have heard in any previous foreign journey, during the same number of days, been so small. It was something not to be cheated altogether of a musical instrument known by reputation to most concerned in the subject,—the organ in Seville Cathedral, on the Epistle side of the choir. It stands in a building beyond most other buildings fitted for the pomps and mysteries of organ-playing,—beyond any other cathedral I know, picturesque in its lofty cavernous intricacies of gloom, in the magical lights which, at one hour in the day, burnish up some overlooked chapel to a mellow splendour, at another, illuminate the crucifix, high in air, above the fretted screen of the great altar, and which, relieved though it is by a rich crimson background, in the morning is but dimly seen, if at all. It is impossible wholly to disconnect musical sounds produced by unseen hands, when they burst out in a theatre of solemn exhibition so magical as this noble building, from their scenic accessories. How the organ, if tested in the show-room in a factory, might be approved, it is as little possible to form an idea;—in its own place the sound is sublime, with the usual Continental tendency towards super-brilliance. There seemed to me good pedal tones, though resorted to with great timidity by the poor player; great variety, too, in the *solo* stops, which are numerous, though many (if I mistake not) only extend over half the register, a fact which has deceived some as to the real size and power of the organ, and no one more egregiously than the author of 'The Handbook,' whose statement that the organ "has 5,300 pipes and 110 stops more than that of Haerlem," is calculated to mislead. But our author, smart as he was, knew little of his subject, since he complains of the "palisades of pipes" (as essential to an organ-front as walls to a building) as "inappropriate." A more precise account should be substituted; exact specifications existing in English treatises. In Seville, no rectification is to be hoped for on the part of the passing amateur. For once he may find all inspection of his favourite instrument impossible, unless he command high ecclesiastical influence. One has no right to call rigid persistence in a rule laid down a discourtesy. We English tourists are far too apt to resent the result of our determination to force business. But the veto is the exceptional fact of the kind as yet standing on our record to prove the rule of a courtesy which (together with a rare politeness and probity among subordinates and persons of low estate) makes large compensation for the material discomforts of Spanish travel.

Who has yet learnt to disconnect Seville (with its *Almadraba* house and its *Don Juan* monument) from the idea of guitars at all hours of the night? The aspect of its narrow streets, as we have seen them, will not chill him into doing so. What

could be gayer, more picturesque, more tempting, than glimpses at every third house passed—through the open door, into some court-yard used as a summer saloon, with its lights, its orange-trees, its oleanders, its pictures, its pianoforte and its tapestry frames, at which some lady might be seen, sitting in the mystic glow, playing at work, or more idly playing with her fan, one of a little circle! Yet not a sound of dance-tune or song issued thence; and this was the more vexatious since your Spaniard seems to have a sound manly voice of his own. There was only one measure to be adopted, the prosaic one of bespeaking music. A guitar-player and singer came, both capable of showing what is the humour of the hour, and the former (better skilled of the two) of showing the real style of his instrument and the pattern of those old national "fits" and measures which do not depend on the Riego or O'Donnell of the time being. This pattern previous research has disposed me to conceive lies within a narrow compass, and has small variety. The mendicant, in the *Puerta del Sol*, had taught us in Madrid as much as was to be learnt in Seville. But the finger of our musician was firmer. In all the music I have heard the feeling for accent has been good, and he played with spirit and some apparent enjoyment. So, too, sang his partner, a bold, black-browed fellow; though not impudent in his behaviour, anything but abashed, and some of whose songs, it may be feared, were not the fittest for a "Family Library." His voice was a good stout baritone: produced without twang or trick. I have heard and seen worse musicians and more coarsely behaved men than this tavern pair sighed and swooned over in gay London houses! How different the arena of exhibition here! The inner court of our hotel is a court surrounded with arcades, supported on marble columns, in a by-outlet of which daily ironing goes on, in the centre whereof is an ivy bower, like a big bee-hive, with four tiled entrances and four tiled benches round a fountain, on which the cook is apt to retire to read his novel, or to sleep, or to arrange two or three flowers for Rosa, the laundry-girl. Outside this bower sat the artists; and the people of the house,—a melancholy set, however kindly, out of whom the long drought seemed to have parched up all their cheerfulness, crept in, or lounged about,—the melancholy book-keeper, the fat and melancholy waiter, the lean and melancholy *ditto*, the melancholy *valet de place* (a capital one though) and his damaged poodle without a tail: a gay audience this for guitars in Seville on a September night, but seemingly cheered, I am happy to add, out of some of its melancholy by a treat so cheap and simple.

The other music we heard in Seville was that of the military band, as weak as it is numerous, playing to an audience of more than ten thousand persons in the midst of the new *Plaza* (the mean ugliness of which is a disgrace to Seville). The music was too innocuous to be offensive. The crowd was remarkable on the same grounds as *Ho Fi's* tea, because there was so little in it to remark. The women of course wore mantillas and manoeuvred fans; the working men had round hats, jackets and sashes: but "the costumes of *Figaro*," promised as not unfrequent in Andalusia, are not "got up" out of "the season" apparently, unless perhaps a *Caballero* should pass as rich as the English nobleman who, desirous of seeing the antique dress of the peasants on the "*Piana dei Greci*," near Palermo, organized a wedding betwixt two peasants, for the state exhibition of their finery, by advertising a dowry for the bride of five hundred pounds! C.

HAYMARKET.—Mr. Edwin Booth, son to the Mr. Booth who competed with the elder Kean and afterwards gathered laurels in America, appeared on Monday on these boards to test the reputation which he has long enjoyed in the United States. Rumours had preceded him of the characteristics and style of his acting, which it was reasonably conceived would resemble his father's and those of his great rival. The part chosen for his *début* in England was that of *Shylock*, a part eminently fitted to bring out the peculiarities of the school to

which he was supposed to belong. He was well received by a crowded audience, and had full reason to be satisfied with his welcome. His first scene was sufficiently promising, and the more so because bearing fewer marks of imitation than had been expected. His voice and action were natural, and the general manner was apparently that of an artist whose impulses were under the control of his judgment, and whose physical powers required judicious husbanding. His declamation was, however, forthcoming when required; and in his justification of the Jew's claim to revenge it was employed with force and effect. In the great scene of his rage on his daughter's flight he manifested uncommon power, but that power was rather in startling contrast with the smoother movement of the earlier scenes, and certainly needs harmonizing;—not by any reduction of its violence or fervour, but an increase of energy in the previous situations. The trial scene was marked by the prevalence of judgment rather than an extent of resources, yet was not without its pathos. Mr. Booth was very well supported. Mrs. Charles Young, in *Portia*, was eminently satisfactory. Mr. Farren, as *Gratiano*, showed considerable skill as an elocutionist, and Mr. Howe, as *Bassanio*, acted with commendable propriety. It is now some time since we saw Mr. Buckstone in *Launcelot Gobbo*, but his impersonation has lost none of its rich humour, and was heartily greeted and appreciated by the house. Among the numerous imitations that we may now expect from the Disunited States, as refugees from the perils or inconveniences of civil war, Mr. Booth will probably be found the most eligible for that classic walk of dramatic art in which we have now few English professors.

PRINCESS'S.—The influence of American emigration has also affected this establishment. Mr. Brougham having produced with success a five-act comedy, called 'Playing with Fire,' in New York, and since tested its acceptability with an English audience at Manchester, was also desirous of trying its effects on London critics. The comedy, accordingly, was produced on Saturday; and proved to be very much what we expected,—a rattling, touch-and-go, improbable medley of incidents, in which as much as possible was trusted to action, and little to dialogue. The plot would be slight even for a farce. A married couple, *Mr. and Mrs. Waverly* (Mr. George Jordan and Miss Rose Leclercq), suffering under a plethora of happiness, consult separately *Dr. Savage* and his *Wife* (Mr. Brougham and Miss Carlotta Leclercq) on their case; and are advised, unknown to each other, to get up a little flirtation, that, by the production of jealous excitement, they may become more sensible of their real love for each other. What, however, is commenced in sport, soon acquires the force of earnest; and Mr. Waverly and Mrs. Savage are both thrown into terrific fits of the most malignant passion in nature, called by Dr. Young "the hydra of calamities," and by Shakespeare more mildly, "the green-eyed monster"; so that the most evil results may be expected from the reckless experiment. In a word, they are found to be "playing with fire" indeed; and are in imminent danger of being scorched in the encounter. In this view of the relation of parties there is some originality, and more ingenuity in the invention of situations to bring out the violence of contending passions. No sooner, however, has the author secured his point and his laugh, than down he brings the curtain, leaving the spectator to harmonize the incidents and supply for himself such connexion as may be wanting. The proceedings are further complicated by an underplot, of which Mr. Widdicombe is the hero—the assistant of Dr. Savage, who silly carries on a little business on his own account as a matrimonial agent, in his master's name, and thus gets into his snare uncle *Timothy Crabstick* (Mr. Ryder), to the great annoyance of his sister *Mrs. Crabstick* (Mrs. Weston), who follows her brother to London. The old snarling bachelor is nearly entrapped into an union with Mrs. Waverly's servant; and is only saved by the course which events take in the solution of the great trial of hearts, in which the principals of the play are engaged. When the misery is brought to a climax, a diversion is readily

effected by a few words of explanation; and the curtain descends on a very lively and decidedly successful comedy.

STRAND.—Mr. Byron has given another burlesque to these boards, under the title of 'Emeralda; or, the "Sensation" Goat.' The animus of the production is manifest in its title, and the execution is full of life, spirit and point. The reputation of the author for the reckless wit proper to pieces of this kind thronged the doors long before opening with expectant auditors, many of whom were disappointed of admission. In structure, the burlesque, of course, follows the drama pretty closely; but in dialogue and effects divaricates perceptibly. More than ever has Mr. Byron loaded his lines with double meanings and unexpected sounds, and brought forth the most excruciating lingual results; meanwhile the audience delight in the torture which the Queen's English suffers, as if language were not made for use but sport, and its speakers had no feeling for its proprieties. The piece has been admirably placed on the stage. Nothing can be more picturesque than the gipsy groups in the old streets of Paris. The struggle in the belfry is after the approved fashion of Punch's contests in the puppet-show; and the Hunchback of Notre Dame fights in a fashion which, though borrowed, is likely to increase his popularity. The catastrophe must, of course, undergo a sea-change. The characters rejoice in a general revival, and unite in the *finale*. Most of the parodies, we should have mentioned, are derived from the Christy's Minstrel-melodies. The scenery, painted by Mr. Albert Calcott, is most skillfully adapted to the limited arena. The performers revealed in the opportunity of excelling. Miss Marie Wilton, as *Pierre Gringoire*, the boy-poet, is elaborately furnished with appointments, and sings and dances with the utmost prettiness and sauciness; and as *Emeralda* Miss Fanny Josephs showed that she could both sing and act. Mr. James Rogers, as *Claude Frolo*, was well made up and romantically effective; and Mr. J. Clarke, as the *Hunchback*, was as grotesque, as noisy and as irresistible as ever. The *Goat*, by Mr. Danvers, was a Welsh curiosity; and Mr. H. J. Turner, as the Gipsy King *Clopin*, a perfect study of the street artist. The whole performance, indeed, was wonderfully successful.

MUSICAL AND DRAMATIC GOSSIP.—That "long vacation" is no more, so far as remission of labour for our English musicians, it needs not to be told. With October, however, our regular English winter of six months sets in, this year with unusual spirit and merriment. Madame Goldschmidt is about (as was to be foreseen) to sing in London and elsewhere in a series of grand concerts, with Herr Goldschmidt as her conductor. Miss Pyne and Mr. Harrison are setting to work again, with gay promise of novelties. We shall be hearing presently of Monday Popular Concerts and Friday Exeter Hall Oratorios—the more the better; let only the weary routine of performance of known and approved masterpieces be varied. In England, however, as elsewhere, we shall as yet be for a few weeks to come, not in the promised land, so much as in the land of promise. This is, then, the time for stringing together a few foreign items of news, which either may have escaped notice, or else belong to the hour.

Opera matters look ill in Italy. At Naples (who can wonder in the present posture of affairs?) the manager of San Carlo has "thrown up his book."—At La Scala, Milan, Madame Colson, a third-rate French *prima donna*, has been singing in 'Don Pasquale' without much success.—At Florence, we read, Madame Vera-Lorini, in the 'Giuditta' of Signor Peri, has been received enthusiastically. Some may recollect that the *Athenæum* has always had some expectations from this composer. The above 'Giuditta,' and Signor Peri's 'Vittore Pisani,' too, figure in the programme for the winter of the Italian Opera House at Madrid. By this it would seem as if the master's reputation was beginning to travel. How long will it be ere it reaches Paris or London?—The Italian Opera of the French capital, which has just commenced its season, will

perhaps be rather retrospective than experimental for 1861—2—since "its start" was made with 'Il Matrimonio,' sung by Mesdames Penco, Alboni and Battu, MM. Bélart, Badiali and Zucchini; and stress is laid on a coming revival there of Mozart's 'Così.'—Middle. Patti and the sisters Marchisio are to sing in Italian opera at Berlin during the winter. The opening of the Italian Opera at St. Petersburg has been retarded, by the death of M. Caves, the manager.

German papers tell us, that the coronation music of the King of Prussia, at Königsberg, has been confided to M. Meyerbeer, who has undertaken to compose for the occasion a Hymn and March; thereby adding another to the list of like compositions by him, which is becoming long in disproportion to that of his operas.—Herr Tschiesche, whom the oldest German opera-hunters must remember as a full-grown *basso*, has only just retired from the stage at Berlin.—A new opera, by Herr Hiller, is to be performed during the winter, entitled 'The Catacombs.'—At Vienna, things seem coming to a pass, if no one is to be found more capable of singing the hero's part in 'Robert le Diable' than Herr Stigelli.—Herr Berwald, the Swedish composer, some of whose music, it may be remembered, was performed in London, during the season, has just died at Stockholm, at an advanced age.

The new grand organ, announced as in preparation for the Hall of the Conservatory in Brussels, was opened the other day at the National Festivals. Our neighbours (given in their musical doings to no small amount of self-admiration) are instructed that this is to be "the model organ." M. Lemmens was the principal player.

MISCELLANEA

Lichfield Cathedral.—This Cathedral is to be reopened on the 23rd inst., a date considerably earlier than was expected. The reasons why it has been considered desirable to do this are thus stated in a report addressed to the subscribers towards the late restorations. Firstly, that the whole area might be available on the various occasions which collect within it large numbers of worshippers from different parts of the diocese. Future progress in the restorations will not interrupt the daily services. It appears also that if the re-opening were postponed until all deficiencies are supplied, many years must pass before the entire Cathedral can be presented to the diocese. "If," the statement goes on to say, "as is already the case, 5,000*l.* has been contributed towards the restoration, it cannot be doubted that a like sum must be raised to secure completion." The following details show what remains to be done: "The reredos (estimated cost 2,300*l.*) with the sedilia, the fitting up of the Lady Chapel for an early service, screens east of the stall-work, pulpit and due supply of seats, the restoration of the windows in the south transept aisle, the re-flooring of the greater part of the area, the repairing of the arcading of the nave, the improvement of the Debased west window, the restoration of the Chapter House and library, the provision of vestries, and by degrees perhaps the introduction of additional stained glass windows,—these works will be proceeded with as means for their execution are provided." The same statement thus specifies what has already been done towards a complete restoration of this building. "It will be seen with satisfaction that the liberality of the diocese has enabled the greater part of the dilapidated or wantonly destroyed stone-work to be restored, the whitewash of long standing removed, the Bishop's throne and stall-work to be completed, the pavement of the choir to be ordered (although it will not be entirely laid), and a light and open screen to be substituted for the former complete separation of the church into two parts; besides the introduction of many costly requisites, the organ, the font, the lecterns, with Bible and Litany desk, lighting standards and candlesticks, books of service, embroidered altar-cloth, poor's box, &c., many of which have been the gifts of individual benefactors.

TO CORRESPONDENTS.—J. H.—H. J. H.—G. E. W.—S. T. B.—G. R.—Pimento—J. D.—D. J.—J. W. C.—received.

JOHN TIMBS'S POPULAR WORKS.

NEW EDITIONS AT REDUCED PRICES.

"Any one who reads and remembers Mr. Timbs's 'encyclopedic varieties should ever after be a good 'tea-table talker, an excellent companion for children, 'a well-read person,' and a proficient lecturer."

Now ready, in fcap. 8vo. (with Map of Confederated Europe), price 7s. 6d. cloth,

THE NEW KORAN, or, Text-Book of Turkish

Reformers, in the Teaching and Example of their esteemed Master, JAIDU MORATA.

The book of the Syrian prophet opens a gateway through which has hitherto been considered an insurmountable barrier to Muslim progress. It separates spiritual religion from dead forms and superstitions, and presents a common ground of reconciliation to Christians, Jews and Turks; and promises to bring about, by moral and pacific means, a far more important reformation in the East than is likely to be effected by Abdul-Aziz or the sword of the Wahabites.

London: Geo. Manwaring, 8, King William-street, Strand.

GERMAN MADE EASY.

MACMILLAN & Co. London and Cambridge.

DANTE'S INFERNO,

(IN THE ORIGINAL).

ILLUSTRATED BY GUSTAVE DORÉ.

In folio, cloth, price 100 francs.

"Here is what may be styled a volume royal, folio, broad margined, luminously printed upon the purest paper, and edited, with care, from the Cominian text, as the foundation of the present version. The telling, bold and dramatic compositions of M. G. Doré will obtain admiration from a wide circle. Thousands will go down in fancy with the living artist into the shades of Hell, and be so impressed by his photographic vigour that they may even know how 'in the thinking it reneweth fear' to have once seen such monstrous shadows, sullen flames and dismal regions."—*Athenæum*.

L. HACHETTE & Co. Publishers, 18, King William-street, Strand, W.C.

MALTA, under the PHŒNICIANS,
KNIGHTS, and ENGLISH.

By WILLIAM TALLACK,
Author of 'Friendly Sketches in America.'

"[It] [the book] is probably the best Guide the intended visitor to
Malta can take with him. In a tone partly historical, partly
scientific, partly antiquarian, and everywhere religious, the Author
tells us about all that is interesting in Malta, from the Baku to the
Religious Procession of Passion Week; from the Cabiri to the
hammer-headed sharks."—*Literary Gazette*.

Morning Herald.

London: A. W. Bennett, 5, Bishopsgate-street Without, E.C.

NEW EDITION OF STEWART'S GEOGRAPHY.

Now ready, 2s. 6d. bound, with 11 Maps.

A COMPENDIUM of MODERN GEO-
GRAPHY, POLITICAL, PHYSICAL, and MATHE-
MATICAL: with a Chapter on the Ancient Geography of Palestine,
the Outlines of Astronomy and of Geology, a Glossary of Geogra-
phical Names, Descriptive and Pronouncing Tables, Questions for
Examination, &c. By the Rev. ALEX. STEWART, LL.D.
Eighteenth Edition, revised and enlarged.

"* More than usual labour has been bestowed on this Edition
of 'Stewart's Modern Geography,' in order to adapt it to the many
important geographical discoveries and political changes of the
last few eventful years. It is enlarged in size by the introduction
of a considerable quantity of new matter, and by the use of a more
distinct type; while advantage has been taken of the thorough
revision to which every page was subjected, to improve it in
several other respects. Among the additions will be found an
Alphabetical Table of the Chief Roots of Geographical Names.

Edinburgh: Oliver & Boyd. London: Simpkin, Marshall & Co.

Author of 'The Angel in the House,'

Will appear Serially in the OCTOBER, NOVEMBER, and DECEMBER Numbers of

MACMILLAN'S MAGAZINE.

MACMILLAN & Co. Cambridge and London.

MUDIE'S SELECT LIBRARY.

In January, 1858, Mr. MUDIE advertised his intention to increase his Library by the addition of ONE HUNDRED THOUSAND VOLUMES PER ANNUM. He has now the gratification of announcing that this design has been more than accomplished—upwards of HALF A MILLION VOLUMES having been added since that date.

The Books thus provided consist chiefly of Works of HISTORY, BIOGRAPHY, TRAVEL, and the HIGHER CLASS OF FICTION, in the following proportion:—

HISTORY and BIOGRAPHY	123,279
TRAVEL and ADVENTURE	71,646
FICTION	237,546
MISCELLANEOUS, including Works of Science and Religion, and the Leading Reviews	115,518

547,989

The present rate of increase will be continued during the ensuing Season, the preference being given as before to Works of permanent interest and value.

NEW OXFORD-STREET, OCTOBER, 1861.

MUDIE'S SELECT LIBRARY.

BOOK SOCIETIES, TOWN AND VILLAGE LIBRARIES, AND READING-ROOMS, IN EVERY PART OF THE COUNTRY, ARE SUPPLIED FROM THIS EXTENSIVE LIBRARY WITH A CONSTANT SUCCESSION OF NEW AND CHOICE BOOKS ON HIRE.

TERMS OF SUBSCRIPTION:

FIFTEEN VOLUMES at One Time (all New), FIVE GUINEAS per ANNUM, AND THREE VOLUMES FOR EVERY ADDITIONAL GUINEA, Commencing at any date.

Two or Three Families in any neighbourhood may unite in One Subscription, and obtain Constant Supplies of the Best Works in History, Biography, Religion, Philosophy, Travel, and the Higher Class of Fiction, without disappointment or delay.

Lists of the Principal New Works and New Editions at present in Circulation, with Catalogues of Surplus Copies withdrawn for Sale, will be forwarded, postage free, on application.

CHARLES EDWARD MUDIE,

New Oxford-street, London; Cross-street, Manchester; and New-street, Birmingham.

CHEAP BOOKS AT MUDIE'S LIBRARY.

This List comprises many of the best Books of the Past and Present Season, cut and uncut; also a Selection of Works, well bound, and adapted for Presents and School Prizes.

CHARLES EDWARD MUDIE,

New Oxford-street, London; Cross-street, Manchester; and New-street, Birmingham.

UNITED KINGDOM LIFE ASSURANCE COMPANY,

8, WATERLOO-PLACE, PALL MALL, S.W.

The HON. FRANCIS SCOTT, Chairman.
CHARLES BERWICK CURTIS, Esq., Deputy-Chairman.

FOURTH DIVISION OF PROFITS.

SPECIAL NOTICE.—Parties desirous of participating in the Fourth Division of Profits to be declared on Policies effected prior to the 31st of December, 1861, should make immediate application. There have already been Three Divisions of Profits, and the Bonuses divided have averaged nearly 2 per cent. per annum on the sums assured, or from 30 to 100 per cent. on the premiums paid, without the risk of copartnership.

To show more clearly what these Bonuses amount to, the three following cases are given as examples:—

Sums Insured.	Bonuses added.	Amount payable up to Dec. 1854.
£5,000	£1,987 10	£6,987 10
1,000	397 10	1,397 10
100	39 15	139 15

Notwithstanding these large additions, the Premiums are on the lowest scale compatible with security; in addition to which advantages, one-half of the premiums may, if desired, for the term of five years, remain unpaid at 5 per cent. interest, without security or deposit of the Policy.

The Assets of the Company at the 31st of December, 1860, amounted to £730,665 7s. 10d., all of which has been invested in Government and other approved securities.

No charge for Volunteer Military Corps whilst serving in the United Kingdom.

Policy stamps paid by the office.

For Prospectuses, &c. apply to the Resident Director, No. 8, Waterloo-place, Pall Mall.

By order,

E. L. BOYD, Resident Director.

All persons insured in this Office, the Premiums on whose Policies are due at the Michaelmas Quarter are reminded to pay the said Premiums, either at the Office in Threadneedle-street; Craig's-court, Charing Cross; at No. 40, Wigmore-street, Cavendish-square; or to the Agents in the Country, on or before the 14th day of OCTOBER, 1861, when the fifteen days, allowed by this Office, over and above the time for which they are insured, will expire.

Insurances may be made for more years than one by a single payment, and in such cases there will be a discount allowed on the premium and duty for every year, except the first.

RATES OF PREMIUM.

FIRST CLASS. SECOND CLASS. THIRD CLASS.
1s. 6d. per cent. 3s. 6d. per cent. 4s. 6d. per cent.
Farming Stock may now be insured at 2s. per cent. if covered to a fair value, and situate in a district free from Incendiarism.

This Office insures Property in Foreign Countries, and the Rates are regulated by the nature of the risks.

The Duty paid to Government by the Sun Fire Office in 1860 amounted to 218,576l.

Special Assurance.—The Policies of this Company new extended to cover Losses occasioned by Explosion of Gas.

MORTLOCK'S CHINA WAREHOUSE, 250, OXFORD-STREET.—SELLING OFF.—In consequence of the Marquis of Westminster's refusal to renew the Lease of the above Premises (in connexion with Park-street), JOHN MORTLOCK is anxious to decrease his RICH Stock, and is prepared to make great allowance for Cash.—250, OXFORD-STREET, and 33, PARK-STREET, near Hyde Park.

MESSRS. J. & R. M'CRACKEN, FOREIGN AGENTS, and AGENTS to the ROYAL ACADEMY, 7, Old Jewry, beg to remind the Nobility, Gentry and Artists, that they continue to receive Consignments of Objects of Fine Arts, Bruges, &c. from all parts of the Continent, for clearing through the Custom House, &c.; and that they undertake the shipment of effects to all parts of the world. Lists of their Correspondents abroad, and every information, may be had on application at their Office, as above. Also, in Paris, of M. M. CHESNE, 24, Rue Croix des Bœufs, the Champagne established upwards of 80 years, Packer and Custom-House Agent to the French Court and to the Musée Royal.—Messrs. J. & R. M'C. have added to their other business that of EAST INDIA AGENCY in all its branches.

LONDON—SHOW-ROOMS, 45, OXFORD-STREET, W.
BIRMINGHAM—MANUFACTORY AND SHOW-ROOMS,
Broad-street. Established 1807.

THE BEST and CHEAPEST TEAS and COFFEES in England are to be obtained of PHILLIPS & CO., Tea-Merchants, 8, King William-street, City. Good strong useful Tea, 3s. 6d., 2s. 10d., 2s. 4d., and 4s.; rich Souchong, 2s. 6d., 2s. 10d., and 4s. Pure Coffees, 1s., 1s. 3d., 1s. 6d., 1s. 9d., and 1s. 12d. Tea and Coffee to the value of 40s. sent carriage-free to any railway-station or wharf in England. A Price Current free. Sugars at market-prices. All goods carriage-free within eight miles of the City.

TEA.—DR. HASSALL'S ("The Chief Analyst of the Sanitary Commission of the Lancet on Food") Report on the Teas and Coffees sold by Messrs. STRACHAN & CO. 36, Cornhill, London, E.C. Having purchased through my own agents, and in the ordinary way of business, a variety of samples of the several qualities of Tea and Coffee vended by Messrs. Strachan & Co., I have subjected the whole of them to Microscopical Examination and Chemical Analysis. The result of the examinations obtained was in the highest degree satisfactory.

A full Report of the above Analysis, also List of Prices, can be had on application to Messrs. Strachan & Co. 36, Cornhill, E.C. London. Carriage to all parts of London daily.

ALLSOP'S PALE ALE, in Bottle, recommended by Baron Liebig and all the Faculty, may now be had in the finest condition of Messrs. HARRINGTON PARKER & CO. 54, Pall Mall, and 144, Regent-street, Waterloo-place, S.W.

SAUCE.—LEA AND PERRINS
beg to caution the Public against Spurious Imitations of their world-renowned
WONDERFUL SAUCE.

out the Grass, collect it into a Box (saving all sweeping), and roll the pile at once and the same time,—and may be used at any convenient time, whether the grass be wet or dry. They are made of various widths, suitable for one man to work, unassisted, up to those for horse draught.

Copies of Letters from all parts of the country, showing the great saving in labour and time and the improvement in the appearance of lawns effected by these Machines, will be forwarded, post free, with Price-List, on receipt of application.

B. SAMUELSON, BRITANNIA WORKS, BANBURY.
LONDON WAREHOUSE: 76, CANNON-STREET WEST, CITY.

STOVES for ENTRANCE HALLS, SCHOOL ROOMS, CHURCHES, &c., all made with fire-brick linings, and entirely free from the objections found to so many, which, from their liability to become overheated, are dangerous and render the atmosphere offensive. These Stoves burn little fuel, may be had with or without open fire, and to burn throughout the cold season, if required, without going out. Illustrated Prospectuses forwarded. FREDERICK EDWARDS & SON, General Irons and Kitchen Range Manufacturers, 49, GREAT MARLBOROUGH-STREET, W. For 25 years in Poland-street, adjoining.

DR. DE JONGH'S
(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL,
Prescribed by the most Eminent Medical Men throughout the world, as the safest, speediest and most effectual remedy for

CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS.

Is incomparably superior to every other variety.

SELECT MEDICAL OPINIONS.

Sir JOSEPH COLLIFFE, M.D., Physician to the British Embassy at Paris.—"I have frequently prescribed Dr. de Jongh's Light-Brown Cod Liver Oil, and I have every reason to be satisfied with its beneficial and salutary effects."

Sir HENRY MARSH, Bart. M.D., Physician in Ordinary to the Queen in Ireland.—"I consider Dr. de Jongh's Light-Brown Cod Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. LAWRENCE, Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.—"I invariably prescribe Dr. de Jongh's Oil in preference to any other, feeling assured that I am recommending a genuine article, and not a manufactured compound, in which the efficacy of this invaluable medicine is destroyed."

Dr. LANKESTER, F.R.S., Superintendent of the Food Collection, South Kensington Museum.—"I consider the Cod Liver Oil sold under Dr. de Jongh's guarantee to be preferable to any other kind as regards genuineness and medicinal efficacy."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 8s.; and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists.

SOLE CONSIGNERS:
ANSAR, HARFORD & CO. 77, Strand, London, W.C.

CAUTION.—Beware of proposed Substitutions.

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of a steel spring, so often hurtful in its effects, is here avoided: a double bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive Circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, two inches below the hips, being sent to the Manufacturer.

Price of a Single Truss, 15s., 11s., 9s., 6d. and 31s. 6d., postage, 1s.
" Double Truss, 31s. 6d., 4s., and 5s. 6d., postage, 1s. 6d.
P. O. O. made payable to JOHN WHITE, Post-office, Piccadilly.

ELASTIC STOCKINGS, KNEE-CAPS, &c.
For VARIOUS VRINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light in texture, and inexpensive, and are drawn on like an ordinary stocking. Price 4s. 6d., 7s. 6d. 10s. and 15s. each, postage 6d.
JOHN WHITE, Manufacturer, 228, PICCADILLY, London.

VOLUNTEER PRIZES.—BURROWS
LANDSCAPE GLASSES are the most popular. They are PERFECT FIELD GLASSES in every respect, valuable alike to Officers, Sportsmen and Tourists. Price 3s. and 6 guineas each.—Sent on receipt of Post-Office orders to W. & J. PURKOW, Malvern.

SOLE LONDON AGENTS:
For the City—JOHN BENNETT, 63, Cornhill.
For the West End—B. ARNOLD, 73, Baker-street.

WHEN YOU ASK FOR GLENFIELD PATENT STARCH, SEE THAT YOU GET IT, AS INFERIOR KINDS ARE OFTEN SUBSTITUTED.
WOTHERSPOON & CO., GLASGOW AND LONDON.

A MOST DESIRABLE BREAKFAST BEVERAGE.

Each packet is labelled "James Epps, Homoeopathic Chemist, London." 1 lb., 1 lb., and 1 lb. Packets, at 1s. 6d. per lb., by Grocers everywhere.

DURABILITY OF GUTTA-PERCHA

TUBING.—Many inquiries having been made as to the Durability of Gutta-Percha Tubing, the Gutta-Percha Company have pleasure in giving publicity to the following letter:—From SIR RAYMOND JARVIS, Bart., VENTNOR, Isle of Wight, Second Testimonial, March 10th, 1858.—In reply to your letter, received this morning, respecting the Gutta-Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years; and I am informed that it is to be adopted generally in the houses that are being erected here. N.B. From this Testimonial it will be seen that the CORROSION WATER of the ISLE of WIGHT has no effect on Gutta-Percha Tubing.

THE GUTTA-PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

BLAIR'S GOUT AND RHEUMATIC PILLS.

Price 1s. 1d. and 2s. 9d. per box.
This Preparation is one of the benefits which the Science of Modern Chemistry has conferred upon Mankind; for, during the first twenty years of the present century, to speak of a Cure for the Gout was considered a romance; but now the efficacy and safety of this Medicine are so fully demonstrated, by unselected testimonials from persons in every rank of life, that Public Opinion proclaims this as one of the most important Discoveries of the present Age.

These Pills require no restraint of diet or confinement during their use, and are certain to prevent the disease attacking any vital part.

Sold by all Medicine Vendors, and at 280, Strand, London.

METCALFE, BINGLEY & CO.'S New Patent Brushes, and Penetrating unbleached Hair Brushes, Improved Flesh and Cloth Brushes, and genuine Smyrna Sponges, and every description of Brush, Comb and Perfumery. The Tooth Brushes search between the divisions of the Teeth—the hairs never come loose. M. B. & Co.'s New and Delicious Perfumes—The Fairy Bouquet, The Oxford and Cambridge Bouquet, in bottles, 2s., 3s., 4s., and 6s. each.—Metcalfe's celebrated Alkaline Tooth Powder, 2s. per box.—Sole Establishment, 130s. and 131, OXFORD-STREET.

DINNEFORD'S PURE FLUID MAGNESIA

has been, during twenty-five years, emphatically sanctioned by the Medical Profession and universally accepted by the Public, as the Best Remedy for acidity of the stomach, heartburn, headache, gout and indigestion, and as a mild aperient for delicate constitutions, more especially for Ladies and Children. Combined with the Acidulated Lemon Syrup, it forms an agreeable Effervescent Draught, in which its Astringent qualities are much increased. During Hot Seasons and in Hot Climates, the regular use of this simple and elegant remedy has been found highly beneficial. Manufactured (with the utmost attention to strength and purity) by DINNEFORD & CO. 173, New Bond-street, London; and sold by all respectable Chemists throughout the Empire.

COCKLE'S ANTIBILIOUS PILLS for Indigestion, bile, sick headache, acidity, heartburn, flatulency, spasms, &c. Prepared only by JAS. COCKLE, 15, New Ormond-street; and to be had of all Medicine Vendors, in boxes, at 1s. 1d., 2s. 9d., 4s. 6d. and 11s. each.

HOLLOWAY'S OINTMENT and PILLS.

EFFECTS OF COLD.—Numerous and severe are the diseases resulting from exposure to low temperatures. Skin, muscles, lungs, and circulation become disordered, and serious illness, and the derangement requires timely attention. For all outaneous affections, neuralgia and rheumatic pains, Holloway's soothing Ointment well rubbed upon the affected parts is an inestimable remedy. When the lungs or heart have irregular action, this Ointment may be rubbed on the chest, and assisted in its curative efforts by Holloway's Pills. These noble medicaments mutually assist each other. All disorders springing from neglected colds, chills, wet or other atmospheric vicissitudes, are thus safely and speedily checked in their course, and freed from pain and danger, by Holloway's preparations.

EVANS'S ENGLISH HARMONIUMS.

These celebrated Harmoniums are made throughout at Messrs. BOOSEY & CHING'S Manufactories, London, and are not only distinguished for their rich and organ-like quality of tone, but are manufactured in that substantial and superior manner peculiar to English-made goods.

EVANS'S ENGLISH HARMONIUMS.

The most celebrated living Musicians, including Balfe, Sterndale Bennett, Cipriani, Potter, Best, Henry Smart, &c. have testified to the extraordinary merits of these Instruments. These Testimonials, as well as others from the Clergy and the Press, are attached to the Illustrated Catalogue just published, comprising Instruments from 6 to 140 Guineas, with One and Two Rows of Keys, the Percussion Action and Pedals.—Gratis, upon application to BOOSEY & CHING, 24, HOLLES-STREET, LONDON.

EVANS'S COTTAGE HARMONIUM, AT SIX GUINEAS,

In a French-polished Pine Case, has the full compass, Five Octaves, Double Pedals, and a soft, subdued, agreeable quality of tone, designed, as its name implies, expressly to suit a Cottage or small Sitting-Room.

EVANS'S TEN GUINEA HARMONIUM

Is in a handsome French-polished Oak Case, and possesses that rich and organ-like quality of tone so peculiar to all Evans's Harmoniums. Suitable for a School or Chapel.

EVANS'S NINETEEN GUINEA HARMONIUM,

In Oak Case, has Unison Trebles, as well as the Bourdon Stop, which adds an Octave to the Bass. This Instrument is especially adapted for leading Public Worship.

EVANS'S THIRTY-SIX GUINEA HARMONIUM,

With Twelve Stops, is the most effective Instrument made with a Single Row of Keys (excepting the Drawing-Room Model, at 55 Guineas). Brillancy, sweetness and great power are combined in this Instrument. Suitable either for a Drawing-Room or a good-sized Church.

EVANS'S NEW PATENT ENGLISH HARMONIUM,

With Two Rows of Keys and Five and a Half Octaves of Vibrators. Price 68 Guineas, in a very handsome Rosewood Case. The most perfect Instrument without Pedals yet offered to the public. Many of the Testimonials from the Profession and Press refer particularly to this most effective and beautiful Instrument.

EVANS'S PEDAL HARMONIUM,

Price 47 Guineas, in a handsome solid American Walnut Case; has Nine Stops. The Pedals have a compass of Two Octaves and a Third, and contain Diapason and Bourdon, independent Reeds.

EVANS'S NEW PATENT ENGLISH MODEL HARMONIUM,

With Two Rows of Keys and Pedals, price 120 Guineas, is the most complete Harmonium ever constructed, possessing all the attributes of an Organ. To give an account of the capabilities of this Instrument in an Advertisement would be impossible.

BOOSEY & CHING, HARMONIUM MANUFACTURERS, 24, HOLLES-STREET, LONDON.

The Factories are at Davies-street and Wells-street, Oxford-street.

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 1772.

LONDON, SATURDAY, OCTOBER 12, 1861.

PRICE
THREEPENCE
Stamped Edition, 4d.

NOTICE.

The price of THE ATHENÆUM from October 5 is THREEPENCE.

Thirty years ago, when THE ATHENÆUM came into the hands of its present Proprietors, its price was Eightpence, and its contents, with advertisements, forty-eight columns. Convinced that the circulation of Literary Journals was restricted by high price, and that every advantage offered to the public would bring increase of circulation and authority, the Proprietors reduced the price one-half—to Fourpence. The experiment succeeded, and cheap Literary Journals became the rule.

The Proprietors have always held to the principle then proved. They have given to the public the benefit of every change in the law, increasing the size of the paper without increase of price, until the average has become about sixty columns of literary matter, with forty columns of advertisements, selected so as to be of general interest.

The Proprietors, taking advantage of the abolition of the Paper Duty, therefore resolved that the price of THE ATHENÆUM should from October 5 be THREEPENCE.

UNIVERSITY COLLEGE, LONDON.— FACULTY OF ARTS AND LAWS.

The SESSION will COMMENCE on TUESDAY NEXT, October 15th, at 3 o'clock. CHARLES CASSAL, LL.D., Professor of French Language and Literature, will deliver the INTRODUCTORY LECTURE. THE WIFE of a PHYSICIAN, living at the West-End of London, between Bond-street and Regent-

street, wishes to meet one YOUNG LADY, to join her two Daughters, aged 15 and 12 years, in their DAILY STUDIES.

An accomplished French Governess resides in the house; and it is thought that the opportunity of securing careful daily teaching and home comfort may be appreciated by some in the neighbourhood, who object to the associations of a school or college classes.

—Address R. H., 192, Piccadilly.

A DAILY GOVERNESS, of great experience, desires PUPILS.

She teaches the German, French, Italian and English Languages, the Piano-forte, Harmony, and other requirements of a polite English education, and can give undeniable testimonials. Address: S. M., Library, Mornington-street, Mornington-crescent, N.W.

TO PRINCIPALS of COLLEGES and SCHOOLS in or near LONDON.—Mr. BIGNAMI, an Italian

Gentleman, just arrived from the Continent, Professor of French and Italian, of Philosophy, Literature, and Political Economy, wishes to occupy some hours a week in TEACHING the above-mentioned LANGUAGES. He of course knows English and moreover Latin, and has much studied German. He can give unexceptionable references.—21, Backville-street, Piccadilly.

A LADY, of middle age, cheerful, a good Pianiste, and knowing several Languages, is seeking AN

ENGAGEMENT as COMPANION or SUPERINTENDENT of a HOUSEHOLD.—Address H., 20, De Beauvoir-road, N.

MEDICAL.—A GENTLEMAN, fully quali- fied, possessing the Degree of M.D., who has just returned

from spending a considerable time in the Hospitals at Paris, and has a knowledge of French, is desirous of obtaining an APPOINTMENT as MEDICAL ATTENDANT to travel with a Gentleman, Family or an Invalid. The highest references will be given.—Address M.D., Post-Office, Kidderminster.

BRIGHTON.—EDUCATION.—A LADY, residing in one of the most healthy situations in Brighton,

RECEIVES A FEW YOUNG LADIES to EDUCATE, assisted by the most approved Masters. The arrangements and system of Education combine the advantages of a private family with the discipline and instruction of a school. The first references, and moderate terms.—Address M. M., Folthorpe's Royal Library, Brighton.

INDIAN CIVIL SERVICE.—A Gentleman, who obtained good marks in English and Modern Lan-

guages at the last Examination, will READ in these subjects with one or two CANDIDATES for the NEXT COMPETITION.—Bzra, Keen's Library, Ledbury-road, London, W.

LADIES' DRAWING CLASSES.—Mr. B. R. GREEN, Member of the New Society of Painters in Water-

Colours, Author of the 'Basic Drawing Models,' 'Heads after the Antique,' 'Landscape Perspective,' &c., RECEIVES SIX YOUNG LADIES, two Mornings in the week, for Instruction in Drawing and Painting.—For Terms, &c. apply at 41, Fitzroy-square; or of Messrs. Rowney, 51, Rathbone-place.

RUSTON MOBL. First Set, One Guinea; Second Set, One

Guinea and a Half; Boxes and Figures included.

TO BOOKSELLERS and STATIONERS.— WANTED, a GENTLEMAN, to take the ENTIRE MA-

NAGEMENT of a BUSINESS.—Address B. S., Mr. Keyworth's, Chemist, Hastings.

PUBLISHERS and BOOKSELLERS. —A GENTLEMAN of great experience in the Bookselling

and Publishing Trade, WANTS a SITUATION where responsibility and confidence are required. Is able to take the management in the absence of the Principal, having had the superintendence for some years past. Understands the Export Trade; good Correspondent. No objection to go abroad. First-class References.—Address F. J., Post-Office, Croydon.

WANTED, by an English Gentleman, aged 50, PARTIAL ENGAGEMENT, as English, Italian

or French Correspondent, Confidential Secretary, Interpreter, Reader, Translator, Teacher, Clerk, or otherwise. First-rate City and West-End references. Security, &c.—Address, p. p., to Mr. CURR, 33, Great Portland-street, Regent-street.

WANTED, for an established Weekly News- paper, a SUB-EDITOR, REPORTER and BOOK-

KEEPER. References to character and ability required.—Address Box 70, Post-Office, Rochdale.

WANTED IMMEDIATELY, for a temporary purpose, a few TRANSLATORS, chiefly of French,

accustomed to literary work.—Address G. C., Post-office, Kensington, W.

A PRACTISED WRITER is open to an ENGAGEMENT as a REVIEWER for a Literary Serial,

or on the 2nd of a collection of Liberal (and a conservative).—Address H., care of Mr. Atkins, 11, Spring Gardens, S.W.

A YOUNG GENTLEMAN, engaged during the day, wishes to meet with EVENING EMPLOYMENT,

literary or otherwise. Highest references.—Address Lectors, Post-office, Fenchurch-street, E.C.

AS AMANUENSIS.—A LADY, who writes English, French, Italian and German, with equal facility,

and in a rapid and legible hand, desires to meet with an ENGAGEMENT in the above character. References exchanged.—Address E. T. S., 16, Great Russell-street, W.C.

UNIVERSITY OF LONDON, EAST INDIA CIVIL SERVICE, and other Competitive Examinations.

—Mr. PAICE, M.A. London, READS WITH GENTLEMEN preparing for any of these Examinations.—Address Messrs. Walton & Maberly, Upper Gower-street.

A MEDICAL MAN and his WIFE, residing near Town, are desirous of meeting with ONE or TWO

LADIES to read with them, or with their LITTLE GIRLS. Terms liberal; references exchanged.—Address X. Y. Z., care of Mrs. Forrest, Post-Office, Peckham Rye.

MEDICAL.—An excellent COUNTRY PRACTICE in the South of DEVON is to be DISPOSED

OF. The present receipts are 400l. per annum, and may be greatly increased. There is a good and commodious house, rent 26l., including ample stabling, and a large and well-stocked garden.—Immediate application by letter to MEXICO, care of Messrs. Suter & Alexander, 23, Cheapside, London, E.C.

REQUIRED A GENTLEMAN, having a good knowledge of EDUCATIONAL and GEOGRAPHICAL

LITERATURE, to represent an Eminent Firm, and to introduce their Publications to the Heads of Schools and Colleges throughout the United Kingdom.—Apply, by letter, stating qualifications and salary expected, addressed DELTA, Post-office, 180, Strand, London.

ITALY and THE EAST.—The Travelling Student in Architecture of the Royal Academy of Arts,

London, (at present in the South of France), offers his services to any NOBLEMAN or GENTLEMAN ABOUT TO TRAVEL, to whom his knowledge of the Fine Arts and Sketching would be of value.—Address J. R., care of Mr. Cates, 7, Whitehall-yard, London, S.W., who will also answer any inquiries.

DR. KINKEL'S GERMAN CLASSES for LADIES will recommence in the second week of October,

at his house, 23, Bloomfield-road, Paddington, W. The LECTURES on MEDIEVAL and MODERN ART will begin on Thursday, October 10, at half-past 3, in the Theatre of the South Kensington Museum. The LECTURES on ANCIENT ART to begin January 8, at Dr. Kinkel's house.—Particulars in the Prospectus.

HOME EDUCATION.—A Lady, residing in an exceedingly healthy neighbourhood (with railway com-

munication), wishes to RECEIVE THREE or MORE YOUNG LADIES to EDUCATE with her Daughter, aged 13 years.—Apply by letter to ALPHA, care of Mr. Joseph Lee, Billiter-square, London.

UNIVERSITY of EDINBURGH.—A Clergyman has Vacancies for TWO YOUNG GENTLE-

MEN attending the University, to whom the advantages of Home will be given. Reference.—Professor Blackie, Edinburgh University.—Address M. A., 25, Stafford-street, Edinburgh.

GERMAN, French, Italian.—Dr. ALTSCHUL, Author of 'First German Reading-Book,' dedicated to Her

Grace the Duchess of Sutherland, &c. M. Philolog. Soc., Prof. Eloquence.—TWO LANGUAGES TAUGHT in the same Lesson, or alternately, on the same Terms as One, at the pupils' or at his house. Each language spoken in his PRIVATE Lessons, and select CLASSES for Ladies and Gentlemen. Preparation for all ordinary pursuits of life, the Universities, Army and Civil Service Examinations.—9, OLD BOND-STREET, PICCADILLY.

MONS. TOURIER'S FRENCH CLASSES FOR LADIES, at Islington, Highgate, Notting-hill, Ken-

sington, Hammersmith, Richmond, and his residence, 41, Manchester-street, W. His ANNUAL CLASS for GOVERNESSES begins Saturday, October the 13th, at half-past Five.—Monsieur Tourrier is the Author of 'French as Spoken,' 'The Model Book,' 'Self-Teaching French Grammar,' 'Juvenile Grammar,' &c.

THE NEW KORAN; or, Text-Book of Turkish Reformers, in the Teaching and Example of their esteemed Master, JAIDÖ MORATA.

The book of the Syrian prophet opens a gateway through what has hitherto been considered an insurmountable barrier to Muslim progress. It separates spiritual religion from dead forms and superstitions; offers a common ground of reconciliation to Christians, Jews and Turks; and promises to bring about, by moral and pacific means, a far more important reformation in the East than is likely to be effected by Abdul-Azis or the sword of the Wahabites.

London: Geo. Manwaring, 3, King William-street, Strand.

MACMILLAN & CO.'S NEW CLASS-BOOK FOR COLLEGES AND SCHOOLS.

This day is published, crown 8vo. price 7s. 6d.

COMPLETION OF THE ENGLISH CYCLOPÆDIA.

CONDUCTED BY

CHARLES KNIGHT.

IN FOUR DIVISIONS, each complete in itself.

In 4 vols. cloth, 2l. 2s.; or half morocco, 2l. 10s.

THE CYCLOPÆDIA OF GEOGRAPHY.

In 6 vols. cloth, 3l.; or 3 vols. half morocco, 3l. 12s.

THE CYCLOPÆDIA OF BIOGRAPHY.

In 4 vols. cloth, 2l. 2s.; or 2 vols. half morocco, 2l. 10s.

THE CYCLOPÆDIA OF NATURAL HISTORY.

In 8 vols. cloth, 4l. 16s.; or 4 vols. half morocco, 5l. 12s.

THE CYCLOPÆDIA OF ARTS AND SCIENCES.

*** For full details, see Prospectus, which may be had
from the Publishers, or through any Bookseller.

"As regards the contents of this Cyclopædia, it is, how-
ever, impossible to give any sufficient impression of an
aggregate which includes somewhere or other all the in-
formation generally required upon every conceivable topic.
A good Encyclopædia, as everyone knows, is a compendious
library; and, though students may require further informa-
tion upon some points than its summaries contain, even
students will be surprised, in this instance, to find the
materials at their disposal when they once adopt the habit
of resorting to its pages. For all practical purposes, a
large proportion of the articles may be said to be ex-
haustive. They are accurate to a degree, which will strike
even those who know what pains have been taken to render
them so; and, as they are concise as well as full, every
column being rammed like a sky-rocket, the owner has a
reservoir out of all proportion to the library-shelves it will
occupy."—*Times*, Oct. 4, 1861.

"Upon the whole, then, we are able to speak very
favourably of this new Cyclopædia. Its great recommen-
dation is not its comparative cheapness (though the cost
only averages about half-a-guinea a volume), but its
originality, completeness, and general trustworthiness. We
may express a hope that its enterprising Publisher will
have no reason to regret his considerable venture. He is
not likely, we think, to have to complain of want of patron-
age, if it is sufficiently remembered that any one of his
four great Divisions may be purchased separately as a work
complete in itself. Few may be able to afford the whole
series; but there are many who will be glad to procure, for
example, a Biographical Dictionary, while others will re-
quire, for their peculiar tastes or studies, the Geographical
Cyclopædia, or that of the Arts and Sciences, or of Natu-
ral History."—*Saturday Review*, Sept. 28, 1861.

London: BRADBURY & EVANS, 11, Bouverie-street,
Fleet-street, E.C.

ANNUAL SUBSCRIPTION, 10s.

MALTA, under the PHŒNICIANS,
KNIGHTS, and TALLACK.
Author of 'Friendly Sketches in America.'

"It [the book] is probably the best Guide the intended visitor to
Malta can take with him. In a tone partly historical, partly
scientific, partly antiquarian, and everywhere religious, the author
tells us about all that is interesting in Malta, from the Bakery to
the Religious Procession of Passion Week; from the Cabiri to the
hammer-headed sharks."—*Literary Gazette*.
"A very valuable and interesting little volume."
Morning Herald.

London: A. W. Bennett, 5, Bishopsgate-street Without, E.C.

Mr. Newby's New Publications.

2 vols. demy 8vo.

The TURKISH EMPIRE in its RELA-
TIONS with CHRISTIANITY and CIVILIZATION. By
R. R. MADDEN, F.R.C.S. M.R.I.A., Author of 'Travels in
Turkey, Egypt, and Syria,' 'The Life of Savonarola,' 'Memo-
irs of the Countess of Blessington,' &c.

NEW NOVELS.

The ANCHORET of MONTSEERAT.
By Mrs. KELLY, Daughter of the late Mrs. Sherwood, Author
of 'The Lady of the Manor,' &c. 3 vols. 31s. 6d. [This day.]

The FRIGATE and the LUGGER: a
Romance of the Sea. By C. F. ARMSTRONG, Author of
'The Two Midshipmen,' 'The Cruise of the Daring,' 'The
Medora,' &c. 3 vols. 31s. 6d. [Just ready.]

The COST of a CORONET: a Romance
of Modern Life. By J. M'GREGOR ALLAN, Author of
'The Intellectual Severance of Men and Women,' &c. 2 vols.
31s. [Just ready.]

CONSTANCE DALE. 2 vols. 21s.

"The Author of 'John Halifax' will find a powerful rival in
Charlotte Hardcastle. This book, like Miss Mulock's, displays
the impress of a master mind; it is striking, not only for original
ideas, for unusual talent, but great genius."—*Advertiser*.
"The story commends itself not less by the unimpeachable
morality than by the agreeable style in which it is written. It
cannot fail to be deeply interesting to the reader of fiction."
Observer.

CULVERLEY RISE. By Julia Corner,
Author of 'The Histories of England, France, Spain,' &c.
3 vols. 31s. 6d.

"It will increase the reputation of Miss Corner."—*Observer*.

BELL & DALDY'S POCKET VOLUMES.

A Series of Select Works of Favourite Authors.

The intention of the Publishers is to produce a Series of Volumes adapted for general reading, moderate in price, compact and elegant in form, and executed in a style fitting them to be permanently preserved.

They do not profess to compete with the so-called cheap volumes. They believe that a cheapness which is attained by the use of inferior type and paper, and absence of editorial care, and which results in volumes that no one cares to keep, is a false cheapness. They desire rather to produce books superior in quality, and relatively as cheap.

Each volume will be carefully revised by a competent editor, and printed at the Chiswick Press on fine paper, with new type, and ornaments and initial letters specially designed for this series.

The POCKET VOLUMES will include all classes of Literature, both copyright and non-copyright: Biography, History, Voyages, Travels, Poetry, sacred and secular, Books of Adventure, and Fiction. They will include Translations of Foreign Books, and also such American Literature as may be considered worthy of adoption.

The Publishers desire to respect the moral claims of authors who cannot secure legal copyright in this country, and to remunerate equitably those whose works they may reprint. The books will be issued at short intervals, in paper covers, at various prices, from 1s. to 3s. 6d., and well bound in cloth, at 6d. per volume extra. Also in superior bindings for Presents and Prizes.

Now Ready,

Southey's Life of Nelson, 2s. 6d. Longfellow's Poems, 2s. 6d.
George Herbert's Poems, 2s. Milton's Paradise Lost, 2s. 6d.

With Four Charts and Portrait, price 5s.

LORD DUNDONALD'S AUTOBIOGRAPHY.

"Ought to be a prize-book in every military and naval school." *London Review.*
 "We may safely predict for this work an unbounded popularity. A narrative of heroic adventure, every line of which should be perused by Englishmen."—*Times.*
 "A valuable contribution to the historical literature of England."—*Blackwood's Magazine.*

"The career of Lord Dundonald recalls that of Raleigh and Herbert of Cheshire. This work will take its place with our best naval histories."—*Athenæum.*

A work which, once read, will imprint itself on the memory for ever. It is an admirable work."—*Spectator.*

"More full of interest than one of Marryat's novels." *Economist.*

FRANCATELLI'S COOK'S GUIDE.

Price Five Shillings.

"Francatelli's 'Cook's Guide' is an admirable manual for every household where pleasure, health, and economy are consulted. The whole book has the merit of being exceedingly plain, of containing sufficient cross references to satisfy a Panizzi, and of being so serviceably arranged in all its parts that we defy you to miss any of the consolations intended for your physical infirmities."—*Times.*

EAST LYNNE: a Story of Modern Life. By Mrs. HENRY WOOD. 3 vols. [Now ready.]

"This is a tale of remarkable power. It displays a force of description and a dramatic completeness we have seldom seen surpassed. The interest of the narrative intensifies itself to the deepest pathos. The closing scene is in the highest degree tragic, and the whole story exhibits unquestionable genius and originality."—*Daily News.*

"So full of incidents, so exciting in every page, so admirably written, that one hardly knows how to go to bed without reading to the last page."—*Observer.*

BENTLEY'S STANDARD NOVELS.

To this Series of Novels has just been added the Popular Story,

THE SEMI-ATTACHED COUPLE.

Price 2s. 6d.

The Volumes already comprise—

ANTHONY TROLLOPE'S THREE CLERKS. 3s. 6d.

RITA. 2s. 6d.

THE LADIES of BEVER HOLLOW. By the Author of 'Mary Powell.' 2s. 6d.

LITERATURE

Switzerland: How to see it for Ten Guineas.
By One who has done it (Henry Gaze).
(Kent & Co.)

THERE must be many readers who would like to see Switzerland for Ten Guineas. A traveller brings you a welcome story who tells you that you may "visit the gay city of Paris and glide along the 300 or 400 miles of railway, which will set you down on the Swiss frontier—may see Bâle, Berne and other of the principal towns of the land of Tell—may traverse some of the sublime passes among the mighty Alps, rewarded at every new height by magnificent views of their flashing snowy peaks," and do many other things of a like kind, for two hundred and ten shillings. Horace tells us it was not in every man's power to visit Corinth—

Non civis homini contingit adire Corinthum.

But Mr. Gaze assures us it is in every man's power who has ten guineas in his pocket to visit not only Paris, a modern Corinth, but also Switzerland into the bargain.

Now, as the whole hinges upon points of economy of money and time, it will be as well to look at this ten-guinea tourist's cash account in the light of some knowledge of the localities named, and some experience of Swiss expenses. The problem is this: fourteen days, and ten guineas being given—how therein and therewith to see Switzerland. As to the time, it is barely enough for the Bernese Oberland; as to the money, it is not more than enough to get there and back comfortably. But Mr. Gaze's followers must pay all their travelling expenses with 6*l.* 5*s.* 6*d.*, after which they have left for feeding and hotel expenses 3*l.* 16*s.*, and for bath, alpenstock and other sundries, 8*s.* 6*d.* Such is his reckoning of disbursements. A few trifling omissions are visible enough at the first glance,—especially when turning over the author's last page you see that one of his advertising friends, who styles himself "The Alpine Outfitter," kindly offers his Alpine outfit for 7*l.* 6*s.*, exclusive of such fancy articles as "Zouave leggings," which of course are extra charges. Already, therefore, we require, for our would-be tourist 17*l.* 16*s.* as the minimum—unless he is supposed to start in his Sunday clothes. A few other trifles, and yet almost indispensable, as map, guide-book and medicines, will bring the total to twenty guineas.

It is right to say that the author takes his economical reader about with him in a light and easy way, always making things pleasant; but though he does not exactly "cook the accounts," he does not settle all accounts with the cook, as any man may imagine who thinks of ten days' expenses at hotels, and 3*l.* to meet them—for the odd 16*s.* go for eating during the four days of travelling. The whole, however, is best to be conceived by an imaginary personage taking this trip with his ten guineas, and we believe we shall do no slight service if we represent things in a different light from this rigid economist, and yet proceed upon his own route and plan.

Suppose, then, gay or gentle reader (you may be gay when you start, but you will soon be gentle enough!), that you have resolved to do what is set down in this tractate. Listen to us as we describe what may, and probably will, be your fortune and your fate during the attempt. Presuming that you have arrived at Paris at the cheapest rate, and not a little fatigued, you hurry on to the Paris and Strasbourg station, determining to take the night train, third class. You are just in time to be

jammed in with fifty soldiers, who are jabbering most confusingly, and demanding passage most fiercely. You sit in that pleasant society for 323 miles. If you have neglected to bring provisions with you, you must wait patiently for five and a half hours before you stop at a decent buffet. By this time the expectation of sleep is a delusion, and the songs of the sons of Mars have driven you to distraction. A stern determination to disappoint your heir-at-law will perhaps sustain you till about two o'clock the next day, when, after enduring what no inspector of prisons at home would permit for felons, you will alight at Bâle, well prepared to study its antiquities—after having crossed the Channel, swept by nearly 100 railway stations, and travelled about 650 miles continuously in the most uneasy circumstances and with the most undesirable companions. But the end of your travelling miseries has not yet come. You are bound for Lucerne, and must reach it this very night. You do reach it, in the dark; and now, at last, you may at least think of a bed, regretting that you have rashly left your own.

If you can lift up your head the next morning, your place is in the steamboat on the Lake of Lucerne. If Pilatus wears his cloudy hat, the weather is in your favour. What a glorious day for mounting the Rigi! Take your ticket for Weggis; get out there, and begin the ascent. Dozens of tourists are bound for this most famous and favourite of Alpine summits and scenes. Peruse in your Murray the particulars of the wonderful and perfect panorama you will behold from the summit, or get a map-like picture of it, and study it as you proceed. Everybody who has not yet been on the Rigi is talking about it, everybody who has been is talking about it—how clear it was, or how cloudy—how grand the sunset, how splendid the sunrise, and how surprising the panorama! Every other alpenstock you shall look at in your after journey will have "Rigi-Kulm" branded upon it. Every other tourist has the scene imprinted on his memory. How often and how enthusiastically will you also talk of the Rigi, and point to your alpenstock! Stop, however, for one moment. Refer to your route in Mr. Gaze's Guide; it omits the Rigi! Your course is to Alpnach, and the other way. It is useless to complain of the route given. You are on the ten-guinea tack, and already in your third day. It is well if you have had time to take a hasty look at the lion of Lucerne—the colossal design of Thorwaldsen. As to anything besides, you have not a minute to spare.

To proceed on our tour, and turn for a moment from mountains. Of course, you are fond of waterfalls. Well, perhaps the most graceful and gleeful in Switzerland is that of the Giessbach. Stay for a night at the neighbouring hotel, the proprietor of which illuminates the fall every night in the month of August. Though somewhat theatrical, yet nothing can be more striking than to see the several portions of the cascade suddenly illumined with bright and different-coloured fires. Even grave and reverend sages clap their hands in approval, and ladies are in ecstasies. The scene by day and the fireworks by night will repay a visit, and everybody makes it, except you, for it is not in your route!

Of course, you go to Lauterbrunnen, and, when you have gazed at the Staubbach, proceed to mount and walk through the wood towards Mürren. On emerging from this wood, and especially on arriving at Mürren, a mountain prospect bursts upon you, which is not

surpassed at the same height in Switzerland. Five or six great mountain masses are marshalled before you, and you see up sheer to their summits. From the gallery of the mountain inn at Mürren you may gaze upon them during delighted hours, and still return to the scene the next day with fresh delight. Still grander, and more extended, is the view from a neighbouring mountain, the Schilthorn, 9,000 feet high, yet not very difficult of attainment, and offering, when attained, a wonderful circle of mountain tops, including the greater and lesser giants of the whole Bernese Oberland, and commanding snowy range after range and rocky parallel behind rocky parallel. You are within reach of these most impressive scenes. A day or a day and a half will suffice for a glorious glimpse of them. Surely you will ascend, and dine, and sleep at Mürren, and scale the Schilthorn. Undoubtedly you would, —only it is not in your route; and, if it were, you are on your fifth day, and have not even a half-holiday from your stated task-work!

Over the Gemmi Pass you go on your seventh day; for that is not, as a seventh day should be, one of rest, though you have been hitherto marching like a foot-soldier. But truly you ought to stop at Kandersteg, and walk quietly to the Oeschinen valley and lake, probably the most lovely little lake in the whole country, lying like a rock-set mirror at the foot of precipitous alps, which, robed in virgin snows, proudly look down upon their reflected image in the glassy waters in which they lave their feet. Six or seven little cascades find their serpentine and joyous way into this lake, and make the eternal silence vocal. Fallen pines stretch their withered lengths on one side, and fallen blocks of stone on another. Not a human being is here beside yourself, and you seem alone in a fairy scene—a scene so alluring, so peaceful, so far removed from human presence and passions and the sad profanations of a mob of sight-seers, that it will live in your memory for months like a placid dream, and stand out and aside from all recollections of hotels, and waiters, and guides, and mules, and porters. It will be the one little quiet fond reminiscence amidst a confused entanglement of recollections of enormous mountains and fearful precipices. Of course you will see this, and refresh yourself for an hour or two in so charming a spot. Alas! it is your seventh day, and you are to ride past and fast without stopping here—except for one minute, to take breath before you begin your fourteen miles' walk over the steep, stern, gloomy Gemmi, and steal fearful glances down the totally unguarded precipices, though, strangely enough, a popular Guide-book declares them to be "perfectly protected with parapets." Worn and dusty, you get down to Leukerbad,—we must say *down*, though the place is higher than the highest British mountain. Here there is enough to see for two days at least, and you need a rest. There are the singular ladders on the face of the steep rocks; and, above all, there is the view from the Torrenthorn to see, which we fully agree with an experienced Alpine traveller in pronouncing one of the grandest in Switzerland. A whole morning should be spent there; but you have not a morning to spare, as it is not in your route! Instead of ascending the Torrenthorn, you must be in the diligence to Sion, and thus ride away from what you should above all things see,—and ride, too, just where you should walk slowly, and frequently rest, to admire different points in the imposing gorge of the Dala, which of all the river gorges you will see is by far the most remarkable. On you hasten to Martigny, where everybody

who arrives in the afternoon stops for the night,—except yourself, you being ordered on a ten miles' walk, and to pay a visit to the monks of St. Bernard, though paying them nothing besides the visit. You come back to Martigny the following evening, and, sleeping there, start the next morning for Chamouni.

Now, there is one view in this day's travel which alone is worth the whole journey from London. It is confessedly one of the grandest views in the world. You get it from the Col de Balme, whence you take in at one glance the whole valley of Chamouni and the whole mass of Mont Blanc on that side, with its towering Aiguilles. Everybody, from poor Albert Smith to every other travelling Smith, was or is enthusiastic upon this sublime scene—and it is in your way, too—only you happen to be directed another way, and do not see it at all! As to returning to it from Chamouni, this would demand a fifteenth day. But let us arrive at Chamouni without further notices of what you have not seen. And now the first question is not, What do you think of the scene? but, What remains in your pocket of the 3l.? If anything at all, it will be but little for such a place as this, where every hotel is full in the season, and everything in season is at full price. Let us look at the particulars of your stipulated expenditure, and we see that you are allowed daily for dinner two and a half francs, which is not much more than half the *table-d'hôte* charge in the good hotels, exclusive of wine. Where you are to dine here for two and a half francs, and sleep for one and a half, puzzles us rather more than any question about glacier theories. Our own impression is, that you will be obliged to dip into the small sum reserved for homeward travelling; and when you have spent all this, as you will have done in a few delightful days here, then you have but one resource left, and that is to stand cap in hand at the door of the new English Church every Sunday, and, having followed the advice of Mr. Gaze, become with your alpenstock a gazing-stock to the whole herd of British and American tourists. Should you not succeed in obtaining sufficient voluntary contributions for your support, starvation and death stare you in the face as starkly as Mont Blanc itself.

Granted that this might be rather a melancholy finish to the ten-guinea tour, we will, on the other hand, suppose that you do get to Geneva with a shilling or two out of the 3l. At Geneva, however, you cannot tarry. You must be at the railway and in a third-class carriage at half-past one, and then you have a very pleasant, short little jaunt before you to Paris, the counterpart of your delightful night trip from Paris to Bâle. You may not, indeed, have with you soldiers, but you are sure to have smokers all night. Most people would absolutely require a good night's sleep in a soft bed after twelve days of unremitting toil, spare diet and forced teetotalism—for not a bottle of wine comes within your allowance. But you will naturally sing through the whole happy hours of darkness, while a snoring peasant rests his lumpish head on one of your shoulders, and a thumping dealer in small-ware on the other. In what condition you will be when you arrive next day in Paris, and especially when, having crossed the Channel the day after, you arrive in London, charity and propriety alike forbid us to describe. But then you have seen Switzerland!

Should you ever converse about what you have seen, it will be as well if no kind friend informs you that you have not even glanced at that district which the English are now commending and frequenting above all others, viz., Zermatt and Monte Rosa. Not to have seen

these and yet to have seen Switzerland is like seeing the play of Hamlet with Hamlet left out.

Vexed at the omission, you turn to Mr. Gaze's book to ascertain if he names it. He certainly does, in a word or two, but then it is in Route A, not the one he discourses upon at length. So that to see Zermatt you must take another fortnight and another ten guineas—thus making the whole one month in time and twenty guineas in cost. Route A puzzles us nearly as much as the previous route, for the tourist is to mount and master the Gemmi Pass on the eighth day, and then with what remnants he may have of 3l. he is to go from Leuk to Visp. We have recently taken this course, and know what a *voiture* costs. Then from Visp to St. Nicholas (where he must sleep, or try to sleep); then on to Zermatt, where he may not even try to sleep, since the two hotels are generally overcrowded every summer, and several tourists this season had to acquaint themselves with the bare boards in the *salle-à-manger*. But perplexities still thicken upon us like mists upon the mountains. The route says: "At Zermatt excursions," &c. Now excursions there demand guides, and at good prices, but not a franc is allowed for guides! Moreover some of the finest excursions must be made from the Riffler Hotel—a little mountain hut-house so named by courtesy. How the economical tourist with his few unspent francs is to tarry at the costly little Riffler inn, make excursions therefrom without guides, get down again to Visp, and up the long Rhone valley—under water, perhaps, in the hot season, from the endless and furious glacier streams converging into it from the heights—how he is to reach Martigny on the thirteenth day and Geneva on the fourteenth, as skeletoned, with a five-franc piece in his pocket beyond the return travelling expenses, passes every effort we have made in simple arithmetic. Sixteen days are allowed, we see, for this tour, but then, how can this skeleton route be headed "to be accomplished at about the same cost and in the same time as the previous route"?

The recent singularly fine and settled weather has proved irresistible to members of the Alpine Club and other adventurous mountaineers. These gentlemen are exceptions to all ordinary men, having iron frames and leather muscles, and they have accomplished several ascents and passes which will procure them name and fame amongst their friends. While at Zermatt, we met with two or three tourists who had ascended the highest peak of Monte Rosa, and we learned that several other ascents had been made in August. In fact, those two weather-beaten, peak-empurpled guides, the Taugwalds, were objects of competition; and as we stood at the door of the Riffler inn and awaited the arrival of one climber of Monte Rosa, another aspirant for mountain honours was eager to engage the Taugwalds on the spot, and they have reaped a fine harvest on the snow-fields. The Lyskamm was attained, for the first time we believe, by Prof. Ramsay and other Englishmen; and most remarkable of all, that haughty giant, the Weisshorn, "whose glorious pinnacle has never yet felt the foot of man," according to an Alpine Clubbist, must learn humility, for while we passed not far from it, Dr. Tyndall was high up on his path towards it, and, as we learned, actually reached the summit. Such triumphs will, we believe, together with others in the Oberland, be duly detailed and recorded, and we may expect a volume which will prove that Englishmen have this season, even more than heretofore, proved themselves the most daring and the most successful of Alpine climbers.

Gleanings from Westminster Abbey. By George Gilbert Scott, R.A. (J. H. & J. Parker.)

Mr. Scott deserves the crown of modesty, for having chosen for this interesting and valuable contribution to the history of the grand edifice, to which he is himself architect, no more presumptuous a title than that of "Gleanings." The student cannot have a better guide-book. He will find it more interesting and illustrative than any other, although it may be less complete in a chronological sense. Much that Mr. Scott does not include in his plan of treatment is supplied by other writers, amongst whom are Messrs. Burges, J. Burtt, J. H. Parker and Prof. Willis. Mr. Burges contributes some valuable notes 'On the Tomb of Henry the Seventh.' Mr. Burtt presents a most interesting Fabric Roll, discovered by him in the Record Office, entitled 'A Roll of Payments of Wages, and of Purchases for the Works at Westminster, 37 Hen. III.' (1253), which gives many a curious glimpse into the ways and means, to say nothing of the manners and customs, of that age. From it we learn that the Abbey was at least as costly an affair as is its new neighbour, the process of whose premature decay we recently reported. Prof. Willis has illustrated this document with an analysis and explanation of its contents, such as no one else could have furnished. An Appendix contains further notes on this subject relating to Fabric Rolls of later dates, i. e. from 1267 until, with some interruptions, 1442. From these sources we gather that the outlay going on at Westminster for the King's Palace and the Abbey Church was from 20,000*l.* to 40,000*l.* a year. Mr. J. H. Parker's examination and history of the Jewel-house is a perfect revelation, for few persons are aware of its existence. Standing as this building does in the heart of Westminster, how many have an idea that this "treasure-house of mighty kings," built by Richard the Second, is still in existence? The walls, even to the parapets and the original doorways, are perfect; the interior, however, has been altered to fit it for a depository of the records of the House of Lords; the original groined vaults remain in the basement, with their moulded ribs and carved bosses, evidently a part of the same work as the cloisters of Abbot Litlington (1377).

Few persons who attend the services at the Abbey, and look at the grimy magnificence of the long and lofty nave, imagine that that portion was rebuilt so late as the fifteenth century, in a style so admirably imitating that of the thirteenth as to pass unsuspected by casual or not very accomplished observers. Such was the case, and Rymer, in the 'Fœdera,' gives the original Royal Commission issued to Richard Whityngton and Richard Harowden, monk of the Abbey (1413), for the said rebuilding. Mr. Lysons considers the first-named of these men to be no less a person than the famous Lord Mayor of London. There is every reason to believe that the old Norman nave was left standing until that time.

Mr. Scott does not trouble himself with the legend that there once stood upon the site of Westminster Abbey a Roman temple to Apollo; but begins his account with the Christian history, which relates that in the days of King Offa a church stood there, rebuilt by Edward the Confessor, which was, according to William of Malmesbury, the earliest Norman church in the island. From a Norman-French verse of the time of Henry the Third, there is no doubt that during that king's reign there existed a central tower and two others at the west end. We know that portions of the Confessor's own

work still exist in the so-called Dark cloister, the substructure of the dormitory, which passes under the library and the great school-room, which occupy the position of the ancient dormitory; two massive early Norman piers (circa 1060) yet remain in the Chapel of the Pyx. The dimensions of the Confessor's building Mr. Scott assumes on very satisfactory grounds to have been about the same as those of the present edifice, except as relates to the remarkable length of the nave. The Chapel of the Pyx, or its immediately adjoining building, was in old time a Royal Treasury, once the scene of a glorious haul by way of the robbery of about two millions of our money by certain folks, amongst whom the Abbot and forty of his monks fell under suspicion and were sent to the Tower. This money (100,000*l.*) had been laid up for the Scotch wars by Edward the First. Mr. Scott on one occasion found under the hinges of a door giving access to a portion of this building, "some pieces of white leather," which Mr. Quekett declared to be human skin, originally, no doubt, as was the case elsewhere, the personal property of certain thieves, and stretched over the entire door as a terror for the future. Such it did not prove, for one Richard de Podelicote, sacrist of Westminster, and the Keeper of the Palace, with some friends of theirs, broke into the king's strong box and spoiled him to their hearts' content. The king, who was not a man to be trifled with, sent writ after writ from his Scottish camp at Linlithgow, and soon the evil was out. Here is part of Podelicote's confession:—

"He was a travelling merchant for wool, cheese and butter, and was arrested in Flanders for the King's debts in Bruges, and there were taken from him 1*l.* 17*s.*, for which he sued in the King's Court at Westminster at the beginning of August, in the thirty-first year, and then he saw the condition of the refectory of the Abbey, and saw the servants bringing in and out silver cups and spoons and mazers. So he thought how he might obtain some of those goods, as he was so poor on account of his loss in Flanders, and so he spied about all the parts of the Abbey. And on the day when the King left the place for Barnes, on the following night, as he had spied out, he found a ladder at a house, which was near the gate of the Palace towards the Abbey, and put that ladder to a window of the chapter-house, which he opened and closed by a cord; and he entered by this cord, and thence he went to the door of the refectory, and found it closed with a lock, and he opened it with his knife and entered, and there he found six silver hanaps, in an ambry, behind the door, and more than thirty silver spoons in another ambry, and the mazer hanaps under a bench near together; and he carried them all away, and closed the door after him without shutting the lock. And having spent the proceeds by Christmas, he thought how he could rob the King's treasury. And as he knew the ways of the Abbey, and where the treasury was, and how he could get there, he began to set about the robbery eight days before Christmas with the tools which he provided for it, viz., two 'tarrers,' great and small knives and other small 'engines' of iron, and so was about the breaking open during the night hours of eight days before Christmas to the quinzain of Easter, when he first had entry on the night of a Wednesday, the eve of St. Mark (April 24); and all the day of St. Mark he stayed in there and arranged what he would carry away, which he did the night after, and the night after that, and the remainder he carried away with him out of the gate behind the church of St. Margaret, and put it at the foot of the wall beyond the gate, covering it with earth, and there were there pitchers, cups with feet and covers. And also he put a great pitcher with stones and a cup in a certain tomb. Besides he put three pouches full of jewels and vessels, of which one was 'hanaps' entire and in pieces. In another a great crucifix and jewels, a case of silver with gold spoons. In

the third, 'hanaps,' nine dishes and saucers, and an image of our Lady in silver-gilt, and two little pitchers of silver. Besides he took to the ditch by the mews a pot and a cup of silver. Also he took with him spoons, saucers, spice dishes of silver, a cup, rings, brooches, stones, crowns, girdles and other jewels which were afterwards found with him. And he says that what he took out of the treasury he took at once out of the gate near St. Margaret's Church, and left nothing behind within it."

The affair was evidently got up between the parties above named; and an extraordinary instance of their cunning and foresight is shown by the cemetery (the cloister-garth, that is) having been sown with hemp in the previous spring, so that it should grow high enough by the time of the robbery to hide treasures in, "that the misdeed might be unknown." What punishment was inflicted on the robbers is unknown. When Mr. Scott came upon the skin above mentioned he also made entry upon a forgotten store of records dating from about *temp.* Henry the Third to Henry the Eighth, the depository of which some zealous canon had turned into a wine-cellar about sixty or seventy years back. A number of little boxes of poplar were amongst the shamefully treated heap; each contained one or more deeds with seals attached, all relating to the affairs of private individuals, interesting from their early dates, extending, as far as has been ascertained, from the time of Henry the Third to that of Edward the Third; they are fresh as when new, beautifully written, and the seals often very good. Fragments of encaustic tiles, of beautiful patterns, were found in the same place, the glaze on which was so fresh as to lead to the belief that they had never been trodden on. In making entry to this place, which led from the cloisters to the entrance to the dormitory, now the library, Mr. Scott found "the sill of the doorway worn deeply with the feet of the monks, and more so on one side than the other, showing that one leaf only of the folding-doors was used."

Dismissing the Confessor's work and its associations with an examination of the few other fragments that remain, Mr. Scott next enters into the consideration of the state of the Abbey at the time of Henry the Third, and the works which were carried out at that period. There is little doubt that he is perfectly right in considering the English works of that date to be more perfect, or at least more complete, in character of development, so far as they indicate the attainment of all that constitutes a style, than the contemporary productions of the French architects. Those who wish to gain, if they do not already possess it, a feeling of admiration for the powers of design of the Gothic architects, cannot do better than refer to Mr. Scott's brief and popular explication of the manner in which the chevet and the apsidal chapels of Westminster have been designed or set out by the architect of old. Mr. Scott's investigations fully establish the point of extreme subtlety with which this was arranged, and testify to the admirable care of the constructive design. In reference to what we call the triforium, or, rather, the gallery immediately above the aisles, Mr. Scott says: "The spaciousness of this upper story is quite surprising to persons who see it for the first time. It is capable of containing thousands of persons, and its architectural and artistic effects, as viewed from different points, are wonderfully varied and beautiful." Intended as this grand church was for the performance of national ceremonies, such as coronations, &c., there can be no doubt of the original intention of these extraordinary additions. The triforium arcade forms, as everybody knows, probably the most beautiful example in existence, of its kind.

Before the statues of Minerva, Neptune, Hercules, and other pagan deities, the marble cherubs, the sarcophagi, the pancake clouds, trumpets, drums, representations of the bottom of the sea, wrecks, starveling secretaries of Queen Anne's time, rigged out in quasi-Greek costumes, and all that world of indescribable and hideous trash, was placed upon the interior walls, this building must have been one of the most lovely that it is possible to conceive. Filled with their soft-toned old glass, of which some specimens still remain, putting to shame the flimsy transparencies of fifty years ago, or the only less unsatisfactory, because less offensive and more timid, icy additions of quite recent date, the windows, with their chaste tracery, must have been solemn and grave to a high degree. Now many of them are blocked up with the most preposterous abortions that ever pained the sight of an artist, or did their very worst—their very heartiest, stupidest worst—to corrupt the tastes of a people. Some mitigation of this architectural scandal we hope and trust may be effected before many years are gone: hardly a cathedral in England but is undergoing repair, re-construction, and re-decoration, or has already been so treated. Chichester, Worcester, Ely, Wells, Peterborough, Carlisle, Durham, Llandaff, Exeter, Hereford, Lichfield, and a host of churches, have received more or less attention, while the sad interior of Westminster, superior to most and equal to any, the most important of all, historically or architecturally considered, can get only piecemeal reparations. The unbreeched secretaries, the red Indians, the negroes, the Romans, the Greeks, the scores of lumbering lions and still more lumbering angels, to say nothing of the 204 allegorical statues, can find no other home than in this fine interior, most sacred to our associations, and amongst the most perfect of our buildings. When another depository can be found for them, the beauties of the wall arcade, with its delicious carvings and coloured shields of the old knights, may be again displayed. As to the exterior, here is a notice of its history and condition, which shows something of its fortune.—

"Of the original details of the exterior it is nearly impossible to form anything like a correct idea. The whole was greatly decayed at the commencement of the last century, and was re-cased, almost throughout, with Oxfordshire stone, by Sir Christopher Wren and his successors, the details being altered and pared down in a very merciless manner; and the work, thus renewed, has again become greatly decayed. There is, in fact, scarcely a trace of any original detail of the eastern portion of the exterior left. The modeller employed by Sir Christopher Wren seems to have had more respect for the details than his master, for, while the latter has destroyed the external shafts of the windows, and represented their capitals by huge ungainly acorns, the modeller has in several instances shown the originals quite faithfully."

Mr. Scott quotes all opinions as to whether or not a central tower was contemplated over the "crossing,"—expressing his own doubts that anything more than a very light structure could have been intended in that situation. Recollecting that several of our cathedrals indicate the existence of intentions which were never carried out, in the way of solid roofs, towers, &c., owing to failures of foundations, of funds, or even structural difficulties, not to be surmounted in practice, however simple in theory, and that the Norman-French verse before referred to clearly ascribes a central tower to the earlier building, we are of opinion that Henry the Third's architects intended to have a central tower. It may be true that the Abbey was designed to a great extent on a

French type, but we are to consider how faithfully, as Mr. Scott has shown, the new building adopted the ground-plan of the old one, so that some of the latter was allowed to remain. It does not seem probable that so striking and noble a feature would have been omitted when that, too, was almost universal in the great English churches of the period. Moreover, Sir Christopher Wren distinctly stated that the commencement of a tower existed in his time, and one of Hollar's views shows clear indications of it. One would think that these facts would be conclusive on the point, notwithstanding the rare occurrence of towers in the cognate French churches, which fact, together with the slenderness of the piers on the crossing, is the strongest argument against the tower. Our conviction is, that a central tower was undoubtedly intended; and that it was carried up to a certain height, and abandoned on account of the weakness of the substructure. As to the rarity of French towers, "M. Viollet-le-Duc seems," says Mr. Scott, "to think that, even in France, this feature had often been contemplated."

The fact of the eastern wall of the cloister being actually beneath the triforium of the west side of the south transept, or so-called Poets' Corner, is a structural singularity not generally observed, and indicates that careful adhesion to the disposition of the older building, which has been never before noticed. The sad wreck to which the Chapter House has been reduced is illustrated by an engraving; and Mr. Scott's view of the interior, as it must originally have been, is contrasted with this. It appears that the building, as long ago as the days of Edward the Third, was given up for the use of the House of Commons, on condition that it should be kept in repair by the Crown. In the reign of Edward the Sixth, St. Stephen's Chapel having been given up to the House of Commons, the Chapter House was converted into a Public Record Office. In or about 1740, the vaulting was found to be dangerous, and taken down; and before this, in 1703, we find that, Sir Christopher Wren having refused to put up a gallery in it, it was made over to the tender mercies of some barbarian, who fitted it up for the records, with studious regard to the concealment or destruction of its architectural beauties. When we get a decent place for the complete stowage of our national archives, something may be done for the restoration of this splendid edifice. Meanwhile, the account of Mr. Scott's discoveries in it will certainly be read with interest:—

"The window over the doorway is most carefully walled up with ashlar, but from the bases visible on its sill, we see that it was of five instead of four lights,—no doubt to avoid the stumped look it might have had from being so much shortened by the height of the doorway and the abutting vestibule. I had often wondered that, while the windows generally are walled up with brick, this should be filled with stone; but on taking out one of the ashlar stones to ascertain the section of the jamb, what was my surprise at finding them to consist entirely of the lengths of the moulded ribs of the lost vaulting, carefully packed, like wine-bottles in a bin, with their moulded sides inwards! I made a still more interesting discovery in the spandrels of the doorway below. The gallery crosses the head of this doorway, and the presses for records were fitted so closely to the wall that nothing could be seen. I was one day on the top of one of these presses, and on venturing to pull away an arris fillet which closed the crevice between it and the wall, I perceived the top of an arched recess in the wall behind the press, and on looking down into it I saw some round object of stone in the recess below. My curiosity being excited, I let down into it by a string a small bull's-eye lantern, when, to

my extreme delight, I saw that the mysterious object was the head of a beautiful full-sized statue in a niche. Permission was speedily obtained for the removal of the press. The statue proved to be a very fine one of the Virgin, and in the spaces adjoining were angels ceasing. I afterwards found that it formed part of an Annunciation; the angel having been on the other side of the door. This last-named figure has, however, been long since removed into the vestibule. Its wings are gone; but the mortices into which they were fixed remain. Both are fine works, though not devoid of a remnant of Byzantine stiffness."

Mr. Burt's discoveries amongst the Pipe Rolls have had the interesting result of enabling us to define exactly the date when the characteristic style of the Abbey architecture was employed in this country. The Abbey is about the earliest work of its kind in England; and, as the building of the first portion of it, by Henry the Third, extended over a space of twenty-four years, it becomes important to ascertain how early in this period the style of its architecture can be proved to have been defined. "The most advanced (as to style) part," says Mr. Scott, "is the Chapter House,"—the windows thereof indicating a very developed style. The bills in the Pipe Rolls give us an item of "300 yards of canvas for the windows of the Chapter House," followed immediately by items for the purchase of glass, under the date 1253, which is expressly stated to be the eighth year from the commencement of the work. Thus the question is settled. The Fabric Rolls of Edward the Third's time are not less interesting, and throw a light upon the mode of employing men at that time:—

"They appear to have been fed and clothed by the employer, and the clothing would appear to be by no means to be complained of. In one year we have an entry of 15*s.* (equal to eight or ten pounds) for a fur robe for the chief mason; but another year nothing entered for his robe, because this independent gentleman 'refused to receive it on account of the delay in its delivery.'"

But one conclusion can be come to with regard to the wicked spoliation of the wonderfully beautiful tombs and monuments, as well as the architectonic sculptures throughout the Abbey, namely, that by far the greater portion of this most ruthless and wanton defacement took place during the first half of the last century. It was the Georgian era that defaced the tomb of Queen Philippa, stamped a base name upon the cheek of John of Eltham, and stole the weepers from round the tomb-chest of William de Valence. Our own age has its share of shame, seeing that Mr. Scott replaced two beautiful statuettes in their original position on Queen Philippa's tomb, and a short time afterwards both these works were pilfered, doubtless by some person well aware of their value. It is to be hoped the thief will restore them. No doubt these words will meet his eye.

An extract from Neale's 'Westminster Abbey' gives an account of the restoration of Henry the Seventh's chapel, towards which the Parliament contributed 42,000*l.*, on a petition presented at the suggestion of Lord Grenville, then First Minister. The work was admirably done, and there is no reason why a similar application for the restoration of the Chapter House, thus eloquently enforced by Mr. Scott, should not be equally successful. It will be seen that this is a claim for justice:—

"We hope that the advice given by Lord Grenville to Dean Vincent, and so judiciously acted upon by him, will not be lost sight of by the present Dean and Chapter, and that the Parliament of Queen Victoria will treat the Chapter-house with the same good taste and liberality which the Par-

liament of George the Fourth showed in the case of Henry the Seventh's Chapel. The claim is a far stronger one, for in place of the decay of time only, as in the instance of the chapel, we have in the case of the chapter-house actual violence committed by Parliament itself, which first took possession of it for its own meetings, and then mutilated it for the purpose of turning it into a public record office, for which it was singularly ill suited. We believe that to this day the remains of this beautiful structure are still the property of the nation, and not of the Dean and Chapter, as it did not form part of the grant of Henry the Eighth. It is obvious that the Dean and Chapter cannot be called upon to repair a building which does not belong to them, and we trust that Parliament will not hesitate to restore to the Dean and Chapter not only the ruins of their beautiful Chapter-house, but will accompany the grant by such a sum as will enable them to put it into a proper state of repair. This appears to be only common justice. We hear that if Parliament will grant the ruins and 20,000*l.* towards the dilapidations, the Dean and Chapter are willing to undertake the perfect restoration of this beautiful building, the present state of which is a disgrace to the country."

The history of the building and restoration of Henry the Seventh's Chapel will be read with interest. A list of the abbots, priors, bishops and deans of Westminster, from A.D. 604 to the present year, follows this. The original of the commission given to Richard de Whittington, &c., to rebuild the nave, and some of the accounts of the works, with cost of various portions of the edifice still existing, are very curious. The 'Further Remarks on the Buildings of Edward the Confessor,' contributed by Mr. Weare, having reference to the monastic buildings, will be invaluable to the student. Mr. Hugo's account of the Jerusalem Chamber—the death-place of Henry the Fourth and reputed birthplace of Edward the Fifth—contains some interesting details; so does that by Mr. Corner of the Abbot of Westminster's house. Mr. W. H. Hart's notes on the Organ and on the Library, with those by Mr. Howard on the ancient bindings contained in the last, and one or two other papers, complete a history and description of the Abbey and its adjuncts, which are second to no similar account of a great national building. Defaced, half-ruined, grimy and neglected as Westminster Abbey has been for so many years, it is beyond all comparison the most valuable and historically important, even if it be not the most beautiful, building in England.

Dutch Pictures: with some Sketches in the Flemish Manner. By George Augustus Sala. (Tinsley Brothers.)

To introduce Mr. Sala—the author of these racy and clever 'Dutch Pictures'—at this date to the public, and to inform the world that such a gentleman enjoys a well-won popularity as a novelist and essayist, would be to imitate that official organ which announces the departure of a warlike expedition, just as it is on the point of returning home victorious, and proclaims, as affairs of latest intelligence, facts with which every village dame is familiar. Yet it so happens that we have not before drawn attention to the brilliance and versatile humour of a man of letters, who by genuine merit, unaided by adventitious influence, has won for himself a foremost place amongst the leaders of his profession, and who displays in every succeeding work of his pen a fresh accession of power. Mr. Sala has published his works in serials; and when they have come before us in a completed form they have already gained their public and become independent of critical introduction.

A second palace for a second Exhibition of

the Industrial Arts of all Nations, is now in course of construction. When the building for the first Great Exhibition was being erected, that enthusiastic poet of the cooks, Alexis Soyer, seized upon Gore House, and converted the once luxurious and elegant home of Lady Blessington into the Symposium. Ere the place was fit for Soyer's use, artists as well as craftsmen had to exert their ingenuity in devising and effecting all those striking and grotesque and splendid varieties of decoration, which on the opening of the pastrycook's heaven, with a blaze of splendour, attracted the public quite as much as the wines and dishes, for which they were charged on a scale commensurate with that of the kindly *restaurateur's* indiscretion. For "certain purposes," Mr. Sala, while the grand hall of bliss was undergoing re-construction and renovation, went and abode in the deserted house, sleeping in one of the upper chambers and wandering about the saloons at the dead of night. The readers of *Temple Bar* remember the description given by the editor in the first number, of what he saw and thought, whilst for "many moons he slept, and ate, and drank, and walked, and talked, in Gore House, surrounded by the very strangest of company":—

"From February to mid-March a curious medley of carpenters, scene-painters, plumbers, glaziers, gardeners, town travellers for ironmongers, wine-merchants, and drapers, held high carnival in the place. By and by came dukes and duchesses, warriors and statesmen, ambassadors, actors, artists, authors, quack doctors, ballet-dancers, journalists, Indian princes, Irish members, nearly all that was odd and all that was distinguished, native or foreign, in London town. They wandered up and down the staircases, and in and out of the saloons, quizzing, and talking, and laughing, and flirting sometimes in sly corners. They signed their names in a big book, blazing with gold and morocco, which lay among shavings on a carpenter's bench in the library. Where is that wondrous collection of autographs, that *Libro d'Oro*, now? Mr. Keeley's signature followed suit to that of Lord Carlisle. Fanny Cerito inscribed her pretty name, with that of 'St. Leon' added, next to the signature of the magnificent Duchess of Sutherland. I was at work with the whitewashers on the stairs, and saw Semiramis sweep past. Baron Brunnov met Prof. Holloway on the neutral ground of a page of autographs. Jules Janin's name came close to the laborious *paraphe* of an eminent pugilist. Members of the American Congress found themselves in juxtaposition with Frederick Douglas and the dark gentleman who came as ambassador from Hayti. I remember one Sunday, during that strange time, seeing Mr. Disraeli, Madame Doche, the Author of 'Vanity Fair,' a privy councillor, a Sardinian attaché, the Marquis of Normanby, the late Mr. Flexmore the clown, the Editor of *Punch*, and the Wizard of the North, all pressing to enter the whilom boudoir of the Blessington. Meanwhile, I and the whitewashers were hard at work. We summoned upholsterers, carvers and gilders to our aid. Troops of men in white caps and jackets began to flit about the lower regions. The gardeners were smothering themselves with roses in the adjacent parterres. Marvellous erections began to rear their heads in the grounds of Gore House. The wilderness had become, not exactly a paradise, but a kind of Garden of Epicurus, in which some of the features of that classical bower of bliss were blended with those of the kingdom of Cocksaigne, where pigs are said to run about ready roasted with silver knives and forks stuck in them, and crying, 'Come, eat us; our crackling is delicious, and the sage-and-salmons with which we are stuffed distils an odour as sweet as that of freshly gathered violets.' Vans laden with wines, with groceries, with plates and dishes, with glasses and candelabra, and with bales of calico, and still more calico, were perpetually arriving at Gore House. The carriages of the nobility and gentry were blocked up among railway

goods-vans and Parcels Delivery carts. The authorities of the place were obliged to send for a detective policeman to mount permanent guard at the Gore, for the swell mob had found us out, and flying squadrons of felony hung on the skirts of our distinguished visitors, and harassed their fobs fearfully. Then we sent forth advertisements to the daily papers, and legions of mothers, grandmothers, and aunts brought myriads of newly-washed boys; some chubby and curly-haired, some lanky and straight-locked, from whom we selected the comelier youths, and put them into picturesque garbs, confectioned for us by Mr. Nicoll. Then we held a competitive examination of pretty girls; and from those who obtained the largest number of marks (of respect and admiration) we chose a bevy of Hebes, whose rosy lips, black eyes and blue eyes, fair hair and dark hair, very nearly drove me crazy in the spring days of 1851. And by the end of April we had completely metamorphosed Gore House. I am sure that poor Lady Blessington would not have known her coquettish villa again had she visited it; and I am afraid she would not have been much gratified to see that which the upholsterers, the whitewashers, the hangers of calico, and your humble servant, had wrought. As for the venerable Mr. Wilberforce, who, I believe, occupied Gore House some years before Lady Blessington's tenancy, he would have held up his hands in pious horror to see the changes we had made. A madcap masquerade of bizarre taste and queer fancies had turned Gore House completely inside out. In honest truth, we had played the very dickens with it. The gardens were certainly magnificent; and there was a sloping terrace of flowers in the form of a gigantic shell, and literally crammed with the choicest roses, which has seldom, I believe, been rivalled in ornamental gardening. But the house itself! The library had been kindly dealt by, save that from the ceiling were suspended a crowd of quicksilvered glass globes, which bobbed about like the pendant ostrich-eggs in an Eastern mosque. There was a room called the 'Floriana,' with walls and ceiling fluted with blue and white calico, and stuck all over with spangles. There was the 'Doriana,' also in calico, pink and white, and approached by a portal called the 'door of the dungeon of mystery,' which was studded with huge nails, and garnished with fetters in the well-known Newgate fashion. Looking towards the garden were the Alhambra Terrace and the Venetian Bridge. The back drawing-room was the Night of Stars, or the *Réverie de l'Étoile polaire*; the night being represented by a cerulean ceiling painted over with fleecy clouds, and the firmament by hangings of blue gauze spangled with stars cut out of silver-foil paper! Then there was the vestibule of Jupiter Tonans, the walls covered with a salmagundi of the architecture of all nations, from the Acropolis to the Pyramids of Egypt, from Temple Bar to the Tower of Babel. The dining-room became the Hall of Jewels, or the *Salon des Larmes de Danaë*, and the 'Shower of Gems,' with a grand arabesque perforated ceiling, gaudy in gilding and distemper colours. Upstairs there was a room fitted up as a Chinese pagoda, another as an Italian cottage overlooking a vineyard and the Lake of Como; another as a cavern of ice in the arctic regions, with sham columns imitating icebergs, and a stuffed white fox—bought cheap at a sale—in the chimney. The grand staircase belonged to me, and I painted its walls with a grotesque nightmare of portraits of people I had never seen, and hundreds more upon whom I had never set eyes save in the print-shops, till I saw the originals grinning, or scowling, or planted in blank amazement before the pictorial libels on the walls. In the gardens Sir Charles Fox built for us a huge barrack of wood, glass and iron, which we called the 'Baronial Hall,' and which we filled with pictures and lithographs, and flags and calico, in our own peculiar fashion. We hired a large grazing-meadow at the back of the gardens from a worthy Kensington cowkeeper, and having fitted up another barrack at one end of it, called it the 'Pré D'Orsay.' We memorialized the Middlesex magistrates, and, after a great deal of trouble, got a licence enabling us to sell wines and spirits, and to have music and

dancing if we so chose. We sprinkled tents and alcoves all over our gardens, and built a gipsies' cavern, and a stalactite pagoda with double windows, in which gold and silver fish floated. And finally, having engaged an army of pages, cooks, scullions, waiters, barmaids and clerks of the kitchen, we opened this monstrous place on the first of May, 1851, and bade all the world come and dine at SOYER'S SYMPOSIUM."

We should like to extend our extract, and would do so if we did not remember that all the world read the description—at the same time, so pathetic, so humorous, and so generous—of the downfall of poor Alexis Soyer's golden hopes, and the concluding sketch of his character. "He was a vain man; but he was good and kind and charitable. There are paupers and beggars even among French Cooks, and Alexis always had his pensioners and his alms-duns, to whom his hand was ever open. He was but a cook, but he was my dear and good friend." We do not envy the man who fails to discern in this a happy touch of true poetic feeling.

During his residence in Gore House, Mr. Sala was known only as a clever, jovial artist, full of good health and high spirits, and not altogether incapable of indiscretion. Friends he already had, who spoke warmly of what he could do if he would; but with the exception of a few first efforts at composition, published anonymously, and known of by only himself and his personal associates, he had not even laid the first foundation of his literary position. With the close of 1851, however, changing his course, he began to contribute to periodical literature, and connected himself intimately with *Household Words*, to the staff of which he was a valuable addition, from his faculty of mimetic composition. Week after week papers appeared in *Household Words*, which caused readers to express their astonishment at the industry or the fecundity of the conductor; and the surprise was maintained for many months, ere it transpired, beyond the limits of a small circle, that the articles attributed by the many to Mr. Dickens were really the productions of a young and comparatively unknown member of his staff. Indeed the mystery did not altogether cease till several of the contributor's articles had been translated into French and reprinted in America, under the impression that they were from the pen of the great novelist.

Mr. Sala's mimetic compositions, apart from their intrinsic excellencies, are, as mere imitations, artistic curiosities worthy of especial observation. They produce their effect neither by burlesque nor mere mechanical imitation. Not only are the leading intellectual features and the distinctive mannerisms of the original accurately presented, but the delicate shades and turns and whimsies of thought are preserved with like success,—the entire reproduction being innocent of even the slightest approach to exaggeration. Indeed, the active faculty is not that of mimicry, so much as that of lively appreciation,—an appreciation of the minutest as well as the most conspicuous graces of an admired artist. It is the imitation of the heart rather than the head,—of sympathy rather than perception. Perhaps some of the best examples of this element of Mr. Sala's power are to be found in stray sentences scattered through 'Twice Round the Clock,' such as that in which he alludes to the "bygone literary nonsenses, and black-velvet-trousered frivolities" of the leader of the Opposition.

The same power by which Mr. Sala rendered efficient service to *Household Words* made him an able coadjutor to Mr. Thackeray in the task of establishing the *Cornhill Magazine*; his papers on 'The Life and Times of Hogarth'

being written in exactly that vein of humour, and seasoned with the subjective digressions and revelations of personal experience, by which the author of 'Pendennis' and the 'Roundabout Papers' keeps alive the loyalty of his adherents. Those, however, who read the Hogarth Papers and 'Twice Round the Clock' (a work, by-the-by, that is almost necessary for a philosophic appreciation of the external phenomena of London life), will not be in danger of interpreting the above remarks as an expression of opinion that their author is content with following in the track of his early teachers. Indeed, Mr. Sala has never lacked distinctiveness, whenever he has been pleased to give free play to his creative faculty, and to his peculiar ability of fixing his idiosyncrasy on the minds of those he addresses. An hour spent in conning the racy, dashing, lawless, and at times almost defiant, descriptions of the 'Buddington Peerage,' 'Gaslight and Daylight,' and 'A Journey due North,' will satisfy any critic that their author is a man who both thinks for himself, and is accustomed to clothe his thoughts in garments of his own style and construction.

A fair view would not be obtained of Mr. Sala's labours by any one confining his attention to his works of fiction, his photographs of Foreign Travel, and his Essays on Social Subjects. He has also written dramatic pieces, which have successfully borne the test of representation, and has for years been a contributor to the daily press; his "social articles" in the *Daily Telegraph* having materially aided in placing that journal in the prominent position which it enjoys. Usually the anonymous labours of the writer on daily newspapers bring him no recompense beyond that substantial remuneration which virtue is proverbially represented as never attaining. On one occasion, however, Mr. Sala achieved an almost unprecedented triumph for a journalist. When the volunteers marched before Her Majesty in Hyde Park, many corps having travelled from distant parts of the kingdom to display their patriotism, the editors of the London newspapers selected their "best men" to draw up an account of the proceedings. The review was felt to be an affair of national significance, and there was no doubt that every family in the kingdom would on the following Monday be asking for "the best account of it." Mr. Sala undertook to supply the description for the *Telegraph*. The task was no slight one. As more than one special reporter showed the public, it was no easy feat to hold all London under survey on that day,—to learn the names of all the corps which marched along the various great arteries of the capital to the field of meeting,—to know when they started, when they arrived on, and how they marched off the ground,—to state the different arrangements made in different parts of London and the suburbs for the entertainment of regiments previous to the review,—and, above all, to give not only an intelligible, but a clear, *truthful* and stirring picture of the proceedings in the Park during the review, together with all the little incidents which varied the monotonous confusion of the imposing display. A special reporter of that day's work had need to have sharp eyes, a quick perception of leading features, an equally ready observation for small things, a retentive memory and a clear head. The article created a sensation for a few days, and was afterwards reprinted as a pamphlet. It was only a day's work; but it was a day's work that only the *beau-ideal* of a London journalist could have accomplished.

The Conquest of Britain by the Saxons: a Harmony of the 'Historia Britonum,' the Writings of Gildas, the 'Brut,' and the Saxon Chronicle, with reference to the Events of the Fifth and Sixth Centuries. By Daniel H. Haigh. (J. R. Smith.)

The Anglo-Saxon Sagas; an Examination of their Value as Aids to History: a Sequel to the 'History of the Conquest of Britain by the Saxons.' By Daniel H. Haigh. (J. R. Smith.)

HISTORICAL inquirers have always been divided into two classes, the credulous and the incredulous, or rather the doubters—those who believe readily, and are prone to accept whatever is told them, and those who believe slowly and require evidence. The extremes of this division are those who believe everything and those who believe nothing. In earlier times credulity was the rule, and the doubters were very few, and hence the earlier annals of nations are generally filled with fables. When people began to inquire after truth, the fabulous character of much which they had been believing became so evident, that the doubters gained ground, at first slowly, but as historical research was carried further and deeper, they increased in number so rapidly, that in our time hesitation in belief among historians has certainly become the rule. There have been many who attempt to go an intermediate path, and who are willing to believe a great deal the evidence of which may not appear satisfactory; but it is certainly a startling phenomenon to see a writer in the present day come forward to announce himself a supporter of the extreme degree of historical credulity, to be in fact a believer in everything. Yet this is virtually the character which Mr. Haigh assumes in the two volumes before us, in which he has taken under his protection the most obscure period of our history, the fifth and sixth centuries, the field, in fact, of the great part of what our historians now generally consider the romance of Geoffrey of Monmouth. The history of this period in Britain, as most of our readers know, depends on certain British or Welsh writers, who go by the names of Nennius, Gildas, and the Geoffrey just spoken of, and it can hardly be said to be told at all by the Anglo-Saxon historians or chroniclers. Mr. Haigh believes that he has entirely cleared up the obscurity and obtained the authentic details of this period of our history by the application of two grand theories. The first of these has nothing new in it, it is merely a new assertion of the authenticity and entire credibility of the so-called British historians, with a few suggestions and conjectures of his own. Thus Mr. Haigh believes that Gildas's History and his Epistle are two different works, written, the first in the year 471, and the second in 492, or 493; and he considers also that the history which goes under the name of Nennius was written by Gildas, and still in the fifth century; and that Gildas wrote another and a larger history, which is now lost, but is supposed to have been used by Henry of Huntingdon, and upon the strength of this supposition Henry of Huntingdon's story of British history is to be considered as coming from Gildas, and therefore as contemporary and authentic record. Further than this, Mr. Haigh thinks he has discovered who was the author of that celebrated Armorican book, the 'Brut,' which Geoffrey of Monmouth pretended to translate. Layamon, an English metrical translator of Geoffrey of Monmouth in the latter part of the twelfth century, talking very loosely of the books he had consulted, enumerates among them the Book of St.

Albinus. Now, Mr. Haigh says the only St. Albinus he knows likely to have written such a book was St. Albinus, bishop of Angers, who was born in 469, and died in 549, and who was an Armorican and of British ancestry. "He might," Mr. Haigh says, "very well have compiled a history from the traditions of his forefathers, or even from those writings which St. Gildas testifies were conveyed to Armorica." It was *probably*, then, this Book of St. Albinus (which, by the way, Mr. Haigh has not adduced the slightest evidence was ever written) which Geoffrey of Monmouth translated literally, and which Layamon also used, and, as we understand it, derived his additional matter from; and thus not only Geoffrey of Monmouth's translation but Layamon's additions are to be considered as contemporary records and as literally true. We think we have here stated all the additional arguments Mr. Haigh has brought forward in support of the authenticity of these British historians; it rests, as will be seen at once, on mere vague conjectures and suppositions, and his other arguments are what he considers the coincidences in the narrative and its truthful character (which means only that he believes it), and the circumstance that, as he has put it together, it makes a pretty good story. It would carry us far beyond the space we can afford, to enter into such an investigation as would enable us to show the want of any good evidence of the authenticity of these documents and their manifest untruthfulness, at least in a great part of their narrative; nor is there any necessity for our going into such an investigation: for after a careful consideration we cannot see that Mr. Haigh has added any real strength to the arguments in favour of them. Like a true knight-errant, he is not satisfied with fighting for the substantial part of what he has taken under his protection, but he contends desperately for even the least defensible of the details. Thus, in his eagerness to justify the entire truthfulness of Gildas, he asserts the ridiculous story told by that writer of the building of what is now considered to be Hadrian's Wall, in Northumberland, by the Romans when they were withdrawing from the island and leaving the Britons to their fate, and ascribes it to one Severus Æquitius; and he believes that the stones of Stonehenge were really brought from Ireland by means of Merlin, and that in the year 474 King Arthur fitted out a fleet at Exeter with which he conquered Ireland: that proceeding thence to the north of Europe, he conquered numerous kings and kingdoms, and that subsequent to this he not only conquered Norway and Sweden, but that he invaded Gaul, captured Paris, and conquered that country to the borders of Italy, and was preparing an expedition against Rome when he was called home to Britain by the rebellion of his subjects!

Mr. Haigh's second theory is much more novel and curious, and displays much more ingenuity. There exist, as all who are acquainted with the literature of our Anglo-Saxon forefathers know, remains of certain early poems of adventures,—Sagas Mr. Haigh calls them,—which have been considered as belonging to the mythic, or heroic, history of the Teutonic race, and to be, in fact, of older date than the coming of the Anglo-Saxons to this island. Mr. Haigh thinks that he has made out that these writings are not fabulous at all, but that their heroes, such as Beowulf, Hrothgar, &c., were all Angle or Saxon chiefs in this island, and that these poems are true and authentic records of the events of Anglo-Saxon history during the period which preceded the establishment of the kingdoms of the Heptarchy. He founds this theory on the

coincidences of names, and especially on the coincidences of names of localities in England with those of the persons and places commemorated in these poems; and these, we confess, are in many cases very remarkable. This theory is chiefly carried out in the second of the volumes before us; but it had been adopted in the first as a means of tracing the supposed expeditions and movements of Hengist and Horsa and the earlier Saxon invaders, and, we think, in that case with not any very great success. Indeed, whatever truth there may be in his explanation of local names in some cases, in many others he evidently carries his principle too far. Thus, to begin at the very beginning of his Angle settlers in Britain, he believes that Hrothgar, with Scyld, Beowulf, and Healfdene, the principal heroes of the story of Beowulf, reigned in Northumberland in the latter half of the fourth century—Scyld, he says, must have been living there in 375. The Secgas, he says, who were subjects of Scyld's family, gave their name to the Roman Segedunum, which he explains as *Secga-dun*; and he believes that he discovers Scyld's name in North and South Shields, and therefore conjectures that that chieftain resided in the neighbourhood. Shilbottle, also, in a neighbouring district, he believes to be *Scyldes-boll*, the palace of Scyld. He finds the name of Beowulf in Bolton-on-the-Alne and in Boulmer, and even in a Roman town mentioned in Ravennas under the name of Bolvelaunis, which he thinks may be a corruption of *Beowulf-alanium*. The explanations of these words seem to us very problematical. Hrothgar's palace of Heorot, where Beowulf visited him, is conjectured to be Hart, in Durham; the lake at a mile distance, the bottom of which, according to the poet, was unknown to men, is supposed to have been situated at what is now called Bottomless Carr, where there is said to have been formerly a pool; and Mr. Haigh conjectures that Hartlepool takes its name from the harts which in the poem are described as bounding over this wild country. The monster Grendel, who committed such devastation at Heorot, is supposed by Mr. Haigh to have been a ferocious giant, and he finds his name in various parts of the country, as at Grendlesmere, in Wiltshire, and Grindelespytt, in Worcestershire, at Grindleton, in Yorkshire, and Crindale-dykes, on the Roman wall, near which latter there is Grindon-lough and Grandy's-knowe; "and in the neighbourhood of Hart there is a parish named Grindon, and Grandy's-close, all apparently bearing the name of the same person—once, no doubt, a powerful chieftain settled in the county of Durham." The names of other members of Hrothgar's family are found with equal ease in the county of Durham and in the neighbourhood of Hart. The battle of Finnesham, which is the subject of a fragment of another of these poems, and the events of which are alluded to in Beowulf, is supposed to have taken place about A.D. 428, at a place still called Finsham, in Norfolk, in the neighbourhood of which Mr. Haigh finds the names of three other personages of the story,—that of Fin's queen, Hildeburh, in Hillborough; that of Hocce, her father, in Hockwold and Hockham; and that of Guthhere in Gooderstone. Mr. Haigh traces the first residence of Hygelac and his family in Yorkshire, whence he thinks they removed to Suffolk, and finds the name of his subjects, the Weders, in such names as Wetherden, Wetherheath, Wetherup, Wetheringsett and Wetherley. Hygelac himself is conjectured to have been confederate with Garmund in his expeditions against the Britons; and thus to have had the oppor-

tunity of leaving his name at Hygelacesgit, near Clifton, in Somersetshire (mentioned in the 'Codex Anglo-Saxonicus'), Hucklecote, near Gloucester, and Hugglescote, near Charley, in Leicestershire. The story of Offa, the son of Wermund (also the subject of one of these earlier Sagas, the outline of which is preserved), is located in Warwickshire and its borders. The adventures of Horn, another of these supposed personages of romance, are placed in Yorkshire. To return, with our author, to Beowulf, this chief is supposed to have been known to Hrothgar, while his father, Hygelac, still resided in Yorkshire, but to have removed with the latter to Suffolk; and it was from thence he went to Heorot to assist Hrothgar and combat the giant Grendel; on the return from which he was associated with his father, Hygelac, in his kingdom. Beowulf, according to the poem, was all his reign, after the death of his father, at war with the Mere-Wioings, who are identified with the Wiwings of Norfolk, and whose name is preserved in Wiveton. Hrothgar's race perished, it is supposed, before the invasion of Eoppa and Ida, the first known historical event at which we have yet arrived; and it was to assist them against this invasion that Beowulf made one of his expeditions, in which the invaders were obliged to retreat to the north, and settle at Bamborough. Beowulf eventually obtained the kingdom of the Scyldings, and reigned at Hart; and Mr. Haigh fixes the place of the battle with the dragon in which he perished at Eagle's Cliff, a promontory in Durham, nearly surrounded by the Tees. Lastly, most of the names of princes enumerated as visited by the minstrel in the poem entitled 'The Traveller's Song' are identified with Anglo-Saxon chiefs, whose names are traced in different parts of England.

We have already had to remark the extent of what we must call Mr. Haigh's credulity; and we must add, that he does not even give up the story of Beowulf's encounter with the dragon, which he holds for good history in all its details, and tells it accordingly. He thinks it necessary, however, to add an appendix to this chapter, to justify his belief in the existence of dragons, which he does by quoting the opinions of Mr. Howitt, Mrs. Jameson, Mr. Walbran, of Ripon, and Mr. Longstaffe, of Durham, that such monsters as dragons may have existed, and adducing the "facts" that, in the tenth century, Guy of Warwick killed a winged dragon in Northumberland; that, before the Conquest, an ancestor of the Conyers family killed a dragon at Graystones; that, in 1133, Gilles de Chin, lord of Berlaumont, slew a dragon which dwelt in a cave near the village of Wasme; that, in the thirteenth century, a son of Roger de Somerville, of Wichnor, in Staffordshire, "killed a dragon by means of a wheel, to which burning peats were attached, fixed on the point of a spear"; that the knights of Rhodes encountered a dragon in the fourteenth century; that, in 1344, according to Walsingham, a man killed a dragon which guarded the treasures in an ancient tumulus in Shropshire; and that Sir John Lambton slew a dragon at Lambton, in Durham. Mr. Haigh calls this "a consecutive chain of evidence of the existence of these creatures"! We would suggest that he has overlooked the dragon of Wantley!

In spite of the great ingenuity displayed by Mr. Haigh, and the immense labour he must have employed in bringing together so many coincidences, or supposed coincidences, of names, we fear that, as evidence, they amount to very little. At best, mere coincidences of names are but dangerous things to deal with in establishing relationships, and we must say that,

as we wade through the pages of his book, we are struck with the comparatively small portion of the examples he gives in which he seems to have clearly made out his derivations. And, even in regard to these few, we must remember that they were names not unlikely to be found among the Anglo-Saxon settlers, without having any reference to the early Anglo-Saxon poems. Mr. Haigh has himself acknowledged that it was customary for people to give the names of the ancient heroes to their children, and we could adduce evidence of this practice, so that there may have been many individuals who bore these names, and who may have given them to the localities in question. The mythic character of the stories given in the poems rests on a different kind of evidence, one of a more extensive character, for they are found recurring in different branches of the Teutonic race in such a way as to show that they all come from an original mythology of the race existing at an early period, previous, indeed, to the time at which it separated into so many branches; and Mr. Haigh's plea, that "sagas, originally English, were carried to the Continent, and formed the basis of a very popular cycle of romances," is neither at all probable in itself, nor consistent with the known facts of the literary history of the middle ages.

NEW NOVELS.

East Lynne: a Story of Modern Life. By Mrs. Henry Wood. 3 vols. (Bentley.)

THIS is one of the best novels published for a season. The plot is interesting, intricate and well carried out; the characters are life-like, and the writing simple and natural. There is nothing forced, nothing disjointed or unfinished about it; no discrepancies in the story. In a little country town—yclept West Lynne—lived a worthy family of the name of Hare. The father, Justice Hare, an obstinate, ill-tempered man, a kind of "Old Poz," who kept his nervous, delicate wife and pretty impetuous daughter in a continual agony of alarm; for a great blight had fallen upon these Hares. The only son, a gentle, weak, nervous creature like his mother, has been suspected of wilful murder (as the mother and sister believe unjustly), though he has escaped punishment for the present, and is supposed to be in America or Australia, or some other out-of-the-way part of the world. The stern old justice has sworn that if he is ever able to discover his place of concealment, he will hunt him out like a dog, and deliver him up to the utmost rigour of the law. This is, perhaps, the only exaggeration in the book, for, since the days of the Romans, what father would be so pitiless and unnatural as to desire his only son to be hung for murder? In other respects Mr. Hare is merely an irritable, headstrong old gentleman, who enjoys his pipe and his glass of ale at the Buck's Head, and makes himself sociable with his brother "J. P.'s" in a quiet, inoffensive manner. To add to the constant terror of Mrs. Hare and Barbara, however, Richard Hare is neither in America nor Australia, but only in London, and in the habit of coming down to West Lynne now and then disguised as a labouring man, to catch a glimpse of his mother and to beg for money. In all the anxiety and distress occasioned by these secret visitations Mrs. Hare's only friend and counsellor is her distant relative, Mr. Carlyle, a clever and sensible young lawyer, and one of the best and kindest of men. To him pretty Barbara is sent upon every emergency. He advances money, he believes in Dick's innocence, he listens patiently to his story, and he consoles the poor broken-hearted mother. Barbara goes constantly to spend the

day with cross Miss Cornelia Carlyle (Archibald's half sister and domestic tyrant), and of course no one sees the slightest harm in Mr. Carlyle's walking home with Miss Hare after ten—least of all Archibald himself. He has known her from a baby; he teases her, pets her, brings her presents, and even on great occasions indulges her with a strictly paternal embrace, thinking her, doubtless, not only a very good, but also a very pretty girl. But to Barbara, Archibald Carlyle is everything that is noble and great and good. She longs to devote to him her whole future life, but "he will never know how much she loves him till she is his wife"—as she *will* be, of course, some day or other. He thinks of no one else in West Lynne, she knows, and surely Archibald *must* care a little for one who loves him so dearly. Poor Barbara! Very pure-minded, modest girls *do* make these mistakes now and then, and very good, honest, honourable men often encourage them in so doing, quite unconsciously, as Archibald did Barbara. But Mr. Carlyle has not the slightest idea of marrying pretty Barbara. He has once seen a vision in London, which precludes his turning his attentions towards a little commonplace country beauty like Barbara Hare. Lady Isabella Vane, only child of Lord Mount Severn, had been seen by the lawyer when on a visit of business to her father, and she had made an impression that could never be effaced from his memory. "She was as little like a fashionable young lady as it was well possible to be," as beautiful as an angel, and as good as she was beautiful. "Generous and benevolent she was; timid and sensitive to a degree; gentle and considerate to all." Lord Mount Severn is represented as a reckless, ruined man, who wishes to dispose of his estate in the neighbourhood of West Lynne in order to raise a sum of ready money. Mr. Carlyle is willing to buy East Lynne, but the transaction must be kept a secret, or the creditors will lay claim to the purchase-money. Lord Mount Severn and his daughter come to East Lynne, and the neighbourhood rejoice in their presence, little knowing that they are merely visitors permitted to remain there at Mr. Carlyle's good will and pleasure. Like the other West Lynne ladies, Barbara gets herself, regardless of expense, a pink bonnet and feathers and brocaded gown, with white gloves and pink parasol, and Mr. Carlyle tells her she "looks like a sunbeam." But Lady Isabella appears very plainly dressed, and puts them all to shame with her quiet refined beauty, and soft melancholy expression. Archibald is taken back to East Lynne in the barouche, and "the day's brightness had gone out for Barbara Hare." Before he could leave East Lynne Lord Severn was seized with the gout in his stomach and died, leaving his creditors nothing but his dead body to divide between them. Isabella Vane is a penniless orphan, consigned to the tender mercies of the heir-at-law—a hard, well-meaning man—and his wife, an unprincipled heartless woman. Insulted, spurned and goaded to despair, Isabella is found one day by Mr. Carlyle ready to do anything to escape from Lady Mount Severn, for Francis Levison flirts with Isabella, and Lady Mount Severn flirts with Francis Levison, and the same house can no longer contain the three. Isabella, seeing no other hope for herself, and knowing Mr. Carlyle to be a kind and true-hearted man, heartily accepts his offer of returning to East Lynne as its mistress and as his wife. She is not the least in love with him it is true, but she respects and esteems him, and she hopes that will do as well. Vain hope! with Miss Cornelia at the head of affairs in-doors, Francis Levison as a

companion and intimate friend out-of-doors, and Barbara Hare running in and out, at all hours, with secret intelligence concerning her brother Richard. Not that poor Barbara means any harm to Isabella. She has had her outbreak of surprise, passion and woe, and she looks upon Isabella only with envy and the most unfeigned admiration. What with overhearing the maid's gossip, the treacherous representations of Francis Levison, and her own oversensitive feelings, however, Lady Isabella gradually works herself up to a pitch of jealous frenzy which cannot be controlled, and she consents in an evil moment to elope with Levison; and the rest of her life is "one dark course of gnawing retribution—one long yearning for the husband and children" she had left. A divorce is obtained, but Mr. Levison (now Sir Francis) refuses to marry her (she would have refused to marry him had he wished it, but for the sake of their child). He leaves her in a miserable lodging in the south of France, and she meets with a railway accident in going to Paris, is fearfully maimed and disfigured and her baby killed. It is reported that she is also dead, and she encourages the notion, and determines to begin life anew as a governess, and never make herself known to any of her former friends. Meanwhile, Mr. Carlyle, thinking Isabella is dead, in due course of time takes it into his head to marry Barbara after all! He is well aware she will never marry any one else; she has an uncomfortable home, and she is prettier than ever! A governess is wanted for the elder children, and a mutual friend offers the situation to Madame Vine, the esteemed instructress of Miss Crosby, who has no further need for her services. The temptation to see her children—to be near Mr. Carlyle, is too much for the unhappy woman, and she accepts the offer—not guessing half the pains she will have hourly to undergo as an inmate for the third time of East Lynne,—not as a beautiful petted child—not as an honoured and beloved wife, but as a poor, humble, disfigured, grey-haired governess this time. It is a strange situation, and it is particularly well described.

As she went up to take off her bonnet—"the doors of her old bed and dressing-room stood open, and she glanced in with a yearning look. No! never more, never more could they be hers. She had put them from her by her own free act and deed. Not less comfortable did they look now than in former days; but they had passed into another occupancy. The fire threw its blaze on the furniture; there were the little ornaments on the large dressing-table as they used to be in her time, and the cut glass of the crystal essence bottles was glittering in the firelight. On the sofa lay a shawl and a book, on the bed a silk dress, as if thrown there after being taken off. No! these rooms were not for her now, and she followed Joyce up the other staircase."

Not that she would be an ill-used governess; "governesses at East Lynne were treated well and liberally, for East Lynne owned Mr. Carlyle as its master." A martyrdom, such as we trust has never in real life fallen to the lot of an erring woman, is now the daily and hourly portion of Isabella Vane. She knew now that she had been mistaken. Her husband had never wronged her for a moment, in thought, word or deed, and how she loves him when it is too late! She nurses and teaches her own children. Her firstborn dies in her arms, and she does not long survive him. As she lies on her deathbed Mr. Carlyle comes to see her, and in the broken-down governess recognizes the once lovely bride of his youth. It is a touching scene, but we have not space to give it here. Sir Francis Levison pursues his wicked course uninterruptedly to the end,

when he comes down to West Lynne as a candidate for the election, in opposition to Mr. Carlyle. Some of his old associates discover in him the real murderer of Halli John, and Richard Hare is cleared from all suspicion, and becomes all of a sudden a popular character in West Lynne, while Levison ends his miserable days in penal servitude.

There may be a little too much repetition of the trial scenes—a little fine-drawing and attempt at melo-drama in the third volume; but the book is a good book, and will be, no doubt, a successful one.

Journeys and Explorations in the Cotton Kingdom: a Traveller's Observations on Cotton and Slavery in the American Slave States. Based upon three former Volumes of Journeys and Investigations by the same Author. By Frederick Law Olmsted. 2 vols. (Low & Co.)

THE universal interest taken in the question of Negro Slavery in the United States secures a sale for any work which either offers new information on the subject, or has a distinguishing quality of style. Authors like Hinton Helper, pushing the arguments of Abolitionist enthusiasm to detestable conclusions, have found their patrons amongst the more intolerant "friends of the North"; whilst a scarcely less cordial support has been given by the opposite party to writers like Mr. Claiborne, who maintain that negro slavery is a beneficent institution, having for its chief object the elevation of the African race in the scale of creation—the production of the cotton-plant being little more than an incidental feature of its operations. Mr. Frederick Law Olmsted takes a middle-course between these violent advocates of extreme and irreconcilable views. He affects to be the calm, dispassionate observer, firmly convinced of the necessity for Abolition, but still anxious to discover and record all the good features of the system of compulsory labour. Of course this liberality secures for him the disapprobation of extreme partisans in the United States; but, as a compensation for their hostility, he enjoys the suffrages of moderate men of both sides in America, and the confidence of the great public of European readers who, having been a few years since betrayed by a "sensation" novel into an exhibition of misdirected fervour on the question of negro slavery, have learnt a wise distrust of the more violent kinds of Abolitionist literature. Mr. Olmsted thoroughly appreciates the nature of his position, and is manifestly resolved to make the most of it. The ear of the public is in his keeping, so he will speak to it while he has the chance. Another subject may rise to divert public attention, and he sees that when his special subject shall cease to be an engrossing topic, his vocation of teacher will be at an end. The hay must be made whilst the sun is shining. Mr. Frederick Law Olmsted's books on slavery follow each other thick and fast. Only the other day we had occasion to notice his 'Journey in the Back Country,' and now lies before us his present work in two volumes, based on *three former volumes*. How long are we to wait ere he presents us with another work on the same subject, based on *five former volumes*? We are induced to ask this question, because though we have perused the 'Journeys and Explorations' carefully, and with considerable pleasure, we have failed to discern in them sufficient new material to justify the production of so bulky a work.

Mr. Olmsted is an entertaining companion, combining many of the agreeable qualities of

a humourist with the shrewdness of a practised observer and the information of a well-educated man of business. What he says is well said, and is usually to the point. Such a person, confining his attention to matters that he understands, cannot easily be wearisome; and yet Mr. Olmsted, at times, lays himself open to the charge of being "a bore." He has contracted a habit of repeating himself; of telling his stories at too great a length, and giving his readers too many anecdotes of the same kind. In fact, he is guilty of exactly those faults which one would expect to find in a writer who, without an adequate reserve of unpublished and new material, makes up a new book based on prior works. His charm consists in his apparent impartiality and candour. As he journeyed through the Cotton Country—through Virginia, the Carolinas, Alabama, Mississippi, Louisiana and Texas—he entered in his notebook whatever he saw that appeared to him worthy of observation with regard to slavery; and these notes, made on the spot, he now presents to the world, without any excess of care in the way of arrangement and artistic preparation. The physical features of the negro; his pecuniary value; the amount of work expected from him; his dress, amusements and education; his rewards and punishments; his food and family relations; the treatment he ordinarily experiences from his masters and the general public: such are the points on which Mr. Olmsted gives his readers a wealth of facts, conveyed in a long stream of anecdotes, the exquisite humour of many of them making parts of his book as pleasant to read as a novel of the first class. The ordinary "nigger" of the author's experience is the clumsy, knavish, tardy, grotesque, and upon the whole happy creature who in works of fiction dances and feasts on holidays, preaches and prates sanctimonious "talkee" on Sundays and at funerals, and shirks labour on weekdays. He is well fed, and in all that regards his physical condition well cared for; for he is too costly a creature—his price ranging from eight to thirteen hundred dollars—to be treated with needless cruelty. Unlike the English agricultural labourer, who too often lives on bread and water, with a sparing slice or two of a flet-milk cheese, the "nigger" has an abundance of bread and bacon every day, a liberal allowance of time for rest and relaxation, the means, by extra labour, of earning "spending-money," and his periodic festivities. In fact, he is treated as the white labourer in this country would be treated if the farmer, making use of his labour, had first to buy him at a price ranging between 200*l.* and 300*l.*, and had then to keep him in sickness and the decline of life, or sell him as a worn-out horse. No one can question that physically the English labourer would be far better placed—would have more rest, less work, better clothes, and more food—if the natural results of his improper exposure and overtasked powers—the chronic rheumatism, putrid fever, and lung disease, which ravage and cripple our working classes, not only took power and life from his frame, but also extracted from his master's pocket a sum of money which would suffice to pay for a team of strong cart-horses. In this respect, therefore, the "nigger" is a just object of envy to the rural workman of any country. It is true he is subject to the lash of the overseer's whip; but, if Mr. Olmsted's testimony may be relied upon, he does not receive more corporal punishment than at the close of the last century our peasantry experienced, either at the hands of the parish beadle, in obedience to the sentences of "country justices," or from the stout ash-sticks of the

farmers, who used in the ordinary way of business to soundly belabour them for faults of neglect or insolence or trivial dishonesty. One horrible picture, that makes the flesh creep, of a flogging administered to a negro girl in an Alabama plantation for shirking work, Mr. Olmsted gives; but he is ready to admit that such cruelty is no more the rule of the slave system, than wife-beating is the ordinary practice of English husbands. The only slave-whipping the author observed, in Virginia, for instance, was that administered to children, lads of twelve or fourteen years of age, for offences that would be similarly punished in this country. Indeed, a planter is not such a fool as to lavish stripes on his costly servants, whose powers of working depend greatly on the goodness of their spirits, and who under extreme mental depression become absolutely useless. The slave is stimulated to extra exertion by the hope of reward, not by the fear of punishment. The lure of "spending-money," equivalent to a London artisan's over-payment, and not the crack of a driver's whip, is his incentive to activity and perseverance in his toil. His master knows "the necessity of humouring him." Such is the testimony of an abolitionist, who maintains that slavery is the real question of contest between the North and the South, and who says that on it the two parties must fight till the fight results, not in compromise, but subjugation. "It is said," observes Mr. Olmsted, "that the South can never be subjugated. It must be, or we must."

The following passage displays the facilities afforded to slaves for enjoyment, and the different views taken by some of the more intelligent of them as to the sentimental side of their condition. It will startle many of our readers to learn that slavery can actually be preferred to freedom by a bondsman:—

"The slaves have a good many ways of obtaining 'spending-money,' which though in law belonging to their owner, as the property of a son under age does to his father, they are never dispossessed of, and use for their own gratification, with even less restraint than a wholesome regard for their health and moral condition may be thought to require. A Richmond paper, complaining of the liberty allowed to slaves in this respect, as calculated to foster an insubordinate spirit, speaks of their 'champagne suppers.' The police broke into a gambling cellar a few nights since, and found about twenty negroes at 'high play,' with all the usual accessories of a first-class 'hell.' It is mentioned that, among the number taken to the watch-house, and treated with lashes the next morning, there were some who had previously enjoyed a high reputation for piety, and others of a very elegant or foppish appearance. Passing two negroes in the street, I heard the following:—'Workin' in a tobacco factory all de year roun', an' come Christmas only twenty dollars! Workin' mighty hard, too—up to twelve o'clock o' night very often—an' then to hab a nigger oberseah!'—'A nigger!'—'Yes—dat's it, yer see. Wouldn't care if 'twarn't for dat. Nothin' but a dirty nigger! orderin' 'round, jes' as if he was a wite man!'—It is the custom of tobacco manufacturers to hire slaves and free negroes at a certain rate of wages per year. A task of forty-five lb. per day is given them to work up, and all that they choose to do more than this they are paid for—payment being made once a fortnight; and invariably this over-wages is used by the slave for himself, and is usually spent in drinking, licentiousness and gambling. The man was grumbling that he had saved but 20 dollars to spend at the holidays. Sitting with a company of smokers last night, one of them, to show me the manner in which a slave of any ingenuity or cunning would manage to avoid working for his master's profit, narrated the following anecdote. He was executor of an estate in which, among other negroes, there was one very smart man, who, he knew perfectly

well, ought to be earning for the estate 150 dollars a year, and who could do it if he chose, yet whose wages for a year, being let out by the day or job, had amounted to but 18 dollars, while he had paid for medical attendance upon him 45 dollars. Having failed in every other way to make him earn anything, he proposed to him that he should purchase his freedom and go to Philadelphia, where he had a brother. He told him that if he would earn a certain sum (400 dollars I believe), and pay it over to the estate for himself, he would give his free papers. The man agreed to the arrangement, and by his overwork in a tobacco factory, and some assistance from his free brother, soon paid the sum agreed upon, and was sent to Philadelphia. A few weeks afterwards he met him in the street, and asked him why he had returned. 'Oh, I don't like dat Philadelphia, massa; an't no chance for coloured folks dere; spec' if I'd been a runaway, de wite folks dere take care o' me; but I couldn't git anythin' to do, so I jis borrow ten dollar of my broder, and cum back to old Virginny.'—'But you know the law forbids your return. I wonder that you are not afraid to be seen here; I should think Mr. — [an officer of police] would take you up.' 'Oh! I look out for dat, massa; I juss hire myself out to Mr. — himself, ha! ha! He tink I your boy.' And so it proved; the officer, thinking that he was permitted to hire himself out, and tempted by the low wages at which he offered himself, had neglected to ask for his written permission, and had engaged him for a year. He still lived with the officer, and was an active, healthy, good servant to him."

On the subject of negro-breeding for sale, Mr. Olmsted's information is vague; but though such systematic breeding exists, he appears to think it by no means so prominent a feature of the compulsory labour system as the fanatics of the Abolition party would wish it to be believed.

On the effect of slavery on the national character of the dominant race, Mr. Olmsted has some passages worthy of remark, and the more so as they are made by an abolitionist:—

"There are undoubted advantages resulting from the effects of slavery upon the manners of some persons. Somewhat similar advantages I have thought that I perceived to have resulted in the Free States, where a family has been educated under favourable influences in a frontier community. There is boldness, directness, largeness, confidence, with the effect of the habitual sense of superiority to most of the community; not superiority of wealth, and power from wealth merely, but of a mind well stocked and refined by such advantages of education as only very unusual wealth, or very unusual individual energy, rightly directed, can procure in a scattered and frontier community. When to this is added the effect of visits to the cultivated society of denser communities; when refined and polished manners are grafted on a natural, easy *abandon*; when there is high culture without effeminacy either of body or mind, as not unfrequently happens, we find a peculiarly respectable and agreeable sort of man and woman. They are the result of frontier training under the most favourable circumstances. In the class furthest removed from this on the frontier—people who have grown up without civilized social restraints or encouragements, and always under what in a well-conditioned community would be esteemed great privations—happens, on the other hand, the most disagreeable specimen of mankind that the world breeds; men of a sort almost peculiar to America and Australia; border ruffians, of whom the 'rowdies' of our eastern towns are tame reflections. Cooper has well described the first class in many instances. I know of no picture of the latter which represents them as detestable as I have found them."

The following criticism of the "F. F. V." is worthy of note:—

"The traditional 'old family,' stately but condescending, haughty but jovial, keeping open house for all comers on the plantations of Virginia or South Carolina, is not wholly a myth. There

really was something which, with some sort of propriety, could be termed a gentry in Carolina and Virginia in their colony days; yet of the names which are now thought to have belonged to it, as descended of brave, loyal, and adventurous cavaliers, some I once saw in London upon an old freight-list of a ship outward bound for Virginia, with the addition of tinker and tailor, poacher and pickpocket, all to be sold for life, or a term of years, to the highest bidder when they should arrive. A large majority of the fathers of Virginia were unquestionably of this class. What was properly to be termed the gentry in Virginia and South Carolina previous to the Revolution, was very small in number. A large proportion of the families who composed it, and who remained after the Revolution in the country (for many were Tories), have since passed in all their branches through a poverty-stricken period, very dissipating in its influence upon hereditary breeding, novelists and dramatic old servants to the contrary notwithstanding. Many of those who have retained wealth and family pride in succession to the present time, have undeniably, from various causes, degenerated wofully in breeding. Coarse tastes and brutal dispositions cannot be disguised under a cavalier address, and the most assured readiness in the established forms of polite society. Of the real 'old families' which remain at all 'well bred' in their qualities, habits and manners, by reason of their lineage, I think it will be difficult for most readers who have not studied the matter at all to form a sufficiently small estimate; call them a dozen or a hundred, what does it matter in a region much larger than the old German empire? Associating with these are a few hundred more new or recuperated families, in which there is also the best breeding, and in certain few parts or districts of the South, to be defined and numbered without difficulty, there is a wealthy, distinct, generous, hospitable, refined and accomplished first class, clinging with some pertinacity, although with too evident an effort, to the traditional manners and customs of an established gentry."

It is well known that in the Free States of America the Whites disdain to hold intercourse with Blacks—to sit at table or exchange the ordinary civilities of life with them. Mr. Olmsted records an almost total absence of this hateful manifestation of race-prejudice in Virginia:—

"I am struck with the close cohabitation and association of black and white—negro women are carrying black and white babies together in their arms; black and white children are playing together (not going to school together); black and white faces are constantly thrust together out of the doors, to see the train go by. A fine-looking, well-dressed and well-behaved coloured young man sat, together with a white man, on a seat in the cars. I suppose the man was his master; but he was much the less like a gentleman of the two. The railroad company advertise to take coloured people only in second-class trains; but servants seem to go with their masters everywhere. Once, to-day, seeing a lady entering the car at a way-station, with a family behind her, and that she was looking about to find a place where they could be seated together, I rose, and offered her my seat, which had several vacancies round it. She accepted it, without thanking me, and immediately installed in it a stout negro woman, took the adjoining seat herself, and seated the rest of her party before her. It consisted of a white girl, probably her daughter, and a bright and very pretty mulatto girl. They all talked and laughed together; and the girls munched confectionery out of the same paper, with a familiarity and closeness of intimacy that would have been noticed with astonishment, if not with manifest displeasure, in almost any chance company at the North. When the negro is definitely a slave, it would seem that the alleged natural antipathy of the white race to associate with him is lost."

By a slight verbal alteration the sentence last quoted would become, "When the negro is definitely a *free-man*, it would seem that the alleged natural antipathy of the white race to associate with him is *discovered*"; and perhaps

this statement of the case would be more appropriate.

A Journey from Belgrade to Saloniki—[*Reise von Belgrade nach Saloniki*, von J. G. von Hahn, K.K., Consul für das Oestliche Griechenland]. Printed in the 11th volume of the Memoirs of the Historical Section of the Imperial Academy of Vienna, and published apart.

TRAVELLING in the greater part of Turkey and Greece appears to have been constantly getting worse and worse for the last 1,723 years. The Emperor Hadrian, who died A.D. 138, walked over the greater part of the Roman empire, and, if we give implicit belief to his biographer, often at the rate of twenty miles a day. Now we can testify from experience that many of the roads along which he travelled seem not to have been mended since his death.

We hear a good deal of the progress of civilization in both Turkey and Greece, but that progress is more visible in the number of the carriages and of the bankruptcies at Constantinople and Athens than in the improvement of the roads in the dominions of the Othoman Sultan and the Greek King. In Turkey you can find nothing to eat in the khans, and in Greece you can find neither khans nor post-houses. Every improvement which has hitherto taken place, whether by sea or land, and whether in Greece or Turkey, has been effected by foreigners. Neither Mussulmans nor orthodox Christians have yet learnt that the construction of good roads is the first step towards a solution of the Eastern Question by native energy. As time rolls on philo-Turks and phil-Hellenes begin alike to lose all hope of seeing the existing anarchy in the East terminated by the strength and wisdom of any native race. The possibility of seeing

The Serai's impenetrable tower

Receive the fiery Frank, her former guest,

is becoming a strong probability. The Turks are feasting while the fingers of a man's hand are writing on the plaster of the wall of the Sultan's palace. And the Greeks are gazing at fleeting clouds which their wild imaginations form into Byzantine crowns and sceptres, while their hearts are swelling with the love of golden byzants. In the mean time, French, English, Austrians and Russians are filling the Levant with their industrial enterprises. Turks are taught to travel by railway by English capitalists, and the Greeks are taught to make streets in Athens by French engineers. But the most important lines of communication in European Turkey remain untouched, and the Acropolis of Athens continues to be separated from the modern city by a broad belt of filth.

The work of Consul von Hahn describes the country through which the great railway that must connect the Ægean Sea with central Europe, will run. Indeed, nothing but the insecurity of property in Turkey, and the uncertainty of revenue which would require to be remitted through Austria, has prevented the execution of a railway on this line of communication.

Dr. von Hahn is known to the learned world as the author of several works. His 'Albanian Researches,' which were noticed in the *Athenæum* at the time of their publication in 1854, are now universally received as the classic authority on Albania. Yet his present work will interest a much wider circle of readers, for, while it adds greatly to our knowledge of the ethnography of European Turkey, it also contains amusing accounts of the manners and customs of an active and prosperous agricultural population in the heart of Turkey rarely visited by travel-

lers. Even the Consul met with novelties that surprised so experienced a traveller. At a khan near Skopia he fell in with an Albanian gentleman attended by two servants, all admirably mounted. On making inquiry concerning this gentlemanly individual, he found that the aga was a horse-stealer who followed his profession like a mediæval knight-errant. There was no concealment, as he both lifted and disposed of his booty at a proper distance, and with becoming precautions.

The principal object of the Consul's journey was to examine the road between Hungary and the Ægean Sea. A glance at the map of Europe indicates that Saloniki is the natural port for the terminus of a great European central railway. It offers the shortest line of communication between Vienna, Berlin, St. Petersburg, Paris and London, and Beyrout, Alexandria and India. One question to determine is, whether a railway from Belgrade to Saloniki offered facilities for construction and the promise of a local traffic sufficient to pay the working expenses of the line. Dr. von Hahn was well aware that for several centuries a considerable part of the merchandise of the East had reached central Europe by this route. The rapacity of the Greek emperors of the houses of Comnenus and Palæologus, and the frauds of the Greek merchants of Saloniki, compelled this trade to seek security and honesty under the flags of Venice, Genoa and Pisa.

At Belgrade Consul von Hahn purchased a travelling carriage and three horses, and with this carriage he crossed the Turkish continent and entered Saloniki without meeting with any accident that might not have occurred on any post-road in England. We can only notice two subjects connected with his journey: the time which would be gained by the India mail if a railway were completed to Saloniki, and the existence of an increasing population of Albanian Mussulmans engaged in agriculture on this route.

The Consul's journey proves that there is a great break in the mountain ranges which separate the basin of the Danube from the high lands of Macedonia and Thrace. The head-waters of the Bulgarian Morava, and of one of the confluent of the Vardar, have their sources in a high plain about 1,450 feet above the level of the Mediterranean. From the Danube the ascent is 180 geographical miles; the descent to the Ægean Sea is 120. Not a single tunnel would be required from Belgrade to Saloniki, and few European lines of equal length present fewer physical obstacles. A very considerable local traffic exists along the line even at present. But all these advantages are neutralized in the minds of capitalists by the fear of anarchy in Turkey and bankruptcy in Austria.

The time which would be gained between London and Alexandria, if a railway existed to Saloniki, deserves notice. It will be best understood by comparing the route by Marseilles. The sea-passage from Alexandria to Marseilles is double that from Alexandria to Saloniki. There would therefore be a certain gain of seventy hours on the sea-voyage, and in all probability throughout the year an average gain of nearly eighty hours. The speed of a railway even in Turkey may be reckoned as double that of a steamer. A passenger, not to speak of the mail-bags, might therefore reach London eighteen hours before a steamer from Alexandria could reach Marseilles. Twelve hours for stoppages at Vienna and Calais would allow a passenger to reach London six hours before a steamer could enter the port of Marseilles.

The other result of Dr. von Hahn's journey which we shall notice, will probably exercise a more permanent influence on the future condition of European Turkey than the construction of the Saloniki railway. It is the fact which he records, that there is a large and increasing Albanian population engaged in agriculture, which, during two generations at least, has been gradually encroaching on the previous limits of the Bulgarian race, and colonizing the high lands about the sources of the Morava and the Vardar. And the most remarkable feature of these agricultural colonists is, that they are Mussulmans and that they are replacing a population of orthodox Christians. The Albanians are the only nation in European Turkey whose agricultural population is increasing in numbers and wealth. They are also the only race in the Othoman empire in which nationality is stronger than religious bigotry. The Greeks of the orthodox church invariably call the Greeks who are Mussulmans, Turks, as was the case in Greece before the revolution, and is now the case in Crete. The Slavonian Christians of Macedonia and Bosnia call the Slavonian Mussulmans in these provinces also Turks. But the Christian and Mussulman Albanians acknowledge the ties of nationality. They both feel that they were born Albanians before they were made orthodox, or Catholic, or Mussulman. Amidst the anarchy which threatens society in Turkey and the corruption which paralyzes Greece, who can pretend to foresee the future of an united nation with warlike habits and an increasing agricultural population? Similar elements have given to the Spaniards and the English their position in the history of foreign colonization, and European Turkey lies open for colonization. We must however refer to Consul von Hahn's work for detailed information concerning the recent extension of the Albanian race. His observations afford the means of correcting the interesting ethnological map of European Turkey by M. Lejean, recently published by Dr. Petermann, by extending the yellow colour which indicates the country inhabited by the Albanian race considerably to the east and south, so as to include Vrania and the country towards Skopia.

Dr. von Hahn's work contains four valuable maps and an Appendix full of scientific geographical information relating to ancient as well as modern geography. The matter of the work confers honour on the Consul, and the manner in which his work has been published by the Academy of Vienna reflects high honour on the intelligent liberality of that learned body.

OUR LIBRARY TABLE.

Letter to the Committee of the Mathematical Section of the British Association. By James Smith, Esq. (Liverpool, E. Howell.)—This is the Mr. Smith of whose squaring of the circle our readers have heard. He informs the Association that he will "not cease on every suitable opportunity to direct attention to the subject." They may "attempt to maintain a dignified silence"; but that will not prevent their receiving a letter once a year. Nor will it succeed if "professional critics" should employ "abuse and ridicule." For ourselves, we shall not undertake to bring forward this quadrature of the circle once a year. Our readers will therefore please consider the entertainment as announced for repetition until further notice. Mr. James Smith sensibly concludes by saying, that perhaps he writes for a wiser and more scientific generation. Many have appealed to posterity on this problem, whose names posterity does not know. We will dismiss Mr. Smith by citing one of his opinions in which we entirely agree: it is, that the silence of his contemporaries will not prevent the ultimate triumph of truth. But to

this we add that no amount of pertinacity will accomplish the ultimate triumph of error.

The Theory of the Moon. Part X. By Sir J. W. Lubbock, Bart. (Goodhall & Co.)—This tract is to a great extent controversial, on matters relating to recent lunar tables and methods. We could not give the mass of our readers any notion of the case; and those who are fit to enter upon the subject have our information that this is the most controversial of Sir J. Lubbock's works. There is one assertion of the author which we hope time will enable us to refute. He says "my career is drawing to a close; or, in the words of the poet,

I near my labours' end
Strike sail, and hastening to the harbour tend."

Judging by the year of his degree at Cambridge, Sir J. Lubbock cannot be sixty; and we have heard nothing of any decay, either of body or mind. In our temperate day his age is only middle life; and we yet hope to notice more than one work of his. We have heard several men of letters and science announce the close of their careers who have all lived to falsify their own predictions.

The English Cathedral of the Nineteenth Century. By A. J. Beresford-Hope, M.A. (Murray.)—That, consequent upon the much-desired extension of the episcopate, we should build new cathedrals in themselves to be fit exponents of the spirit of the age, and that this should be done in what he considers the national and appropriate style of Gothic art, are the themes Mr. Hope has chosen for his labours. He brings considerable observation, much earnestness, very little method of expression, and, it may be said, still less originality of thought to bear upon his subject. The confused and parenthetical style in which his remarks are put together appears to result from the substance of the volume—its core, so to speak—having been produced in the form of a Lecture delivered to the Cambridge Architectural Society, and printed, at the request of that body, with expansive interpolations by the author. These additions have not always been made with workmanlike care, or even ordinary mercy upon the reader's powers of sustained attention. Undoubtedly the new matter so inserted is now and then of interest, but it should, even when it is such, have been produced in a more elegant manner than that Mr. Hope has cared to adopt. Want of system as a whole there is none, for nothing could be more sequential than the progress of the arguments educed, but the effect of the mass is frittered away by the introduction of all sorts of supererogatory remarks and snatches of knowledge, often of the most commonplace order, such as must have rather amazed, if not bored, the original audience, and, that radical fault growing stronger, rendering the book itself neither satisfactory to a professional nor to a purely popular class of readers. Notwithstanding these shortcomings, the importance of the subject is enforced by the author, and, doubtless, his hope of serving the end in view will bear some good fruit through this effort of his. When a royal commissioner has twice reported upon the urgent need of new bishops, and people have ardently quarrelled about the localities to be appropriated for their sees, and an impression prevails that some of our old minsters will do well enough for their "cathedrals," it is good time for a reminder that the cathedral is to be made for the bishop, and not the bishop for the minster. Therefore, although in more than one instance, as at Beverley (which is within a quarter of an hour of Hull, the proposed centre for a new see in the East Riding of Yorkshire), most splendid buildings stand already well placed, and even endowed for their perpetual preservation, it must be most frequently expedient to erect new cathedrals for the novel dioceses. As even Lord Palmerston and the advocates of the abortive "Victorian" architecture declare that for ecclesiastical purposes Gothic is the most suitable style, and as Palladian churches are not in vogue, we need not follow Mr. Hope through his arguments in favour of the same, but take for granted that nothing but a development of Gothic will be employed for a modern English cathedral.

Culverley Rise: a Tale. By Julia Corner. 3 vols. (Newby.)—A regular, thoroughbred, three-volume

novel, stretched into the thinnest possible volumes, and eked out with a few little stories at the end as a makeweight, and which are, of course, as such little stories always are, perfectly unreadable. Now, what objection is there to a tale in two volumes,—or even in one volume? Why do the publishers almost invariably insist upon a certain number of pages being produced, whether the unfortunate author has the power of producing them or not? Surely the harm this practice does to literature is unmistakable. If an author has a good story to tell, or a few pleasant remarks to make on men and manners, persons and things, by all means let him make them; but when he has nothing more left to say, for mercy's sake, let him stop, pack up his manuscript, and send it out of the house at once, without waiting to spin out a page of morality here and a chapter of feeble sentiment there, or even at the last gasp patch on a tale, to fill up the quantity of writing required by the publisher. No matter how awkwardly or foolishly it is done, we must have our "pound of flesh," our due allowance of trash, say the publishers. The libraries will be obliged to take a certain number of copies, and if nobody is ever able to wade through them that is a matter of no consequence at all. In this particular novel, 'Culverley Rise,' we find all the proper, regulation characters, about as much like people in real life as the wax figures in Madame Tussaud's Exhibition. We find the old baronet, who disinherits his best son—and the wicked younger brother, who, however, contrives in this case to usurp not only the property of his elder brother, but even the very title. We have, of course, the deathbed of the elder brother, who turns artist and dies in great distress, leaving a young and lovely daughter to go out as a governess, and be insulted by her cousin, the reigning baronet, in the home of her forefathers. In short, we all know the rest. The two sons of the wicked brother kindly put each other out of the way in a drunken squabble, and the despised governess is finally restored to her rightful honours and marries a very nice young man, called Alfred, who had not been above falling in love with a governess, though he could not go quite so far as to "disoblige his friends" by marrying her, and who was also heir-at-law to the Culverley estate; so nothing can be more pretty and proper and romantic than a very gay wedding, with six bridesmaids, and a tour to Paris, before mutually taking possession of Culverley Rise.

The Huntley Casket. By A. Crawford. (Nimmo.)—This collection of literary remains is a posthumous publication. The author was a man who, in his lifetime, enjoyed much social celebrity. If Scott had not written his novels in general, and 'The Fortunes of Nigel' in particular, 'The Huntley Casket' would have had a much higher merit than can be awarded to it, coming as it did after Sir Walter had produced works which set the fashion and awakened the taste for historical novels. 'The Huntley Casket,' in the general cast of incidents, characters, and even the period in which the story is laid, bears so strong a resemblance to 'The Fortunes of Nigel' that no other praise can be given than is due to a clever and spirited imitation. Trapbois, the miser, and Richard Monypies, the serving man, in 'Nigel,' have their duplicates in 'The Huntley Casket.' The story is a brief one. The author was not capable of the long-sustained literary effort which is needed for an historical three-volume novel. The sentiments and modes of expression are often of the present day, rather than of the time of James the Sixth of Scotland and First of England. The story is somewhat feeble in the joints, and the incidents do not keep their proportions. The intervention of the gipsy and the scene of the false hermit's cell are not well managed; the effect is well intended, but not wrought out with a strong, masterly hand. Taken on its own merits, 'The Huntley Casket' is a very readable story, and would be pleasanter were it less ambitious. The style in which it is written resembles more that of the Ettrick Shepherd in his tales than Sir Walter Scott. There are several other sketches in the volume, but all of them shorter and slighter than 'The Huntley Casket.' 'Jedburgh Justice' is the best of these:—it is a spirited version of the Border tradition

which hanged a man first and tried him after! But in the present story the poetical justice is so well vindicated that the reader's judicial sympathies are not wounded, the more especially as, if the culprit had not been hanged when the good people of Jedburgh had him in hand, the chances were that he would have escaped altogether. Mr. Crawford seems to have been a man who possessed more faculty than ever came out of him,—to have had stronger capabilities than he ever worked out. He evidently had the gift of impressing his large circle of friends and acquaintance with faith in his powers; and they are generally the last to believe in prophets of their own rearing; but when they do believe, their faith is a fanaticism: and, after all, the praise of friends is the pleasantest part of fame.

Mentone and the Riviera as a Winter Climate. By J. Henry Bennet, M.D. (Churchill.)—Dr. J. Henry Bennet, whose health has for some years past necessitated a winter residence in the south of Europe, addresses the public on the advantages offered by Mentone to phthisical patients, and draws a most pleasant picture of the largest town of the Principality of Monaco,—its wall of mountains surveying the ever-restless bay; its lemon-groves (famous throughout the world) which three degrees of frost would kill; its picturesque dells, bright with red valerian, harebells and violets, flowering in December and January. We should certainly have liked Dr. Bennet all the better, if he had not subscribed his Preface with the following addresses and announcement—

"60, Grosvenor Street, The Farns, Weybridge, from May to October."

The dignity of the medical profession suffers whenever its members solicit employment, either by word of mouth or pen. Still the most rigid upholder of that etiquette, which "the faculty" wisely deem necessary for the maintenance of the high respect in which they are held by the community, would permit some latitude to an invalid physician whose health compels him to practise one-half of the year in England and the other half in Italy. We have therefore pleasure in referring those sufferers who from pulmonary affection annually seek the relief and security of a southern climate to Dr. Bennet's sketch of the vegetation, climate and social features of Mentone and the Riviera. The reader will not fail to observe that the Doctor gives only very few particulars relative to the temperature of Mentone last Christmas. Of course the cold of last year was exceptional; but still a consumptive patient, considering the propriety of visiting Mentone, would like full information as to its exceptional experiences. We are especially induced to give this caution by the knowledge that some of the invalids residing there last winter give the place a bad character, as having been both cold and badly supplied with those provisions and luxuries on which the comfort and well-doing of invalids greatly depend.

Catalogue of the Museum of the Academy at Bruges—[*Catalogue du Musée de l'Académie de Bruges. Notices et Descriptions, avec Monogrammes, &c. par W. H. James Weale.* (Bruges, Beyerart-Defoort; London, Barthés & Lowell.)—We find in this publication a carefully compiled account, by one well versed in the subject, of the ancient and modern pictures forming the collection of the Bruges Academy. The accurately-copied monograms inscribed on the older pictures in the gallery give a special value to these pages, and the incidental historical illustrations will be found of considerable service to the student. It appears that Mr. Weale, like many others, has had reason to complain—and he does so severely in his Preface—of the illiberality of authorities in charge of the Archives of the Hospital of St. John at Bruges. The Commissioners turned a deaf ear to all applications for leave to search their records; and we remember that Mrs. Jameson complained of the same spirit, which denied her permission to make sketches from Memling's larger paintings, to illustrate her intended work on the Legends of the Madonna. The Académie Royale of Bruges was founded by a body of artists and amateurs, with Joseph van den Kerckhove at their head. He died in 1724. The Catalogue contains 144 pictures, and commences with the

well-known picture by Jan van Eyck, executed for George de Pala, and completed in 1486. In this realism and ugliness prevail. The painter's Wife, dated 1489, is a more agreeable specimen of his portraiture. The Head of the Saviour, dated 1440, Mr. Weale unhesitatingly pronounces a weak imitation, and cites against it the fine original picture in the Berlin Museum, executed two years earlier. Of Hans Memling (now spelt Memline), the following biographical references have a certain interest. They are the general result of the author's investigations:—"Hans or Jan Memline was settled at Bruges in 1479, and possibly still earlier; but on this point documents throw no light. He is not connected with the Hospital of St. John in the light of a poor and wounded soldier (as in the erroneous accounts circulated of him), but as the possessor of several tenements and houses in the city. In 1480, he appears among the principal burghesses of Bruges who advance a sum of money to the city towards carrying on the war between Maximilian and France. Memline was married. The Christian name of his wife, Anne, is all that is known. She bore him three children—Jan, Petronilla or Cornelia, and Nicolas. She died before the 10th of September, 1487. Lastly, the list of pupils of the town, dated December 10th, 1495, affords a proof that Memline himself was dead and his children still in their minority. The largest of the houses belonging to Memline, and the one in which he resided, was situated in the Rue du Pont-Flamand (now the Rue St.-George), facing the house of the Arbalisters. It was built of stone, and roofed with tiles—a rare and expensive mode of construction in those days. Our surmises have been justified. The author of these excellent productions, teeming with the purest faith, the most exquisite refinement, and exhibiting the most original and delicate sentiment, has resumed in the eyes of the world that honour and worth of character which the gratuitous fabrications of certain biographers had for a time effectively endeavoured to wrest from him." The Triptych, dated 1484, containing St. Christopher, as principal figure, between St. Benedict and St. Giles, is one of the best productions of the master. The donor and his wife occupy the two wings, and on the reverse, when the altar-piece is closed, are seen St. George and St. John the Baptist. Authentic works by Prevost, Blondeel, Pourbus and Claessens follow. 'The Judgment of Cambyses' and 'The Execution,' formerly attributed to Claessens, and, as such, engraved in Passavant's 'Kunstreise,' are here transferred to the class of unknown masters. The first of these two pictures is dated 1498. Both were removed to Paris in 1794, and formed rare exceptions to the general style and taste of the pictures collected by the French from other countries at this period. We find here many pictures with the simple designation of *School of Flanders*, or *Brabant*, or *Quentin Massys*, as the case may be,—a good indication that those entrusted with the care of the Museum do not wander beyond the reach of certainty. The system of *finding* a particular name for every old picture that retains a place in a gallery has long been a very mischievous one, and the Cambyses pictures above referred to have also been brought under the same system. They are now simply attributed to the school of Germany of the fifteenth century. Van Goyen, Van Oost, Artois, Bredael, Minderhout, and many other well-known landscape painters, are represented in this collection, and many paintings of the more modern school will be found accompanied in these pages by characteristic descriptions and biographical notices not otherwise to be obtained. The results of Mr. Weale's researches respecting Memling have been published, as he tells us, in the *Journal des Beaux Arts*, 3^e année; and we look forward with interest to a still more extended work which is announced from his pen on this subject.

Students preparing for Military College examinations or the Oxford and Cambridge local examinations of schools, may be tested and improved by *German Examination Papers: Two Hundred and Two Questions on the Essential Parts of the German Grammar and Literature, with a copious Selection of Examination Papers,*

by C. Rühle (Nutt). The bulk of the book consists of examination papers which have been set at Woolwich, Sandhurst, and other military examinations, those for the Civil Service of India, and the local examinations for schools instituted by the Universities of Oxford and Cambridge.—Other useful books for students of German are, *Elements of the German Language*, by F. O. Froembling, First Part (Nutt), which is an elementary grammar with exercises and vocabularies; and a *Manual of German Conversation*, by F. Ahn (Tribner), containing words, phrases and conversations of daily occurrence, the English of which is perfectly pure. This latter is an advantage often wanting in such works, among others in *Moral Fables: a French-English Work for Young Students*—[*Fables Morales, &c.*] by A. Saintour (Whitaker). The Fables, which were originally written by the author in verse, have been turned into prose and are accompanied by a translation into broken English on the opposite pages.—*The First Step in French; being an Easy Method of Learning the Elements of the French Language*, by L. Contanseau (Longman), is an introductory grammar followed by French and English exercises, and a selection of French extracts for translation into English, the whole arranged and executed in masterly style.—We close our list of educational works with *Outlines of Grecian History*, by E. Walford (Kent), a small shilling volume, with two maps of ancient and modern Greece, giving as full an account of the history of ancient Greece down to the taking of Corinth by the Romans as could be comprised within the limits, though not in our opinion so satisfactory, on the whole, as Prof. Browne's 'History of Greece' in Gleig's Series.

LIST OF NEW BOOKS.

Abercromby (Lieut.-Gen. Sir R.), *Memoir*, by Dunfermline, 10s. 6d.
Amateur Illuminator's Magazine, No. 1, 10s. 2s. 6d. swd.
Anderson on the Paralytic Affections of the Skin, 8vo. 5s. cl.
Bennet on Inflammation of the Uterus, 4th edit. 8vo. 16s. cl.
Blaikie's Bible Geography, Physical and Political, 12mo. 1s. 6d.
Briggs's The Islam: its History, &c. 2 vols. 8vo. 2s. 6d. cl.
Brooke's Silver Cord: a Story, 2nd edit. 2 vols. 8vo. 31s. 6d. cl.
Brown's Home-Subsistence, 1st & 2d series, new ed. 8vo. 7s. 6d. each.
Cadart's Le Corrécteur; or, Niceties of French Conversation, 32. cl.
Child's Singular Properties of the Ellipsoid, 8vo. 10s. 6d. bds.
Cooper's Dict. of Practical Surgery, 2 vols. 8vo. 2s. 6d. cl.
Craig's Hist. of English Literature and Language, 2 vols. 8vo. 34s.
De Tocqueville, *Memoir, Letters, &c.* tr. from French, 2 vols. 8vo. 34s.
Donald's Land Drainage, Embankment & Irrigation, new ed. 12.
France's Example of Christ and the Service of Christ, 8vo. 3s. 6d.
Gardiner's Tale, by S. B. C. small 8vo. 3s. 6d. cl.
Gauguin & Law's Anatomy of the Domestic Animals, roy. 8vo. 12s.
Giles's Keys to the Classics, Homer's Iliad, Bks. 1 to 6, 18mo. 3s. 6d.
Green's Life: the Reward of Piety, by the Rev. R. Ray, 3s. 6d. cl.
Gurney's Thoughts on Habit and Discipline, 7th ed. 16. 8vo. 1s. 6d.
Harris's Civilization considered as a Science, 8vo. 12s. cl.
Herschel's The Telescope (from the 'Encyc. Brit.'), 16. 8vo. 3s. 6d. cl.
Hulke's Practical Treatise on the Ophthalmoscope, royal 8vo. 8s.
Irving's History of Scottish Poetry, edited by Carlyle, 8vo. 16s. cl.
Larrey (Baron), *Memoir*, of from the French, 8vo. 6s. cl.
Moore's Golden Lectures, 2nd series, 41 sermons, 8vo. 6s. cl.
Old Roman Well: a Romance, 2 vols. 8vo. 81s. cl.
Owen's Paleontology, 2nd edit. 8vo. 16s. cl.
Palgrave's Golden Treasury of Songs & Lyrical Poems, 2nd ed. 4s. 6d.
Parker's The Devout Soul's Daily Exercise, new edit. 32mo. 1s. cl.
Peypala Domestic Sketches in Russia, 2 vols. post. 8vo. 81s. cl.
Post-Office Directory of the West Riding of Yorkshire, roy. 8vo. 30s.
Reynolds's Epilepsy: its Symptoms, Treatment, &c. 8vo. 10s. cl.
Richardson's The Domestic Fowl, new edit. 12mo. 1s. swd.
Sanderson's Rural Architecture, new edit. 12mo. 1s. swd.
Saunders, Oliver & Co.'s Overland Guide to India, &c. 1s. swd.
Smith's Smaller History of Greece, new edit. 6s. 8vo. 3s. 6d. cl.
Sortain (Rev. J.), *Memoirs*, of by B. M. Sortain, 2 vols. 8vo. 7s. 6d.
Syme's Observations in Clinical Surgery, 8vo. 8s. 6d. cl.
Thiers's History of the Consulate and Empire, Vol. 19, 8vo. 6s.
Temple and Trevor's Tannhäuser, 3rd ed. 16. 8vo. 3s. 6d. cl.
Todhunter's Elementary Treatise on Theory of Equations, 7s. 6d.
Tomlins's New Bankruptcy Act, 12mo. 5s. cl.
Tracts for Priests & People, No. 8, by Rev. O. P. Chretien, 1s.
Trollope's Examination Questions on the Pentateuch, 16. 8vo. 12s.
Twiss's Early Choice, new edit. 12mo. 3s. 6d. cl.

THE GORILLA.

"*Ilorum in arma feror.*"

Walton Hall, near Wakefield, Oct. 7, 1861.

Prof. Owen, in the *Athenæum* of October the 5th, having declared his entire reliance on the statements of Mr. Du Chaillu touching the Gorilla, and having also introduced my name, I beg respectfully to draw the Professor's attention to what follows:

Mr. Du Chaillu, at page 58 of his 'Explorations,' informs us that the Male Gorilla is the king of the African forest, and again that every beast flies before it. This implies strength and fleetness and courage in the Gorilla. But, at page 434, we are informed that the short and slender legs of the animal are not able firmly to sustain the vast body. They totter beneath the weight, and the walk is a sort of waddle, in which the long arms are used in a clumsy way to balance the body, and keep up the ill-sustained equilibrium.

Thus, at one time, Mr. Du Chaillu's Gorilla is a potent monarch, causing every beast to fly before

him; at another time it dwindles into an ill-shaped, tottering creature, barely able to support its own weight, as it waddles onwards. Will Prof. Owen, who has raised his seven-fold shield to defend a needy explorer, condescend to explain away this manifest discrepancy?

When we shall have fairly disposed of the Gorilla, it is my intention to comment on other parts of the book where natural history is introduced. I find them very unsound.

CHARLES WATERTON.

October 7, 1861.

It would have been more to the purpose if Prof. Owen, instead of indulging in vague generalities as to what a photograph may do, what course a ball may take, or how the hair may fall from a skin if not prepared in a particular manner, had made a little examination and some inquiries, before writing the letter inserted in your last number.

For example, if he had looked at the skeleton of the Gorilla, he would have seen that the fracture of the ribs is really and truly "as nearly as possible in the middle of the side, where the ribs stand widely apart," as stated by me in your number of September 28th, and not "at the back of the chest, where the ribs bend outward and forward, and are so close together as almost to overlap," as stated by Prof. Owen in your number of September 21st. This is the question of fact between us, which no cleverness in the construction of hypothetical suggestions can alter. The materials for a decision are open to the inspection of all who take an interest in the subject; and I reiterate my already repeated invitation to all such to see and determine for themselves. Again, if he had looked at the skeleton, he would have seen that whatever "manipulation" it had undergone was the work of M. Du Chaillu himself; that the connecting wires were exactly in the state in which he sent the skeleton to the Museum; and that so far from their having "pulled and kept apart" the ribs to which they are attached, their effect has been to bring them much closer together than the corresponding ribs on the opposite side, which have undergone no such "manipulation."

Again, if Prof. Owen had taken the trouble to consult my letters printed in your journals of the 26th of May and 1st of June, he would have found in them no statement "that the skins, brought over by M. Du Chaillu, had not undergone the usual European preservative operations." On the contrary, my statement was distinctly, that they were preserved in *too* European a manner to have been brought from any considerable distance in the interior; for common sense will tell us that if a man has to carry his specimens a long distance, he will pack them in the smallest possible compass, and in a manner which shall render them the least liable to injury in the transit, and not stuff them out to the largest size and in the most cumbersome form, as has been the case with M. Du Chaillu's skins of the Gorilla, and even of the Buffalo,—this process of stuffing being effected as he tells us in his Narrative, on the spot where they were shot.

Fourthly, if Prof. Owen had taken the trouble of examining the skins of Mammalia, which are sent to England by traders living on the west coast of Africa, who obtain them from native collectors, he would have found that they are very generally prepared with arsenic, or; if he prefers the expression, have "undergone the usual European preservative operations." He would have found also that these negroes frequently use so much arsenic as to burn the skin and make it brittle and rotten, as was the case with the skins brought by M. Du Chaillu.

Fifthly, if he had paid a visit to the West African Fur Company in Great St. Helen's, he would there have seen thousands of skins of large monkeys and other animals, prepared by the natives of Tropical Africa, with the hair in admirable preservation without the use of arsenic; and even any ordinary draper would have shown him muffs with long silky black hair, made from the skins of *Colobi* brought from the Gaboon and other stations on the western coast, similarly prepared.

Sixthly, if he had consulted the missionary who visited the Museum last week, and who resided in

the Gaboon for many years, he would have learnt that Gorillas are not uncommon in the neighbourhood of that settlement (a "Gorilla country" appears on M. Du Chaillu's own map within less than fifty miles of it); that they are often brought in by the natives, both alive and dead; that he had himself had several living; and that his description of the habits of the young Gorilla in captivity entirely agreed with that given by Mr. R. B. Walker. By what process of reasoning the mark of a chain round the neck of one of M. Du Chaillu's skins of a young Gorilla is made to prove that M. Du Chaillu "had been, as he describes in the Gorilla forests," passes my comprehension.

I have hitherto purposely confined myself to the scientific bearings of the question; but as Prof. Owen, who has forced upon me this defence of my previous statements and this repudiation of statements unjustly attributed to me, has thought fit to introduce his opinion of M. Du Chaillu's personal merits into the question, I see no reason why I should be longer silent upon that head. I have no doubt that M. Du Chaillu appears in a very amiable light to Prof. Owen, to whose patronage he is entirely indebted for his reception in English society and even for the publication of his book; and to whose influence also he owes the purchase for between 500*l.* and 600*l.* of a part of his collection, which he had been unable to sell in America, and which had been refused, when offered to them, by the Berlin and other Continental museums. We all know how this "gentleman" acted at a meeting of the Ethnographical Society; and how the pecuniary claims set up against the Academy of Natural Sciences of Philadelphia by this "liberal-minded man, more desirous that the public should benefit by the rarities which he has brought us, than seeking any mere personal profit," were treated by that learned and intelligent body. But I will now add, that I have long had in my possession or at my disposal letters from the Continent and elsewhere containing information respecting him quite in conformity with the statements of Mr. R. B. Walker, printed in your number of Sept. 21st; and that I have also letters from the United States from which I learn that some of the most distinguished scientific men in America (including Mr. Cassin, who described his new species of birds, and who is continually quoted as entertaining a very high opinion of him), who subscribed the money which alone enabled him to return to Africa in quest of zoological specimens, and to make his collections there (a support which this "liberal-minded man" nowhere acknowledges or alludes to in his book), are now convinced, and especially since the publication of his Narrative, that they have been grossly imposed upon.

One word more of a personal nature, and I have done. Prof. Owen complains that in referring to the opinions of medical and scientific men, I quoted no individual by name. I have before said that in a plain question of fact, capable of being tested by all, I am not disposed to appeal to any authority, however great. But I will also add, that I have no inclination to be the instrument of exposing others besides myself to the torrent of scurrilous invective which has been let loose upon all who have ventured to expose the shallowness of M. Du Chaillu's pretensions as a naturalist, and the innumerable self-contradictions of a work which credulity itself cannot swallow entire. Even Prof. Owen vaguely declares himself "no indiscriminate advocate of M. Du Chaillu," but it would be far more satisfactory to know in what his discrimination consists.

J. E. GRAY.

MACCHIAVELLI AND GUTCIARDINI.

GUTCIARDINI. It grieves me, Ser Niccolò, to learn by your letter that Fortune has been ungrateful and unjust to you. Hard is it that a statesman who hath served his country conscientiously and ably should be reduced so nearly to poverty.

MACCHIAVELLI. The hardship, my compassionate friend, lies chiefly in the necessity of entreating as a favour what I believe to be my due. Having served our Florence faithfully, I claim only a small remuneration from the Medici.

GUIC. Gratitude is not in the vocabulary of princes: and Republics insist on every man's services, deeming him sufficiently paid for them by a place, however subordinate, in the government. You are become out of favour by writing what appears to be satirical in your *Principe*. Can you deny to me, who am your trusty and hearty friend, that, in this wise and profound work, you make it appear how such high functionaries, in order to acquire and retain their power, must act occasionally with violence and dishonesty?

MAC. Is it not true?

GUIC. And by being true is it not the more dangerous to him who utters and promulgates it?

MAC. I desired to show my countrymen what they must expect if they prefer an absolute prince to a free republic.

GUIC. All desires out of the domestic circle lead to disappointment, most of them to grief. Are we less tranquil than under the late regimen?

MAC. The sleeper is more tranquil than the wide-awake, and the dead even than he.

GUIC. It is somewhat for the generous, patriotic, and energetic, to have escaped persecution. After your commentary on Livy, I feared you might, notwithstanding all your caution and prudence, take up Tacitus. Then might you, peradventure, have been accused of personalities: Hemlock and Hellebore and other simples, sedatives prescribed for the unruly, are to be gathered in Tuscany.

MAC. Dante Alighieri, the glory of our country, dared openly to avow himself an innovator and reformer. He would have called in the Emperor of Germany to rule the whole of Italy.

GUIC. Were it practicable it might have been well for us. The vilest and most ineradicable of vermin is that which generates in the skin: we can sweep away the outlying.

MAC. No people can flourish where any man sets at defiance the magistrates and the laws. An appeal out of them is treason, and punishment should be summary and prompt. Beside a conclave of princes set over us by a priest, we, at present, lie ground between an upper and a nether millstone. Germany and France crush us into powder, and leave nothing but the husks. Better is it to be subject to the Emperor of Germany than to the King of France. For the German Powers would encourage our commerce through interest, the French through jealousy would repress it.

GUIC. It was impossible for the Emperor of Germany to become sovran of Italy, as Alighieri wished, and ventured to propose, unless by abolishing the temporal power of the Pope.

MAC. Republican as I am, I would willingly see all Italy under one constitutional hereditary prince. At present we have no choice between the bear and the wolf. The bear hugs to suffocation, breaks a few ribs, then, tearing out a mouthful, lies down. The wolf springs at the throat, strangles the animal, tears the heart out, and laps up the last drop of blood. Neither you nor I can speculate far into the future. Yet we both of us can see clearly what is about us and nigh. The French are incapable of freedom, and will never let others enjoy it. The Germans have as much liberty as they want or know what to do with. They are a moral people and sigh after the purity of religion. It appears to be an axiom with princes that the more corruptions there are in it the more easily are men governed. But under a good government a religion will gradually become good, and revolutions will be unnecessary. I do not believe that during our lifetime there will be any in this country. Yet who could have foreseen the prodigious one which has been lately almost accomplished in the Netherlands? There are now living many men, and not extremely old, who remember Spain the most powerful and the most prosperous of kingdoms. What is she now become! England crushed her armada, and left her scarcely enough of its timbers for an auto da fé. Nearer to ourselves than the scene where Spain sank, never to rise again, the Hollanders are cooking their fish to-day over the splinters they have broken off from the old fisherman's chair, while the banners of Castile and Leon droop in ignominy over the Knights of the Garter.

Now to the matter of union and consolidation.

England could unite to her discordant kingdoms and divers races, speaking different languages. Is it indeed going too far in speculation that the provinces of Italy, both on the Peninsula and on the Adriatic, living in harmony and speaking in the same mother tongue, may become united?

GUIC. On such a consummation you a republican hardly can dream.

MAC. I do dream of it, and when I am most awake. My republicanism is for my country, not for my city. Florence was my cradle, Florence taught me my letters, but there were masters who made me hold up my head and walk with them beyond the gates.

GUIC. The nurse had well nigh shaken thee out of the cradle, and the masters have brought thee among thorns. We all have our projects, and generally on things farthest from our reach. The most accredited of philosophers often tread upon unsound ground. Never was a scheme less practicable than Plato's Republic, redundant with whims and puerilities. Did no obstruction lie in your path on your road to the consolidation of Italy? Did never the two rival cities, Genoa and Venice, rise up before you? Both of them are opulent and powerful: both would be more opulent and more powerful by going hand in hand.

GUIC. But Venice, whose nobility is higher than any other in Europe, would never take the ring off her finger. She is queen of the Adriatic, and arbitress of the Levant. Remembering that she hath often set at defiance both Emperor and Pope, she would receive any sovran, and most unwillingly one from across the Alps.

MAC. Never was any government so politic as hers hath continued to be from century to century, never any people so long contented. In other countries the nobles are the worst of slaves because they adulterate the worst of masters. Flattery in Venice is no less exuberant, but the victorious admiral or the cherished maiden are the flattered. Ariosto breathes his spirit into the gondolier, by day and by night, and music swells above the ripples of the lagoon.

GUIC. Ser Niccolo, you are growing quite poetical.

MAC. Venice herself is poetry, and creates a poet out of the dullest clay. Woe betide the wretch who desecrates and humiliates her! She may fall, but she shall rise again.

GUIC. Our hopes at the present time must rest contentedly. It was impossible for the Emperor of Germany to become sole sovran of Italy, as Alighieri wished, abolishing the temporal power of the Pope. France and Spain are interested in maintaining it; that is, they are playing as partners, sitting on opposite sides of the table. If Italy is ever to be under one potentate, the only one eligible is the Duke of Savoy, he being already her guardian. Care, however, must be taken that his family never intermarry with the stranger. We have families in our own country more illustrious by exploits and wisdom than the Bourbons or the Hapsburgs, and if antiquity, as it seems to be, is considered a title to reverence, we have fifty more ancient. With other nations, if ours were united, we should require no alliances. They would only involve us in difficulties and wars.

Freedom of traffic is advantageous to all. When the seas are open man's eyes will open. We want little from abroad, and we shall want less. Our wines are richer than those of Spain, which usually taste of the pigskin or goatskin, and the best of the French owe their odour and flavour to the root of that lily which grows profusely in the crevices and on the summits of our city-walls. These roots we never use but for perfumery, and export them in quantities from Livorno. The wool of Taranto celebrated by Virgil in his Georgics, is less deteriorated than everything else in the Neapolitan territory. We might clothe our wealthier neighbours with it, as we do with our silks and velvets. Manufacturers of linen and lace would easily be tempted from the Netherlands. Sicily and Sardinia could produce not only a profusion of flax, but also of cotton. The island of Sardinia is scarcely a quarter peopled. Horace celebrates its "segetes feraces." There is in it a more extensive

and a more fertile plain than perhaps in any other island.

MAC. Nothing can be hoped for where priests and monks swarm in all seasons. Other grubs and insects die down, these never do. Even locusts, after they have consumed the grain and herbage, take flight or are swept away, and leave no living progeny on the ground behind them. The vermin between skin and flesh are ineradicable.

GUIC. What can we do with the religious?

MAC. Teach them religion. Teach them to earn by labour the bread they eat. Some confraternities work already, make all do.

GUIC. Remember, there are aged and infirm in monasteries; to deprive them of a decent and comfortable subsistence as was done in England, would be inhumane, not to them only, but also to the poor wretches who lived by them.

MAC. It would be: but such a case might be obviated, by stationing them in their native towns and villages, where friends are living. The less afflicted may visit the sick and instruct the children: few of them can do more, or are willing to do so much. The bishops, out of their vast revenues, ought to supply whatever may yet be needful.

GUIC. Perhaps you would curtail their revenues and their number.

MAC. Jesus Christ ordained twelve to preach his gospel to all nations. Surely twice the number is sufficient for Italy. I would allow a spacious house and garden to each, and 2,000 crowns* annually from the public treasury. Sardinia and wild Corsica might also have each of them four prelates.

GUIC. Sardinia in another century could be what she was under the old Romans.

MAC. Religion in their time was no hinderer of labour, no encourager of idleness, no mendicant in purple and fine linen and a jewelled bonnet three stories high.

Another generation will see better things, another, but not the next.

GUIC. After the *Purgatorio* we arrive at the *Paradiso*! Vision! vision!

MAC. Holy visions are at last accomplished.

W. S. LANDOR.

NATURALISTS AT SPEYER.

Speyer, Sept. 26, 1861.

THE Society of German Naturalists and Physicians, which yesterday terminated its Thirty-sixth Annual Meeting at this place, was formed in times of deep national despondency. The patriotic appeals of the German princes, which had roused once more the national spirit, effected the expulsion of the French, and restored in many, in too many, instances those petty dynasties to whose mutual jealousies most of the misfortunes of the country were directly traceable, had been succeeded by an utter betrayal of the national cause on the part of the new governments. The deluded masses had fondly hoped that the sufferings their rulers had undergone and the political experience they might have learnt in exile would have opened their eyes, at least so far as to be able to embrace the great ideas moving our modern era, and grant their subjects sufficient freedom for the development of their natural resources. But these hopes were cruelly disappointed. All those fair promises, by means of which the thrones had again been erected, were set aside, and even the purest patriotism was regarded as a crime of the deepest dye. The princes saw clearly that they had nothing to fear for their own safety as long as they could keep up the isolation of the different "nations" who constitute the geographical conception of Germany. Hence originated their obstinate resistance to all that bore the name of *association* and that spirit of free inquiry which animated the scientific men of the country. The conferences of the re-actionary Governments at Carlsbad and the resolution passed at that place against the tendency of the age are familiar to all readers of history; and had the policy founded upon them been successful, the whole of Germany would in time have been reduced to an

* 2,000 crowns at that time were equal to 5,000 now. The French Bishops have about 700 pounds, with houses in their cities, not palaces.

absolute state of mental stagnation. It was only a few years after this gigantic blow had been aimed at the very head and heart of the nation that at Leipzig was formed the Society of German Naturalists and Physicians, whose primary object was proclaimed to be to afford opportunity to its members to become *personally* acquainted. Those not versed in the history of the country have thought it strange that this object was publicly advanced as the primary one of a society assuming such a title, and that not a single paragraph of the original constitution contains a word respecting the advantages which science and scientific men might be expected to reap from joining. Though politics were altogether excluded, it was felt on all hands that the establishment of an association seeking to embrace the most able men from all countries in which the German language is spoken, all admitted without any formalities or loss of time, was more than it pretended to be, and might justly be regarded as a living protest against the destructive tendency of the Carlsbad resolutions. Some interesting details were made known at Speyer concerning the first meeting at Leipzig, in September, 1822, the real originator of which seems to have been Oken. Such was the terrorism reigning, that throughout the whole width and breadth of the land only about twenty men could be found bold enough to attach their signatures to the constitution framed. Purkinje and the two Prests from Prague attended the Leipzig meeting, but declared it impossible to sign, as that would have deprived them of their office, perhaps their personal freedom, on returning home. Blumenbach, the celebrated Göttingen anatomist, was equally nervous about the consequences of so bold a step; and many others, still less bold, did not even dare to attend. For a few years the new Society struggled in adversity; but, by skillfully choosing localities for its meetings favourable to its tendencies, it gradually gained such strength that its members were counted, not only by hundreds, but often by thousands. It has now held its meetings in all the principal towns of Germany, twice at Vienna, and for the next year has accepted the invitation of that very Carlsbad which at one time threatened to destroy science altogether. Its organization, with a few unimportant modifications, has become the prototype of similar associations in America and all civilized parts of Europe, and in Germany it has besides become the pattern of innumerable societies devoted to the advancement of almost every branch of Art and Science. Even the National Union, from which such great results are expected, has copied the chief features of its organization from this Society. All this will explain the political feature of the Society and the prominence given to the national element, both of which would, of course, speedily disappear as soon as the legitimate desires of the country for national unity had been satisfied. But the political narrow-mindedness of the majority of their princes was not the only obstacle which the *savants* of Germany had to fear. With a powerful Roman Catholic hierarchy in the south, ready to go any length in obtaining unlimited dominion over the minds of the people, and establishing an *Index Expurgatorius* on the narrowest principles, it was necessary to disseminate liberal religious views; and the members have not been backward in giving vent to their opinion when opportunity offered, though they cannot be charged with making a point of doing so. The Roman Catholic notables, who have just concluded their meeting at Munich, have launched severe anathemas against science and its cultivators; and if what they say should prove correct, a certain hot place may be expected to be rather overcrowded with celebrated names. At the Second General Meeting at Speyer, when Prof. Virchow declared there was no hope for Germany till all the people had begun to think for themselves, and become men, I saw a priest get up in the greatest rage, and it required all the assurances of his friends and those near him that no sort of discussion or interruption was tolerated in the General Meetings before he could be induced to resume his seat. Another priest held it to be his duty to inform the Geological Section that their cosmogony was altogether at variance with his own, and begged them and their science to return to the more primitive

but sounder interpretation. This declaration and the pretensions advanced appeared so ridiculous that they caused general hilarity.

The number of members assembled at Speyer amounted to about 600, besides a great number of associates, i.e. scientific men who have *not* written a book, and who are, therefore, disqualified to vote, though they enjoy every other privilege granted to members. The distinction may seem absurd theoretically, but works well practically, by keeping a crowd of *dilettanti* out. The ancient town of Speyer, with its newly-restored cathedral, had a very festive look. Scarcely a house was without garlands and green boughs, whilst hundreds of flags and streamers were waving in every street. The Bavarian Government had desired that the public buildings might *not* be decorated with the German tricolor, and the local authorities had been weak enough to give way on this point, but the inhabitants, not so yielding, had hoisted two German for every Bavarian flag. The reception of the guests was cordial in the extreme. All the wealthier inhabitants had placed free quarters at the disposal of the members, and my host had provided for no less than six. The members were also provided with a free pass for all the railways of the Palatinate, and a fine opportunity was thus liberally offered to visit many places of interest, and all the principal towns in the neighbourhood. Two general excursions were made, one to the village of Berghausen, where the town of Speyer had arranged an open-air concert, succeeded by a grand firework and illumination of the gardens with Chinese lanterns. The band, an Austrian one from the Federal garrison at Mayence, was excellent, the singing tolerable; but the exclusively Bavarian decorations of the place seemed to act like a wet sheet upon the assembly, and strikingly contrasted with the enthusiasm displayed at Neustadt-an-der-Haardt, where the whole arrangements were more in keeping with the prevailing national sentiment. The members were received at the railway-station by the Lord Mayor of Neustadt, and conducted to the shooting-house, where refreshments had been provided. Arndt's song, 'Was ist des Deutschen Vaterland?' was repeatedly encored, and seemed to put everybody in good humour, and patriotic speeches and toasts were the order of the day. All the grievances of fatherland were ventilated, want of unity, Schleswig-Holstein, Slavonic encroachments, and others. The establishment of a German fleet, under Prussian guidance, a topic now uppermost, received its due share of attention, and a considerable sum was collected on the spot for the Prussian treasury. From the hill on which the festival took place a most beautiful view presents itself: miles and miles covered with vineyards, here and there interrupted by towns and villages, and protected by bold mountains on which several old castles may be seen amongst forests of chestnut-trees. Many an eye was directed to Hambach, where, about thirty years ago, that celebrated meeting in favour of national unity took place which brought so much misfortune upon all those who participated in it. With as much ill-taste as bad judgment, the Bavarian Government has changed the name of that now historical place into "Max-burgh," but the people still persist in calling it Hambach. The rock used as a platform by the speakers on that memorable occasion has been blown up to render its site uncertain, but it is said that the spot has been well marked, and may yet be illustrated in a more prominent manner.

For a Correspondent, it is impossible to escape all these reflections when he hears them on every side. The intellectual classes have endured too much not to revert to their sufferings. I was sitting the other day at a public table when the conversation turned upon imprisonment. Amongst the rather numerous company, mostly all men of intellectual pursuits, scarcely one had not been imprisoned for political offences, their terms of confinement varying from two months to thirty-two years; Herder (a grandson of the great poet) being an instance of the former; Schultz-Bipontinus, the botanist, of the latter. In most instances, they were not harshly treated, and in a few cases even with kindness. The most amusing account was given by Dr. Ule, a popular writer on Natural

History, who had simply to live in prison, and was allowed full liberty to go out; and when returning rather late at night, he had often to knock up the jailer to let him in. In England, people are found to wonder why scientific men should ever mix in politics; but they are apt to overlook the fact, that it was not a question about forms of government, extension of the suffrage, or even illegal taxation, which drove them into the ranks of the Opposition, but the intolerable interference of the Government with their quiet studies; they were persecuted because they refused to make their knowledge subservient to dynastic interest or certain narrow views of religion.

The General Meetings were held in the great Protestant church, where Dr. Heine, the President, read an interesting paper 'On Ancient German History,' which has a special ethnological interest, and has since been printed as a festive offering, together with a Dissertation on the Nibelungen Lay. Dr. Heine has for years made these subjects his study, and a prolonged residence in districts where so many of the scenes of that great epic poem are laid has enabled him to throw much new light upon some of the most important questions connected with the original unity, the authorship, and the time of the creation of this oldest monument of Teutonic literature. There are still living at Speyer, it would seem, descendants of the Nibelungen.

The feeling for unity, now so powerful in the country, also exhibited itself in the unanimous adoption of a resolution in favour of a general Pharmacopœia Germanica and a uniform system of medical weights and measures. Similar resolutions have been repeatedly put, but in former years always rejected by a considerable majority. In the Geological Section an important discussion took place between the advocates of the pyrocentric condition of our globe and their opponents. The discussion was opened by Dr. Bialloblotzky, and so ably supported by Dr. Volger and others that the central fire was very nearly extinguished.

Amongst the notables assembled may be mentioned Liebig, of Munich, and Bunsen, now the most rising chemist of Germany; Noeggerath, of Bonn, the well-known geologist, and Dr. Volger, of Frankfurt, the leader of the new geological school and the discoverer of enormous coalfields in Saxony; Schultz-Bipontinus and Martius (botanists); Argelander, astronomer, and Virchow, Professor of Medicine at Berlin. Dr. Virchow played the most conspicuous part during the festival, and his lecture 'On the Influence of the Study of Natural Sciences on Civilization,' delivered at the second general meeting, was a fine specimen of sound thought and manly eloquence. No one, except Dr. Bialloblotzky, displayed such freshness. Frequent marks of approbation greeted him during the delivery, and he sat down amongst a regular storm of enthusiastic cheers. The part of his speech which met with most approbation was one in which he declared that one-half of the time now spent at school would answer every requirement; the other half ought to be devoted to the due development of the body by means of manly exercises, such as prevail in England. He also alluded in touching terms to the fact, that Prague, the oldest German University, had lately exchanged the Bohemian for the German language, and that in all the public schools of Bohemia that Slavonic tongue was to be introduced. Fancy Irish and the Repeal party triumphant in Ireland, and you have an exact parallel. "This," Dr. Virchow exclaimed, "is the result of the doings of a Government for more than four centuries systematically hostile to science!" All those nations of Eastern Europe whom Austria has brought under its sway fully appreciate the advantages which the German language and its rich literature afford them; but as long as German civilization and German misgovernment as represented at Vienna are identical, they endeavour to do without either. So much had these and similar words won the hearts of the good people of Speyer, that they arranged a torch-light procession in his honour, which may be said to have been the concluding scene of the meeting.

B. S.

NOTES ON SPANISH PICTURES.

Seville.

AMONG the impressions stamped to last so long as reason and memory shall endure, during a glance at some among the treasures of Spain—delight in certain works of Art often described has been accompanied by so much of surprise that I cannot but record it.

Every one knows that Murillo was the favourite artist among Spanish church patrons, when the claims of mystical adoration advanced for the Madonna were to be set forth in painting. By his remarkable presentations of Our Lady ascending to beatitude, upborne by cherubs bearing lilies, palm-branches, roses (the bearers rosier still), may this great Spanish painter be most instantly recollected by many gallery-haunters.—Much has been written on the subject, and by few with greater show of sympathy and acquaintance than Ford, who is more than usually precise and picturesque in stating how entirely Murillo conformed to the requisitions of his employers;—and what these requisitions were. "Never," he writes elegantly, "has dignified composure and innocence of mind, unruffled by human guilt or passion, * * heavenly beatitude past utterance, or the unconquerable majesty and hidden strength of chastity been more exquisitely portrayed. * * The Inquisition required the Virgin to be painted as about fifteen years old, very beautiful, with those regular features which the great artists selected; * * that she should be clad in a spotless robe of blue and white, because she appeared in those colours to Beatrix de Silva. She should bruise with her heel the serpent's head. * * She should stand on the throne in a crescent-shape. * * The horns should be placed *downwards*, because, in fact, the moon is always solid, although it appears to us, from the sun getting between it and the earth, continually a crescent. * * The draperies of the Virgin must be very long, and her feet never shown," &c.

The above is explicit enough to pass for a criticism and a character; and pre-occupied by ideas bred on the specifications just cited, many persons may have too carelessly run over and afterwards recollected as a fair tribe of sisters—each precisely like the other—the Virgin pictures of Murillo. But the above is not complete—stranger still, not wholly correct. Murillo's remarkable freedom and variety of motion within limits so circumscribed have been, I think, too much forgotten. Among wider canvases devoted to the subject are two upright ones in Madrid, (one in Queen Isabella's room, or the Tribune,)—and as many in Seville. The former are fairly hit off by Ford's wholesale description—one strange mistake rectified—which is, that in all four (as in most pictures, if not every picture of the kind), without any regard to indication of the solidity of the moon, the Virgin is supported on the crescent, with its horns pointing *upwards*. * But the pictures known in the Seville Gallery as the 'Virgen del Lobo' and 'La Purissima' wander wider from it in their variations of treatment and expression.

In both the Virgin rises, not as oftentimes from a tempered gloom, but as from the near darkness of the Pit.—In the 'Virgen del Lobo,' by the side of our earth, from which she has hardly extricated herself, gazes the head of the Enemy in his dragon guise,—not so much crushed as baffled, and still able to excite terror. Anxiety and suffering are on her face,—the face of one who has been sore afraid and is ill assured of her strength still to get free. Her figure droops. The Celestial Host surround her—and regard her, a little apart, with tender and reverential sympathy. The impression that her trial is hardly yet over,—and her escape from peril only just made, is repeated in every face (how different from the wonted adoring angel-faces of Murillo!). Even with the outspread arms of Omnipotence leaning down to receive the rescued one, there are struggle and doubt in this affecting picture—as well as release.

There is not a trace of either in 'La Purissima.'

* The note on the "Murillo Room" in the Seville Gallery in the 'Handbook' is so vague, inexact and remarkable in its omissions (the Catalogue references being still correct) as to justify the idea that it has been described from imperfect memory.

The earth and the Spirit of Evil are under foot, unseen. The Stainless One soars upward homeward in ecstatic triumph. There is majesty with her modesty,—with her adoration there is the assurance of victory. And mark her angels, with their palms and lilies and roses!—thickly pressing beneath her feet, they may be said to strew her ascending path as with the living flowers of Heaven. A 'De Profundis' and a 'Hallelujah' are hardly more distinct in tone and expression than are these two admirable pictures;—and neither accords with the "set pattern." Their variety, I repeat, and departure from the canonical rule and ordinance so stringently laid down, arrested me.—Perhaps some one more able, and with more time at command, may think what has been said not unworthy of being followed out by comparison and examination, when studying one of Spain's greatest painters. Too much pleasure is lost in every art, when admiration is content carelessly to be borne along in any given direction by "a sweeping character."

Granada.

The rapidity with which Spain is being cleft to "the heart of its mystery" by railways must be attended by beneficial changes of every kind—and this with no disenchantment as its necessary adjunct.—The horseman may always (an it so please him) ride from Gibraltar to Granada by Ronda, and climb up to the proud castle of Teba on his way without fear of highwaymen (the latter being largely kept in check by the *Guardia Civil*, who are out by pairs on every road),—but those who care not to ride, or to whom time is precious, will, in two years from this autumn, be able to reach the Alhambra without the punishment of drawling through the dust from Manzanares, or of jolting up over the hills from Malaga.—And there are things in Granada to be seen besides the great Moorish Palace, of which too little account has been made:—to name one, the Carthusian Monastery, with its gorgeously corrupt chapel, Holy of Holies and sacristy,—and its cloister pictures, showing the enormous cruelties practised by our Henry the Eighth and his minister "Crumbel" on Carthusian monks in London,—by Fray Cotan. The absurdity of such a display of *odium theologicum* has disgusted tourists into a wholesale abuse of these strange works, which, as paintings, they hardly deserve. Some, as compositions, have merit; certain single figures are fine and gravely expressive. I recollect, in particular, a life-size group of three grey Fathers chained to a pillar in expectation of their doom as far above mediocrity.—A far greater man than Cotan, Alonzo Cano (is he not Spain's greatest sacred painter?), has left his mark of beauty in the chapel, among his many other gifts to Granada.—Passing hotelward from this monastery, the walker, if on shopping intent (forewarned that he will find nothing worth buying), may take a Moorish relic, not in the Guide-Book, the Alcaiceria, a narrow cruciform arcade, formerly a silk-market, and restored (we were informed) subsequently to a great fire which took place three years ago.—There seems now a laudable disposition to make much of what is left of antiquity. The Alhambra, now visited by droves, and no longer the ruin in which Irving dreamed, is strictly watched, to the discomfort of those who prefer to loiter, and to take in impressions undisturbed by *cicerone*-chatter. The other day, the guardian was suspended in his office by the Governor, for surreptitiously allowing three tourists to dream in it one hour by moonlight.—Nor will the Englishman's character here stand him in stead. This is not wonderful, seeing the past tributes of admiration and self-advertisement still visible there.—Who has been so "savage and Tartarly" on any disrespect to the graces of antiquity as the Author of 'The Handbook'? Yet, here, at Granada, on the very lip of the fountain in the Court of Lions, and again, on a marble pillar overlooking Queen Lindaraja's flower-knot, the polyglot *cicerone* calls the Englishman's attention to two inscriptions—saying the while "Murrei"—and these are of a name many years ago cut, and cut as deep as any vulgar creature from "Oottonopolis" could have cut it—and the name is Richard Ford.

C.

OUR WEEKLY GOSSIP.

THE Record Office has made an acquisition of the highest historical moment—nothing less than the Books of Orders and Decrees in Chancery, and the Books of Reports of the Masters in Chancery for the sixteenth and seventeenth centuries. The series include the Cases heard and decided by Lord Bacon, and in these contemporary papers, many of them signed by his hand and enriched with his observations, we for the first time read the true history of Lady Wharton's case, of Lord Clifton's case, of John Wraynham's case—for the first time learn who Lady Wharton was, why Lord Clifton quarrelled with his son-in-law the Earl of March, and what injuries provoked the foolish threats which caused the madman Wraynham to be sentenced to lose his ears. The whole history of Bacon's reign as Lord Chancellor is written in these Books of Orders and Decrees.

Lady Llanover, we hear, has in a state of preparation a sequel to the *Mary Granville Correspondence*. In this new work we shall have what we were promised on the title-page of the former—pictures of the Court of George the Third.

The second volume of Dean Hook's 'Lives of the Archbishops of Canterbury' is nearly ready for the press.

The admirers of Elizabeth Barrett Browning will be glad to hear that she has left behind her a number of unpublished poems. They are being prepared for the press; and a volume of them will be, probably, published in time for the givers of Christmas presents.

Mr. Thornton Hunt is engaged, since his return from America, in editing 'The Correspondence of Leigh Hunt,' his father. This work will be one of the books of the season.

Sir Archibald Alison, the historian of 'Europe,' and the defender of Marlborough against Lord Macaulay's misrepresentations, is engaged in writing 'Lives of Lord Castlereagh and Sir Charles Stewart, Second and Third Marquises of Londonderry,' from family papers.

Messrs. Smith, Elder & Co. have in the press a 'Narrative of the North China Campaign of 1860; containing Personal Experiences of Chinese Character, and of the Moral and Social Condition of the Country; together with a Description of the Interior of Peking,' by Robert Swinhoe.—'History of the Four Conquests of England,' by James Augustus St. John.—'The Lady's Guide to the Ordering of Her Household, and the Economy of the Dinner Table,'—'The Wonderful Adventures of Tufongbo and his Elfin Companions in their Journey through the Enchanted Forest, with Little Content,' by Holme Lee.—'Selections from the Writings of John Ruskin,'—'The Four Georges: Sketches of Manners, Morals, Court and Town Life,' by W. M. Thackeray.—'Love the Widower,' by W. M. Thackeray.—'The Early Italian Poets, from Ciuillo d'Alcamo to Dante Alighieri (1100-1200-1800), in the Original Metres, together with Dante's Vita Nuova, translated by D. G. Rossetti,—and 'The Experiences of an English Sister of Mercy.'

Mr. Bentley will publish during the coming season 'Anecdote Biography,' Part III., in 2 vols., containing the lives of Swift, Steele, Sheridan, Porson, Sydney Smith, &c.,—'A New Virgil,' by C. D. Yonge, who has had access to the papers of Dr. Hawtrey and to the manuscripts of many other eminent scholars.—Two volumes of Dr. Mommsen's 'History of Rome,' edited and translated, under the supervision of Dr. Mommsen, by the Rev. Pitt Dickson,—and M. Guizot's new work, 'The Church and the Christian World in 1861.'

Messrs. W. H. Allen & Co. are about to publish a 'Popular Account of the Channel Islands,' by Prof. Ansted and Dr. Latham, with illustrations,—a work by Dr. Latham on the 'Nationalities of Europe,'—Prof. Ansted's 'History of the Geology of Great Britain,'—Mr. Sutherland Edwards's 'History of the Opera,'—and the same writer's 'Life and Death in Poland.'

Messrs. Chapman & Hall are preparing for the early part of the coming season, 'The Dutch at

Home,' by Alphonse Esquiros, translated by Lascelles Wrixall,—'The Witch Book,' by Mrs. Linton,—'Influence of Women in France,' by Madame Mohl,—'The History and Literature of the Crusades,' by Von Sybel, translated and edited by Lady Duff Gordon,—'The Common Signs in the Heavens, and How to See and Know Them,' by Capt. A. W. Drayson, R.A., with coloured illustrations,—'Tales of All Countries,' by Anthony Trollope,—'A Life of the Late Duke of Richmond,'—and 'Egypt and the Nile,' by F. W. Fairholt.

Mr. Mudie's library is certainly one of our London marvels. The British Museum contains a little more than half-a-million books. Mr. Mudie has added to his collection in three years, upwards of half-a-million volumes. The books consist chiefly of works of history, biography, travel and the higher class of fiction, the following are the exact figures, and they are so remarkable as to deserve being put on record:—history and biography, 123,279; travel and adventure, 71,646; fiction, 237,546; miscellaneous, including works of science and religion, and the leading reviews, 115,518; total, 547,989. We suppose there is no instance in literary history of such a growth, under either public or private enterprise. The rate of increase continues.

The prices occasionally paid for advertisements may suggest some curious reflections. Her Majesty's Commissioners for the Exhibition of 1862 received last week offers for the wrappers of the two Shilling Catalogues, the printing of which we have already announced as having been arranged for; and we understand that Mr. Bennett, the watchmaker, has been a successful bidder for the back page of each of these Catalogue wrappers, having paid for the two, the sum of one thousand guineas. The Accidental Death Assurance Company have also obtained the last page but one, at the price of 600*l.*; and Messrs. Chappell & Co., of Bond Street, get a page at back of title in each Catalogue, having also paid 600*l.*

The private munificence which has furnished Liverpool with a Natural-History Museum, a Free Library, a noble edifice to contain the latter, and a Gallery of Inventions, has crowned the good work by the founding of a School of Science. This last was inaugurated on Thursday, with much appropriate ceremony. Mr. Gladstone, at the public meeting which took place in the afternoon, aptly showed to the diffident, that the triumphs of science were effected by the application of experience gained in the contemplation of natural objects. The shell of the lobster suggested the strong tube to Watt; the earthworm, the Tunnel, to Brunel; the bird's wing produced the car; the gyrations of a hawk, the wheel; while the plough was founded on intelligent observation of certain practices of the pig!

Another old actor is in the obituary of this week, Mr. Vandenhoff. Up to a very recent period, he was in good health, but he died in London, after a few hours' illness, and had then passed the allotted threescore and ten. It is forty-eight years since he first appeared, after some itinerant preparation, in Bath, where he played Jaffier to Young's Pierre. Some other actors of note made their first appearance there in the same season, namely, John Cooper from Liverpool, and Wards. The last-named became a great favourite, not to be disturbed even by Conway, with all the Piozzi's influence to back him. Cooper was (and is) a Bath man, and his friends were true to him. Vandenhoff was a native of Salisbury, where his father was a dyer. The Bath people found him ungainly, and he set with good heart to work, corrected that defect, and became one of the most dignified actors on the stage. In the season of 1820-21, he and Cooper came to London, where the playgoers were lamenting the absence of their prime actor, Edmund Kean, then in America. Cooper opened at Drury Lane with Othello,—Booth, the father of the actor now playing so successfully at the Haymarket, being the Iago. Vandenhoff commenced at Covent Garden with King Lear,—subsequently acting Sir Giles, Coriolanus, Rollo, taking Macready's parts when the latter actor was ill, and finally subsidising into melo-drama;—no derogation, for did not

Macready play *Geordie Robertson*, and also in *'The Warlock of the Glen'*. At the Garden, Mr. Vandenhoff was ill-placed. His line was occupied by established actors, and he could not excel Young, C. Kemble (who was, however, but a poor, mouthing player in some parts), and Macready. In Liverpool, Mr. Vandenhoff was long accounted to be equal to any one of these, and there were characters in which they would have found it hard to surpass him. He never took a permanent standing in London, but he was never seen or heard without pleasure, for his figure was fine, his voice beautifully a-tuned, his deportment graceful, his conception of a character exhibiting study, and his execution of it invariably an exhibition of high art. He was forcible without rant, cared little for making points, and ignored the audience, as long as he was on the stage. There were many worse actors in his time more loudly applauded; but these have passed away into oblivion. Mr. Vandenhoff will be remembered as a first-class actor of that transition period when the traditions of the Kemble school were before the public with the fiery earnestness of Edmund Kean. He partook of both schools, for he could be as stiltedly classical as the former—witness his *Cato*, and as impassioned as could be desired by any follower of Edmund—though his *Sir Giles* could never bear comparison with Kean's. Mr. Vandenhoff had finally retired from the stage only a few years previous to his demise. His old rival, John Cooper, survives him.

M. Fechter will appear in *Othello* on Saturday evening next week.

Some time ago we made a small error, which we should hardly correct but for the sake of gossip. We said that Thomas Simpson spelt the name of his contemporary, Robert Simson, with the "p" of his own name. We were wrong: it is an *editor* of Simpson (1800) who has stuck the "p" into the name of Simson, which Simpson himself spells rightly. Whether this learned editor imagined that when Simpson wrote about Simson he was writing about himself and spelling his own name wrong, we cannot tell. But certainly Simson's Euclid was so well known in 1800, that a geometer of that date who spells the name wrongly can only be explained upon some very recondite hypothesis. While on the matter, we may as well tell any reader who may be led to Simpson's *Geometry* by this scrap, that it is not until the second edition (1760) that Simpson comes into collision with his approximate namesake, who had criticized a point of the first edition.—

Strange that such difference there should be
'Twixt Simson and the same *plus p*.

There is a little story in illustration of the popularity of Madame Rose Chéri. On one occasion she happened to be acting on her birthday in one of those small domestic pieces peculiar to the Gymnase, called *'La Fête de Thérèse'*. In the last scene, instead of the usual supernumerary characters entering to perform a concluding *tableau*, the door of the apartment represented was thrown open and to the great surprise of the audience a crowd of some of the best actors in Paris made their appearance and in turn congratulated the Thérèse of the evening. Her sister Anna Chéri presented her with a beautiful bouquet. Le peintre Jeune (whose rotund comic form will not easily be forgotten) made an elaborate *rebus* in honour of Achard out of the names of the actors present; at the conclusion of which Grassot, of the Palais-Royal, stepped forward and pronounced the following epigram:—

C'est maîn je me lève, et tout transporté d'aise,
Ce soir d'aujourd'hui, me dis-je, la Fête de Thérèse.
Et comme je n'ose pas lui offrir un bouquet,
Je dois au moins lui faire un compliment coquet.
Thérèse est une Rose, et sans flageolette
D'un parler brillant c'est la Rose Chéri.

The roofs and floors of the Pavilion of Flora in the Tuileries have been falling in of late, so as to render an entire re-construction of the interior of the wing necessary. The walls have been telling tales; since on stripping off the hangings with which they were covered many relics of the First Revolution were discovered,—Phrygian caps, proclamations, scribbings, and the like. If any memorials have been found of that later popular inroad in 1848,

the Government journals do not announce the discovery.

A paragraph is going the round of the French papers announcing that a Chinese speculator has arrived in our allies' country, with the naturalization and multiplication of fish as his mission. He is said not merely to have imported many new species, which are to prove of great value to European bills of fare, but he professes also to introduce new methods of breeding and feeding of the most extreme simplicity, which will place a plentiful supply of fish within the reach of the poor.

Some works are going on in and about York Minster which are calculated to display the glories of that pride of English architecture more completely than has hitherto been the case. In the first place, several small houses are being demolished, which, from their close neighbourhood to the east window and chapter-house, obscured the view of both. We may remark, that this improvement will also bring more into notice the interesting ancient Hospital, so called, which, with its picturesque gateway and inner quadrangle,—now in a wretched condition,—is seldom seen by visitors. The Chapter-house is having a new pinnacle placed on one of its buttress heads. Not only is the east end of the Minster being thus displayed, but the formation of a street from the river, opening upon the new iron bridge, the scene of the recent catastrophe, near the railway-station, and close adjoining the memorable chain towers, will give an excellent view of the west front itself, to be obtained obliquely from the south-west; this opens the south side of the Minster very much, and to great advantage. Much more might be done if three or four miserable tenements, the property of St. John's College, Cambridge, could be obtained by the Minster authorities, and demolished, with a view to widening the approach on this quarter. This would leave very little indeed to be desired in that respect. In the interior of the church, in the north transept, the famous "Five Sisters," the most consummately beautiful and perfect portion of the whole edifice, are being displayed better than hitherto by the Purbeck marble shafts, which stand between the lights, being cleaned. The similar shafts throughout the whole building are about to undergo this operation; those in the north transept are almost completed. The glass contained in the "Five Sisters," that is to say, the lower range of windows in the north end of the north transept, being, probably, the most valuable, as it certainly is amongst the most beautiful and ancient remains of that nature in this country, has been effectually protected from future weather-damage or accident by there having been recently placed on the outside thick sheets of rough, cast glass covering, and, indeed, slightly obscuring, the inner ancient glass. This is an effectual protection, and the object protected demands every care; the slightly increased opacity of the glass cannot be considered an objection to this addition, giving, as it does within, a still greater solemnity and quietude of aspect and colour to the already grave and noble windows; but we cannot give so favourable an opinion of the result of this operation exteriorly, where the characteristic reveals of the tracery are filled up and occupied by the thick newly-placed glass, so that their expression—giving depth—is entirely lost, and the splay of the mullions takes place immediately from the surface of the new glass; the poverty-stricken and enfeebling result of this may easily be imagined. We should fear that in course of time the accumulation of dirt and smoke between the horizontal joints of the cast glass will present an appearance of opaque bars traversing the windows, when seen from within. On the whole, as the glass is thus placed, we should be inclined to let it remain, satisfied, at least, that the ancient window is thus well secured. It might be worth considering, nevertheless, in case this practice should be extended to other windows and other buildings, if a thinner description of glass could be obtained and employed with perfect safety, or at least it should be placed in the closest possible contact with the inner glass in order to hide the reveals as little as is practicable. With

regard to the colour of this superimposed glass, we are bound to enter an earnest protest against the strong and coarse green it displays, which, added behind more vividly hued vitreous works than this in the "Five Sisters," would be ruinous to their characteristic purity, strength and beauty of tint. A perfectly transparent and colourless glass only ought to be permitted in such cases.

SCIENCE

Manual of the Sub-Kingdom Coelenterata. By Joseph Ray Greene. (Longman & Co.)

It is observable that naturalists are now alike diligent at each end of the scale of being in relation to magnitude. No living thing is too large, and no living thing too minute for their notice. To them size is not significance, nor is simple magnitude attractive. Of Science must be predicated the very opposite of what is said of Law—*de minimis non curat lex*. Having respect to the present zeal for microscopic studies, we might venture to affirm that science cares most for the least, and least for the greatest. Yet upon taking a wider view, we will rather return to our first assertion, that naturalists are now equally active and acute in observing at both ends of the scale. While Prof. Owen has lately advocated in our columns the claims of whales to national respect, we have now Prof. Greene bespeaking our attention on behalf of creatures at the opposite end of the scale; and though only a few of them are really microscopic, and by far the majority are of appreciable size, yet by comparison with great fishes they are small enough to be at the other extreme. The study of the largest creatures that swim the ocean stream, and of those that find ample harbourage in a single drop of water, is in either instance pursued at present with wonderful zeal and acumen. But there is this advantage in the case of the minute existences, that while you must go to the Museum for the large, you may stay at home to study the small. In this respect size is of full significance, for while Prof. Owen demands a gallery of 500 feet long to entertain his whales and their friends, and informs us that at Leyden thirty skeletons of Cetacea occupy a gallery of 200 feet in length, and while another correspondent, Mr. Brierly, magnifies even the whales, and would seem to require the length of the National Gallery for a National Museum of Cetacea,—it is some relief to break away from creatures of fifty or sixty feet in length and to bestow our attention upon such as might be easily packed up in a neat despatch-box and sent from study to study of private houses. On this account one dreads the Cetacea, but welcomes the Coelenterata. Nobody can house whales, but anybody can make room for a few hundreds of minor Hydrozoa. As for the Actinozoa, many of them are already quite at home with us, and are familiar to us under their more common name of Sea-anemones. If, therefore, to most readers this title of Coelenterata should seem to intimate strange things, be it known to them that, according to the wont of scientific naturalists, only the name is strange, and that as for some of the things signified, half London has been looking at them during the summer months, either at watering-places, on rocky shores, or in that mimic sea, the marine vivarium. It may be a comfort to learn that, though the name is so hard and so forbidding, the creatures intended are as soft and attractive as any in the whole range of lower existences.

Any reader moderately acquainted with Greek will be able to conjecture the meaning of the term Coelenterata, but Mr. Greene should have given this etymologically, in note or glossary, as well as in general terms, since the

name is at present little known, though it designates animals easily recognized under the familiar names of marine invertebrates, zoophytes, anemones, polypes, medusæ, sertulariæ, corals and corallines. This new and comprehensive term, *Cœlenterata*, is to include in a sub-kingdom all those creatures in which a large internal cavity is constantly present, and whose body-substance resolves itself into two foundation membranes or layers, one serving the purpose of an integument, the other lining the large internal cavity. Their body-substance, however, by no means always presents so simple a structure of its layers, for the body-layers also elaborate pigment-masses and granular structures which seem adapted for secretion. By conversion and excretion outer growths are formed, which serve either for support, ornament or protection; whilst by deposition of calcareous salts, the beautiful internal skeletons known as *corals* are produced. All the *Cœlenterata* are marine, with the exception of two freshwater genera; and few if any seas appear to be wanting in the animals so named. Their several forms, both those which are fixed and those which have oceanic freedom, enjoy a varied range in depth. When we come to understand the extent of this comprehensive sub-kingdom, we see that the ocean is peopled, islanded and banked with them. The coral reefs, so lengthily and widely spread over tropical seas; the floating banks of jelly-fishes, amidst which ships have been known to sail for some days; and the Actinozoa, varied, beautiful, and in many instances strange,—when assembled together for scientific classification and description, comprise no small section of the creatures of low organic rank and vitality.

Either of the classes Hydrozoa and Actinozoa would demand many pages even for cursory description of a commonly intelligible character; and, in fact, each group under these classes has been separately the subject of careful researches, as the "Bibliography of the *Cœlenterata*" at the end of this volume shows, and still completer lists are there referred to. More than a hundred memoirs and briefer articles might be enumerated, which treat of particular groups of *Cœlenterata*. There, has therefore, been untiring and patient industry in this direction, and it is not probable that such industry will abate. The merit of the present little Manual is, that it presents a convenient and systematic introduction to the specific details comprised in the separate memoirs and articles alluded to, and at the same time offers an abstract of the whole. Its systematic aim, however, deprives it of all popular attraction; and this must necessarily be the case in similar manuals, unless the author is possessed of a peculiar gift, by exercising which he may occasionally throw in a few touches of free nature. Yet as a text-book for a class of intelligent students, this Manual is well adapted, and probably for such it is principally constructed, as neither foot-notes nor glossary explain a single technical word. We cannot but regard this as a great hindrance to the acceptance of such volumes. All is easy enough when a professor is at hand to expound every term, and aid in every difficulty; but is it wise to expect even a diligent reader to make anything of the pages before us, thickly studded as they are with terms uncommon to most men? Dictionaries are guiltless of them, and where is the inquirer to search for their significance? This difficulty becomes the more serious when new terms are plentifully introduced. Take, for instance, the corals, and look down the neat chronological arrangement of them with relation to the geological periods

of their occurrence. Even the geologist finds many of the names new—a result of course attributable to recent nomenclators, and not to this author. But can they not be briefly explained in glossary or foot-notes? and should they not at least be so explained in an elementary Manual?

A constant use of scientific terms may have a more prejudicial effect upon an author's English than he is aware of. Mr. Greene is generally clear and direct, and therefore we are the more surprised to find him paying the following equivocal compliment to Prof. Huxley:—"But the author must confess himself under deeper and less formal obligations to the same philosophic investigator, whose rich and suggestive seeds of thought could not, from their nature, fail to fall fruitless on the soil of any patient mind." It is obvious enough that Prof. Greene means the exact contrary of what he has said, and it is singular that such a sentence should have escaped him in his Preface.

As we were able to notice favourably the author's previous little 'Manual of the Protozoa,' so we are glad to be able to express our approval of the present Manual of a larger portion of the animal kingdom, and higher in the scale of organization. Its illustrations are clear and sufficient, and naturalists will find it a useful summary.

MEETING FOR THE ENSUING WEEK.

WED. Meteorological, 7.—Council.

FINE ARTS

FINE-ART GOSSIP.—The Turner pictures having been removed from South Kensington to the National Gallery, only just in time to keep within the terms of the bequest, it has now become a question as to what is to be done with the rooms vacated; one proposition is, we understand, to appropriate them, temporarily at least, to the use of the Female School, the most profitable and, on the whole, worst-housed branch of the institution. Numerous complaints reach us of the discomfort endured by the ladies attending the school in question. The bitterness of the cold from which they suffered last winter, the torrents of cold air admitted by way of ventilating the place, and its general want of accommodation have been the causes of severe illness to many of the pupils and the subjects of serious remonstrances to the authorities; but these are so crippled by want of space that little could be done by way of improvement. Now, however, a fair chance offers itself of doing justice to those who pay well enough for handsome accommodations, and who certainly would not submit to the same miseries in a private *atelier*, which have been inflicted upon them by the parsimony of the Government.

Another of our ancient Cathedrals is about to be restored. Mr. G. G. Scott, at the instance of the Dean and Chapter of Ripon, has examined the cathedral to which that body is attached and reported many portions of the edifice to be in a dangerous state, and that much of the rest demands extensive repairs in order to reproduce its ancient splendour. Mr. Scott estimates the cost of the imperative repairs at 17,000*l.*, the improvements and re-decorations at 10,000*l.*, the refitting, warming and lighting at 5,000*l.*, making a total of 32,000*l.* A meeting of the promoters of the plan for restoration, &c. was held at Ripon on the 4th inst., when it was determined to take immediate steps to raise funds for the purpose, and subscriptions were announced which amounted to more than 8,000*l.*

The central portion of a triptych, by Mr. D. G. Rossetti, has been placed as a *retables* behind the high altar of Llandaff Cathedral. This represents the Virgin and Child in the manger; a kneeling angel leads a king and a shepherd, one by each hand; the king deposits his crown and the shepherd his crook before the feet of the Saviour. Round the manger is arranged a whole ring of angels,

with most admirably varied expressions and beauty of character; within the arch at the top of the work are two angels bearing musical instruments and with more merely human faces than those in the lower division of the subject. Throughout this work no nimbi have been introduced to interfere with the rich and grave sobriety of the colour. The general style of treatment is essentially pictorial, and not conventional. The whole is not conceived to represent a mere Adoration, but to express the idea of Christ, sprung from high and low, being worshipped by high and low. The wings still further illustrate this intention of the central picture, representing, as they will do when completed, on the left hand, David armed with a sling going forth to attack Goliath. This portion is but just commenced by the artist, but the opposite wing may be said to be almost completed. This represents David as king, seated on a peacock throne, dressed in the costume of a mediæval knight in a coat of mail, &c., playing a harp. The design of this work is remarkable for expression, dignity and grace; the colour singularly rich and deeply toned.

The College at Hurstpierpoint, Sussex, originally designed by Carpenter, is now likely to be completed from those designs by that architect's pupil, Mr. Slater. In prosecution of this, the first stone of the chapel was laid by the Provost of the College, the Rev. N. Woodward, in presence of several bishops and other distinguished persons, on the 17th ult. The building is to be in the Middle Pointed style; the choir 120 feet long, 37 wide, and 45 high to the top of the wall-plate, and this portion of the building will be the first contract. Funds are in hand for beginning the work, but the progress must be gradual.

In reference to the numerous restorations of cathedrals and great ecclesiastical buildings now proceeding, we beg to be allowed to suggest to the architects and others concerned in the works thereupon, that most heedful attention should be given to the dangers from fire incurred by the recklessness of workmen, especially the plumbers, to which we owe the destruction of the roof of York Minster and of Westminster Abbey, to say nothing of other misfortunes of the like nature that might be quoted. It should be the special duty of some trusty person to see all safe when the works are left at night, and that responsibility ought not to be left to be shared amongst many, which makes it nobody's business.

M. Xindavelonia, husband of the late Madame Bosio, has had erected a monument of bronze to her memory in the city of her death, St. Petersburg. It is nevertheless intended, we understand, to remove the body of the deceased to Paris, for interment in the cemetery of Père-la-Chaise.

A picture, representing two water-mills, by Hobbema, has lately been placed in the Gallery of Dutch Masters in the Louvre. It formed part of the Duke of Mecklenburg's Gallery, and was purchased by the French Government for 52,000 francs.

By a clerical error we stated, last week, that the cost of certain works in hand at Ely Cathedral was estimated at 61,000*l.*: the sum should have been 6,000*l.* The decorations which are being executed by Mr. L'Estrange on the ceiling of the nave consist of a Jesse tree, or genealogy of Christ.

MUSIC AND THE DRAMA

ROYAL ENGLISH OPERA, COVENT GARDEN, under the Management of MISS LOUISA PYNE and MR. W. HARRISON, WILL OPEN for the SIXTH OPERATIC SEASON, on MONDAY, October 31st, when will be presented (first time) an entirely New Opera, by Howard Glover, to be entitled 'RUY BLAS.' Further particulars in future Advertisements.

PARIS OPERA-PROSPECTS.

To judge from appearances the revival of 'Il Matrimonio,' with which the Paris Italian Opera opened its season, was thoroughly relished.—Yet Cimarosa's delicious work is mutilated by large omissions. Madame Penco is too utterly unrefined, both as a singer and actress, for her part, while Signor Badiali is too old to play *Count Robinson*, great artist though he be. M. Bélart, again, stands at a severe disadvantage with those who recollect Rubini's 'Pria che spunti.' Lastly, Signor Zuc-

chini, though possessing some dry humour, is still further from satisfying any who recollect the stupendously deaf and stentorian *Don Geronimo* of Lablache. On the other hand, Mdlle. Battu, the *Elisetta*, already named in the *Athenæum*, deserves credit as a useful singer, who has gained power and nerve since last year, and who may be counted on as still improvable, because her small *soprano* voice has been trained in a good school—that, we believe, of M. Duprez. Madame Alboni's *Fidalmia* is the best character in the cast: her voice, singing, and delivery of Italian are alike welcome and predominant above those of her mediocre playmates.—Signor Volpini is to come,—the new German tenor, in whose favour Vienna rumour has been so loud, and Signori Beneventano and Delle Sedie are of the company about to sing through the season.—In spite of all that has been urged on the subject, we continue to find the new lowered diapason unbecoming to the voices rather than the reverse. The singers in 'Il Matrimonio' were, with little exception, out of tune.

The *Opéra Comique* is in an ailing state just now. A real *prima donna* is still "to seek" there. Madame Ugalde, who can less than ever afford to lose her friends, has been giving trouble, according to her wont, and is going to law (they say) with her manager. He has let M. Jourdan leave his theatre, and has taken back M. Roger, a step to be regretted, for reasons fruitless to dwell on, on every side.—Mdlle. Cico, one of the dozen singers ready for their stage duties who are turned out annually by the *Conservatoire*, has made a favourable impression,—in part by her good looks. But the accepted composers seem to be shy of the theatre; and for awhile the public must be contented with revivals, or else with questionable novelties, sung by artists mediocre or worn out. Among the former, a palatable hit has just been made by M. Adam's 'Pottillon,' now precisely a quarter of a century old,—but with enough of genuine mirth and melody in it to outlast many a dry production more handsomely treated by the critics.—M. Montaubry replaces Chollet, to the great delight of the audience; but he is merely a copy of one who was eccentric and exceptional as a singer. On the other hand, Madame Faure-Lefebvre is a more acceptable and refined *Madelon* than Mdlle. Prevost, the original heroine.

At the *Grand Opéra* such interest as there is naturally concentrates itself on the revival of 'Alceste,'—of which, as the most important musical event of the year 1862, we shall speak in detail. Otherwise, the times seem "out of joint," as regards the great musical theatre of Paris. For the introduction of M. Faure, has been given, not 'Guillaume Tell,' but the 'Pierre de Medicus' of Prince Poniatowski. So much for Art becoming a ministerial plaything! All talk of M. Meyerbeer, the coy, being prevailed on to produce his 'Africaine' (a manuscript fast approaching "years of discretion") seems to have died away.—M. Halévy's 'Noë' is to appear at the *Théâtre Lyrique*, in its new quarters. There is not a whisper of a chance of the Homeric opera by M. Berlioz as forthcoming.—Difficulties are said to have arisen with regard to M. Gounod's 'Reine de Saba,' owing to the unsatisfactory nature of the book. His 'Ivan the Terrible,' a fierce Russian tale of conspiracy against an Emperor, is held (they say) to be unsafe, by the Censorship. The Republic of 1848 was more courageous in allowing 'Le Prophète,' with its Anabaptist riots, to see the light. Meanwhile, it would be a pity if a composer who has the ear of Europe now, should be checked in the career of his popularity by carelessness or want of judgment in the selection of his subjects.—In England, no Biblical opera will ever succeed, whether it be Méhul's 'Joseph,' or Signor Rossini's 'Moïse,' or Signor Verdi's 'Nabucco.'

'Undine,' a legend, which (tempting though it has been found) may still be intrinsically too delicate and spiritual for stage presentation, has been re-set by M. Semet, and is about to be produced at the *Théâtre Lyrique*.

HAYMARKET.—Mr. Booth made a second appeal to the public on Monday, and in the character of

Sir Giles Overreach confirmed the good opinion of him that we had formed from his performance of *Shylock*. Perhaps the part of Sir Giles is a more arduous character than that of the unrelenting Jew. There is more violence to be displayed, more difficulty to be dared, more effect to be produced. It is, in a word, an exceptional part, and requires energies which the actor may not be called upon to exert in any other. As an ordeal, therefore, it is a severe one. The actor who passes safely through it may be regarded as having acquired credentials beyond dispute. Mr. Booth in the great speeches and scenes was greatest; but he reserved himself for these with remarkable care. He appeared to be conscious of a want of sustaining power, and, therefore, cautiously subdued the ordinary course of the action and dialogue, which gave an abrupt suddenness to the tragic portions. Mr. Booth is a good elocutionist, and the American intonation seldom intrudes; when it does, it is in those level passages where the conversational tone prevails. He is not skilful in making sarcastic points, and passes over many little phrases which, in themselves, are fertile of suggestion, of which other actors generally take advantage, but which he would appear purposely to suppress: probably this arises from a desire to appear original; a not unusual error, but still an error. Good acting does not consist either of omitting to do what is ordinarily done, or of doing what never has been done before, but in doing well what ought to be done at all. There is no need to avoid conventional points where conventional points are right. In the search for new points there is always peril. Selection is necessary, and in the attempt to give extra emphasis there is danger of loading the text with an overweight of demonstration. Mr. Booth has taste, and will improve on these hints. His person and features are good, and his voice pleasing. He is yet young, and has in him capacity for a good actor, perhaps for a great one. The support rendered to him, on this occasion, by his fellow actors was very small. The drama had not received due rehearsal, and the text was languidly and incorrectly delivered. Some of the characters were improperly allocated. Miss Oliver was incapable of speaking the part of *Margaret*, and her blank verse was unintelligible. Mrs. Wilkins, as the *Lady Alworth*, was magnificently dressed, but was evidently in doubt as to the deportment proper to be observed, and hesitated in her delivery of the text. Both these ladies, in fact, were out of their element. Mr. Chippendale, as *Justice Greedy*, and Mr. Compton, as *Marall*, made some compensation for these defects. Really, when a work of Elizabethan art is revived at the West End, it ought to be efficiently rendered. Either ignore it altogether, or treat it well when recognized. Many of the audience came not only to see the new actor, but the play; and these surely merit consideration.

SADLER'S WELLS.—On Saturday, the tragedy of 'William Tell' was revived. Mr. Phelps, as the patriot mountaineer, was appropriately rough, energetic and spirited. The poetic speeches he delivered with laudable care, and, in the prominent situations, assumed boldness and pathos with equal power. He manifested the most artistic discrimination and finish in the scenes with Melcthal on the loss of his eyes, and before Gesler in his captivity, and abundantly merited the applause of his admirers. His son, as *Michael*, was gay, dashing and brave, and showed considerable improvement in his bearing, which is generally wanting in freedom and ease. Time alone can supply such deficiencies, and practice will ere long contribute the needed facility. Miss Atkinson made her first appearance this season, in the character of *Emma*, and was warmly welcomed. She has lost nothing of her dignity or force; while her declamation has gained considerably. Gradually, she is losing her staginess, and learning the value of a natural delivery that allows of due vocal inflexions, so as to give to the feelings the proper play of expression, and to emotion that variety which is requisite to indicate its comparative depth and intensity. In all respects, the play was carefully exhibited; and the scenery, entirely Swiss in its character, was

fresh and capably set. The house was well attended.

OLYMPIC.—A new drama has been produced here, which is likely to be the means of making the public acquainted with fresh talent, and gave rise to three new appearances on Thursday week. It is called 'Jack of All Trades,' but is adapted from a French piece, entitled 'Le Ramoneur.' *Toby Crank* (Mr. H. Neville) is the hero, the brother of a travelling tinker, *Joe Crank* (Mr. Horace Wigan), who is called in to cure the smoky chimney of a merchant's dwelling, and meets with an unexpected piece of good luck. *Mr. Stapleton* (Mr. J. W. Ray), the rich merchant, had formed a design of marrying his daughter to the son of his partner, late resident in India, in order to join their fortunes and found a wealthy family. But young Dalrymple is drowned on his way to England; and thereby the scheme is defeated. *Toby Crank* bears a remarkable resemblance to the deceased, and thus suggests to the merchant the feasibility of substituting him for the lost heir. The aspiring tinker, ready to turn his hand to anything, enters into the arrangement. Five years pass away, and *Toby* has become quite a gentleman in his manners, and really loves *Violet*, the merchant's daughter (Miss Florence Haydon); but the young lady's affections are bestowed on *Jack Heartall* (Mr. W. Gordon), the rightful heir to the property. *Jack* and the supposititious *Fergus Dalrymple* are friends; and it falls to the lot of the latter to have his life saved by the self-sacrificing bravery of *Heartall*. Gratitude and remorse now combine to make the *soi-disant* tinker regret the part he has been playing; and, therefore, he not only pays the young man's debts, but determines on yielding *Violet* and returning to his mother, who, during the period of his deception, has mourned his absence, supposing him to have gone to India. He departs, and leaves the merchant to repair the wrong he had done, and to recover his integrity, which had been needlessly surrendered for a purpose that providence had otherwise secured. The new candidates for Olympic honours,—Mr. Ray, Mr. Neville and Miss Haydon,—were not only well received, but merited the approbation of the audience, which was liberally bestowed on them and the new drama, whose success was mainly due to their excellent acting.

MUSICAL AND DRAMATIC GOSSIP.—A grand concert is shortly to be given at the *Paris Conservatoire* in aid of the funds for the monument which is about to be erected at Florence to the memory of Cherubini. At this we are positively assured that Signor Rossini is about to break his long and perverse silence, by permitting to be executed there a grand *scena* for a bass voice, entitled 'Titan.' Some journals, however, add an odd condition to this timely condescension, and state that the composition is to be sung by four men in unison.

A competent witness, just returned from Italy, dismayed at the musical decadence everywhere to be found,—and not giving a good account of the music by Signor Peri, from which we had hoped something,—makes an exception in favour of Signor Mazzoleni as a *tenore robusto* who recalls the vigorous days of Donzelli, but who, however robust, does not bawl.—M. Gustave Garcia, the youngest of the great musical family, who sang his first public notes this spring in London, after making a fair *début* the other day in Brussels as one in a comic opera company, has gone to Italy to work out his career.

M. Meyerbeer, whose fastidiousness in the production of his works is as well known as their popularity, has an account to settle with the modest men of the Belgian capital. There his 'Struensee' music (written for his brother's tragedy) has been given to a new drama, by M. Guillaume. Referring to our remarks last week on the amount of what may be called his occasional music which is in being,—it may be asked whether, in our present rage for classification, a Meyerbeer "Morning" or "Night," would not prove attractive? England knows nothing of those grand harmony-Polonaisses, his 'Torch Dances,'—nothing of the music to the

tragedy in question, save its overture,—nothing beyond some four or five of his hundred songs. A novelty like this, we should fancy, must prove a safe speculation.

A compendium calling itself a 'History of Music in France,' by Charles Poisot, may be recommended as not a bad piece of outline-work on a section of art full of interest which has been till of late disregarded.

The walls of Paris have been placarded with announcements of the appearance, on "the rope," at the Hippodrome, of Madame Saqui, giving her the age of eighty-three years!—It is long since that in one (we forget which) of Mrs. Trollope's books of foreign travel a similar farewell taken by this poor woman was graphically described as even then something more than ordinarily repulsive.

"I should have said," writes our Correspondent who lately communicated a note or two on the music of Spain, "that if the Zarzuela theatres of the Peninsula have composers of their own whose names are unknown on this side of the Pyrenees, they seem to be as liberal as most European opera houses in borrowing their stories from the French. Señor Gaztambide's 'Catalina,' mentioned by me, is a re-setting of M. Scribe's 'L'Étoile,' with changes in the third act. His 'La Vieja' is from the same fertile dramatist's 'La Vieille.' How far the music is borrowed from French or Italian sources,—to what extent it possesses any national form or flavour, are matters to be discussed elsewhere. Señor Arrieta's 'Domino Azul' (is this a 'Black Domino' re-set as a blue one?) is a stock-piece in the theatres of the Peninsula, if advertisements are to be trusted.—I may add to this paragraph of odds and ends a note on the nothingness of the Gipsy music which I heard. The guitar-playing for the dancers, timed with tambourine and castanet, was piquant in its accent, though monotonous: the voices of the women and men who (by courtesy) sang to it were simply hideous in their harshness; and the tunes, if tunes they deserved to be called, had as little outline or variety as the generality of Oriental chaunts,—not getting beyond a drawing recitation."

MISCELLANEA

Temple Church.—The works which are going on at the Temple Church are calculated to display that interesting building to an extent such as has not been the case for some centuries past. Before long the edifice will stand entirely detached from the surrounding houses. By the removal of those which were actually in contact with it on the north-west in Inner Temple Lane, the old round church itself is already very fairly displayed. The porch, which is of considerably later date than the round church, will also, we believe, be set quite free from the houses. The recent improvements reveal on the exterior a beautiful circular window, which has hitherto been completely hidden; also one of the ordinary windows, to the north of this, is brought into view, and a very fine buttress. The fact that the whole of the round church can now be seen will give an idea of the extent of the improvement effected. It is not yet decided whether the newly-revealed portion shall be left in its original and existing condition of rough wall-work, or whether it shall be cased with smooth stones, as was done with the southern portion of the building some years ago. There can be no question about the superior picturesqueness of the former over the smug look of the recent work; it is also undecided if the roof of the circular church shall not be lowered to its original height, which would of course imply the destruction of the paltry brick parapet now existing. The flagged court on the north of the church is to be lowered by removal of the accumulated earth; the surface will in future be borne upon arches to insure dryness. Some fragments of tessellated pavements and of carvings, together with a few coins, have been found by the workmen while effecting these improvements.

TO CORRESPONDENTS.—C. P.—J. B.—J. H.—N. W. R.—J. B. H.—received.

TINSLEY BROTHERS'

LIST OF NEW WORKS.

DUTCH PICTURES:

With SOME SKETCHES in the FLEMISH MANNER.

By GEORGE AUGUSTUS SALA.

Author of 'William Hogarth,' 'Seven Sons of Mammon,' 'Twice Round the Clock,' &c. [Now ready.]

In 3 vols.

THE SEVEN SONS OF MAMMON.

By GEORGE AUGUSTUS SALA, Esq.

Author of 'William Hogarth,' 'A Journey Due North,' &c. [December 1.]

THE TWO PRIMA DONNAS.

By GEORGE AUGUSTUS SALA.

Author of 'William Hogarth,' 'Seven Sons of Mammon,' 'Twice Round the Clock,' &c. [November 1.]

In 2 vols. post 8vo. 15s.

THE SELF-DIVORCED;

Or, THE SCHOOL for WIVES.

By Capt. CURLING,

Author of 'The Soldier of Fortune,' &c. [November 1.]

Now ready at all Libraries, in 2 vols. price 15s.

MABEL'S CROSS.

By E. M. P.

"We hear of a new novel, called 'Mabel's Cross,' which is said to be considerably above the average in interest and descriptive power. This is saying a good deal in an age when the rule seems to be to have one monumental Obelisk of Romance, with the name of a Bulwer, a Dickens, a Thackeray, a George Eliot, or a Lever carved upon it, and surrounded for hundreds of leagues by a dead level of dreary three-volume performances." *Illustrated News.*

Now ready, price 6s. small 8vo.

PHOTOGRAPHS OF PARIS LIFE;

Being a Record of the Politics, Art, Fashion, Gossip and Anecdote of Paris during the past Eighteen Months.

By CHRONIQUEUSE.

"It requires a woman's sympathy to depict these home-scenes (of French Imperial life), and to sympathise with these home-virtues. La Chroniqueuse has done well to make these charming sketches better known to English hearts and English homes in a collected volume than in the confined sphere in which they first appeared."—*Saturday Review.*

"A lively, sparkling and amusing résumé of all the most remarkable events of Parisian life, as set forth in the title-page, very neatly written, and full of wit, pleasantry and humour." *Bell's Weekly Messenger.*

Just published, price 5s.

ABOUT LONDON.

By J. EWING RITCHIE,

Author of 'The Night Side of London.'

"They are all written with such a knowledge of each subject as might be expected from a perceptive and accurate observer, who has gained his experience from himself, while the descriptive writing is that of a practical hand."—*Illustrated London News.*

"'About London' displays an amount of industrious research very rarely met with, and a knowledge of men and manners which only experience—and active experience, moreover—can supply." *Literary Gazette.*

Now ready, price 6s. 6d.

A NEW, REVISED AND ENLARGED EDITION OF THE NIGHT SIDE OF LONDON.

Third Edition.

By J. EWING RITCHIE,

Author of 'About London,' &c.

TINSLEY BROTHERS, 18, Catherine-street, Strand.

JOHN TIMBS'S POPULAR WORKS.

NEW EDITIONS AT REDUCED PRICES.

"Any one who reads and remembers Mr. Timbs's 'encyclopedic varieties' should ever after be a good 'tea-table talker, an excellent companion for children, 'a well-read person,' and a proficient lecturer." *ATHENÆUM.*

THE 'THINGS NOT GENERALLY KNOWN' SERIES.

In Six Vols. fcap. cloth, price 15s., viz. :—

GENERAL INFORMATION ('Things not Generally Known'). 3 vols.

CURIOSITIES OF SCIENCE ('Things not Generally Known in Science'). 2 vols.

CURIOSITIES OF HISTORY ('Things not Generally Known in History'). 1 vol.

POPULAR ERRORS EXPLAINED. (Last Volume of 'Things not Generally Known'.) 1 vol.

* Each Volume is sold separately, price 5s. 6d.

[Things not Generally Known.]

"Mr. Timbs has stored up in this little volume more knowledge than is to be found in a hundred books that might be named."—*Albion.*

"A remarkably pleasant and instructive little book; a book as full of information as a pomegranate is full of seed."—*Punch.*

"A very amusing miscellany."—*Gentleman's Magazine.*

"And as instructive as it is amusing."—*Notes and Queries.*

[Curiosities of Science.]

"There is not a man of science who would not be arrested by this book, on matters which he never knew, and on matters which he had forgotten. At the same time, there is not any man out of science who would find Mr. Timbs's phalanx of extracts uninteresting or unintelligible."—*Athenæum.*

"As much information as could otherwise be gleaned from reading elaborate treatises on physical phenomena, acoustics, optics, astronomy, geology and paleontology, meteorology, nautical geography, magnetism, the electric telegraph, &c."—*Mining Journal.*

[Curiosities of History.]

"We can conceive no more amusing book for the drawing-room, or one more useful for the school-room."—*Art-Journal.*

[Popular Errors Explained.]

"We know of few better books for young persons: it is instructive, entertaining, and reliable. This book cannot but enhance the author's reputation for curious research, and entertaining as well as instructive writing."—*Builder.*

"A work which ninety-nine persons out of every hundred would take up whenever it came in their way, and would always learn something from it."—*English Churchman.*

SCHOOL-DAYS OF EMINENT MEN.

Containing School and College Lives of the Most Celebrated British Authors, Poets, and Philosophers; Inventors and Discoverers; Divines, Heroes, Statesmen, and Legislators. By JOHN TIMBS, F.S.A. With a Frontispiece by JOHN GILBERT, and 13 Views of Public Schools, &c., in a closely-printed volume, price 5s. 6d. cloth.

* This book is extensively used, and specially adapted, for a Prize-Book at Schools.

"Altogether a most amusing volume, and will be a most acceptable present to any schoolboy ambitious of figuring in a future edition as one of England's Eminent Men."—*Gentleman's Mag.*

"A book to interest all boys, more especially those of Westminster, Eton, Harrow, Rugby, and Winchester."—*Notes and Queries.*

STORIES OF INVENTORS AND DISCOVERERS IN SCIENCE AND USEFUL ARTS. By JOHN TIMBS, F.S.A. Numerous Illustrations. Fcap. 5s. cloth.

"These stories by Mr. Timbs are as marvellous as the 'Arabian Nights' Entertainments, and are wrought into a volume of great interest and worth."—*Atlas.*

"Another interesting and well-collected book, ranging from Archimedes and Roger Bacon to the Stephensons."—*Athenæum.*

MANUAL FOR ART-STUDENTS AND VISITORS TO THE EXHIBITIONS.

With a Frontispiece and Vignette, in small 8vo. pp. 336, 6s. cloth.

PAINTING POPULARLY EXPLAINED. With HISTORICAL SKETCHES OF THE PROGRESS OF THE ART. By THOMAS JOHN GULLICK, Painter, and JOHN TIMBS, F.S.A.

* This Work has been adopted as a Text-book in the Schools of Art at South Kensington, in connexion with the Science and Art Department of the Committee of Council on Education.

"Much may be learned, even by those who fancy they do not require to be taught, from the careful perusal of this unpretending but comprehensive treatise."—*Art-Journal.*

"This volume we heartily recommend to all who are desirous of understanding what they admire in a good painting."—*Daily News.*

"This is a book which all lovers of Art will rejoice in, as containing, in small compass, the very information which Exhibitions and Art-Unions must have made so many thousands sensible of their want of."—*National Magazine.*

THE ADVANCEMENT OF SCIENCE.

Fcap. 5s. cloth, with fine Portrait of Lord Brougham, F.R.S., and a Vignette of the New Oxford Museum.

The YEAR-BOOK OF FACTS IN SCIENCE AND ART. Exhibiting the most important Improvements and Discoveries of the past year in Mechanics and the Useful Arts, Natural Philosophy, Electricity, Chemistry, Zoology and Botany, Geology and Mineralogy, Meteorology and Astronomy. By JOHN TIMBS, F.S.A.

* This work records the Proceedings of the principal Scientific Societies, and is indispensable for such as wish to possess a faithful picture of the latest novelties of Science and the Arts.

Just published, post 8vo. price 5s. cloth,

SOMETHING FOR EVERYBODY; and a GARLAND for the YEAR. By JOHN TIMBS, F.S.A.

LOCKWOOD & Co. 7, Stationers' Hall-court; And at all Booksellers and Railway Stations.

MR. CHURCHILL'S PUBLICATIONS.

NEW WORKS AND NEW EDITIONS FOR OCTOBER.

A MANUAL of the PRACTICE of MEDICINE. By G. H. BARLOW, M.D., Senior Physician to Guy's Hospital. Second Edition, considerably enlarged. Fcap. 8vo. cloth, 12s. 6d.

A MANUAL of the DISSECTION of the HUMAN BODY. By LUTHER HOLDEN, F.R.C.S., Assistant-Surgeon to St. Bartholomew's Hospital. Second Edition, illustrated with Wood Engravings. 8vo. cloth, 16s.

A MANUAL of MEDICAL JURISPRUDENCE. By Alfred S. TAYLOR, M.D. F.R.S. Seventh Edition, revised. Fcap. 8vo. cloth, 12s. 6d.

PRACTICAL CHEMISTRY, including ANALYSIS. By John R. BOWMAN. Edited by CHARLES BLOXAM, Professor of Practical Chemistry, King's College. Fourth Edition. Fcap. 8vo. cloth, 6s. 6d.

LECTURES on the GERMS and VESTIGES of DISEASE, and on the PREVENTION of the INVASION and FATALITY of DISEASE by PERIODICAL EXAMINATIONS. By HORACE DOBELL, M.D., Physician to the Royal Infirmary for Diseases of the Chest. 8vo. cloth, 6s. 6d.

A PRACTICAL TREATISE on INFLAMMATION and other DISEASES of the UTERUS. By J. HENRY BENNET, M.D., Physician-Accoucheur to the Royal Free Hospital. Fourth Edition, with numerous Additions. 8vo. cloth, 16s.

GUY'S HOSPITAL REPORTS. New Series. Volume VII. 8vo. 7s. 6d.

A PRACTICAL TREATISE on the USE of the OPHTHALMOSCOPIC. Being the Essay for which the Jacksonian Prize was awarded by the Royal College of Surgeons of England. By J. W. HULKE, F.R.C.S., Assistant-Surgeon to the Royal London Ophthalmic Hospital, and to King's College Hospital, London. 8vo. cloth, 8s.

THE PARASITIC AFFECTIONS of the SKIN. By T. McCALL ANDERSON, M.D., F.F.P.S., Physician to the Dispensary for Skin Diseases, Physician to the Deaf and Dumb Institution, Glasgow. With Engravings on Wood. 8vo. cloth, 6s.

EPILEPSY: its SYMPTOMS, TREATMENT, and RELATION to other CHRONIC CONVULSIVE DISEASES. By J. RUSSELL REYNOLDS, M.D., Lond., F.R.C.P., Assistant-Physician to University College Hospital. 8vo. cloth, 10s.

THE DISEASES of the PROSTATE, their PATHOLOGY and TREATMENT; comprising the Second Edition of 'The Enlarged Prostate,' and the Jacksonian Prize Essay of the Royal College of Surgeons for 1860. By HENRY THOMPSON, F.R.C.S., Assistant-Surgeon to University College Hospital. With Plates. 8vo. cloth, 10s.

A MANUAL of the DISEASES of INDIA. By William JAMES MOORE, M.D., Medical Officer to the Abou Sanitarium for European Soldiers. Fcap. 8vo. cloth, 5s.

ON the STRUCTURE of the SIMPLE TISSUES of the HUMAN BODY, including the CONNECTIVE TISSUES; with some Observations on Development, Growth, Nutrition, and Decay; and on certain Changes occurring in Disease. A Course of Lectures delivered at the Royal College of Physicians in April and May, 1861. By LIONEL S. BEALE, M.B., F.R.S., F.R.C.P., Physician to King's College Hospital. With 10 Plates, and a Descriptive List of the Microscopical Specimens. 8vo. [Just ready.]

CHEMICAL DIAGRAMS. On 4 Large Sheets, for School and Lecture Rooms. By ROBERT GALLOWAY, F.C.S., Professor of Practical Chemistry, Museum of Irish Industry. Second Edition. [Just ready.]

On the 1st of October, No. IV., New Series, with Plates, price 4s.
THE JOURNAL of MICROSCOPICAL SCIENCE. (Quarterly.) Edited by EDWIN LANKESTER, M.D., F.R.S., and GEORGE BUSK, F.R.C.S., F.R.S.

Post 8vo. cloth, 3s. 6d.
MENTONE and the RIVIERA as a WINTER RESIDENCE. By J. HENRY BENNET, M.D.

Third Edition, considerably altered, post 8vo. cloth, 7s.
THE CLIMATE of PAU; with a Description of the Watering-Places of the Pyrenees, and of the Virtues of their respective Mineral Sources in Disease. By ALEXANDER TAYLOR, M.D., F.R.S.E.

Crown 8vo. cloth, 2s.
ON the CLIMATE of WORTHING: its Remedial Influence in Disease, especially of the Lungs. With Remarks on the Nature and Uses of Ozone, with the Influence of Humidity, Barometric Fluctuations, &c., on the Human System. By WALTER GOODYER BARKER, M.D. Lond., Medical Officer to the Worthing Dispensary.

Post 8vo. cloth, 2s.
TORQUAY in its MEDICAL ASPECT as a RESORT for PULMONARY INVALIDS. By C. RAD-CLIFFE HALL, M.D., F.R.C.P. Lond., Physician to the Torquay Hospital for Consumption, and to the Institution for Reduced Gentlewomen affected with Diseases of the Chest.

"This is an excellent medical handbook to the most celebrated resort for consumptive patients in the British Isles, containing many facts of much value both for the physician and the patient." *Dublin Quarterly Medical Journal.*
"In this work one of our most accomplished provincial physicians supports the view of the rational cure of consumption by attention mainly to the laws of life. Dr. Hall's book well deserves the careful study of all who wish to find an Atlantis for consumptive patients or friends."—*Sunday Review.*

DR. LEE on BATHS, &c. BATHS of RHENISH GERMANY. Third Edition. 2s.

HOMBURG and NAUHEIM. Second Edition. 1s.

WATERING-PLACES of ENGLAND. Fourth Edition. 7s. 6d.

EFFECTS of CLIMATE on TUBERCULOUS DISEASE. (Prize Essay.) 4s. 6d.

Second Edition, re-written, with 173 Illustrations, 8vo. cloth, 14s.
A TREATISE on the SURGICAL DISEASES of the EYE. By HAYNES WALTON, Surgeon to the Central London Ophthalmic Hospital and to St. Mary's Hospital.

With Engravings, 8vo. cloth, 12s.
THE PHYSICAL EXAMINATION of the CHEST in PULMONARY CONSUMPTION and its INTERCURRENT DISEASES. By SOMERVILLE SCOTT ALISON, M.D. Edin., F.R.C.P. Lond., Physician to the Hospital for Consumption and Diseases of the Chest, Brompton.

Post 8vo. cloth, 10s. 6d.
DIGESTION and its DERANGEMENTS. By T. K. CHAMBERS, M.D., Physician to St. Mary's Hospital, and Lecturer on Medicine at St. Mary's Medical School.

"This is no common publication, to be taken up and thrown aside, but the result of deep study and patient investigation. No person can rise from the perusal of this scientific work without a feeling of deep and deserved respect for the accomplished author." *Dublin Quarterly Journal.*
"There is common sense and sound philosophy in the views taken by Dr. Chambers."—*Medical Times and Gazette.*

Seventh Edition, Revised and Enlarged, 18mo. cloth, 6s.
THE POCKET FORMULARY and SYNOPSIS of the BRITISH and FOREIGN PHARMACOPOEIAS; comprising standard and approved Formulae for the Preparations and Compounds employed in Medical Practice. By HENRY BRASLEY.

By the same Author, Second Edition, 18mo. cloth, 6s.
THE BOOK of PRESCRIPTIONS: Containing 3,000 Prescriptions, collected from the Practice of the most eminent Physicians and Surgeons, English and Foreign.

Also, by the same Author, Fifth Edition, Revised, 18mo. cloth, 6s.
THE DRUGGIST'S GENERAL RECEIPT-BOOK; comprising a Copious Veterinary Formulary and Table of Veterinary Materia Medica; Patent and Proprietary Medicines, Druggists' Nostrums, &c.; Perfumery, Skin Cosmetics, Hair Cosmetics, and Teeth Cosmetics; Beverages, Dietetic Articles, and Condiments; Trade Chemicals, Miscellaneous Preparations and Compounds used in the Arts, &c.; with Useful Memoranda and Table.

FOOT-NOTES

FROM THE

PAGE OF NATURE; Or, FIRST FORMS of VEGETATION.

With numerous Illustrations, and a Coloured Frontispiece, 5s.

By the Rev. H. MACMILLAN, F.R.S.E.

A Popular Work on Mosses, Lichens, Freshwater Algae and Fungi.

"One of the pleasantest compilations we have read for a long while. It is admirably adapted to serve as an introduction to the study of more scientific botanical works, and to throw a new interest over country rambles, by bringing into notice the simpler forms of vegetation everywhere to be met with."—*Saturday Review*.

MACMILLAN & Co., London and Cambridge.

VOL. VII.

HENRY G. BOHN, York-street, Covent-garden, London, W.C.

Just published,
DANTE'S INFERNO,

(IN THE ORIGINAL).

ILLUSTRATED BY GUSTAVE DORÉ.

In folio, cloth, price 100 francs.

"Here is what may be styled a volume royal, folio, broad margined, luminously printed upon the purest paper, and edited, with care, from the Combian text, as the foundation of the present version. The telling, bold and dramatic compositions of M. G. Doré will obtain admiration from a wide circle. Thousands will go down in fancy with the living artist into the shades of Hell, and be so impressed by his photographic vigour that they may even know how 'in the thinking it reneweth fear' to have once seen such monstrous shadows, sullen flames and dismal regions."—*Athenæum*.

L. HACHETTE & Co. Publishers, 18, King William-street, Strand, W.C.

Now ready, Vol. XIX. price 6s. of

SECOND EDITION OF THE SILVER CORD.

On Monday, the 14th inst. will be published, in 3 vols. post 8vo. price 31s. 6d.

THE SILVER CORD.

By SHIRLEY BROOKS,

Author of 'The Gordian Knot,' 'Aspen Court,' &c.

SECOND EDITION.

"If to create excitement from the first chapter to the last be the great object in writing a novel, Mr. Shirley Brooks has achieved a most remarkable success,—for a more exciting story than 'The Silver Cord' was, perhaps, never written."—*Examiner*.

"A very curious and powerful story."—*Athenæum*.

"There is a wealth of materials in it that is quite surprising. Almost every chapter has its own striking situation allotted to it, and we are constantly kept on the alert watching for something even more startling than all that has gone before."—*Saturday Review*.

London: BRADBURY & EVANS, 11, Bouverie-street, Fleet-street, E.C.

Twenty-first Thousand, now ready, crown 8vo. cloth, price 3s. 6d.

HEAVEN OUR HOME.

WE HAVE NO SAVIOUR BUT JESUS, AND NO HOME BUT HEAVEN.

"This volume, to which the author has not thought proper to attach his name, must be welcomed with especial gratification by those who look forward to that heavenly home which he so wondrously and delightfully portrays.... It proves in a manner as beautiful as it is convincing, the doctrine of THE RECOGNITION OF FRIENDS IN HEAVEN.... It demonstrates THE INTEREST WHICH THOSE IN HEAVEN FEEL IN EARTH, and proves with remarkable clearness, that such an interest exists, not only with the Almighty and among the angels, but also among the spirits of departed friends."—*Glasgow Herald*.

"It treats of a subject interesting to all—'Heaven our Home,' and that a SOCIAL HEAVEN, the RECOGNITION OF FRIENDS IN HEAVEN, and THE INTEREST WHICH THOSE IN HEAVEN FEEL IN EARTH; and it will moreover bear a frequent perusal."—*Berwick Warrier*.

"This work gives POSITIVE and SOCIAL VIEWS OF HEAVEN, as a counteraction to the negative and unsocial aspects in which the subject is so commonly presented."—*English Churchman*.

London: SIMPKIN & Co.; and HOULSTON & WRIGHT. Sold by all Booksellers.

Post 8vo. cloth, cloth, 12s. 6d.

THE SIGNS and DISEASES of PREGNANCY. By T. H. TANNER, M.D. F.R.S., &c.

"The book before us—written by Dr. Tanner, one of the medical officers to King's College Hospital, London, and the author of a text-book on Children's Diseases, as well as of several other works—ranks amongst the most valuable medical treatises which have appeared in England during the course of the last few years." *Allgemeine Medicinische Central-Zeitung*, Berlin, Sept. 4, 1861.

Henry Renshaw, 356, Strand.

Seventh Edition, fcap. 2s. 6d. sewed; or 3s. cloth.

THE WATER CURE in CHRONIC DISEASE: an Exposition of the Causes, Progress, and Termination of various Chronic Diseases of the Digestive Organs, Lungs, Nerves, Limbs, and Skin; and of their Treatment by Water and other Hygienic Means. By JAMES MANBY GULLY, M.D. L.R.C.S. and F.R.P.S. Edinburgh, and F.R.M.C.S. London, &c.

Dr. Gully has published a large and elaborate work on the Water Cure, which is, we think, the best treatise on the subject that has yet appeared. — *Westminster Review*.
 "Dr. Gully's book is evidently written by a well educated medical man. This work is by far the most scientific that we have seen on hydrotherapy." — *Athenæum*.
 "Of all the expositions which have been published respecting the Water Cure, this is the most tangible and complete."

London: Simpkin, Marshall & Co. Stationers' Hall-court.

BLACK'S GENERAL ATLAS of the WORLD:

London: F. Pitman, 20, Paternoster-row, E.C.

AN ENGLISH-HINDUSTANI LAW and COMMERCIAL DICTIONARY of Words and Phrases used in Civil, Criminal, Revenue and Mercantile Affairs; designed especially to assist Translators of Law Papers.

By S. W. FALLON.

"In the departments of law, revenue, and commerce especially, new helps are required, and one such help, of much value and importance, Mr. Fallon has here furnished. Mr. Fallon's Dictionary comprises about 4,000 English Words, many of them having a number of secondary meanings, and all extremely well and accurately rendered into Urdu. It deserves a place in every Indian library. Prefixed to the work is a useful dissertation on the Indian languages." — *Athenæum*.

"Capt. Raverty has done for one department of Hindustani—that is for technical phraseology—what Mr. Fallon has done for law terms." — *Athenæum*.

"The arrangement is good, the philology accurate, the lexicography very fair, and the scholarship, we believe, most creditable. The preliminary dissertation on Urdu, Hindi, Persian and Arabic, viewed philologically, and as 'law languages,' is good, and conveys not a little information that is new to the general student of languages." — *Colonial Review*.

See also the *Examiner* and the leading Indian papers for January, 1860.

Apply to the Author, No. 8, Princes-road, Notting-hill, London.

Super-royal 8vo. 12s.

London: F. Pitman, 20, Paternoster-row, E.C.

Head Office—64, Princes-street, Edinburgh.

London Office—4, New Bank-buildings, Lothbury.

Policies opened before 31st December will be entitled at next Distribution of Profits in 1862 to rank for five years' bonus.

PROGRESS of BUSINESS.

For five years, from 1853 to 1857 inclusive, the annual average was 307 £376,948

In 1858, the Policies issued 455 377,485

1859 " 605 449,913

1860 " 741 475,649

This increase in the "business" of the Company will, it is expected, beneficially affect the Bonus to be declared at next Division of Profits.

New and liberal conditions of Assurance have recently been adopted, particulars of which, together with Prospectuses and all necessary information, may be had as above, or will be forwarded. ROBERT STEACHAN, Secretary.

4, New Bank-buildings, October, 1861.

SAUCE.—LEA AND PERRINS beg to caution the Public against Spurious Imitations of their world-renowned WORCESTERSHIRE SAUCE.

Purchasers should ASK FOR LEA AND PERRINS' SAUCE, Pronounced by Connoisseurs to be "THE ONLY GOOD SAUCE."

*Sole Wholesale and for Export, by the Proprietors, Worcester; Messrs. CRUSSE & BLACKWELL, London, &c. &c.; and by Grocers and Oilmen universally.

DR. DE JONGH'S

(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL, Prescribed by the most Eminent Medical Men throughout the world, as the safest, speediest and most effectual remedy for

CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS.

Is incomparably superior to every other variety.

SELECT MEDICAL OPINIONS.

Sir JOSEPH OLLIFFE, M.D., Physician to the British Embassy at Paris,—"I have frequently prescribed Dr. de Jongh's Light-Brown Cod Liver Oil, and I have every reason to be satisfied with its beneficial and salutary effects."

Sir HENRY MARSH, Bart. M.D., Physician in Ordinary to the Queen in Ireland,—"I consider Dr. de Jongh's Light-Brown Cod Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. LAWRENCE, Physician to H.R.H. the Duke of Saxe-Coburg and Gotha,—"I invariably prescribe Dr. de Jongh's Oil in preference to any other, feeling assured that I am recommending a genuine article, and not a manufactured compound, in which the efficacy of this invaluable medicine is destroyed."

Dr. LANKESTER, F.R.S., Superintendent of the Food Collection, South Kensington Museum,—"I consider the Cod Liver Oil sold under Dr. de Jongh's guarantee to be preferable to any other kind as regards genuineness and medicinal efficacy."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-Pints, 3s. 6d.; Pints, 4s. 9d.; Quarts, 8s.; capped and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists.

SOLE CONSIGNERS.

ANSAR, HARBORD & CO. 77, Strand, London, W.C.

GLENFIELD PATENT STARCH USED IN THE ROYAL LAUNDRY.

And pronounced by HER MAJESTY'S LAUNDRESS to be THE FINEST STARCH SHE EVER USED.

Sold by all Chandlers, Grocers, &c. &c.

WOTHERSPOON & CO. GLASGOW AND LONDON.

MR. HOWARD, SURGEON-DENTIST, 52, FLEET-STREET, has introduced an ENTIRELY NEW DESCRIPTION OF ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly resemble the natural teeth as not to be distinguished from the originals by the closest observer; they will never change colour or decay, and will be found superior to any teeth ever before used. This method does not require the extraction of roots, or any painful operation, and the roots and preserve teeth that are loose, and is guaranteed to restore articulation and mastication. Decayed teeth rendered sound and useful in mastication.—At home from Ten till Five.

THE FAIRY BOUQUET.—Dedicated (by Special Permission) to the QUEEN of the FAIRIES. It is made from Wild Flowers, culled by Fairy hands from "the bank whereon the wild thyme grows." The authenticity of the receipt is vouched for with the same degree of certainty as is the existence of Titania herself. In bottles, 2s., 3s. 6d., and 5s. each.

METCALFE, BINGLEY & CO'S NEW PATTERN TOOTH BRUSHES, Penetrating Hair Brushes, Genuine Smyrna Sponges, and every description of Brush, Comb, and Perfumery. Metcalfe's Alkaline Tooth Powder, 2s. per box.—130n and 131, Oxford-street.

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 500 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of a steel spring, so often hurtful in its effects, is here avoided; a soft bandage being worn round the body, while the required support is supplied by the MOC-MAIN LEAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive Circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, two inches below the hips, being sent to the Manufacturer.

Price of a Single Truss, 15s., 21s., 25s. 6d. and 31s. 6d., postage, 1s.

Double Truss, 31s. 6d., 35s., and 52s. 6d., postage, 1s. 6d.

P. O. O. made payable to JOHN WHITE, Post-office, Piccadilly.

ELASTIC STOCKINGS, KNEE-CAPS, &c. for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light in texture, and inexpensive, and are worn like an ordinary stocking. Price 4s. 6d., 7s. 6d., 10s., and 12s. each, postage 6d.

JOHN WHITE, Manufacturer, 283, PICCADILLY, London.

STOVES FOR ENTRANCE HALLS, SCHOOL ROOMS, CHURCHES, &c. all made with fire-brick linings, and entirely free from the objections found to so many, which, from their liability to become overheated, are dangerous, and render the atmosphere offensive. These Stoves burn little fuel, may be had with or without open fire, and so burn throughout the cold of the season, if required, without cost. Illustrated Prospectus forwarded. FREDERICK EDWARDS & SON, General Stove and Kitchen Range Manufacturers, 49, GREAT MARLBOROUGH-STREET, W. For 36 years in Poland-street, adjoining.

REFRESHING BALM for the HAIR.—Every one values and admires a beautiful head of hair; yet there are hundreds who desire to make their hair look well, keep it from turning grey and falling off, but are unacquainted with the means to do so. OLD BRIDGE'S BALM OF COLUMBIA to the hair is the priceless treasure—it is the only genuine remedy. Established upwards of 30 years, it has withstood every opposition and imitation, and by the increasing demand proves its true value. In producing whiskers or moustaches, aiding weak thin hair to become strong, it has no equal. Price 3s. 6d., 6s., and 15s. only.—Bottle Wholesale at Retail by J. & A. OLD BRIDGE, 25, Wellington-street (seven doors from the Strand), W.C.

FOR WEAKNESS, INFLAMMATION and IRRITATION of the EYES, caused by the Winds, Blight, Close Application to Literary and other Professional Occupations, the EYE DROUPE or FOUNTAIN, invented by SAVORY & MOORE, for the perfect application of Cold Water Eye Lotions, &c. The effects produced are grateful and refreshing, and the sight is improved and permanently strengthened by the regular use of the Droupe.—SAVORY & MOORE, Chemists to the Queen, 145, NEW BOND-STREET, LONDON, W. As the indication of these Droupes consist of the *Vaselet of the Eye*, it is important to observe that the names of SAVORY & MOORE are conspicuous on all instruments of their manufacture.

DINNEFORD'S PURE FLUID MAGNESIA has been, during twenty-five years, emphatically sanctioned by the Medical Profession and universally accepted by the Public, as the best Remedy for acidity of the stomach, heartburn, headache, and indigestion, and as a mild aperient for delicate constitutions, more especially for Ladies and Children. Combined with the Acidulated Lemon Syrup, it forms an agreeable Effervescent Elixir, in which its aperient qualities are much increased. During Hot Seasons and in Hot Climates, the regular use of this simple and elegant remedy has been found highly beneficial. Manufactured with the utmost attention to strength and purity by DINNEFORD & CO. 173, New Bond-street, London; and sold by all respectable Chemists throughout the Empire.

COCKLE'S ANTIBILIOUS PILLS for Indigestion, bile, sick headache, acidity, heartburn, flatulency, spasms, &c.—Prepared only by JAMES COCKLE, 18, New Ormond-street; and to be had of all Medicine Vendors, in boxes, at 1s. 12d., 2s. 6d., 4s. 6d. and 11s. each.

HOLLOWAY'S PILLS.—INDIGESTION, BILIOUS HEADACHE.—These ailments may sometimes be considered trifling; but it should be borne in mind that by simple inattention and neglect, they often end most seriously. Give early thought to a deranged stomach, take Holloway's Pills, rub his celebrated Ointment over the pit of the stomach, and you will at once perceive the change for the better in your digestion, spirits, appetite, strength and energy. The improvement, though it may be gradual, will be thorough and lasting. They preserve from a recurrence of the malady. Holloway's Pills will be found to purify the blood, give health to the every organ, and his Ointment beneficially influences through the skin both superficial and deep structures.

SIR EDWARD BULWER LYTTON'S NEW WORK.

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 1773.

LONDON, SATURDAY, OCTOBER 19, 1861.

PRICE
THREEPENCE
Stamped Edition, 4d.

NOTICE.

The price of THE ATHENÆUM from October 5 is THREEPENCE.

Thirty years ago, when THE ATHENÆUM came into the hands of its present Proprietors, its price was Eightpence, and its contents, with advertisements, forty-eight columns. Convinced that the circulation of Literary Journals was restricted by high price and that every advantage offered to the public would bring increase of circulation and authority, the Proprietors reduced the price one-half—to Fourpence. The experiment succeeded, and cheap Literary Journals became the rule.

The Proprietors have always held to the principle then proved. They have given to the public the benefit of every change in the law, increasing the size of the paper without increase of price, until the average has become about sixty columns of literary matter, with forty columns of advertisements, selected so as to be of general interest.

The Proprietors, taking advantage of the abolition of the Paper Duty, therefore resolved that the price of THE ATHENÆUM should from October 5 be THREEPENCE.

JURISPRUDENCE.—UNIVERSITY COLLEGE, LONDON.—Professor SHARPE, LL.D. Barrister-at-Law, will COMMENCE his COURSE on MONDAY, October 22, at 7 o'clock P.M. The Professor will deliver Two Courses of Lectures. The First Course, of about Eight Lectures, 'On the Definition and Sources of Jurisprudence and Principles of Legislation, and their Application to the Law relative to Persons and Property.' The Second Course, of about Eight Lectures, commencing on January 27, 1862, 'On the Doctrines of Jurisprudence and Principles of Legislation in relation to Civil and Criminal Remedies and the Law of Evidence.' The Lectures will be on Mondays, from 7 to 8 P.M. Payment, including College Fee, 4s. 4s. on payment of 5s. College Fee in addition, the Course is open to Gentlemen who are not attending other Classes in the College.

The following College Scholarships, Prizes, and Distinctions are conferred on the subjects of this Course:—
1st. A Joseph Hume Scholarship in Jurisprudence of 200 l. a year, tenable for three years, will be awarded in December, 1861. This Scholarship is awarded every third year.
2nd. A Prize of Books and Certificates of Honour at the Examination of the Members of this Class at the close of the Session.
3rd. A Scholarship of 500 l. per annum, tenable for three years, is given by the University of London, at the Annual Examination for the Degree of LL.B. to the Candidate who distinguishes himself the most in the Principles of Legislation.

Special Classes will be formed for Candidates for the Civil Service of India. Application to be made at the Office of the College.

EDWARD SPENCER BEESLY, A.M., Dean of the Faculty of Arts and Laws.

CHAS. C. ATKINSON, Secretary to the Council.

October, 1861.

Prospectuses may be had at the Office of the College.

EDWARD SPENCER BEESLY, A.M., Dean of the Faculty of Arts and Laws.

CHAS. C. ATKINSON, Secretary to the Council.

October 16, 1861.

KING'S COLLEGE.—ELEMENTARY BOTANY AND VEGETABLE FOOD SUBSTANCES.—Professor BENTLEY will COMMENCE a COURSE of LECTURES on the above subjects on MONDAY EVENING, October 21, at Eight o'clock. The Minute Structure of Plants will be demonstrated to the Class by means of portable Microscopes.

A Prospectus may be obtained from J. W. CUNNINGHAM, Esq., King's College, London.

R. W. JELF, D.D., Principal.

UNIVERSITY OF EDINBURGH.—CHEMICAL LABORATORY.

The LABORATORY will be opened for the Winter Session on MONDAY, 4th of November. The instruction is under the immediate superintendence of the Professor of Chemistry, Dr. W. PLAYFAIR, C.B., assisted by Mr. DITTMAR and Mr. WANKLYN, F.R.S.E.

The LECTURES commence on TUESDAY, 5th of November. The HOPE PRIZE, of 500 l. in value, is open for competition to Laboratory Students.

POLYTECHNIC INSTITUTION.—Professor J. H. PEPPER, F.R.S., Inst. C.E., continues to accept ENGAGEMENTS to LECTURE at Institutions, Colleges and Schools; and his CHEMICAL LABORATORY for Analyses, Private Pupils. Instruction in the Scientific Portion of the Civil Service and Military Examinations, and for Morning and Evening Classes, is at the Polytechnic, 309, Regent-street. N.B. The Laboratory is carefully fitted with every necessary Apparatus.

THE GOVERNESSES' INSTITUTION, 34, SOHO-SQUARE.—MRS. WAGHORN, who has resided many years abroad, respectfully invites the attention of the Nobility, Gentry, and Principals of Schools, to her REGISTER of English and Foreign GOVERNESSES, TEACHERS, COMPANIONS, TUTORS, and PROFESSORS. School Property transferred, and Pupils introduced in England, France, and Germany. No charge to Principals.

CRYSTAL PALACE.—LAST TWO WEEKS OF M. BLONDIN'S PERFORMANCES.—On MONDAY 21st, and THURSDAY 24th.—This week being the last week but one of the engagement of this astonishing Artist, those who desire to witness his unparalleled exploits should avail themselves of these opportunities.—Admission, 1s.; Children, Half-price.

SINGING SCHOOL, under the direction of Mr. JOHN HULLAH, Music Hall, Store-street, Bedford-square.—**ELEMENTARY CLASSES.**—No. 199, for Ladies. First Lesson, Friday, Oct. 12, at a Quarter to Six.—No. 200, for Gentlemen. First Lesson, Friday, Oct. 12, at Eight.—Fee for the course of Thirty Lessons, Ladies, 12s.; Gentlemen, 16s.—Tickets and further particulars may be obtained of T. H. HANCOCK, Secretary, No. 3, Heathcote-street, W.C., or at the Music Hall, Store-street, on the evenings of meeting.

A LADY, an Exhibitor and Portrait Painter, GIVES LESSONS in General Drawing and Painting, Perspective, Drawing from Models, Life, Fruit and Flowers, Oil Painting, &c.—Address D. M. Miller's, Stationer, Church-street, Stoke Newington, N.

THE WIFE of a PHYSICIAN, living at the West-End of London, between Bond-street and Regent-street, wishes to hear of a YOUNG LADY to join her two Daughters, aged 15 and 12 years, in their DAILY STUDIES. An accomplished French Governess resides in the house; and it is thought that the opportunity of securing careful daily teaching and home comfort may be appreciated by some in the neighbourhood, who object to the associations of a school or college classes.—Address R. H., 193, Piccadilly.

WANTED, by an English Gentleman, aged 50, PARTIAL ENGAGEMENT, as English, Italian or French Correspondent, Confidential Secretary, Interpreter, Reader, Translator, Teacher, Clerk, or otherwise. First-rate City and West-End references. Security, &c.—Address, p. p. to Mr. CURT, 32, Great Portland-street, Regent-street.

UNIVERSITY OF LONDON, EAST INDIA CIVIL SERVICE, and other Competitive Examinations.—Mr. PAICE, M.A., London, READS WITH GENTLEMEN preparing for any of these Examinations.—Address Messrs. Walton & Maberly, Upper Gower-street.

MEDICAL.—An excellent COUNTRY PRACTICE in the South of DEVON is to be DISPOSED OF. The present receipts are 4500 l. per annum, and may be greatly increased. There is a good and commodious house, rent 350 l., including ample stabling, and a large and well-stocked garden.—Immediate application by letter to Messrs. Suter & Alexander, 23, Cheapside, London, E.C.

BRUNSWICK SCHOOL, LEAMINGTON.—OXFORD MIDDLE-CLASS EXAMINATIONS.

The only First-Class Certificate awarded for the last two years at Birmingham, the Examining Centre for the Midland Counties, has just been gained by a Pupil of Brunswick School, Leamington. Three other Boys, from this School, passed their Examination. Prospectuses on application.

J. H. HAWLEY, Principal.

MILITARY EXAMINATIONS.—COMPETITORS for Sandhurst, Woolwich, or the Staff College, and Candidates for Direct Commissions or Staff Appointments, are PREPARED in all the Branches (compulsory and optional) of their Programmes, at the Practical Military College, Sunbury, S.W.—Apply for Prospectuses, &c. to Captain LEWIS.

MISS HOLTHAM, formerly of Bowdon, Cheshire, RECEIVES A FEW YOUNG LADIES requiring social yet select Companionship in their Studies.—For Terms and References apply to Miss HOLTHAM, 21, Fowls-square, Brighton.

THE COMMERCIAL, ENGINEERING, and SCIENTIFIC SCHOOL, beautifully situated near CHESTER. This School, recognised by the SECRETARY of STATE for INDIA, "as possessing an efficient Class for Civil Engineering, offers a sound English Education, and, in addition, Classics and the Modern Languages. Particular attention is given to Mathematics and Practical Chemistry. The instruction in Drawing is on the system of the Department of Science and Art. Each Pupil is provided with a separate sleeping apartment.—For particulars, apply to the Rev. ARTHUR RIGGS, College, Chester.

LESSONS in HEBREW, according to an easy method, which a long experience has proved successful, given to Beginners and Adults at their own residence.—Address Mr. J. LEVY, 48, Great Russell-street, opposite the British Museum.

UNIVERSITY OF EDINBURGH.—A Clergyman has Vacancies for TWO YOUNG GENTLEMEN attending the University, to whom the advantages of Home will be given. Reference.—Professor Blackie, Edinburgh University.—Address M.A., 25, Stafford-street, Edinburgh.

EDUCATION in HEIDELBERG.—The Misses FALLER, who resided some years in England and France, can offer to YOUNG LADIES a good general EDUCATION, with the Continental languages and accomplishments, combined with the comforts of home. References and Prospectuses to be obtained of Messrs. Schott & Co. 109, Regent-street, and of the Parents whose Daughters have been under Miss Faller's care.

BOARD and RESIDENCE in HEIDELBERG.—LADIES wishing to spend some time in the vicinity of Heidelberg, will find the comforts of home at Miss FALLER'S. The house is situated in the best and most healthy part of the town, references to those who have resided with Miss Faller may be obtained by applying to Messrs. Schott & Co. 109, Regent-street; or to the Misses FALLER, 30, Anlage, Heidelberg.

A FRENCH PROTESTANT CLERGYMAN, a resident Pastor of Voujaucourt, on the Doubs, near Montbéliard, one of the most beautiful and healthy parts of France, receives FOUR ENGLISH YOUNG GENTLEMEN, to Board and instruct in the French and German Languages, Mathematics, Geography, &c. Terms, 80 Guineas per annum.—For further particulars apply to Messrs. Houghton, Artists' Stationers, 30, Poultry.

THE HANOVER-SQUARE ROOMS (THE QUEEN'S CONCERT ROOMS), are undergoing a thorough Restoration and Re-decoration, and will shortly be opened again for Concerts, Balls, Public Meetings, &c., &c. heretofore. The Hall will in future be available for Sabbath Services.

N.B.—The Basement Story and Vaults may be engaged by a Wine or other Merchant for Warehousing purposes. Enquiries be addressed to Messrs. ROBERT COOKS & Co. New Burlington-street, Regent-street, W.; or to Messrs. FOSTER & Co. 54, Pall Mall, W.

NATIONAL EXHIBITION OF DOGS. THE SECOND GREAT ANNUAL EXHIBITION OF SPORTING and other DOGS will be held in extensive Premises, in TENNANT-STREET, Broad-street, near Bingley Hall, BIRMINGHAM, on Monday, Tuesday, and Wednesday, the 2nd, 3rd, and 4th of December next, when SILVER CUPS and other Prizes, amounting in value to nearly 4000 l., will be awarded.

Copies of the Prize-Lists, Regulations and Certificates may be had on application to the Secretary, at the Office of the Society. The ENTRIES CLOSE on the 1st of November.

F. BURDETT, Hon. Secretary.
W. W. HOUGHTON, Secretary.

Office: Wellington Chambers, Bennett's Hill, Birmingham.

TO the NOBILITY and GENTRY.—Señor MARIANO VIVES, Professor of the Spanish Language and Literature.—41, Clarendon-road North, Notting Hill, W.

AS AMANUENSIS.—A LADY, who writes English, French, Italian and German, with equal facility, and in a rapid and legible hand, desires to meet with an ENGAGEMENT in the above character. References exchanged.—Address E. T. S., 16, Great Russell-street, W.C.

TO PUBLISHERS.—An Interesting, Unpublished MANUSCRIPT for publication, entitled 'The Gradual Restoration of Physical Perfection, a consequence of Spiritual Regeneration, and the Outward Purpose of Christianity in Nature.'—Apply, by letter, to MRS. CARE, of Mr. Woodwell, 62, Berners-street, Oxford-street, W.

TO NEWSPAPER PROPRIETORS.—A Gentleman, attached to one of the London Daily Papers, of good critical and literary ability, would be happy to supply a Country Paper with LEADING ARTICLES, LONDON CORRESPONDENCE, or REVIEWS.—Address to E. S. M., Mr. Davis, 16, Grange-street, St. John's-road, Hoxton.

FRENCH, Italian, German.—Dr. ALTSCHUL, Author of 'First German Reading-Book' (dedicated to Her Grace the Duchess of Sutherland), &c. M. Philol. Soc. Prof. Eloquence.—TWO LANGUAGES TAUGHT in the same Lesson, or alternately, on the same Terms as GUY'S at the pupils' or at his house. Each language spoken in his PRIVATE Lessons, and selected CLASSES for Ladies and Gentlemen. Preparation for all ordinary pursuits of life, the Universities, Army and Civil Service Examinations.—9, OLD BOND-STREET, PICCADILLY.

PAU.—A LADY, of considerable experience in the Care and Education of Children, proposes to proceed to Pau, early in November, for the benefit of the health of a little Girl, eleven years old, and wishes to take CHARGE of Three or Four YOUNG LADIES, of from eight to fourteen years of age, to whom a Residence in a Southern Climate for the Winter might be beneficial. Terms, 1000 l. a year. References permitted to eminent Medical Men, and others, whose Children have been under the care of the Advertiser.—Address L. L., Post-Office, Victoria-road, Brighton.

ELOCUTION.—Mr. GEORGE VANDENHOFF, M.A., Author of 'The Art of Elocution,' gives INSTRUCTION to CLERGYMEN and all Public Readers or Speakers. "Quod magis est nos perit et necesse malum est."—Hos. 11, Orchard-street, Portman-square.

GERMAN and FRENCH LANGUAGES.—TO PRINCIPALS of COLLEGES, GOVERNMENT SCHOOLS, and OTHERS.—An English Gentleman (age 40), who has from childhood mostly resided on the Continent, and had very great experience in tuition, from having been many years Professor of Modern Languages and Teacher Examiner in a Foreign University, as well as French and German Master in several Public Schools—one of which is a Government Institute for the Education of the Daughters of the Noblesse,—wishes to obtain, about New Year, in his own country, a Scholastic or other engagement, suitable to his acquirements. He is thoroughly acquainted with the principal European languages; has travelled extensively in both hemispheres in an extremely responsible capacity, and is prepared to furnish the highest official testimonials and private references. In a place of trust, could offer adequate cash security. A Partnership in a really first-class School, in which advertiser would zealously devote himself to the department of Modern Languages, (usually taught with so little success in Great Britain,) would be entertained.—Letters, from Principals only, giving the fullest possible particulars, and stating if with a view to Partnership the amount of in-coming capital required, would be considered strictly confidential, and would shortly be replied to.—Address Professor D. F. B., care of Mr. Baillière, Publisher, 219, Regent-street, London, W.

EDUCATION.—Banks of the MEUSE, Belgium.—A Married, Protestant GENTLEMAN, recently Professor in a Foreign University, and residing in a healthy, picturesque district, desires to RECEIVE two or three GENTLEMEN'S SONS, to whom he can offer every educational advantage. Unexceptionable references given and required.—For fuller Particulars, apply to T. W., 29, Rue Belliard, Brussels.

SOUTH AUSTRALIAN BANKING COMPANY.—Incorporated by Royal Charter, 1847.

LETTERS of CREDIT and BILLS issued upon ADELAIDE, PORT ADELAIDE, GAWLER, ROBE, and WALLAROO. Approved Drafts negotiated and sent for collection. Every description of Banking business conducted with Victoria and New South Wales through the Company's Agents.

WILLIAM PURDY, Manager.
54, Old Broad-street, E.C.

TO THEOLOGICALS and STUDENTS of
HEBREW and GERMAN.—Herr J. LÜPSCHUTZ, 20, Alfred-place, Bedford-square, W.C. (late of the University of Berlin, and late principal Hebrew Master at the Jews' Hospital here), having returned to Town, begs to announce that he has RESUMED his INSTRUCTION in the above-named Languages, FINISHING HEBREW LESSONS, to advanced Students, with an especial aim for Competitive Examinations, comprising Cursive and Exegetical Readings of the Sacred Writings, Composition, the study of Rabbinical Writings, &c. FINISHING GERMAN LESSONS.—History of the German Literature, combined with Readings of select Portions from the Classics and Expositions on the principal Works by Goethe, Schiller, &c. Composition, Correspondence, Conversation and Grammatical Exercises. All kinds of Translations, both from and into the above Idioms, at a moderate charge.—Apply, if in person, any morning between nine and eleven, at 20, Alfred-place, Bedford-square.

AN ENGLISH LADY, residing in France,
 is desirous of meeting with A BOARDER, or ONE or TWO YOUNG LADIES, to EDUCATE with her own Daughters.—Apply, by letter, to M^r. F. Street Brothers, 11, Serle-street, Lincoln's Inn-fields, London, W.C.

TO CONCHOLOGISTS.—FOR SALE.—The
 Valuable GENERAL COLLECTION of RECENT SHELLS of the late PROFESSOR FLEMING, of Edinburgh, containing about 4,000 or 5,000 Species, and believed to be one of the best in England. The Collection is contained in two handsome Mahogany Cabinets of five drawers, in the valuable Collection of the late Dr. Pitt-Rivers of Edinburgh.—Apply to Dr. A. FLEMING, Seagrave House, Leith, N.B., where the Collection may be seen.

THE AQUARIUM.—LLOYD'S PRACTICAL
 INSTRUCTIONS for TANK MANAGEMENT, with Descriptive and Priced List, 160 pages and 100 Engravings, post free for twenty-one stamps.—Apply direct to W. ALFORD LLOYD, Portland-road, Regent's Park, London, W.
 "Many manuals have been published upon aquaria, but we confess we have seen nothing for practical utility like this."
Rev. Oct. 14, 1860.

COINS and MEDALS.—A CATALOGUE
 may be had on application to WM. JOHNSTON, 3, Queen-street, Cheapside, London.

PURSUIT of PLEASURE, a Vision of
 Human Life, painted by J. NOEL PATON, R.S.A.—This grand and celebrated PICTURE is now ON VIEW, at Messrs. J. & R. Jennings, 22, Cheapside, from 10 till 6.—Admission, 6d. each person.

SIGNOR F. BEATO has just arrived from
 China with a large Collection of Photographic Views of Peking, the Summer Palace, the Peking Forts, Canton, Hong Kong, and the whole of the Views taken during the Campaign in China. Also, the Views taken during the Chinese Mutiny in 1857—of Delhi, Calcutta, Lucknow, and the Punjab; and Portraits of the Celebrities engaged during the Mutiny in India and the late War in China.

The whole Collection will be shortly published, by subscription, by Mr. H. Hering, Photographer, 137, Regent-street, London, where the list is open for Subscribers' Names.
 A detailed Catalogue of the Views and Portraits will be ready in a few days, and will be forwarded on the receipt of two postage stamps.

FIRST-CLASS PHOTOGRAPHS MONTHLY.
 The Proprietors of THE NATIONAL MAGAZINE have entered into arrangements with a Photographic establishment capable of issuing 5,000 impressions a-day, to produce monthly a high-class picture in Photography. The subjects will be taken specially for THE NATIONAL MAGAZINE, and will form a collection fit to grace the walls of an exhibition-room or the portfolio of the connoisseur. The first Photograph will be issued with the November Number. Price One Shilling.
 Early orders will oblige.
 London: W. Tweedie, 367, Strand.

To be viewed, and Catalogues had.

Many Thousand Volumes of Modern Books, bound and in quires.

MR. HODGSON will SELL by AUCTION, at his New Rooms, the corner of Fleet-street and Chancery-lane, on TUESDAY, October 23, and two following days, MANY THOUSAND VOLUMES of MODERN BOOKS, bound and in quires, in every department of Literature; also copies of New Books, including several important Publications, slightly damaged by the late fire in Paternoster-row: Modern Novels in quires, Railway Reading, and a great variety of saleable Books of all Classes.

Catalogues are preparing.

Ancient Arms and Weapons of War.

MR. J. C. STEVENS will SELL by AUCTION, at his Great Room, 38, King-street, Covent-garden, on TUESDAY, October 23, at half-past 12 precisely, an EXTENSIVE COLLECTION of FIRE-ARMS, selected with the greatest care by a Gentleman Amateur, to exhibit in the most perfect manner a gradual Series, from the earliest times to the present, with Illustrative Specimens of Eastern Weapons, Ancient Ordnance or portable Cannon, Match-lock, Wheel-lock, Trick-lock, early and late Fire-lock, with most interesting Specimens, showing the development and perfection of the modern principle; also a valuable Series of Dated and other Rifles, showing that many of the bones in use in ancient times have been adopted by modern inventors.

May be viewed the day prior and morning of Sale, and Catalogues had (with Illustrations, 6d. each).

Microscopes, Electrical Machines, Photographic Cameras, Lenses, and Albums, Minerals and Miscellaneous Articles.

MR. J. C. STEVENS will SELL by AUCTION, at his Great Room, 38, King-street, Covent-garden, on FRIDAY, October 26, at half-past 12 precisely, SEVERAL EXCELLENT MICROSCOPES, by Smith & Beck and other eminent makers. Five glass frames of interesting objects for the Microscope, (these preparations were awarded the Paris First-class and London Prize Medals at the Great Exhibition)—splendid 3-foot Plate Electrical Machine, by Morse & Thornthwaite.—Cameras and a variety of Photographic apparatus.—Gems—Jewellery.—Handsome Gilt Albums for Portraits.—Case of Cut and Polished Gems, Minerals, and Miscellaneous Articles.

May be viewed on the day prior and morning of Sale, and Catalogues had.

To Heads of Schools and Others.

MR. J. C. STEVENS begs to announce that he will include in his Sale on TUESDAY, October 23, a SPLENDID 3-FOOT CIRCULAR PLATE ELECTRICAL MACHINE, by HOBBS & THORNTHWAITE, with Conductors, &c., well adapted for the Lecture-room or Scientific and Experimental purposes.

Full-compass Church or Chamber Organ, by Groves, in handsome Case.

TOPLIS & HARDING will SELL by AUCTION, at their Room 26, St. Paul's Churchyard, E.C., on WEDNESDAY, October 24, at 3 o'clock, a First-class COMPASS CHURCH or CHAMBER ORGAN, by S. Groves, London. G.G. to F. in alt, with open diapason 54 notes, C.C. in front 23 pipes, stop diapason through, principal, fifteenth and dulciana stops, 13 octave pedals, and 5 composition pedals. In handsome carved oak Gothic Case.

May be viewed the day preceding and morning of Sale, and Catalogues had at the Rooms.

MEMOIR OF BARON LARREY, Surgeon-in-Chief of the Grande Armée. From the French.

London: Henry Renshaw, 265, Strand.

THE ILLUSTRATED NATURAL HISTORY—NEW VOLUME.

In royal 8vo. price 18s. cloth gilt.

BIRDS. By the Rev. J. G. WOOD, M.A. F.L.S. With upwards of 600 Original Illustrations by Wolf, W. Cole.

London: Routledge, Warne & Routledge, Farringdon-street.

THE BEST PRACTICAL HORSE BOOK.

In demy 8vo. price 12s. half-bound, 600 pp.

THE HORSE, in the Stable and the Field. By STONEHENG and LUPTON. His Varieties, Management in Health and Disease, Anatomy, Physiology, &c. With 160 Illustrations by Barnard, Swecker, Scott, &c.

London: Routledge, Warne & Routledge, Farringdon-street.

THE NEW KORAN; or, Text-Book of Turkish Reformers. In the Teaching and Example of their esteemed Master, JAID MORATA.

The book of the Syrian prophet offers a gateway through what has hitherto been considered an insurmountable barrier to Muslim progress. It separates spiritual religion from dead forms and superstitions; offers a common ground of reconciliation to Christians, Jews and Turks; and promises to bring about, by moral and pacific means, a far more important reformation in the East than is likely to be effected by Abdul-Aziz or the sword of the Wahabites.

London: George Manwaring, 8, King William-street, Strand.

Now ready, price 3s. 6d.

MADAME CAPLIN'S large and beautifully illustrated WORK on HEALTH and BEAUTY, or Corsets and Clothing adapted to the Human Body.

By the same Author.

WOMAN and HER WANTS. Price 1s.

Darton & Co. Holborn Hill; and from the Author, 58, Berners-street, Oxford-street, W.

Second Edition, 8vo. cloth, price 5s.

SCHILLER'S WILHELM TELL (Hamilton System). The German Text, with an Interlinear Translation, Grammatical and Historical Notes, and an Introduction containing the Elements of Grammar, by L. BRAUN-FELS and A. C. WHITE. Second Edition. 8vo. cloth boards, 5s.

"With the help of this book, and it alone, a student may gain a considerable knowledge of the German Language and German Grammar, learning it practically as he gets through the play. A traveller may learn German in a railway carriage with this book for his guide."—*Critic*.

"This book is particularly adapted to the English students of the German Language who wish to make a rapid progress. The grammatical notes and explanations are such as to convey at once an accurate idea of the construction of the German language, and will greatly facilitate his studies."—*Morning Chronicle*.

Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 50, South Frederick-street, Edinburgh.

NOTICE.—The GAZETTE of BANKRUPTCY, No. 1, is published THIS DAY, October 19. Office: V. & R. Stevens & Sons, 26, Bell-yard, Lincoln's Inn.

Just published, Third Edition, much enlarged, price 5s.

THE BOOK OF FAMILIAR QUOTATIONS. London: Whittaker & Co.

Just published, price 2s. 6d.

GABRIELLE: A TALE.

Weston-super-Mare: J. Whereat. London: Hamilton, Adams & Co. Paternoster-row.

New Work, cloth, 3s. 6d.

EMPEREUR. London: Houlston & Wright.

GROTE'S GREECE and RAWLINSON'S HERODOTUS. Now complete, with Portrait, Maps and Index, 12 vols. 8vo. 16s. each.

A HISTORY of GREECE. From the Earliest Period to the Close of the Generation contemporary with Alexander the Great. By GEORGE GROTE.

Also, now complete, with Maps, Woodcuts and Index, 4 vols. 8vo. 18s. each.

THE HISTORY of HERODOTUS. A New English Version. Translated, with Notes and Essays, by Rev. GEORGE RAWLINSON.

* * The above Histories being now finished, Subscribers are recommended to complete their Sets without delay, as the Volumes in the next Editions will not be sold separately.

John Murray, Albemarle-street.

THE MISSIONARY in MADAGASCAR.

Fourth Thousand, with Map and Illustrations, 8vo. 16s.

THREE VISITS to MADAGASCAR, in 1853-54, including a Journey to the Capital; with Notices of the Natural History, and of the Present Civilization of the People. By Rev. W. ELLIS, Author of 'Polynesian Researches.'

"In the revived interest attaching to Madagascar by the important changes that have taken place in that island, we should urge those who have not read the Rev. Wm. Ellis's most interesting volume to turn to it at once, for the sake of making themselves acquainted with the history of civilization and Christianity there."—*Patriot*.

"What Mr. Livingstone has done for Central Africa, Mr. Ellis has accomplished for Madagascar. He has brought to light the interior of an unknown region, and laid open a new field of vast importance for European and Transatlantic enterprise. That Madagascar will very soon be accessible to our trade and commerce, it is impossible to doubt, after the recent instances of China and Japan."—*Christian Observer*.

John Murray, Albemarle-street.

F. G. TRAFFORD'S WORKS.

NEW EDITION, 5s. bound.

TOO MUCH ALONE. By F. G. TRAFFORD, Author of 'City and Suburb.' A NEW and CHEAPER EDITION, in crown 8vo. price 5s. cloth.

"We can cordially recommend 'Too Much Alone' to any reader in quest of a thoroughly good novel. It is a well-conceived, well-wrought-out story; but we regard it less as a present success than the commencement of a successful career."—*Advertiser*.

"'Too Much Alone' is an exceedingly suggestive phrase, and the title. It is a thoroughly good novel, both in conception and execution, and ought at once to secure for its author an honourable popularity. Among the rare combination of qualities which distinguish it is the downright reality, which yet does not preclude an infusion of ideal grace into a story of domestic life."—*Spectator*.

CITY AND SUBURB. By F. G. TRAFFORD, Author of 'Too Much Alone.' A NEW and CHEAPER EDITION, in crown 8vo. price 5s. cloth.

"This is a first-class work, and cannot fail to attract universal attention. It is one of the most interesting and instructive novels we have ever read."—*London Review*.

"In pathos, sentiment and vigour the author is almost equally at home, and we do not hesitate to say that he will be carried to a high status amongst the romance writers of the day."—*Press*.

"Sustains the author's right to hold a very high position among contemporary novelists."—*Spectator*.

"We feel assured that the author is destined to hold a high place in the ranks of English novelists."—*Literary Gazette*.

"Will repay perusal with interest. . . . Decidedly interesting."—*Athenaeum*.

"Opens with great effect. Ruby reminds us of Thackeray's most successful female character—Triz."—*Globe*.

"Ruby the beauty will stand out as a distinct personage in the reader's memory when the dramatic persona of half-a-dozen intervening novels have melted into chaos."—*Saturday Review*.

"Has more than common interest attached to it."—*Observer*.

"We can unhesitatingly recommend the novel to all dwellers in 'City and Suburb.'"—*Critic*.

"The author has given us a really pleasing novel. The story is replete with interest."—*Morning Chronicle*.

"The announcement of a new work from this author's pen cannot fail to excite curiosity, and arouse expectation of that which is so dear to a novel reader, a really genuine, good novel. In the present instance that expectation is fulfilled: 'City and Suburb' is more than equal in ability and finish to the author's preceding works."—*Morning Post*.

OLD VAUXHALL: a Romance.

By W. H. MARSHALL, Esq. 3 vols. post 8vo.

[November and.]

FORTY YEARS' MILITARY and PERSONAL ADVENTURES in Portugal, Spain, France, Malta, New South Wales, Norfolk Island, New Zealand, Andaman Islands, and India. By Lieut.-Col. BUNBURY.

FOOT-NOTES FROM THE PAGE
OF NATURE;
Or, FIRST FORMS OF VEGETATION.With numerous Illustrations, and a Coloured
Frontispiece, 5s.

By the Rev. H. MACMILLAN, F.R.S.E.

A Popular Work on Mosses, Lichens, Freshwater Algae
and Fungi.

"One of the pleasantest compilations we have read for a long while. It is admirably adapted to serve as an introduction to the study of more scientific botanical works, and to throw a new interest over country rambles, by bringing into notice the simpler forms of vegetation everywhere to be met with."—*Saturday Review*.

MACMILLAN & Co., London and Cambridge.

SAMPSON LOW, SON & CO.'S

LIST OF NEW BOOKS AND
NEW EDITIONS.

I.

The ART of ELOCUTION, with a
Modern Speaker. By GEORGE VANDENHOFF, Esq. Fcap.
cloth, 5s. [New Edition on the 21st inst.]

II.

**LIFE amongst the NORTH and SOUTH
AMERICAN INDIANS:** a Book for Boys. By GEORGE
CATLIN, the Indian Traveller. With numerous illustrations.
Small post 8vo. cloth, 6s.

"Here we have adventures far more exciting than the dreams of the romancer; descriptions of natural scenery and phenomena which would not occur to the imagination without actual observation. Unless we greatly misjudge the literary tastes of English boys, few books of the season will be more welcome to them than Mr. Catlin's 'Life among the Indians.'"
"Facts coming from such a man cannot fail to be worth having; and it is most desirable that they should be known by the youth of this country, who will find in every page of the book matter for wonder, interest and improvement."—*Observer*, Oct. 6.
"Admirably answers the purpose for which it was intended; and we are fully persuaded that the volume will hold a distinguished place in every boy's library."—*Examiner*, Oct. 12.

III.

The COTTON KINGDOM: a Travel-
ler's Observations on Cotton and Slavery in America, based
upon three former volumes of Travels and Explorations. By
FREDERICK LAW OLDMSTED. With a Map. 2 vols. post
8vo. 21s.

"Mr. Oldsted gives his readers a wealth of facts conveyed in a long stream of anecdotes, the exquisite humour of many of them making parts of his book as pleasant to read as a novel of the first class."—*Athenæum*, Oct. 12.

"This book is a compendious re-cast of Mr. Oldsted's invaluable volumes on the Slave States; volumes full of acute, pithy and significant delineations, which bear in every line the stamp of an honest and unexaggerating, but close and clear-sighted, study of those States. We know of no book in which significant but complex social facts are so fairly, minutely and intelligently photographed, in which there is so great intrinsic evidence of impartiality—in which all the evidence given is at once so minute and so essential, and the inferences deduced so practical, broad and impressive."—*Spectator*, Oct. 12.

IV.

**PLUTARCH'S LIVES from DRY-
DEN'S Translations and other sources.** The whole carefully
revised and corrected. Edited by A. H. CLOUGH, Esq., some-
time Fellow of Oriel College, Oxford; and late Professor of
English and Literature at University College.
5 vols. medium 8vo. cloth, 50s.

"Plutarch, we repeat, will be read, and read among ourselves for the future, in the version of Mr. Clough. We have given that version our cordial praise before, and shall only add, that it is brought before the world in a way which fits it admirably for general use. The print is clear and large, the paper good, and there are excellent and copious indices."—*Quarterly Review*, October.
"Mr. Clough's work is worthy of all praise; and we hope that it will tend to revive the study of Plutarch."—*Times*.

V.

DR. WORCESTER'S New and greatly

Enlarged DICTIONARY of the ENGLISH LANGUAGE.
Adapted alike for Library or Household Reference, compris-
ing 40,000 Words more than Johnson's Dictionary, and 260
pages more than the 4to. edition of Webster's Dictionary, and
illustrated. 1 vol. royal 4to. pp. 1,894, 31s. 6d.

"The volumes before us show a vast amount of diligence; but with Webster it is diligence in combination with fancifulness,—with Worcester in combination with good sense and judgment. Worcester's is the soberer and the safer book, and may be pronounced the best existing English lexicon."—*Athenæum*, July 12.

VI.

SLAVERY and SECESSION: Histo-
rical and Economical. By THOMAS ELLISON, Esq. F.R.S.,
of Liverpool. Author of 'A Handbook of the Cotton Trade.'
With Coloured Map, and numerous Appendices of State
Papers, Population Returns, New and Old Parishes, &c. Form-
ing a complete Handbook of Reference on all matters con-
nected with the American War. 1 vol. post 8vo. cloth, 8s. 6d.

"Mr. Ellison's volume is a serviceable compendium of the events which have taken place, and especially of the State Papers, speeches and opinions of the men who on both sides have borne a prominent part in them. Mr. Ellison is not an abolitionist, in the extreme sense of the term. His views are moderate, his facts are carefully collected; and upon the whole his book is the most useful contribution we have seen in Europe to the history of this crisis in American affairs."—*Edinburgh Review*, October.

VII.

CROSS COUNTRY. By WALTER
THORNBURY, Author of 'Ice-bound,' &c. With Frontis-
piece on Steel, handsomely bound in cloth, 4s. Forming the
7th Volume of a Low's Popular Library of Favourite Books.

LORD DUNDONALD'S AUTOBIOGRAPHY.

"Ought to be a prize-book in every military and naval school." *London Review.*
"We may safely predict for this work an unbounded popularity. A narrative of heroic adventure, every line of which should be perused by Englishmen."—*Times.*

"A valuable contribution to the historical literature of England."—*Blackwood's Magazine.*

"The career of Lord Dundonald recalls that of Raleigh and Herbert of Cherbury. This work will take its place with our best naval histories."—*Athenæum.*

A work which, once read, will imprint itself on the memory for ever. It is an admirable work."—*Spectator.*

"More full of interest than one of Marryat's novels." *Economist.*

SIXTH THOUSAND.

FRANCATELLI'S COOK'S GUIDE.

"Francatelli's 'Cook's Guide' is an admirable manual for every household where pleasure, health, and economy are consulted. The whole book has the merit of being exceedingly plain, of containing sufficient cross-references to satisfy a Fanciful, and of being so serviceably arranged in all its parts that we defy you to miss any of the consolations intended for your physical infirmities." *Times.*

EAST LYNNE: a Story of Modern Life. By Mrs. HENRY WOOD. 3 vols. [Now ready.]

"This is a tale of remarkable power. It displays a force of description and a dramatic completeness we have seldom seen surpassed. The interest of the narrative intensifies itself to the deepest pathos. The closing scene is in the highest degree tragic, and the whole story exhibits unquestionable genius and originality."—*Daily News.*

"So full of incidents, so exciting in every page, so admirably written, that one hardly knows how to go to bed without reading to the last page."—*Observer.*

BENTLEY'S STANDARD NOVELS.

To this Series of Novels has just been added the Popular Story,

JOHN MURRAY, Albemarle-street.

LONDON, SATURDAY, OCTOBER 19, 1861.

LITERATURE

The English Cyclopædia. Conducted by Charles Knight. 22 vols.: viz., *Geography*, 4 vols.; *Biography*, 6 vols.; *Natural History*, 4 vols.; *Arts and Sciences*, 8 vols. (Bradbury & Evans.)

The Encyclopædia Britannica: a Dictionary of Arts, Sciences, and General Literature. Eighth Edition. 21 vols. and Index. (Black.)

THE two editions above described are completed at the same time: and they stand at the head of the two great branches into which pantological undertakings are divided, as at once the largest and the best of their classes.

When the works are brought together, the first thing that strikes the eye is the syllable of difference in the names. The word *Cyclopædia* is a bit of modern purism. Though *ὑπερλόπαδία* is not absolutely Greek of Greece, we learn from both Pliny and Quintilian that the circle of the sciences was so called by the Greeks, and Vitruvius has thence naturalized *encyclium* in Latin. Nevertheless we admit that the initial *en* would have euphonized but badly with the word *Penny*: and the English *Cyclopædia* is the augmented, revised, and distributed edition of the Penny *Cyclopædia*. It has indeed been said that *Cyclopædia* should mean the education of a circle, just as *Cyropædia* is the education of Cyrus. But this is easily upset by Aristotle's word *κυκλόφοια*, motion in a circle, and by many other cases, for which see the lexicon.

The earliest printed *Encyclopædia* of this kind was perhaps the famous "myrrour of the worlde," which Caxton translated from the French and printed in 1480. The original Latin is of the thirteenth century, or earlier. This is a collection of very short treatises. In or shortly after 1496 appeared the 'Margarita Philosophica' of Gregory Reisch, the same, we must suppose, who was confessor to the Emperor Maximilian. This is again a collection of treatises, of much more pretension: and the estimation formed of it is proved by the number of editions which it went through. In 1531, appeared the little collection of *works* of Ringelberg, which is truly called an *Encyclopædia* by Morhof, though the thumbs and fingers of the two hands will meet over the length of its one volume. There are more small collections; but we pass on to the first work to which the name of *Encyclopædia* is given. This is the ponderous 'Scientiarum Omnium Encyclopædia' of Alsted, in four folio volumes, commonly bound in two; published in 1629 and again in 1649: the true parent of all the *Encyclopædias*, or collections of treatises, or works in which that character predominates. The first great dictionary may perhaps be taken to be Hofman's 'Lexicon Universale' (1677); but Chambers's (so called) Dictionary (1728) has a better claim. And we support our proposed nomenclature by observing that Alsted accidentally called his work *Encyclopædia*, and Chambers simply *Cyclopædia*.

We shall make one little extract from the "myrrour," and one from Ringelberg. Caxton's author makes a singular remark for his time; and one well worthy of attention. The grammar rules of a language, he says, must have been invented by foreigners: "And whan any suche tonge was perfytyly had and usyd amonge any people, than other people not used to the same tonge caused ruly to be made wherby they myght lerne the same tonge and suche ruly be called the gramer of that tonge." Ringelberg says that if the right nostril bleed, the little finger of the right hand should be

crooked, and squeezed with great force; and the same for the left.

We pass on to the *Encyclopédie*, commenced in 1751; the work which has, in many minds, connected the word *encyclopedist* with that of *infidel*. Readers of our day are surprised when they look into this work, and wonder what has become of all the irreligion. The truth is, that the work—though denounced *ab ovo* on account of the character of its supporters—was neither adapted, nor intended, to excite any particular remark on the subject: no work of which D'Alembert was co-editor would have been started on any such plan. For, first, he was a real sceptic: that is, doubtful, with a mind not made up. Next, he valued his quiet more than anything: and would as soon have gone to sleep over a hornet's nest as have contemplated a systematic attack upon either religion or government. As to Diderot—of whose varied career of thought it is difficult to fix the character of any one moment, but who is very frequently taken among us for a pure atheist—we will quote one sentence from the article 'Encyclopédie,' which he wrote himself:—"Dans le moral, il n'y a que Dieu qui doit servir de modèle à l'homme; dans les arts, que la nature."

A great many readers in our country have but a very hazy idea of the difference between the political *Encyclopædia*, as we may call it, and the *Encyclopédie Méthodique*, which we always take to be meant—whether rightly or not we cannot tell—when we hear of the "great French *Encyclopædia*." This work, which takes much from its predecessor, professing to correct it, was begun in 1792, and finished in 1832. There are 166 volumes of text, and 6,439 plates, which are sometimes incorporated with the text, sometimes make about 40 more volumes. This is still the monster production of the kind; though probably the German *Cyclopædia* of Ersch and Gruber, which was begun in 1818, and is still in progress, will beat it in size. The great French work is a collection of dictionaries; it consists of *Cyclopædias* of all the separate branches of knowledge. It is not a work, but a collection of works: one or another department is to be bought from time to time; but we never heard of a complete set for sale in one lot. As ships grow longer and longer, the question arises what limit there is to the length. One answer is, that it will never do to try such a length that the stern will be rotten before the prow is finished. This wholesome rule has not been attended to in the matter before us; the earlier parts of the great French work were antiquated before the whole was completed: something of the kind will happen to that of Ersch and Gruber.

The production of a great dictionary of either of the kinds is far from an easy task. There is one way of managing the *Encyclopædia* which has been largely resorted to; indeed, we may say that no such work has been free from it. This plan is to throw all the attention upon the great treatises, and to resort to paste and scissors, or some process of equally easy character, for the smaller articles. However it may be done, it has been the rule that the *Encyclopædia* of treatises should have its supplemental Dictionary of a very incomplete character. It is true that the treatises are intended to do a good deal; and that the Index, if it be good, knits the treatises and the dictionary into one whole of reference. Still there are two stools, and between them a great deal will fall to the ground. The dictionary portion of the *Britannica* is not to be compared with its treatises; the part called Miscellaneous and Lexicographical in the *Metropolitana* is a great

failure. The defect is incompleteness. The biographical portion, for example, of the *Britannica* is very defective: of many names of note in literature and science, which become known to the reader from the treatises, there is no account whatever in the dictionary. So that the reader who has learnt the results of a life in astronomy, for example, must go to some other work to know when that life began and ended. This defect has run through all the editions; it is in the casting of the work. The reader must learn to take the results at their true value, which is not small. He must accustom himself to regard the *Britannica* as a splendid body of treatises on all that can be called heads of knowledge, both greater and smaller; with help from the accompanying dictionary, but not of the most complete character. Practically, we believe, this defect cannot be avoided: two plans of essentially different structure cannot be associated on the condition of each or either being allowed to abbreviate the other.

The defect of all others which it is most difficult to avoid is inequality of performance. Take any dictionary you please, of any kind which requires the association of a number of contributors, and this defect must result. We do not merely mean that some will do their work better than others; this of course: we mean that there will be structural differences of execution, affecting the relative extent of the different parts of the whole, as well as every other point by which a work can be judged. A wise editor will not attempt any strong measures of correction: he will remember that if some portions be below the rest, which is a disadvantage, it follows that some portions must be above the rest, which is an advantage. The only practical level, if level there must be, is that of mediocrity, if not of absolute worthlessness: any attempt to secure equality of strength will result in equality of weakness. Efficient development may be cut down into meagre brevity, and in this way only can apparent equality of plan be secured throughout. It is far preferable to count upon differences of execution, and to proceed upon the acknowledged expectation that the prominent merits of the work will be settled by the accidental character of the contributors; it being held impossible that any editorial efforts can secure a uniform standard of goodness. Wherever the greatest power is found, it should be suffered to produce its natural effect. There are, indeed, critics who think that the merit of a book, like the strength of a chain, is that of its weakest part: but there are others who know that the parallel does not hold, and who will remember that the union of many writers must show exaggeration of the inequalities which almost always exist in the production of one person. The true plan is to foster all the good that can be got, and to give development in the directions in which most resources are found: a *Cyclopædia*, like a plant, should grow towards the light.

The Penny *Cyclopædia* had its share of this kind of defect or excellence, according to the way in which the measure is taken. The circumstance is not so much noticed as might be expected, and this because many a person is in the habit of using such a dictionary chiefly with relation to one subject, his own; and more still want it for the pure dictionary purpose, which does not go much beyond the meaning of the word. But the person of full and varied reference feels the differences; and criticism makes capital of them. The Useful Knowledge Society was always odious to the organs of religious bigotry; and one of them,

adverting to the fact that geography was treated with great ability, and most unusual fullness, in the Penny Cyclopædia, announced it by making it the sole merit of the work that, with sufficient addition, it would make a tolerably good gazetteer.

Some of our readers may still have hanging about them the feelings derived from this old repugnance of a class to all that did not associate direct doctrinal teaching of religion with every attempt to communicate knowledge. We will take one more instance, by way of pointing out the extent to which stupidity can go. If there be an astronomical fact of the telescopic character which, next after Saturn's ring and Jupiter's satellites, was known to all the world, it was the existence of multitudes of double stars, treble stars, &c. A respectable quarterly of the theological cast, which in mercy we refrain from naming, was ignorant of this common knowledge,—imagined that the mention of such systems was a blunder of one of the writers in the Penny Cyclopædia, and lashed the presumed ignorance of the statement in the following words, delivered in April, 1837:—

"We have forgotten the name of that Sidrophel who lately discovered that the fixed stars were not single stars, but appear in the heavens like soles at Billingsgate, in pairs; while a second astronomer, under the influence of that competition in trade which the political economists tell us is so advantageous to the public, professes to show us, through his superior telescope, that the apparently single stars are really three. Before such wondrous mandarins of science, how continually must *homunculi* like ourselves keep in the background, lest we come between the wind and their nobility."

Certainly these little men ought to have kept in the background; but they did not: and the growing reputation of the work which they assailed has chronicled them in literary history; grubs in amber.

This important matter of inequality, which has led us so far, is one to which the Encyclopædia is as subject as the Cyclopædia; but it is not so easily recognized as a fault. We receive the first book as mainly a collection of treatises: we know their authors, and we treat them as individuals. We see, for instance, the names of two leading writers on Optics, Brewster and Herschel. It would not at all surprise us if either of these writers should be found criticizing the other by name, even though the very view opposed should be contained in the same Encyclopædia with the criticism. And in like manner, we should hold it no wonder if we found some third writer not comparable to either of those we have named. It is not so in the Cyclopædia; here we do not know the author, except by inference from a list of which we never think while consulting the work. We do not dissent from this or that author: we blame the book.

The Encyclopædia Britannica is an old friend. Though it holds a proud place in our present literature, yet the time was when it stood by itself, more complete and more clear than anything which was to be found elsewhere. There must be studious men alive in plenty who remember, when they were studious boys, what a literary luxury it was to pass a few days in the house of a friend who had a copy of this work. The present edition is a worthy successor of those which went before. The last three editions, terminating in 1824, 1842, and 1861, seem to show that a lunar cycle cannot pass without an amended and augmented edition. Detailed criticism is out of the question; but we may notice the effective continuance of the plan of giving general historical dissertations on the progress of knowledge. Of some of these dissertations we have

had to take separate notice; and all will be referred to in our ordinary treatment of current literature.

The literary excellence of these two extensive undertakings is of the same high character. To many this will need justification: they will not easily concede to the cheap and recent work a right to stand on the same shelf with the old and tried magazine, newly replenished with the best of everything. Those who are cognizant by use of the kind of material which fills the Penny Cyclopædia will need no further evidence: to others we shall quote a very remarkable, and certainly very complete testimony. The 'Cyclopædia of the Physical Sciences, published by Dr. Nichol in 1857 (noticed by us, April 4), is one of the most original of our special dictionaries. The following is an extract from the editor's preface:—

"When I assented to Mr. Griffin's proposal that I should edit such a Cyclopædia, I had it in my mind that I might make the *scissors* eminently effective. Alas! on narrowly examining our best Cyclopædias, I found that the scissors had become blunted through too frequent and vigorous use. One great exception exists: viz. the Penny Cyclopædia of Charles Knight. The cheapest and the least pretending, it is really the most philosophical of our scientific dictionaries. It is not made up of a series of treatises, some good and many indifferent, but is a thorough Dictionary, well proportioned and generally written by the best men of the time. The more closely it is examined, the more deeply will our obligations be felt to the intelligence and conscientiousness of its projector and editor."

After Dr. Nichol's candid and amusing announcement of his scissorial purpose, it is but fair to state that nothing of the kind was ultimately carried into effect, even upon the work in which he found so much to praise. We quote this testimony because it is of a peculiar kind.

The success of the *Penny Magazine* led Mr. Charles Knight, in 1832, to propose to the Useful Knowledge Society a Cyclopædia in weekly penny numbers. These two works stamp the name of the projector on the literature of our day in very legible characters. Eight volumes of 480 pages each were contemplated; and Mr. Long and Mr. Knight were to take the joint management. The plan embraced a popular account of Art and Science, with very brief biographical and geographical information. The early numbers of the work had some of the *Penny Magazine* character: no one can look at the pictures of the Abbot and Abbess in their robes without seeing this. By the time the second volume was completed, it was clearly seen that the plan was working out its own extension: a great development of design was submitted to, and Mr. Long became sole editor. Contributors could not be found to make articles of the requisite power in the assigned space. One of them told us that when he heard of the eight volumes, happening to want a shelf to be near at hand for containing the work as it went on, he ordered it to be made to hold twenty-five volumes easily. But the inexorable logic of facts beat him after all: for the complete work contained twenty-six volumes, and two thick volumes of Supplement.

The penny issue was brought to an end by the state of the law, which required, in 1833, that the first and last page of everything sold separately should contain the name and address of the printer. The penny numbers contained this imprint on the fold of the outer leaf: and *qui tam* informations were laid against the agents in various towns. It became necessary to call in the stock; and the penny issue was abandoned. Monthly parts were substituted, which varied in bulk, as the demands of the plan became more urgent, and in price from one

sixpence to three. The second volume of Supplement appeared in 1846, and during the fourteen years of issue no one monthly part was ever behind its time. This result is mainly due to the peculiar qualities of Mr. Long, who unites the talents of the scholar and the editor in a degree which is altogether unusual. If any one should imagine that a mixed mass of contributors is a punctual piece of machinery, let him take to editing upon that hypothesis, and he shall see what he shall see and learn what he shall learn.

The English contains about ten per cent. more matter than the Penny Cyclopædia and its Supplements; including the third supplementary volume of 1848, which we now mention for the first time. The literary work of the two editions cost within 500*l.* of 50,000*l.*: that of the two editions of the Britannica cost 41,000*l.* But then it is to be remembered that the Britannica had matter to begin upon, which had been paid for in the former editions. Roughly speaking, it is probable that the authorship of a page of the same size would have cost nearly the same in one as in the other.

The longest articles in the Penny Cyclopædia were 'Rome' in 98 columns and 'Yorkshire' in 86 columns. The only article which can be called a treatise is the Astronomer Royal's 'Gravitation,' founded on the method of Newton in the eleventh section, but carried to a much greater extent. In the English Cyclopædia, the longest article of geography is 'Asia,' in 45 columns. In natural history the antelopes demand 36 columns. In biography, 'Wellington' uses up 42 columns, and his great military opponent 41 columns. In the division of Arts and Sciences, which includes much of a social and commercial character, the length of articles often depends upon the state of the times with regard to the subject. Our readers would not hit the longest article of this department in twenty guesses: it is 'Deaf and Dumb' in 60 columns. As other specimens, we may cite Astronomy, 19; Banking, 36; Blind, 24; British Museum, 35; Cotton, 27; Drama, 26; Gravitation, 50; Libraries, 50; Painting, 34; Railways, 18; Sculpture, 36; Steam, &c., 37; Table, 40; Telegraph, 30; Welsh language and literature, 39; Wool, 21. These are the long articles of special subdivisions: the words under which the *Encyclopædia* gives treatises are not so prominent. As in Algebra, 10; Chemistry, 12; Geometry, 8; Logic, 14; Mathematics, 5; Music, 9. But the difference between the collection of treatises and the dictionary may be illustrated thus:—though 'Mathematics' have only five columns, 'Mathematics, recent terminology of,' has eight: and this article we believe to be by Mr. Cayley, who certainly ought to know his subject, being himself a large manufacturer of the new terms which he explains. Again, though 'Music' *in genere*, as the schoolmen said, has only nine columns, 'Temperament and Tuning' has eight, and 'Chord' alone has two. And so on.

In a dictionary of this kind it is difficult to make a total clearance of *personality*: by which we mean that exhibition of peculiar opinion which is offensive to taste when it is shifted from the individual on the corporate book. The treatise of the known author may, as we have said, carry that author's controversies on its own shoulders; and even his crotchets, if we may use such a word. But the dictionary should not put itself into antagonism with general feeling, nor even with the feelings of classes. We refer particularly to the ordinary and editorial teaching of the article. If, indeed, the writer, being at issue with mankind, should confess the difference, and give abstract of his full grounds, the case is altered: the editor

then, as it were, admits a correspondent to a statement of his own individual views. The dictionary portion of the Britannica is quite clear of any lapses on this point, so far as we know: the treatises and dissertations rest upon their authors. The Penny Cyclopædia was all but clear: and great need was there that it should have been so. The Useful Knowledge Society, starting on the principle of perfect neutrality in politics and religion, was obliged to keep strict watch against the entrance of all attempt even to look over the hedge. There were two—we believe only two—instances of what we have called personality. The first was in the article 'Bunyan.' It is worth while to extract all that is said—in an article of thirty lines—about a writer who is all but universally held to be the greatest master of allegory that ever wrote:—

"His works were collected in two volumes folio, 1736-7: among them 'The Pilgrim's Progress' has attained the greatest notoriety. If a judgment is to be formed of the merits of a book by the number of times it has been reprinted, and the many languages into which it has been translated, no production in English literature is superior to this coarse allegory. On a composition which has been extolled by Dr. Johnson, and which in our own times has received a very high critical opinion in its favour [probably Southey], it is hazardous to venture a disapproval, and we, perhaps, speak the opinion of a small minority when we confess that to us it appears to be mean, jejune and wearisome."
